is no room to doubt what are the ten most popular works on political economy, and that out of every 194 of them called for at the stores, 30 will be Mill's 'Principles,' 30 Adam Smith's 'Wealth of Nations,' 23 Prof. Perry's 'Elements,' 20 Cairnes's 'Some Leading Principles,' 19 Fawcett's 'Manual,' 17 Walker's 'Science of Wealth,' 17 Wayland's 'Elements,' 14 Greeley's 'Science,' 13 Bowen's 'American Political Economy,' 11 Jevons's 'Theory.' To make this exhibit perfectly intelligible we should need to know how many of the above works are required as text-books in our colleges, and the names of the colleges; but, apart from this, it is clear that the body of doctrine now most in force in this country is overwhelmingly sound. Nor is the outlook any less encouraging when we come to the less popular works, led off by Prof. Sumner's 'History of American Currency' (9), those next in order being Jevons's 'Science of Money' (8), Bastiat's 'Essays' (7), Cairnes's 'Character and Logical Method' (7), Mrs. Fawcett's 'Political Economy for Beginners' (5), McCulloch's 'Principles' (5), Mason and Lalor's 'Primer' (5), Carey's 'Social Science' (4), Price's 'Currency and Banking' (4)—another list to which very little exception can be taken. Finally, to carry the investigation *ad ima*, the least popular are still wholesome, viz., Bascom's, List's, and Say's works (3 each); Bagehot's 'Lombard Street,' Bastiat's 'Sophisms,' Butts's 'Protection and Free-Trade'; Cairnes's 'Essays,' Fawcett's 'Essays and Lectures' (2 each). Now if we embrace the whole scale in one view, we find the total number to be 267, and this gives us a ratio of *authors* as follows: Mill, 11.24 per cent.; Smith, 11.24; Cairnes, 10.86; the Fawcetts, 9.74; Perry, 8.61; Jevons, 7.12; Walker, 6.37; Wayland, 6.37; Greeley, 5.24; Bowen, 4.87. In other words, these ten writers (counting for convenience Prof. and Mrs. Fawcett as one) supply nearly 82 per cent. (81.66) of the public demand for works on political economy.

—*Harper's* for April is rich in Centennial reading. The eighteenth paper of the regular series deals with the progress of the fine arts, the writer seeming rather more concerned to omit nobody from his retrospect than to be particularly critical. Benjamin West, however, is allowed to have painted only one picture "rising above the dead level of Academical mediocrity." The portraits of the older artists are interesting. "Old Philadelphia" is treated excellently well by Mrs. Rebecca Harding Davis. She begins with the early Swedish settlers, whose descendants are now well represented in the city that entertains so much respect for "old families"; and, not unmindful of this Philadelphia trait, makes a large part of the interest of her narrative turn upon the history of many well-known names. It was a peaceable, well-ruled town from the time when three books were preserved for sixty years among the Swedes, from which all the settlement learned to read, down to the time when oppressed religionists from New England were kindly received. It is a pungent recollection in our fraudulent epoch that in those days when a merchant failed his house was darkened and the family went into mourning. Mrs. Davis draws some comparisons between Philadelphia and the New England settlements unfavorable to the latter, which we will offset by a single observation: Printing was flourishing in Boston when William Penn stopped the first printer in Philadelphia, who put into his 'Almynack' that "the rule of the Lord Penn was earlier than the flood," because such Mystery of Printing was "a danger to the printer and the country." Mr. Lossing's "Romance of the Hudson" might have spared a well-worn story or so. What we have hitherto read in "Daniel Deronda" apparently does us but little good in the present issue, for we are plunged among new sets of people, who appear to open as many new plots as 'Middlemarch' contained. If Miss Harleth is one heroine, Mirah Lapidoth is plainly to be another one; and between the romantic nature of her introduction to us and the number of illegitimate relations to be settled, one wonders how only eight numbers of *Harper's* are to contain it all.

—In *Lippincott's* fourth paper on the Century we reach, betimes, the "Centennial Exposition under Roof." Good elevations of the buildings are given, but it is a pity they were not accompanied by ground-plans. In default of these the author has to perform a great deal of heavy description, involving many figures, and to strive to conduct his readers, with a clear idea of where they are going, through endless rooms and galleries. Difficult as the task is, any one with a fair sense of locality can get along pretty well. On behalf of those not thus gifted, however, one feels like protesting against the introduction of such confusing and whimsical remarks as this, apropos of the width of the main promenades: "Narrow highways these for traversing the kingdoms of the world; but, combined, they nearly equal the bottom depth [width ?] of the Suez Canal, very far exceed the five feet of the Panama Railway, and still farther the camel-track that sufficed a few centuries ago to link our ancestors to the Indies." Equally futile is the comparison to the storage in Noah's Ark which follows. Lady Barker's third letter treats without dulness of a somewhat dullish life in Natal. In the paper on the "Instruction of Deaf-Mutes" the difficulty of teaching these unfortunates to use the English language is amusingly illustrated by a letter, written the day after Thanksgiving, which ran thus: "Dear Mother: We had Thanks be unto God, no school yesterday, Turkey mincepies, and many other kinds of fruits." The article, in fact, is chiefly amusing, but it clearly indicates that the religious creed taught to deaf-mutes should be as simple as possible, owing to the obstacles in the way of conveying to them any abstract thought. The most serious article in *Lippincott's*, "The College Student," might even be called sombre. It will depend quite on the individual experience of Mr. Hart's readers whether they regard his general arraignment of the dormitory system, the class system, and what he calls the "spirit of caste" in our colleges, with sympathy or with surprise. His illustrations of the evils of each suggest the query whether the fault does not, in any given instance, lie at least as much with the government as with the constitution of the college. An inefficient president and faculty, for instance, would do far more to foster disorder than the mere facility for combination afforded by the dormitory or by class recitations. We do not feel, either, that Mr. Hart makes good his plea for metropolitan as opposed to rustic or small-city colleges. Everything depends upon the city itself whether professors or students will gain by the attrition with the world which Mr. Hart so much prizes. With all respect to Columbia and the University of Pennsylvania, it cannot be said that they sustain Mr. Hart's general proposition; nor, on the other hand, should we have greater hopes of Harvard's usefulness if Cambridge should some day be included in the limits of the municipality of Boston. On this head and the foregoing, we think Mr. Hart has been somewhat misled by his German examples. Nevertheless, what he has to say on each topic is well worth considering.

—Some of the undertakings suggested during this Centennial year are even more stupendous than the Exposition itself. The Commission has recommended each county in the United States to provide in its celebration of the coming Fourth of July for "the delivery of an address tracing the history of that particular community for the past century, or from the time of its settlement, and including a sketch of its growth, its resources, industries, prospects, etc." "These addresses should be published in a uniform size, in order that they may be bound together by States"; and, in order that time may be given for the preparation of them, "designations of the historians ought to be made without delay." We think this suggestion was thrown out about March 1, but it manifestly comes too late by many months. There exist, of course, already a fair number of county histories (mostly New England), which could be drawn upon by the Fourth-of-July orator, but it can hardly be thought that a *précis* of any one of these would be of much value except as awakening an interest in historical studies. In all other cases, the original work that could now be achieved (for counties not absolutely new) must necessarily be superficial, and not worth the binding, even if worth the printing. Moreover, who is to "designate" the historians, and what guaranty is there that they will accept so difficult a task? Altogether, the scheme wears a hopeless look, as if one of the supernumerary Centennial germs that are foreordained not to fructify. Formidable as it seems, however, it is child's-play compared with the work which the "Pilgrim Record Society" of this city has in hand—nothing less than "to collate and prepare for the press the genealogical histories of all known descendants of the Pilgrim Fathers, with the view of completing during the Centennial year a literary monument to the memory of noble ancestors." Dr. David-Parsons' Holton is, we believe, the Society, or the mainspring of it, and we wish him a year devoid of ennui—and one with more than twelve months in it. For our own part, we should prefer the chance of becoming Pilgrim Fathers ourselves held out to us by the "African Company" of Cincinnati, which proposes, in a circular too long to quote, "to organize a company, under the laws of Kentucky and the Constitution and laws of the United States, to trade in Africa, to secure trading-posts and concessions, to open new avenues of trade, and to use the means of the company so formed to establish steam lines, or to build railroads, or to foster the cultivation of profitable products, and to act in such a manner in Africa as to make the company rich and strong, and to carry out the desires of the American people [what are they ?] in that direction, and to enhance the value of the stock of the African Company in every possible way." Colored Americans in particular are invited to step up and take shares at a hundred dollars each to the amount of five millions. As an equivalent, shareholders are to have "the preference in the employments and nomination to offices under the Company." This is almost as tempting as the Samana Bay Company's allurements.

—The *Geographical Magazine* for March contains the expected map of Cameron's route from Lake Tanganyika nearly to the West Coast, together with one showing a part of the route traversed by Livingstone as well as by his successor. The cartographer's remarks on this famous journey are interesting, but of necessity meagre. It is pleasant to find that Livingstone's reckoning compares so favorably with that of the more expert and better equipped Cameron. Mr. David Ker's paper on "The World's Future Coal Depot," meaning Russia, is certain to console the hearts of his countrymen for the blank prospect of the giving-out of their coal-mines, and, if the Russians were Yankees, it would have an immediate effect upon the price of coal-lands in the Don and the Moscow basins, and be the signal for a railroad mania for which the United States alone could furnish a parallel. Something like this will take place, doubtless, when the demand comes from England. Meanwhile, the world at large may repose with confidence in the knowledge of the vast and as yet indeterminable deposits of this country and of China.

—The Wisconsin Legislature has not often of late been complimented by the *Nation*, and we therefore are glad of an opportunity to notice its recent liberal action, more especially towards the University and the State Library. It has imposed by law a tax of one-tenth of a mill for the benefit of the University, which thus receives an immediate addition of about $20,000 to its income, with the certainty of future increase with the growth of the State. It has also authorized the University to sell the vacant Soldiers' Orphans' Home given it by the last Legislature for a Medical College, such a college not being thought advisable by the regents. This building has an estimated value of about $20,000, and the proceeds will probably be devoted to building a chapel. As for the Historical Society, the Legislature has increased the annual appropriation by $1,500, making a total of $5,000 besides salaries ($2,800) and the use of rooms warmed and lighted. It also prints for the Society a supplementary catalogue and a volume of Collections in alternate years, and for the Academy of Sciences a volume of Transactions in alternate years. It appropriated $10,000 for the purchase for the University of Dr. Lapham's collections, with botanical specimens amounting to 20,000 and geological to 10,000 (to mention no others), and with a library of about 1,000 volumes. It further appropriated $20,000 for the representation of the State at the Centennial, and authorized the printing of the State Geological Report. As this is the same body that practically abrogated the Granger railroad law, it certainly deserves to be remembered and to be imitated by other legislatures.

—The third International Congress of Orientalists is to be held this year at St. Petersburg, beginning on the 1st of September. According to the arrangements made at the second Congress in London, in 1874, the meeting in Russia should have been held last year, but, for reasons not made public, it was postponed. The Committee of Organization has now printed and distributed its rules for the conduct of the session. Suitably enough, the affairs of Asiatic Russia are made the central and leading subject, as Japanese studies were given the same prominence at the first Congress in Paris. Of the ten days' meetings, four will be devoted to them ; the three following will be given to India (Hither and Farther), to Arabia with Egypt and Turkey, and to the rest of Asia ; and then a day each to general Oriental archæology and to Oriental religions. The Committee propose to fix the topics which shall be discussed at the meetings, and no others will be admitted unless they receive the Committee's approval, on proposal by a member, with statement of the views which he intends to bring forward. Only strictly scientific subjects will be taken up ; questions concerning the Christian religion or contemporary politics and industry are excluded. Communications and remarks upon them are to be limited to fifteen minutes for each speaker. Some of these regulations may seem perhaps a little strait-laced ; but they are doubtless intended, and will be effective, to prevent the miscellaneousness, and the monopoly of time by a few interminably long addresses and papers, which did so much to spoil the English Congress. There is a large and active body of Russian scholars and officials thoroughly versed in all matters affecting the infinitely varied and extended interests of Russia in the East, and their communications will certainly make the meeting, as organized, a very profitable one to all who are able to be present, as well as to the world, by the publication of papers and debates. The intended exposition also of objects illustrating the Orient will doubtless be a very rich one. The Russian Government liberally defrays all the actual expenses of the Congress, so that the contributions of members will be available purely for purposes of publication. The sum required to make one a member is $3 of our money (12 francs, 10 shillings or marks), and there is no question that the full commercial value of this sum will be received back in print. Such was the case with the French Congress ; the transactions of the London one are not yet out, though we have an excellent substitute for them in Trübner's very full report. Persons of both sexes interested in the objects of the Congress are admitted as members, and any learned body may assume the position of a member, gaining a right to send an accredited representative, and to receive, like a member, a copy of everything that is published. To the meeting at London many distinguished scholars were sent from Germany, with their expenses paid, by the various local governments ; it is not likely that such an example will be followed this time in America, or that many Americans will make it convenient to go so far, especially in Centennial year. There should be, however, American subscribing members enough to show that the importance of the meeting is appreciated in our country. Professor Whitney, of Yale College, New Haven, has received from the organizing committee the appointment of Corresponding Member for the United States, and intending subscribers are requested to report to him. The secretary of foreign correspondence at St. Petersburg is the Baron Victor de Rosen ; and M. Peter Lerch is charged with the special interests of the exposition.

—In No. 502 of the *Nation* we called attention to the collection of English songs and ballads of the sixteenth century contained in a MS. (Cotton. Vesp. A. 25) of the British Museum, and edited for the *Jahrbuch für Romanische und Englische Literatur* by H. Böddeker. This collection has already run through three numbers (II Bd. Neue Folge, pp. 81, 210, 347), and is now finished in the number before us (III Bd. N. F., 1876, p. 92). Most of these ballads, etc , are now edited for the first time, and in an excellent manner, and the whole collection cannot fail to be interesting and useful. Other articles of interest in the present number are : a version of the old French romance of Renaus de Montauban, from a MS. in the Bodleian Library, Romance words in the mediæval Greek dialect of Cyprus, and the usual philological *mélanges*.

THOMAS'S HISTORY OF PRINTING.*

THE memoir of the author of the 'History of Printing in America,' prefixed to the first volume of the new edition of that work, presents to us a very remarkable man. The story has few parallels. If it can fitly be said of any one that he was "self-made," then surely that term can be applied to Isaiah Thomas. He was born in Boston, in 1749, and when he was only seven years old the straitened circumstances of his mother, a widow, compelled her to bind him as an apprentice to a printer. Saving six weeks' "schooling," his education was wholly gathered in the printing-office. At seventeen he quarrelled with his master, and, imitating the example of Franklin, "retired privately"; for the next four years he worked about from Nova Scotia to the Carolinas, and then returned to Boston and engaged in business on his own account. He was getting fairly started, with a newspaper and young family on his hands, and great schemes in his head for extending his operations, when the Revolutionary war broke out. Thomas was an active "Son of Liberty"—his office had been a place of meeting for the Boston patriots ; his name was on the list of the proscribed—and it followed that he was compelled to pack up and look out a new field for action. He selected Worcester, at that time a town of about a thousand inhabitants, and, to quote the words of an eminent traveller, "rendered it famous throughout all the continent." He was enterprising and ambitious to get on in the world ; and, with a strong mind, he seems to have been gifted with that peculiar sagacity sometimes called "knowledge of human nature," which enabled him to pick the proper men for assistants in his various undertakings, and so to extend his business far and wide. He was, too, a thorough master of his trade. Franklin has said that he was the "Baskerville of America," and Brissot that he was the "Didot of the United States." He was paper-maker, printer, binder, publisher, and bookseller, and eminent, too, in each of these branches. A writer, describing his Worcester establishment in 1797, says : "His printing apparatus consists of ten presses, with types in proportion. . . . His printing apparatus is reckoned the largest in America"; but he also employed presses in Boston and elsewhere in New England, and was concerned at one time in eight bookstores in as many large towns of the country, from Boston to Baltimore. He printed and published Bibles in various forms, psalters, histories, school-books, tracts, juvenile books, newspapers, and magazines ; and, to use the language of one of his contemporaries, "there never came a book from his press that

* "The History of Printing in America, with a Biography of Printers, and an Account of Newspapers. By Isaiah Thomas, LL.D." 2 vols. 2d ed., with the Author's corrections and additions, and a Catalogue of American Publications previous to the Revolution of 1776. Albany: Joel Munsell. 1874. [Vols. V. and VI. of Transactions and Collections of the American Antiquarian Society, Worcester, Mass.]

was not an honor to him and a credit to his art." And presently wealth came to his heart's content. At the age of fifty-five he retired from active business, and for the rest of his days employed himself in projects for advancing the general interests of the town and in literary pursuits very dear to him. He wrote the 'History of Printing in America'; he founded the American Antiquarian Society, and endowed it with a collection of precious books and manuscripts, together with a sum of money ample to secure their preservation. College honors were conferred upon him—Master of Arts and Doctor of Laws—and, living to the age of eighty-two, he died with the respect and love that his worth had so fairly won from every one who had known him.

In preparing to write a history of printing, Mr. Thomas brought together rich stores of material. He provided himself with all the specimens of early American printing that he could lay hold upon ; he regarded the cost as a matter of small moment. In the purchase of files of old newspapers alone he paid out upwards of one thousand dollars. He gathered up the "remains" of Cotton Mather's library, and for this, if for nothing else, he deserves the warmest thanks of the antiquary. We know something of what that library once was through John Dunton's letter, written in 1686 : "I do think he has one of the best (for a private library) that I ever saw. Nay, I may go farther, and affirm that, as the famous Bodleian Library at Oxford is the glory of that University, if not of all Europe (for it exceeds the Vatican), so I may say that Mr. Mather's library is the glory of New England, if not of all America. I am sure it was the best sight that I had in Boston." Many of the productions of the press of Stephen Daye and Samuel Green and John Foster would have been swept from the face of the earth but for the ready hand and purse of Isaiah Thomas.

The first edition of Thomas was published in 1810. It is needless to say that it has been many years out of print. We have seen it priced in catalogues as high as $20, and at public sales it has sometimes fetched even more. At the Rice sale (New York, May, 1870) it was knocked down at $85, but the value of this particular copy had been considerably increased by Bedford's binding. Mr. Thomas had himself made some corrections and alterations, having in mind the reprinting of the work in his lifetime ; and in carrying out his expressed wishes, the committee of the American Antiquarian Society (Messrs. Samuel F. Haven and Nathaniel Paine of Worcester, and Joel Munsell of Albany) seem to have regarded themselves as performing a "labor of love" for the author. In that view they have permitted many serious faults to pass into the second edition, for no better reason, seemingly, than that the faults stood in the first edition. Upon a careful examination of this work we feel constrained to say, repeating Mr. Thomas's words in describing another book, that it "abounds with errors." The dates when printers and booksellers first engaged in business, and of collateral events, are frequently wrong. There are, too, many confusing repetitions of names and circumstances, and some are so glaring that we wonder they could have escaped good proof-reading. Of John Mein, a Boston printer and bookseller, it is related that he was "from Edinburgh," that he was "from Scotland," was "born in Scotland," and was "a Scotchman." We are furnished with two accounts of Mecom's *New-England Magazine*. In one we are informed that it contained about *fifty* pages, "but no date either of month or year appeared in the title-page or in the imprint" ; and in the other that each number contained *sixty* pages, and that "this work is without date, either in the title, in the imprint, or in any of its numbers." And yet the magazine is very distinctly dated, in the title and in another place, the first number reading "for August, 1758." The statement is made that Mr. Increase Mather's 'Mystery of Israel's Salvation' was printed in London by John Allen, and hence it is supposed that Allen "came to Boston by encouragement from the Mathers." It happens, however, that the book was not printed by, but *for*, John Allen, and consequently the inference that the Mathers encouraged the printer to come over has nothing to support it. We are told that Samuel Sewall, who succeeded John Foster at the Boston press, in 1681, was "not a printer, but a magistrate." Taking Sewall's own words, he "practised something in that science," and he took no little credit to himself for that he printed the Assembly's Catechism with his "own hand." He certainly was not a "magistrate" until 1684. Mr. Thomas says of Gamaliel Rogers that "about the year 1729 he began business in a printing-house near the Mill Bridge," Boston, when in fact he was in business as early as 1727 in Long Lane, as his imprints sufficiently prove. Henry Phillips published Mather's 'Renewal of the Covenant' in 1677, "at his shop in the West end of the Town-house in Boston"; but Thomas makes no mention of Phillips, nor is this title to be found in the list of "Ante-Revolutionary Publications." We have before us a book printed in New York "by Samuel Brown, at the Foot of Pot Baker's Hill, between the New Dutch-Church and Fly-Market, 1766"; the 'History of Printing' makes no mention of this printer either. In the list of subscribers to Prince's 'Chronology,' printed in 1736 (the subscription was begun in 1728), we find the name of Charles Harrison, "bookseller" ; and in the same list Samuel Eliot, "bookseller," is down for twelve books. Thomas's date for Harrison is 1739, and for Eliot 1740, as the "earliest periods when they are known to have been in business." There is a paragraph of three lines (II., 231) which contains three mistakes. John Edwards, bookseller (son of Joseph), is mentioned as having commenced business in 1767 and as having died March 9, 1778. According to the *News-Letter* of March 17, 1768, young Edwards died March 10 of that year. He is known to have been in business, and his advertisements are in the newspapers, as early as 1763. But to make all the needed corrections would be to extend this notice beyond reasonable bounds, and we run the risk of being monotonous when we add even the following, which are still barely a tenth part of what we might produce if challenged :

Alford Butler's shop, in 1727, was "at the lower end of King Street, near the Crown Coffee-house" (see Robert Russel's 'Seven Sermons' printed for him in that year). Thomas's date is 1729.

John Edwards, bookseller, "next door to the Light House Tavern, on the South side of the Town-House in King-Street," published several books as early as 1718, for a list of which see the catalogue at the end of Increase Mather's sermon at the ordination of Thomas Walter, printed in 1718. Thomas's date is 1719.

Benjamin Elliott, bookseller (Thomas, II., 214), should be *Eliot*.

John Eliot, "under the Great Tree at the South End," was in the book trade as early as 1723 (see 'Contemplations on the State of Man,' printed by T. Fleet, in that year.) Thomas's "earliest period" is 1728.

James Franklin, jr., died *April* 21, 1762 (see *Boston Gazette* of May 3, 1762). Thomas's date is August 22.

Benjamin Gray, bookseller, was in business as early as 1715 (see Cotton Mather's 'Benedictus'). Thomas's date is 1719.

Thomas Hancock was in business as a bookseller in 1725, "at his shop in Ann-street" (see Dr. Colman's two sermons on the Sabbath). Isaac Woody, "bookbinder and bookseller," was in the employ of Hancock, as appears by an indenture dated January 11, 1725 ; he agrees "to work in said Hancock's employ at binding and selling books for him at his shop in Boston for the term of two years, at £50 per annum." Thomas puts Hancock "first in business" in 1726.

Our eyes rest wonderingly upon the "Indian Gazette" which serves as an illustration to the chapter on Newspapers. Mr. Thomas must have regarded it as "authentic," for he has somewhere applied that term to it. We are not disposed to be hypercritical, and yet we cannot withhold the opinion that, considering the importance bestowed upon the "Gazette," it would have been a creditable thing to have stated that it was an exact facsimile of a plate of "Hieroglyphicks" furnished by the Baron La Hontan, in his 'New Voyages to North America,' published in 1703. Its authenticity is another matter. La Hontan is not generally regarded as ranking with the best authorities. Charlevoix says of him, referring to the 'New Voyages,' that he "had a mind to render his account entertaining, and to that end everything true or false was the same to him." There are many reasons for supposing that these hieroglyphics sprung fresh from the brain of La Hontan. They can be made to read almost anything, as may be seen on comparing the baron's "explication" with Thomas's.

This work will be regarded as the principal authority upon the subject of which it treats, and, viewing it as such, we must hold the revising editors responsible for many of its misstatements. They had the means at hand for correcting almost all the errors the author had been led into. To have made the corrections would have been esteemed an act of justice to Thomas ; not to make the essential ones is only discreditable to themselves. The catalogue of 'Ante-Revolutionary Publications' (new matter in this edition), compiled mainly by the late Dr. S. F. Haven, Jr., although far from being complete, is an important contribution to American bibliography, and exhibits a vast deal of painstaking research. We have here a list of about eight thousand titles, arranged by years, commencing with Pierce's Almanac, printed at Cambridge in 1639, and ending with Zubly's 'Sermon on the Law of Liberty,' printed at Philadelphia in 1775. In many instances the collations are given, and there are occasional notes showing where the originals are to be found. The typographical execution of these volumes is, like everything from Munsell's press, a highly finished piece of work. We wish we could say as much for the binding—for that is as bad as muslin can make it—and books like these deserve better covering.

RECENT NOVELS.*

MRS. ALEXANDER has decidedly the knack of writing readable novels. Usually she takes some rather commonplace incidents for the plot and some rather commonplace people for the characters, but she brings to her task

* 'Her Dearest Foe : A Novel. By Mrs. Alexander, author of 'The Wooing O't,' etc.' Leisure Hour Series. New York : Henry Holt & Co. 1876.

so much humor and vivacity that only a very crusty critic would object to following the simple fortunes of her simple people. It is impossible to avoid the thought that the author would do better not to saturate her writing so thoroughly with notions of social distinctions, and to avoid the monotony of pairing off her pleasant heroines with titled men whose main charm is an indefinable gentility; but, after all, this conclusion, of which she is so fond, is only part of the general simplicity of her novels. In 'Her Dearest Foe,' for instance, we find a young widow, Mrs. Travers, whose old and jealous husband has left his money away from her to a relative of his, a harsh-voiced baronet, Sir Hugh Galbraith, who only knew Mrs. Travers by name and had conceived a great dislike for her. Mrs. Travers refuses to accept an annuity Sir Hugh offers her, and in company with a young companion goes to a sea-side town, and under the name of Mrs. Temple opens a shop, the Berlin Bazaar, where she sells worsted, gloves, and such things to the neighboring gentry. Sir Hugh meets with an accident when hunting and is brought to the Bazaar and put into the rooms which lodgers are in the habit of taking, and during his convalescence falls in love with Mrs. Temple, who breaks the will, gets back her own, and in time marries Sir Hugh, while she also finds several high-born relatives of whom before she had known nothing. The story is very slight, but it is well told. There is a great deal of love-making, and it is prettily managed; there is, too, some amusing caricature in the curiosity of Lady Styles and of Dr. Slade. It is a clever touch which tells us how Mrs. Travers gets word to the villain who, out of love for her, has wrought the mischief, and gives him a chance to run away. As for Tom and Fanny, the second pair of lovers, they bear a strong likeness to the young couples in Mrs. Stowe's later novels, and the impatient reader yearns to throw them over the cliff at the sea-side resort where most of the scene is laid. If the moralist has to draw the lesson that respectability is the best policy, he will find it agreeably sugared by Mrs. Alexander's humor.

Miss Amanda M. Douglas takes life more seriously; the ordinary inanities of courtship in which there is nothing more serious than a misinterpreted frown have no charm for her; she reads between the lines those deep tragedies which escape Mrs. Alexander's smiling notice, and when she sets about writing a novel like 'Drifted Asunder; or, the Tide of Fate' the reader is pretty sure to get his money's worth of excitement. 'Drifted Asunder' is something of a misnomer, however, for Dora Tremaine is abducted from her husband Ralph after they had been two years married, and on the very day she for the first time feels herself really in love with him, by a very unpleasant Enoch Arden of whom Ralph had never heard. Still it would be the right word to use about Ralph's conduct when his wife was taken away and he did as little as he conveniently could about it, and consoled himself with an old flame whom he invited to stay with him. Justice though slow is sure, and when everybody turns out to be everybody else matters get straight.

Miss Douglas is an old offender who does not improve. Mr. Justin McCarthy, on the other hand, has not always succeeded in writing the best novels in the world, but his last one—'Dear Lady Disdain'—is certainly deserving of commendation. The heroine, whose nickname gives the title to the book, is an attractive creature, as honest as possible, with a sort of manly generosity and heartiness which distinguish her from most heroines, and bring her close to some real human beings. The name, Lady Disdain, does not suit her over well, for, so far from being disdainful, she has a very pleasing comradeship with every one she meets. The men are reasonably well drawn; the successful lover is somewhat vague and misty, but the aspiring barber, Natty Cramp, and the lover of old china, Ronald Vidal, are well set before the reader—the former especially. Throughout, Mr. McCarthy has shown his earnest desire to improve, and his knowledge of the right method by holding his hand and not overdoing either the unattractive or the ridiculous side of what he has undertaken to describe. In what he has written about this country this discretion is very noticeable, and he has avoided the easy temptation to make too much of its lack of fascination and rawness. Even Natty Cramp, whom many story-writers would have blackened with obloquy, is treated with great fairness, and there is something very pleasing in the lack of exaggeration in describing the woman's-rights advocate—Miss Sibyl Jansen.

'Mathilda of Canossa, and Yoland of Groningen' is a novel with a strong theological bias, and although, as the translator tells us, it contains "a true and accurate account of the great struggle between the Emperor Henry IV. and Gregory VII., the great Pope, involving as it did the most sacred liberties of the Church," yet it is but a parable serving to throw light on the struggle at present going on between Germany and the Vatican. Some readers will prefer to get their information about these matters from the newspapers; others, again, may think it wiser to wade through this historical novel, which is full of gems like this:

"The landlord, on his part, seeing that his customers were becoming animated, leaned his elbows on the table, his chin in his hand, and began thus: "'I would fain know, indeed, who could stand against ye, my gallants? Ye are the most famous marksmen of the neighborhood, they who strike the stoutest blow. . . . Ye are out for work to-night, I wot me; and they who would bar your passage will feel the point of your lances or the weight of your battle-axes.'"

And yet the author charges those who hold different theological views from his own with reproducing them "more or less openly every day under the exterior of an elegant and florid style."

'The Little Joanna' is a novel of Southern life since the war in a community which keeps alive the old traditions of society, and which seems to be as ignorant of Whipper and Moses and of the Ku-klux as of snow and ice. The heroine has some natural traits, and there is something amusing in the first chapters; but when the very elegant Anita appears and begins to talk, the story becomes too high-toned to charm the fastidious reader. The slender vein of talent which it shows hardly suffices for a whole volume.

'Jonathan' is one of those clever English novels dealing with rustic life which are written with the utmost care, and profess to give an accurate representation of the country people and their humble ways. At times it reminds us of parts of 'Far from the Madding Crowd' with one important element, the humor, left out; and, as in that novel, we have rather tense dramatic situations prolonging themselves at times almost to morbidness. The characters are well drawn, although the feeble-minded Priscilla is hardly so impressive as she was apparently meant to be made, and the story is well arranged to bring out the main qualities of the different *dramatis personæ*. 'Jonathan' is decidedly above the average of novels, although it approaches that class which so busy themselves with the pathology of the human mind that after reading them one wants a long walk in the fresh air. But this one escapes that danger, it is only fair to say.

'Throstlethwaite' is another readable story, the main interest of which lies in a young girl's troubles with one lover who is unworthy of her, and her final freedom from him, and her attainment of greater happiness with another man much more deserving of her. She is well drawn, and in good contrast with her stands her fashionable married sister. The two young men, too, are natural and lifelike, and although the villains of novels are apt to carry with them a strong, unmistakable odor of brimstone, in this case the evil heart is hidden beneath a calm, but not too calm, exterior, and the good young man is no shadowy supporter of all the virtues, but is a very good copy of a human being.

In 'My Young Alcides' Miss Yonge has taken the old myth of Hercules and his doings, and retold the story, substituting a modern Australian for Hercules, and an escaped menagerie lion for that which the god slew, and making such other changes as give a general resemblance to the traditional fable without slavish adherence to it. Some of the incidents are cleverly managed, as that of the Augean stables, the apples of the Hesperides, and the Lernæan hydra; others are less well treated, but, no effort having been made to adapt everything which has been said about Hercules, the story has a consistent life of its own which gives it a place among Miss Yonge's good works, though not with her best. Even if her novels do not carry a great many guns, they are very much liked by a large class of readers. They have a homelike flavor which many people find very acceptable.

'Wooed and Married' bears in its title a rather frank avowal of those subjects which writers of fiction have seldom found it to their interest to eschew. Here we have our old friend, the poor governess, apparently insignificant and girlish; but, although she has a way of yielding to her quick temper, she has the good fortune to interest a number of people in her, and in time, after much delay, she marries the squire "with the quizzical eyes." There is in all this a good deal of "gushing"; but there is less of it when the author fairly buckles down to business, and it is her digressions which are the most tiresome things in the book. There is

'Drifted Asunder; or, the Tide of Fate. By Amanda M. Douglas, author of 'In Trust,' etc., etc.' Boston: William F. Gill & Co. 1876.

'Mathilda of Canossa, and Yoland of Groningen. By Rev. A. Bresciani, S.J., author of 'The Jew of Verona,' 'Lionello,' etc.' Translated by Anna T. Sadlier. New York: D. & J. Sadlier & Co. 1875.

'The Little Joanna: A Novel. By Kamba Thorpe.' Appleton's Library of American Fiction. New York: D. Appleton & Co. 1876.

'Jonathan: A Novel. By C. C. Fraser-Tytler, author of 'Mistress Judith,' etc.' Leisure Hour Series. New York: Henry Holt & Co. 1876.

'Throstlethwaite. By Susan Morley, author of 'Aileen Ferrers.'' Philadelphia: J. B. Lippincott & Co. 1876.

'My Young Alcides. By Miss C. M. Yonge.' New York: Macmillan & Co.

'Wooed and Married: A Novel. By Rosa Nouchette Carey, author of 'Robert Ord's Atonement,' etc.' Philadelphia: J. B. Lippincott & Co. 1876.

besides this a more serious fault—the wholesale slaughter and maiming of so many of the characters. Rheumatic fever, dislocated ankles, blindness, heart disease, hunting accidents, and sudden death make the story almost as alarming reading as a report of sewage commissioners; but then they supply incidents enough to interest the most callous.

JORDAN'S NIBELUNGE.*

WITH the exception of the Homeric controversy, no literary subject has attracted so much study and elicited such diversity of opinion as the investigation into the authorship and composition of the Nibelungenlied. The *odium theologicum* has been equalled, if not surpassed, by the *odium philologicum*. On the one side, Lachmann and his followers, nicknamed Lachmannians; on the other, Holtzmann; more in the middle, Zarncke. For a long while it seemed an insoluble problem whether the poem was indeed an artistic unity, the production of one man, or only a string of loosely joined rhapsodies. It was not until quite recently, when Pfeiffer, and especially Bartsch, discarded prior methods of investigation, and subjected the poem, line by line, to the minutest analysis of rhythm and rhyme, that the real facts began to appear. It will not be necessary for us to do more than refer our readers to a masterly prize essay, by Hermann Fischer (Leipzig, 1874), entitled 'Die Forschungen über das Nibelungenlied.' This essay gives a just and clear survey of the question in all its stages and bearings. We have not the space for even the briefest *résumé* of Fischer's conclusions. Suffice it to single out a few of the more prominent. The St. Gall manuscript (Codex B) is upon the whole the best, but both it and the Lassberg manuscript (Codex C) are probably revisions, made about 1200 and independent of each other, of an elder form of the poem, made about 1170. This elder form was itself the revision of a still older poem, the oldest *German* form, composed about 1150, probably by the poet called the Kürenberger. But the Kürenberger's version was based in turn upon a Latin work, whether in prose or in verse is uncertain, made by Konrad, the clerk of Bishop Pilgrim of Passau, about the end of the tenth century. All these forms prior to B and C are no longer extant. The structure of the poem, as we have it, consists in part of ancient Teutonic myth and hero-legend, the Sigfrid saga, and in part of historical legend embodying the overthrow of the Burgundians by Attila. The peculiar character given to the Huns in the poem, and the transfer of the scene of the overthrow of the Burgundians from the Rhine to the Danube at Gran, are due to the influence of the Hungarian wars of Henry III. in the middle of the eleventh century. The tone and style of chivalry pervading the poem are the product of the latter half of the twelfth century.

It is thus evident that the poem, as recorded in Manuscripts B and C (the leading versions), has been shaped by forces and impulses, some of which outdate all history, others of which are perfectly susceptible of historical analysis. The tendency of recent investigation is to strip the Lied of its whilom atmosphere of mystery, to show how the several ethical and historical motives have been introduced one by one, and thereby to make it more human, so to speak, and more attractive as a study. The Lied is undoubtedly the most curious blending of myth, history, tradition, and individual authorship. Those who wish to study it cannot do better than to read Bartsch's annotated edition (in Brockhaus's series of German Classics of the Middle Ages) in connection with Bartsch's or Simrock's translation and Fischer's essay. Birch's English rendering (Berlin, 1848), although grievously defective, may be of help. Jordan's Nibelunge, be it said once for all, is anything but the Nibelungenlied of Bartsch, Simrock, and Fischer. The difference is twofold: of form and of substance. In form Jordan has attempted the alliterative measure. The Nibelungenlied is written in stanzas of four lines, each pair of lines making a rhyme-couplet. Jordan discards rhyme and governs the flow of the line by what he would have us accept as alliterative beats. Whoever has read ten lines of Beovulf, or the genuine Hildebrandslied, or the Muspilli, will feel the difference. True alliteration is rugged and powerful, the emphasis falls naturally upon the alliterative syllables, dragging the rest of the line after it. Jordan's verse is smooth and discursive, emphasis and alliteration do not coincide, and the flow is iambic or anapæstic. It would be easy to select pages by the score where one can disregard initial syllables and read the lines as mere irregular blank verse, to say nothing of incessant and complicated *enjambements*, which are contrary to the very being of true epic simplicity.

To show the difference between Jordan and the 'Nibelungenlied' in substance, would require a volume. We can only indicate a few salient points. The 'Sigfridsage' is, in the main, the first part of the 'Nibelungenlied,' down to the assassination of Sigfrid. In 'Hildebrants Heimkehr' the hero is Hildebrant, into whose adventures the account of the destruction of the Burgundians, as given by the second part of the 'Nibelungenlied,' is intercalated piecemeal. Both of Jordan's songs are great expansions of the primitive myths and legends. The relation of 'Hildebrants Heimkehr' to the 'Sigfridsage' is that of the 'Odyssey' and the 'Æneid' to the 'Iliad.' Jordan has borrowed allusions, traits of character, incidents, episodes from far and near. Greek, Latin, and mediæval mysticism is put under contribution. The gods of Northern mythology sit in council on the Brocken, after the fashion of Jupiter and his court on Olympus. Volant reminds us of Goethe's Mephistopheles. The incident with the love-potion reminds us of Tristan and Isolt; the suckling of Sigfrid by the doe, of Romulus and Remus. Hildebrant is a northern Ulysses and Æneas. His return, which is barely outlined in the original 'Hildebrandslied,' and which—so far as we can judge from the fragment—has a tragic issue, is expanded by Jordan into a glorious life with peace and prosperity at its close. His wife Ute is a Swabian Penelope, and his son Hadubrand a mediæval Telemachus. Kriemhild's daughter, Swanhild, whom Hildebrant rescues from captivity in Norway, is in certain respects the Gudrun of the Low-German saga. Finally, there are passages in which the poet alludes to events of our own day, with intent to make the Hohenzollern-Brandenburg dynasty the continuers, as it were, of the fabulous Wölsungs.

We have said enough to make it plain how Jordan's song-cycle differs from the true Lied, which is a simple, straightforward story with but two themes—Sigfrid's glorification and Kriemhild's revenge. But while warning our readers not to look in Jordan's verses for the Sigfrid and Hildebrant stories as embodied in the mediæval song and reconstructed by modern scholarship, we do not join in the hue-and-cry raised in Germany against the author's innovations. German scholars are too much given to regarding folk-lore as their especial domain, upon which no one can poach without incurring the penalties of the law. This is a view which we cannot share. It seems to us that any one in thorough sympathy with the subject, and sufficiently learned to read the originals, has a right to treat these topics as he may see fit, provided he treat them in the poetic spirit. The mediæval poets themselves did so. We think that Jordan has displayed much ingenuity in grouping and expanding isolated fragments, and remarkable power of invention. There are passages, it is true, where he becomes trivial and almost commonplace, and very often his reflections are abstruse and wearisome from their length. On the other hand, there are other passages full of beauty and dramatic or epic force. His range of vocabulary is remarkable. The reader who gives himself up to the perusal, without concerning himself about the true Nibelungenlied, will probably come to the conclusion that he has enjoyed two exciting and well-told stories. We think that the insertion of brief arguments at the opening of the cantos would make the thread of narrative less difficult to follow, and that the want of occasional foot-notes is a decided defect. Few unprofessional readers will recognize, for instance, in Bern the mediæval form of Verona.

Saxon Studies. By Julian Hawthorne. (Boston: J. R. Osgood & Co. 1876.)—Mr. Hawthorne is decidedly disappointing. He strikes us as having inherited a certain portion of his father's genius. He writes with vigor and vivacity, and his style has a charm of its own; but he perpetually suggests more than he performs, and leaves the reader waiting for something that never comes. There is something masculine and out of the common way in his manner of going to work, but the use he makes of his talent is not characterized by a high degree of wisdom, and the reader's last impression is of a strange immaturity of thought. 'Saxon Studies' is such a book as a very young man might write in a season of combined ill-humor and conscious cleverness; but it is a book which most young men would very soon afterwards be sorry to have written. We suspect that this intelligent compunction will never be Mr. Hawthorne's portion, and the feeling makes us judge his volume with a certain harshness. The author fairly convinces us that he is not likely ever to understand why the tone in which he has chosen to talk about the worthy inhabitants of Dresden is not a rational, or a profitable, or a philosophic, or a really amusing one. Mr. Hawthorne spins his thread out of his own fancy, and at the touch of reality it would very soon snap. He had a perfect right, of course, to produce a fanciful book about Dresden; but such a book, as it gives our imagination some trouble, is more than usually bound to justify itself. It must have a graceful, agreeable, and pliable spirit to reward us for the extra steps we take. But Mr. Hawthorne has quite violated this canon

* 'W. Jordan's Nibelunge. Erstes Lied, Sigfridsage; Zweites Lied, Hildebrants Heimkehr.' New York: Westermann. Part first, second Am. ed. Part second, first Am. ed.

and has been fanciful only to be acrimonious, and reflective only to be —it is not too strong a word—unwholesome. He has written a *brooding* book, with all the defects and none of the charms of the type. His reveries are ill-natured, and his ingenuity is all vituperative.

He declares, in an amusing preface, that "his interest in Saxony and the Saxons is of the most moderate kind—certainly not enough to provoke a treatise upon them. They are as dull and featureless a race as exists in this century, and the less one has to do with them, the better. But the plan of his work requiring some concrete nucleus round which to group such thoughts and fancies as he wished to ventilate, and the Saxon capital chancing to have been his residence of late years, he has used it rather than any other place to serve his turn in this respect." This strikes us as an explanation after the fact. In so far as 'Saxon Studies' had a "plan," we suspect it consisted of the simple desire on the author's part to pour forth his aversion to a city in which, for several years, he had not been able to guard himself against being regrettably irritable and uncomfortable. Dresden has served his turn, and enabled him to write his book; he ought at least in fairness to admit that there was something to say about her. But in truth, of what there was to say about her, even for ill, Mr. Hawthorne strikes us as having made but little. Of "plan" his volume contains less than the pardonable minimum; it has little coherency and little definiteness of statement. It is taken for granted in the first few pages, in an off-hand, allusive manner, that the Saxons are an ignoble and abominable race, and this note is struck at desultory intervals, in the course of a good deal of light, rambling talk about nothing in particular, through the rest of the volume; but the promise is never justified, the aversion is never explained, the story is never told. Before we know it we have Mr. Hawthorne talking, as of a notorious fact, about "the cold, profound selfishness which forms the foundation and framework of the national and individual character in every walk of life, the wretched chill of which must ultimately annul the warmth of the most fervent German eulogist," etc. This is a sweeping but an interesting charge, and the reader would have been glad to have the author go a little into the psychology of the matter, or at least into the history of his opinion—offer a few anecdotes, a few examples of Saxon selfishness, help us to know more exactly what he means. But Mr. Hawthorne is always sweeping and always vague. We can recall but two definite statements in his volume—that bearing upon the fact that the Germans, indoors, are pitifully ignorant of the charms of pure air, and the other upon the even more regrettable circumstance that they condemn their women to an infinite amount of hard labor. Here is an example of some of the reflections provoked in Mr. Hawthorne by the first-mentioned of these facts: "As might be imagined, such lung-food as this gets the native complexion into no enviable state; in fact, until I had examined for myself the mixture of paste and blotches which here passes for faces, I had not conceived what were the capacities for evil of the human skin. I have heard it said—inconsiderately—that the best side of the Saxon was his outside; that the more deeply one penetrated into him, the more offensive he became. But I think the worst damnation that the owner of one of these complexions could be afflicted with would be the correspondence of his interior with his exterior man."

In spite of Mr. Hawthorne's six years' residence in Dresden, his judgments appear to be formed only upon those matters which limit the horizon of a six weeks' sojourner—the tramways, the cabmen, the policemen, the beer-saloons. When he invites us to penetrate into a Dresden house, we find he means only to gossip rather invidiously about the parties, and to talk about the way the doors open and the rooms are distributed. The most successful pages in his volume are an extremely clever and amusing supposititious report, from a local newspaper, of the appearance of the first street-car, and a charming sketch of a beer-maiden, or waitress in a saloon, who invites the author and his friend to be her partners at a ball. These are the only cases we can recall in which Mr. Hawthorne's humor is not acrid and stingy. For the rest, he gives us no report of his social observations proper, of his impressions of private manners and morals; no examples of sentiments, opinions, conversations, ways of living and thinking. Upon those other valuable sources of one's knowledge of a foreign country —the theatre, literature, the press, the arts—Mr. Hawthorne is entirely dumb. The only literary allusion that his volume contains is the observation that the relation of Schiller and Goethe to the Germans of the present day may be described as sublimity reflected in mud-puddles. The absence of those influences to which we have alluded makes 'Saxon Studies' seem unduly trivial and even rather puerile. It gives us the feeling that the author has nursed his dislikes and irritations in a dark closet, that he has never put them forth into the open air, never discussed and compared and intelligently verified them. This—and not at all the fact that they *are* dislikes—is the weak point of Mr. Hawthorne's volume. He had a perfect right to detest the Saxons, and our strictures are made not in the least in defence of this eminent people, but simply in that of good literature. We are extremely sorry, indeed, that so lively an aversion should not have been better served in expression. Even if Mr. Hawthorne had made the Saxon vices much more vivid, and his irritation much more intelligible, we should still find fault with his spirit. It is the spirit which sees the very small things and ignores the large ones—which gives more to fancy than to observation, and more to resentment than to reflection.

Angola and the River Congo. By J. J. Monteiro. (New York: Macmillan & Co. 1876.)—This book is somewhat of a rarity in African literature. It contains no hair-breadth escapes nor improbable hunting adventures, and it is written by a trained scientific observer, who has a distinct idea of the sort of information he desires to impart and a very lucid method of imparting it. He is fortunate, too, in writing of a country which is practically unknown, being that part of Lower Guinea intermediate between the scenes of Andersson's travels on the south and those of Du Chaillu on the north. Mr. Monteiro does not give us much geographical information beyond a conjecture as to the course of the River Congo, concerning which we may hope for more definite information from Lieut. Cameron, but devotes himself to a description of the resources of a country of tropical luxuriance and to the customs of the various tribes of blacks, as observed during a residence of fifteen years. Interspersed with these are descriptions of birds and plants, written in a style sufficiently plain for a mind of ordinary culture, and supplemented, for the benefit of the scientific zoölogist, with reference notes to the published Transactions of zoölogical societies.

The resources of the country are principally "Andansonia fibre" (the inner bark of the baobab-tree), for use in paper-making, coffee, ivory, gums, india-rubber, and several kinds of nuts for the extraction of seed-oils. The supply of these would seem to be almost unlimited, and the exports are yearly increasing in spite of hindrances from the ignorance of the blacks and the corruption and carelessness of the Portuguese officials. The principal food of the negro is the mandioca root, which is eaten raw and in various preparations; it is cultivated by the women, and requires but little attention. Copper and malachite mines were worked in several localities, but were not profitable, owing to a variety of adverse causes, none of which are, however, considered insuperable. The character and customs of the natives are described at great length. According to Mr. Monteiro, the negro of that part of the coast is simply an imperfectly developed being, with "an organically rudimentary form of mind," and cannot be judged by the same standards as other human beings. "He knows not love, affection, or jealousy"; he steals and lies, not from viciousness, but from an incapacity to appreciate the wrong of it; "he has no idea of a Creator or of a future existence, neither does he adore the sun nor any other object, idol, or image; his whole belief is in evil spirits and in charms or fetishes; mere peaceable, vegetarian, prolific human rabbits and guinea-pigs, in fact." Missionary labor, as it has been conducted among them (*i.e.*, without first inculcating habits of industry), is a cruel waste of money which might have been charitably expended elsewhere with beneficent results. The reason of the rudimentary character of the negro is found in the climate, whose malaria has in countless ages killed off the more highly developed, and, on the principle of the survival of the fittest, has left those who have sluggish physical natures, without delicate nerves or sensibilities, and whose minds are of a correspondingly imperfect quality. The author is of opinion that the full development of the riches and capabilities of Tropical Africa can only be attained by the introduction of Coolies and Chinese, and the gradual extinction of the negroes, or the merging of them into a more highly organized race. On the future of their successors, exposed to the same climatic influences, he does not permit himself to speculate.

The Centennial Book of the Signers. By William Brotherhead, author of the 'Book of the Signers,' etc. (Philadelphia: W. Brotherhead. 1876.)—Mr. Brotherhead's second venture in reproducing facsimiles of autograph letters of the signers of the Declaration of Independence makes, with the accompanying letterpress, a heavy portfolio containing nearly three hundred pages, printed upon large paper. Any one who has learned the necessity of economizing shelf-room may well hesitate before accepting even as a gift so ponderous a memento of our centennial festival, nor will his hesitation vanish on reading the "Historical Monograph" with which the work opens. This is an odd jumble in the guise of a review of the progress of the century, as a sample of which we take at random the following passage:

"Among the numerous great men which [*sic*] this country has added to the roll of science, Agassiz, David Dale Owen, Leidy, and Silliman are prominent"—certainly a most curious selection. We have, in fact, encountered in this "Monograph" but a single sentence which has repaid us for reading it, and even that is very clumsily expressed. Mr. Brotherhead states from his experience as a librarian, and taking an average of fifteen years, that "where one book of any other author is read, Cooper's works are read ten times oftener." The "Monograph" is followed by "Brief Histories of the Original Thirteen States," also written in a singularly careless manner, as in the failure to enumerate Cornell among the leading colleges of New York, and in endorsing by adoption a statement such as this: "The University of Pennsylvania, the Pennsylvania Hospital, and the medical department of Pennsylvania and Jefferson Medical College, are 'the most celebrated and successful of their class in the country.'" The "Lives of the Signers" are next briefly sketched; then come "Proceedings in the Congress of the United Colonies respecting a Declaration," the text of the Declaration itself, an interesting but (we must say) thoroughly muddled discussion of the place in which Jefferson composed the Declaration, an account of the present Exposition buildings with views, and, finally, the autographic facsimiles. Here at last, one might think, is ample reason for giving house-room and shelf-room to 'The Centennial Book.' But the letters, except as mere specimens of handwriting, have little value. A considerable number are letters either of introduction and recommendation, or relating to business matters of purely personal interest. One, by Thomas Lynch, is supposed to be the only autograph of this signer, save that affixed to the Declaration, extant; and one, by John Adams, is genuinely characteristic of the man as well as reflective of the spirit of the time. Each sheet as a rule contains the writer's likeness, or a view of his birthplace or residence, or some memento of his career. But all this lithographic work seems to us very poorly executed. The letterpress, on the other hand, is exceptionally handsome. Mr. Brotherhead's own designs of shields for the several States are as inartistic as possible, yet have (with a few anachronisms) an archaic look in keeping with the period commemorated, and are not altogether unpleasing.

Memoirs of Rev. Charles G. Finney. Written by Himself. (New York: A. S. Barnes & Co. 1876. 12mo, pp. 477.)—The publication of President Finney's life is certainly very opportune in these days of revivals, for he was the great revivalist of his day—a man of genuine and original power, by the side of whom we fancy that even Moody would shrink into very small dimensions. How completely this subject gives a character to the book is shown by the fact that "Revival" appears as the heading of eighteen out of the thirty-six chapters, and is a topic in most of the others. Even to one who wholly disbelieves at once in the theology and the religious philosophy of the book, it is interesting reading. The man was heartily in earnest, and tells his story with the graphic power that made him an effective preacher of the first rank. Of the value of his revival work, as of revival work in general, we do not propose to speak in this place. We shall content ourselves with alluding to one out of many cases of conversion described in this memoir—namely, that of the daughter of a certain Mrs. B. (p. 149), "manifestly regarded by the family as almost perfect." There is a certain naïveté in the remark that follows: "Her life had been so irreproachable that it was very difficult to convict her of sin." But it was Mr. Finney's business to convict her of sin. If she had committed no sin, she must, at any rate, be made to believe that she had; so he proceeded deliberately to worry the poor girl until, as usually happens when a strong and plausible man gets hold of an innocent and trusting nature, "she broke thoroughly down, and came out into the kingdom, as beautiful a convert as, perhaps, I have ever seen."

Channing, sa Vie et sa Doctrine. Par René Lavollée. (Paris: Plon; New York: F. W. Christern. 12mo, pp. 301.)—The reputation of Channing is not one of those that become less as time goes on. The principle with which his name is most associated—the dignity and perfectibility of man—has in many quarters been diluted to a weak sentimentality, inconsistent with good government and the order of society; but if we go to Channing's own words we find constant recognition of the limitations and necessary safeguards which must accompany it. With these limitations and safeguards, it is the indispensable foundation of all progress. It is exceedingly interesting to meet with an appreciative treatise upon the life and labors of this American Unitarian by a sincere and devout French Catholic; and the publication of this little book ("couronné par l'Académie des Sciences Morales et Politiques") is enough to prove that the "liberal Catholic" (pronounced a logical impossibility) is still to be found—in larger numbers, no doubt, than the Ultramontane leaders would desire. The most interesting parts to us are those which make a practical application of Channing's principles to the situation of France; for example, p. 151, where we find a long and instructive passage upon the character and aspirations of the laboring classes. M. Lavollée does not appear to have studied our party politics so carefully as our theology and social philosophy; the "Whig or Republican party" is said to have represented "the principles of union between the States, of individual liberty and popular government, in opposition to the Democratic party, favorable to the independence of the States, the restriction of the individual franchise, and aristocratic ideas"—a curious mixture of correct and incorrect, not at all unnatural, however, in the curious phases through which party principles passed before the war.

A Few Suggestions on Tree Planting. By C. S. Sargent, Director of the Botanic Garden and Arboretum of Harvard University. (Boston, 1876.)—Nurserymen and dendrophilists never tire of quoting the Laird of Dumbiedikes' advice: "Be aye sticking in a tree, Jock," etc. The Laird, being then *in articulo mortis*, may be excused for not having followed up his excellent advice with practical directions how to do it; and the present pamphlet, more leisurely prepared, does not supply the omission. In his next contribution to the Massachusetts State Board of Agriculture (from whose Report for 1875 the article before us is reprinted), we hope Prof. Sargent will do so; for not a little zeal in tree-planting loses its reward for lack of knowledge in this seemingly simple matter. However, as trees will never be planted in the large and systematic way here recommended until the importance of the culture is demonstrated, it is well that the present publication should deal, as it does, with this preliminary question, and show, first, that a reclothing of otherwise nearly useless soils with forest may have an appreciably good effect in the increase or more equable distribution of summer rain; and, secondly, that in the long run it must needs be, when judiciously managed, a profitable employment of such land. It is stated "that forests, in order to maintain normal physical conditions and to supply the materials so essential to every branch of industry, should occupy about twenty-five per cent. of the area of the country to be influenced and supplied by them." New England could surely supply her quota, and be beautified as well as enriched thereby; while in our Western States the greater dearth of lumber may soon make it profitable to cover even that amount of arable land. Prof. Sargent indicates the trees which may be most advantageously planted in his native State, viz., first of all white ash, then European larch, Scotch pine, then hickory, sugar-maple, and the European as well as the American elm. The case is strongly presented, without being overdone, and in a practical way, the financial part worked out with estimates.

Fine Arts.

PAINE'S SYMPHONY IN C MINOR.

THE favor with which Mr. Paine's new symphony has been received in New York and Boston cannot be surprising to any one who is familiar with the noble music of his oratorio "St. Peter" and other earlier works which have obtained less general recognition. For original talent, when aided by diligent labor and single-minded enthusiasm, is pretty sure, sooner or later, to win the attention and enlist the sympathies of the world; and in this new work, with all its beauties, there is nothing for which the oratorio and the D minor trio might not have prepared us. Its well-earned success is due perhaps partly to the fact that the earlier works have in some measure reconciled the public to the idea of good music originating in America; but chiefly, no doubt, to the fact that it was thoroughly well performed, and its beauties distinctly set forth, by a sympathetic and well-trained orchestra. Mr. Theodore Thomas is a conductor to whom the most exacting composer need have no hesitation in submitting a new work, and to the execution of Mr. Paine's symphony he seems to have devoted as much scrupulous care as if it were a composition long since ranked by general consent among the classics of the art.

The symphony is, indeed, one which well repays careful study. For while it cannot be said to indicate a "new departure" in the art of symphonic writing, it illustrates forcibly how much can be achieved without overstraining the mould elaborated by Beethoven for this form of music. It serves to support the opinion of those who hold that in many respects the extravagances of modern instrumental music are due to insufficient mastery of the technique of contrapuntal and thematic treatment. For want of skill in the use of the legitimate means of developing a funda-

mental melody, modern composers have too often resorted to the excessive multiplication of themes, or to ill-organized modulations, or to sensuous effects of rhythm or of instrumentation, surprising for the moment, but in the long run tedious and unsatisfactory. Schubert and Schumann, and among second-rate composers Liszt, are all in some degree amenable to this criticism; while Mendelssohn, on the other hand—the one modern symphonist who in mastery of form rivals the older masters—with all his Virgilian elegance and majesty, is lacking in the deeper emotional qualities to which Mozart and Beethoven gave expression. Hence the inference has been frequently drawn that further progress in the path marked out by Haydn, Mozart, and Beethoven is impracticable, and that the greatest wealth of musical expressiveness can only be attained at the present day by partially or wholly discarding the strict sonata-form in which these masters developed their greatest thoughts. Without seeking to decide so far-reaching a question, we think one may safely cite Mr. Paine's symphony as valuable testimony to the unsoundness of this inference. Mr. Paine's easy mastery of the whole technique of musical form is so conspicuous that no competent listener can fail to be struck with it. As a contrapuntist he has few rivals, and of the various resources of thematic development he has acquired such thorough control that the art is ever concealed by its own perfection. A musical critic will soon be struck with this on studying the score of the first movement of this new symphony or of some of the principal choruses in "St. Peter." The listening public, which does not understand the technical secret of such effects, will still recognize the masterly comprehension which foresees the end from the beginning, which never gropes or fumbles for a decisive chord or leading turn of melody, but promptly strikes it as if its position were foreordained and could admit of no doubt or misgiving. This mastery of form is still further exemplified in the clearness with which the musical themes assert themselves amid the sweeping current of subordinate sounds, so that they are easily carried away from the concert-room and dwelt upon in memory. A thorough master of form never loses sight of the fact that the most complicated symphony is but a highly-developed song, and this fact Mr. Paine has not lost sight of.

Now, along with this formal power, which enables the composer to make two or three bright phrases tell a long and consistent musical story, we think it may be fairly conceded that the new symphony shows marked originality in invention of themes. It is not easy to decide such a point upon technical considerations, but every one accustomed to hearing music knows the characteristic turns of melody which distinguish the works of original composers—the ear-marks, as it were, by which their style of thought is betrayed. One would no more hesitate between the melodic phrases of Chopin and Mendelssohn than between the literary phrases of Carlyle and Macaulay. In this respect, if Mr. Paine sometimes recalls to us the tones of Bach and again of Schumann, yet on the whole there is a freshness and novelty about his themes which awakens interest, while it is saved from provoking us by the formal skill which elucidates each motive, until on its final recurrence it compels our assent and causes all our mind and heart to go along with it.

Such an interesting combination of melodic fertility with classical form should be enough to make us reconsider some of the questions which there has lately been a disposition to let go by default. Such a work as Mr. Paine's symphony is in itself a protest against the inferences which might be too hastily drawn from the recent prevalence of compositions in the various styles of Raff, Rubinstein, and Liszt. Indirectly, it is a protest against unreserved acquiescence in the methods of composition of which Wagner is the great representative; although, with his close adherence to classical form, Mr. Paine has drawn upon modern sensuous resources of instrumentation to no less an extent than Wagner, and in so doing the sympathetic skill with which he has considered the idiosyncrasies of every instrument is by no means the least of his merits. Both in melodic development and in orchestration the significance of Mr. Paine's work lies in its attempt to attain originality of musical expression without deserting classical form, and by its success in this will its permanent value be estimated. For the present, we think its favorable reception augurs well for the success of future attempts which, with wider experience and in yet bolder mood, its composer is likely to make in this direction.

Special Notice.

HEALTH-LIFT.—How many persons in every thousand on quitting the study, the office, the bank, or the store, for the day, are not the worse for the mental effort required of them? If Cumulative Exercise, as afforded by the use of the REACTIONARY LIFTER, can make your daily application an easy use of a reliable fund of energy and, consequently, promote your capacity, which is just what Cumulative Exercise can do, would it not be well to familiarize yourself with a remedy, DELIGHTFUL, EFFECTUAL, SUCH AS NO MEDICINE CAN AFFORD? No health, no strength; no strength, no endurance. Write to the Health-Lift Co., No. 46 East Fourteenth Street, New York, for their pamphlet description, etc., of the Reactionary Lifter. Cumulative Exercise, the sovereign merit of this instrument, will provoke energy in you, will and does develop vital power, and add years and happiness to one's life.—*Eclectic Magazine.*

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O.
Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price.

CENTENNIAL BOOKS.

FIRST EXPLORERS OF NORTH America. By J. Banvard, D.D. With Introduction by G. T. Day, D.D. 16mo, illustrated, $1 50.
"Interesting scenes and events in the New World are here brought together and invested with a charm that is irresistible by old as well as young."—*Christian Intelligencer.*

PIONEERS OF THE NEW World. By Joseph Banvard, D.D. 4 vols., $5.
Plymouth and the Pilgrims.
Southern Explorers and Colonists.
Pioneers of Maryland.
Soldiers and Patriots of the Revolution.

HISTORICALS FOR THE YOUNG
Folks. By Oro Noque. 12mo, illustrated, $1 25.
Contains graphic sketches of noted characters and events connected with the early history of this country, specimens of Indian picture-writing, and a chart showing time and place of each important event of the Eight Years' War of the Revolution.

*LIFE OF BENJAMIN FRANK-*lin. By Rev. J. Chaplin. Large 16mo, illustrated, $1 50.
This new life of the great philosopher and statesman meets a want long felt. It is the most complete and interesting life of Franklin ever issued in a single volume.

ADAMS ACADEMY, Quincy, Mass.—Hon. Charles Francis Adams, LL.D., Chairman of the Board of Managers; William R. Dimmock, LL.D., Master. Designed to give the most thorough preparation for college. For catalogues, address the Master.

A NORMAL INSTITUTE OF DRAWING and PAINTING will be held at the COLLEGE OF FINE ARTS OF THE SYRACUSE UNIVERSITY, during the coming summer, from July 11 to August 4, 1876.

FOR WHOM DESIGNED.

FIRST. *Teachers in Public Schools*, who find themselves now required to teach free-hand and indu-trial Drawing in their schools, but who have hitherto had no practice in Drawing and no instruction in the elements of art and design.

SECOND. *Principals of Public Schools, Superintendents of City and Village Schools, and County Commissioners of Schools*, who find themselves required to superintend a branch of education with which they may have imperfect acquaintance; also Principals of Seminaries, Academies, and Private Schools.

THIRD. *Teachers of Drawing and of Painting in High Schools, Academies, Seminaries, and Private Schools*, who may have had limited opportunities for acquainting themselves with methods of instruction in the various branches of Drawing and Painting, with the principles of the Science of Æsthetics (which underlies the fine arts), and with the history of art and its relation to the general history of civilization.

FOURTH. *Teachers of other branches of education than Drawing and Painting, Natural Artists, etc.*, who may desire to acquaint themselves with the processes of execution, the resources, and the limitations of the various branches of Drawing and Painting.

FIFTH. *Recent graduates of Colleges, Normal Schools, and other institutions*, who may desire to acquaint themselves with the general principles of Art, in its theory, history, and practice, as a supplement to their other general liberal education.

WHAT IS FEASIBLE IN SO SHORT TIME.

Professional artists can be trained only by many years of careful and consecutive study and application. But persons of mature age, of thorough elementary and scientific education, can acquire a general knowledge of the fundamental principles of Art, and of the processes of execution, the scope, and the limitations of the various branches of Drawing and Painting. Teachers can have a general knowledge of pedagogic science, and experience in teaching other branches of education, can acquire a sufficient general knowledge of art and of pedagogic methods in art to enable them to impart instruction (at least to primary classes) in Drawing with great acceptability and success; also teachers in art, of imperfect artistic education, can attain to more correct views of the nature and office of art, and acquire a better knowledge of technical execution and of pedagogical methods in art.

Instruction will be given in classes, by lectures, or to individuals, as may be found necessary. The course will include practical instruction in the various kinds of Drawing — as with the lead-pencil, the crayon, charcoal, the steel-pen, in India ink and sepia, and with draughting instruments; and also in water-color and oil-painting, interspersed with frequent dissertations on the relative and actual advantages, the natural scope and the limitations, of these various branches of art. There will be daily class exercises as follows:

1. In Free-hand Drawing (artistic and industrial) for beginners.
2. In Free-hand Drawing (artistic and industrial) for advanced students.
3. In Mechanical and Architectural Draughting.
4. In Perspective Drawing (from plane and elevations, and with the free hand).
5. In Painting in Water-Colors.
6. In Painting in Oil-Colors.

Parties will be formed to sketch from nature, and classes in modelling in clay and in photography. Instruction by the following persons:

Prof. G. F. COMFORT, A.M., Dean of the College of Fine Arts of the Syracuse University.
Prof. SANFORD THAYER, of the College of Fine Arts.
Prof. ARCHIMEDES RUSSELL, of the College of Fine Arts.
Prof. W. V. RANGER, of the College of Fine Arts.
Principal J. W. ARMSTRONG, D.D., of the State Normal School at Fredonia, N. Y.
Prof. M. M. MAYCOCK, B.P., of the State Normal School, Buffalo, N. Y.

Arrangements have been made for adding other instructors if necessary.

LECTURES.—One or more each day—most of them illustrated by stereopticon views, diagrams, or drawings made on the blackboard or cartoon paper during the lecture.

1. Five lectures upon the Science of Æsthetics and the Principles of Art Criticism, by Prof. G. F. COMFORT, Dean of the College of Fine Arts.
2. Five lectures upon the History of the Fine Arts, by Prof. G. F. COMFORT.
3. Two lectures upon Pedagogical Methods in teaching Drawing and Painting, by Prof. G. F. COMFORT.
4. A lecture upon Pedagogical Method in industrial Drawing, and the true Scope of industrial Art, by Prof. G. F. COMFORT.
5. Four Lectures upon Artistic Anatomy, by Prof. E. E. VAN DE WARKER, M.D., of the College of Fine Arts.
6. Four lectures upon the Application of Drawing to the teaching of Botany, Zoology, and Geology, by Prof. ALEXANDER WINCHELL, LL.D., of the Syracuse University.
7. Four lectures upon the Application of Drawing to the teaching of Chemistry and Physics (with accompanying experiments), by Principal J. W. ARMSTRONG, D.D., of the State Normal school at Fredonia, N. Y.
8. A lecture, with stereopticon illustrations, upon the laws of Linear Perspective, by Principal J. W. ARMSTRONG.
9. A lecture upon the Common Bond of the Fine Arts, by Chancellor E. O. HAVEN, LL.D., of the Syracuse University.
10. A lecture upon the Cathedral Builders of the Middle Ages, by President ANDREW D. WHITE, LL.D., of the Cornell University.
11. Two lectures upon Artistic Studies in Tree Forms, by Principal J. H. HOOSE, Ph.D., of the State Normal School, Cortland, N. Y.
12. Two lectures upon the Relation of Art to Religion, by Prof. C. W. BENNETT, D.D., of Syracuse University.
13. A lecture upon Points of Contact between Science and Art, by Prof. G. F. COMFORT.
14. Three lectures upon the Chemistry of Colors, by Prof. J. J. BROWN, A.M., of Syracuse University.
15. A lecture upon Teaching as a Fine Art, by Prof. J. W. MEARS, D.D., of Hamilton College, Clinton, N. Y.
16. A lecture upon the Cultivation of Taste at the Home and in the School, by Principal H. B. BUCKHAM, A.M., of the State Normal School at Buffalo, N. Y.
17. Four lectures upon Early American Art, by WILLIS DE HASS, M.D., of New York City.
18. A lecture upon Art in India, by Hon. N. F. GRAVES, Ex-Mayor of Syracuse.
19. A lecture upon Chinese and Japanese Art and Customs, by Prof. W. V. RANGER, of the College of Fine Arts.
20. A lecture upon the Present Condition of Architecture in America, by Prof. ARCHIMEDES RUSSELL, of the College of Fine Arts.
21. A lecture upon the Present Condition of Painting and Sculpture in America, by Prof. G. F. COMFORT.

A Loan-Exhibition of Works of Art will be held in the University Building during the summer. Those attending the Institute will have access without extra charge.

EXPENSES.

Tuition-fee, $25.
Board, with furnished room, can be obtained in the city for from three and a half to five dollars a week.

REMARKS.—Provision is made for more exercises each day than can be attended with profit by any one person. This is necessitated by the varied artistic attainments of the attendants.

It will greatly facilitate the preparations if persons proposing to attend will state with some definiteness what degree of advancement (if any) they have attained in the study of the arts of art, and what branches they desire to pursue, especially if *modelling* or *photography*: and they will confer a favor by communicating as early, at least, as the 1st of June.

The opening exercises will take place in the University Building, at three o'clock on Tuesday afternoon, July 11. It is greatly desired that all shall be present.

For further particulars address Prof. G. F. COMFORT, Dean of the College of Fine Arts, Syracuse, N. Y.

BALTIMORE.—All Saints' School, 261 *Hamilton Terrace.* Rev. Jos. RICHEY, M.A., Rector. Address the Sister Superior.

*BELLEVUE HOSPITAL MEDICAL COL*lege, City of New York. Sessions of 1875-'76.
For the Annual Circular and Catalogue, giving regulations for graduation and other information, address the Secretary of the College, Prof. AUSTIN FLINT, Jr.

BELOIT COLLEGE for Young Men. Address Pres. A. L. CHAPIN, Beloit, Wis.

BORDENTOWN FEMALE COLLEGE, N. J. — Select, thorough, Christian; delightful situation, and very healthy. Rev. WM. C. BOWEN, A.M., Pres.

BOYS AND YOUNG MEN privately fitted for College. Conditioned or rejected candidates coached. Stockbridge, Mass. F. HOFFMANN.

CARLETON COLLEGE, Northfield, Minn. Open to both sexes. J. W. STRONG, D.D., President.

CAZENOVIA SEMINARY. Established 1825. Has prepared over 600 young men for college. Address W. S. SMITH, Cazenovia, N. Y.

*CHANDLER SCIENTIFIC DEPART*ment of Dartmouth College.—Liberal education on a scientific basis. Specialty, Civil Engineering. Address Prof. RUGGLES, Hanover, N. H.

CHAUNCY-HALL SCHOOL, Boston, for both sexes. Complete preparation for college or business. For catalogues, address CUSHINGS & LADD.

*CHEGARAY INSTITUTE for Young La*dies and Misses, 1527 and 1529 Spruce Street, Philadelphia. Penn. Madame D'HERVILLY, Principal.

CHESTER VALLEY ACADEMY for Boys, Downington, Pa. For catalogue, with testimonials, etc., address F. DONLEAVY LONG, A.M., Principal.

CHICAGO.—Union College of Law, of the two Universities. V. B. DENSLOW, Secretary.

COLUMBIAN UNIVERSITY, Washington, D. C.—College, Law School, and Medical School. For catalogues, address J. C. WELLING, LL.D., President.

CLASSICAL AND ENGLISH SCHOOL. For twenty boys. Rev. C. E. & Dr. G. E. ABBOTT, Hartford, Conn.

CLEVELAND SEMINARY. Boarding School for Girls. For catalogue, address S. N. SANFORD, Pres., Cleveland, O.

*COLLEGIATE INSTITUTE, Newton, Sus*sex Co., N. J. Sept. 8. S. S. STEVENS, A.M., Principal.

DEAN ACADEMY, Franklin, Mass.—First-class Academy for both sexes. Opens Aug. 31, 1875. Address Rev. J. P. WESTON, D.D., Principal.

DENISON UNIVERSITY, Granville, Ohio. Address Rev. ELISHA B. ANDREWS, President.

DREW THEOLOGICAL SEMINARY, Madison, N. J. Address the President, JOHN F. HURST, D.D.

DE VEAUX COLLEGE, Suspension Bridge, N. Y. Rev. GEO. HERBERT PATTERSON, Pres.

*DR. MEIGS'S Family School for Boys, Potts*town, Pa. Classical, Scientific, and English Courses.

DUANE S. EVERSON'S Collegiate School. Harvard Rooms, cor. 42d St. and 6th Ave., New York.

The Nation.

NEW YORK, THURSDAY, APRIL 6, 1876.

The Week.

GENERAL SCHENCK has appeared before the committee which has in charge the Emma Mine investigation, and fully explained his connection with the Company. He admits, of course, his secret contract with Park, dated November 1, 1871, by which he was guaranteed first two and then one and a half per cent. on his stock; that he paid no money for it, and that he had the right for a specified time, in case of any danger of loss, to make Park take the stock off his hands; but he says that this was a perfectly *bonâ-fide* agreement, which Park made because he was a "liberal" man and wanted to do the General a good turn. We have always thought, however, that the story of this contract and Schenck's note for £10,000 given to Park was incomplete without details of the settlement between the parties, and we now find that the settlement was made in this way: Whenever any payments were made on account of the note, they were, as is usual between business men, endorsed on the back of it. There are endorsements for £500, for £1,897, and for £2,500—the first representing the value of shares which Schenck sold to "a friend"; the second some "stock speculations" of Park's, the details of which Schenck says he does not know; the third (to the amount of £500) represented cash; the rest (£2,000), being put down to "commissions" paid to and "refunded" by Albert Grant, making an actual payment of £500 out of endorsements to the extent of £4,897. In May, 1874, the transaction having meantime been subjected to some venal criticism by the licentious press, Park and Schenck settled their accounts, when Park told Schenck that there was a sum due General Schenck on account of some other "stock speculations" sufficient to balance accounts. Here, it seems to us, Schenck made his only mistake in the whole transaction; for, instead of taking this as a final settlement, he declared that he owed money to Park, and insisted on transferring to him a quantity of stock, valued (by whom does not appear) at $32,000, and $1,700 cash, thus manifesting a total disbelief in Park's statements, which is, to say the least, singular. At the same time, Schenck is to retain the income from this stock, and has the right to redeem it within three years. On being asked why, if Park said that he was Schenck's debtor, the latter should have insisted on transferring his property to him, he said that this was on account of the public criticism of his connection with the Mine. He also gave his note for $3,000, on which Park will no doubt, in due course of time, make endorsements. At the same time he borrowed $15,000 more of Park and gave him the mortgage of his house in Washington, of which we have heard so much before, and which, it now appears, was not given as security for his purchase of shares at all. It also appears that he received about $10,000 in dividends, and still holds 475 shares, worth about $2,500 more. So far as any cash transactions are concerned, therefore, the account stands as follows: Schenck's receipts, $12,500; payments (£500 + $1,700), $4,200; Schenck's profits, $8,300. General Schenck has also fully explained all the matters in dispute connected with his resignation. It will be recollected that he mailed his resignation to Washington on the 19th of February. On the 2d of March he begged that his resignation might not be accepted; on the 3d, his request was refused; on the 4th, the resignation was received; on the 6th, accepted; and on the 6th, the same day, the writ served on General Schenck was withdrawn, with an apology from the English lawyers, who said they had been "under the impression" that the General "had resigned."

This explanation resembles, in one respect, those of Professor Silliman and Mr. Stewart. Mr. Silliman, according to Lyon, sent a despatch to England in 1872 to this effect: "Eight thousand tons discovered since last report; sample assay, two thousand dollars per ton." This he indignantly denied, and declared that what he did telegraph was: "Sample assays twenty-eight per cent. lead and $2,000 silver. Reserves discovered since last report, over eight thousand tons." Mr. Stewart was declared by Lyon to have written a letter in which he spoke of the Emma as a "worked-out" mine. This he indignantly denied, and says that he takes the ground that the phrase a "worked-out" mine does not mean that the mine has been worked out. In the same way, General Schenck denies that there was any want of good faith in his transactions with Park, and then, by way of proving this, makes the explanation we have just recapitulated. The Committee are now engaged in cross-examining Lyon, the Emma partners being desirous of showing that he is a bad character and unworthy of belief. But nothing that is proved about Lyon can have any bearing on the facts already proved by other evidence. Schenck's explanation, any business man or lawyer can see, is a confession of facts which would in civil proceedings render him liable to the shareholders, and which would make it necessary for a grand jury to indict him for a conspiracy to defraud if he was within reach of process.

By a vote of 31 to 17, the Senate has passed the resolution reported by the Foreign Affairs Committee, "That the Senate does not advise and consent to the nomination of Richard H. Dana, jr., to be Minister to England." An analysis of the vote shows that Mr. Dana's support was entirely Republican, the Democrats either refusing to vote, pairing, absenting themselves, or voting against him. Of the 31 votes against the nomination, twenty were Democratic, so that if the Democrats had really treated the matter, as some of them affected to consider it, as a party question, with which they had nothing to do, there would have been a majority in Mr. Dana's favor.

The House Judiciary Committee has reported on Mr. Pierrepont's letters to the Western district-attorneys which he drew up, and Babcock got hold of and published, censuring him for his behavior. The Committee truly observes that "the testimony of accomplices has been used against their associates from the early ages of our jurisprudence." This is no more news to Mr. Pierrepont than it is to the public, or to Babcock. The question is not as to the existence and necessity of the practice of using the testimony of accomplices under promises of immunity, nor of the probable effect that the letter, even if sent privately, would have had on the minds of the prosecuting officers in St. Louis and elsewhere. When we find the President and the Attorney-General making arrangements to prevent the production of material evidence for the prosecution in Government cases, the only question is, "What are we going to do about it?" Still further light promises to be thrown on Babcock's case by the evidence of a man named Bell, who swears that he was employed by Babcock or his friends to steal evidence for him in the West. We know of nothing in the character of the "tarnished" man to render the story improbable.

The Senate has passed a law amendatory of the Bankrupt Act, to the effect that *bonâ-fide* voluntary assignments made (without preferences) under State laws shall not be a bar to a discharge of the debtor, if afterwards adjudged a bankrupt in involuntary pro-

ceedings. Besides this the Senate has done little of general interest, except with reference to the regular appropriation bills. Messrs. Boutwell and Bayard have had an encounter over Mr. Morton's resolution for a committee of investigation into the political affairs of Mississippi (subsequently passed), which went off, as we fancy most encounters with Mr. Boutwell would be likely to, rather tamely. In the House, the Belknap articles, based on the evidence of the Marshes, have been adopted, managers appointed, and Belknap formally impeached before the Senate. The investigations are going on as usual, and early in the week it was reported that "Robeson had been caught," or, in other words, that the Secretary of the Navy had been detected in crimes and misdemeanors of some kind. But it is as yet too early to say positively what the precise nature of the transactions between the Government and Jay Cooke will turn out to be. The Real-Estate Pool witness, Kilbourne, is still incarcerated, and his ingenuity seems to be now devoted to the discovery of new and hitherto undreamt of ways of "getting even" with the Government. It seems that he is, while in prison, eating and drinking at the rate of from fifteen to twenty-five dollars a day, and, in fact, gives what may be called Bastile Banquets from day to day, to which he invites Boss Shepherd and the other gentlemen connected with the Pool. The Democrats, who now begin to fear that investigation in this way may defeat its own ends, and, instead of benefiting the Government, lead to pecuniary loss, are going to look into these bills (they include, by the way, $3 a day for "drayage," this term being the political equivalent of restaurant carriage-hire), and if it cannot be stopped we trust they will release Kilbourne at once.

The House of Representatives on Friday committed itself by a vote of 122 to 100 to the folly of substituting silver coins for fractional notes, and further to the enormity of making silver tokens a legal tender for $25, and "trade-dollars" a legal tender for $50. That the important principles involved were not understood by many who voted for the bill is evident from the weight which was given to Mr. Randall's representations that it was simply a question of expense—that is, whether the Government should be burdened with a heavy charge in keeping up the fractional notes, or should save the public money by issuing silver. The falsity of this claim was thoroughly shown up by Mr. Hewitt, but apparently not to the satisfaction of the duller members of the House. The pretension put forward when the subject first came up, that the substitution of silver for fractional notes would be a step towards resumption in 1879, was abandoned, but no one showed that the bill would have the tendency of driving California or rather the people of the Pacific coast into suspension and into the use of the paper legal tender with which the Atlantic States have been cursed since 1863. The only legal tender in use on the Pacific coast is gold; and subsidiary silver coins, which can only be passed here as the fractional parts of the paper dollar (worth about 88 cents in gold), can be passed there as the fractional parts of the gold dollar. It will be strange therefore if, when the silver tokens appear, they are not gathered up and sent to California and gold obtained for them. This movement might continue until California had lost a good part of its gold. The third section of the Silver Bill, which makes the silver tokens a legal tender for $25, will of course aggravate this tendency, and the country may be prepared to hear very soon after their appearance that California and the Pacific States have, by the "step" which Congress has taken towards resumption, been carried or driven into suspension. The panic of last summer in San Francisco was indirectly caused by the execution of the first section of the Sherman Bill; and if another crisis should be precipitated the people of that section may well pray to be delivered from their friends—the Big Bonanza princes.

There is another feature of this silver question which short-sighted advocates of a sound currency will do well to consider. The old silver dollar was not demonetized until 1873, and was, therefore, part of the lawful coin money of the country up to that time. Should Congress, while the silver fever is on, restore that coin, there is nothing to prevent the establishment of the claim that the Treasury notes can be redeemed in silver as well as all the bonds of the United States issued since the outbreak of the war. Of course, silver with such an extended use for it would advance in price, but, nevertheless, the public creditors would be swindled out of a good part of what is due them. This, while the same kind of a fraud as that for which Mr. Pendleton was so great a stickler, could be committed in the name of "hard money." It would be well, therefore, for senators and members of Congress who favor hard money to be on the lookout for such a scheme, and we also respectfully suggest to some of the newspaper writers who have approved of the House measure to be on the lookout for pitfalls.

The Alabama Claims report will shortly come up in the House, and we trust that in the debate the attention of the members may be called to the opinion of the present court of Alabama Commissioners, in the case of West *v.* The United States. This commission was created by the act of 1874, when the job had only gone so far as to involve a swindle of the insurance companies, and when nobody yet dreamed of carrying out the idea of which this was the germ to its logical consequences of a general "grab." The Court use the following significant language: "Does not national courtesy and good faith require of us to suppose that Congress, in creating this Court, never intended we should distribute this fund other than for the purposes for which Great Britain supposed she was paying it? For instance, suppose Congress had chosen to keep half the fund and convert it into the Treasury of the nation, or had directed this Court to distribute it among those whose commercial interests had been injured by the terror and alarm caused by the insurgent cruisers, or among those who had suffered loss by the depredations of rebel cruisers other than the *Alabama*, *Florida*, and *Shenandoah*. In such cases, would not Great Britain have had cause to complain that she had been misled, overreached, deceived? Would our Government have been acting in good faith in making such disposition of this fund?"

The Connecticut election, on Monday, went, as it was generally expected to, in favor of the Democrats, but by a largely reduced majority. The total vote was less than that of last year, and the Republicans announced beforehand that they had little hope of carrying the State. Mr. D. A. Wells made a good canvass in the Third Congressional District, and drew off a heavy vote from the Republican candidate, who only won the day by a majority of a few hundred. There could not have been a better proof of the vastly greater importance the average voter attaches at the present time to character, ability, and reputation in a candidate than he does to any other considerations. The other political news of the week chiefly consists of the meetings of Republican nominating conventions in Mississippi, Pennsylvania, Vermont, and Ohio. Mississippi is for Morton, Pennsylvania for Hartranft, Ohio for Hayes, while the Vermonters have not declared their preferences. All the platforms are very much alike, and strongly in favor of reform, particularly that from Mississippi, where Governor Ames has just resigned to escape impeachment, as Cardozo, the State Superintendent of Education, did before him. Nothing but a new Force Bill will now save the State, and Mr. Morton has given notice in the Senate of his intention to pass one which the Supreme Court will not be able to upset. "Morton and Equal Rights" will be the cry from the Mississippi Valley to Cincinnati.

The week has brought forth little of interest in Wall Street, except the decline in the gold premium, the price as expressed in Treasury

notes having fallen to 112¼@112⅜. This decline, while in a measure speculative, was due to the fact that the amount of gold in the New York banks is more than twice what was held a year ago, and that it will not be a long time before the May interest comes out of the Treasury. The London money market also continues very easy, and, as the Bank of England is steadily gaining gold, it is thought the official rate of the Bank will be lowered this week. The small exports of gold from here show that few remittances are sent rather than that there is an abundance of sterling bills offering. The Stock Exchange, notwithstanding that the crisis in the contest between the Panama Railroad and the Pacific Mail Steamship Co. has come, has been very dull. Complaints pour in from all parts of the country that trade is poor, and that the weather is such that transportation off the railroads is almost impossible. Of course more than fine weather is needed to make trade active, but, with a tendency towards dulness, bad weather becomes a serious matter. New York merchants complain of the absence of Western and Southern buyers, and say that except for the trade of which New York is the jobbing centre, they are doing almost nothing. The New York banks have stood the April drain of currency without reducing their surplus reserve much below $10,000,000, which is nearly double what they held a year ago. The value in gold of $100 greenbacks has ranged during the week between $87 62 and $88 59.

In England, the prolonged debate on the bill providing for the assumption by the Queen of the title of "Empress of India" seems likely to end in the abandonment of the measure by the Ministry, in spite of the majority by which the second reading was carried in the House of Commons. A more puerile discussion than it has called forth has not taken place in England in modern times. The comic element in it has been heightened by Mr. Disraeli's avowal of his desire to accommodate the people of India in the matter, whom he represented as largely desiring the assumption of a title of some kind different from "Queen," but what title he was unable to say exactly, nor did he produce any evidence of the desire. There has consequently been much discussion as to whether the Hindoos would be best satisfied by having her called "Malikah," or "Malik," or "Sultana," or "Shâhin-Shah," or "Padishah," or "Mahârani," all of which are objected to on one ground or another. At this point Mr. Max Müller appears on the scene, and cuts the knot in a letter to the *Times*, showing, by reference to the old Sanskrit of the Rig-Veda and the Atharva-Veda, that the right name for the sovereign of India is "Adhirâja" or "Samrâj," but that there is "a still grander title" than this, viz., Râjadhirâja, which he "feels certain would be understood, appreciated, and loved by every true son of India." Naturally enough, the sober English people have been every day growing more and more disgusted with this stuff, and the opposition to the bill out of doors been becoming stronger and more bitter. As the Queen could, by the exercise of her prerogative, give herself whatever title she pleased as ruler of India, the only object in passing an act about it is to make the formal assumption of any title more solemn and impressive, and all the virtue of the act would, therefore, lie in the unanimity with which it passed. If bitterly opposed, as this is, it is generally felt it ought not to pass, and since the Opposition have resolved on the extreme measure of trying to address the Queen asking her not to take the title of "Empress," the Ministry doubtless feel that the scheme ought not to be pressed further. It has been thoroughly theatrical and ridiculous from the beginning, and touches English sentiment in a very tender place. Mr. Gladstone's protest against it has been one of his ablest speeches.

The Ministry has also been getting into trouble about India through the action of Lord Salisbury, who seems to be too high and mighty a personage for our time, both in sending a very peremptory despatch to the Governor-General directing all proposed Indian legislation to be submitted to the Secretary for India at home before being enacted, of which there is universal disapproval, and in directing the removal of the Indian duty on cotton goods at a certain fixed date—a measure avowedly projected in the interest of the Manchester manufacturers, and not in obedience to the principle of free-trade simply, because there are other portions of the Indian tariff which are much more objectionable on economic grounds. He has defended this proceeding so fully in the House of Lords that, coming so close on other mistakes, it helps to make the position of the Ministry almost precarious, and it would be decidedly precarious if the Liberals had bold and enterprising leaders and some settled policy.

The French Ministry have read a "Declaration," in the nature of a presidential message, to the Chambers, containing a sort of outline of their policy. It recognizes the legitimacy of a government based on universal suffrage; professes fidelity to the "liberal conservative spirit"; promises that the subordinate functionaries will make the Republic understood and appreciated by the people, by showing them how much more than any other form of government it rests on the general virtue and intelligence; proclaims a peaceful foreign policy; announces that, in renewing the commercial treaties shortly to expire, the Government will persevere in "the wise policy of free trade," and will shortly submit measures dealing with the problems of municipal government and university education. The correspondent of the London *Times* reports the comments of a member of the Cabinet on the Declaration, which means, he says, that ten or twelve of the present prefects, who have been plainly reactionary in their conduct, ought to be and will be dismissed; but that, apart from this, everything will be done to give good men a feeling of security in their places; that the state of siege now maintained in four Departments will be brought to an end on the 1st of May; that the Government will bring in a bill for the reform of the municipalities—that is, making the mayors elective, but will endeavor to provide that the elections will not take place within the present year, to avoid the agitation they would cause; that the act of the last session, making university education free, of which the Catholic clergy are so largely availing themselves, will be modified so as to reserve to the Government the right of granting the degrees. All this is very promising, and it is made all the more so by the fact that Gambetta's organ announces that the Ministry will, as far as the Left is concerned, be judged by its acts.

The statement of the Italian Minister of Finance, made to the Chambers a fortnight ago, seems to indicate that Italy has turned the corner in her finances, and that a steady process of deliverance from her burdens may now be looked for. In the first place, the unpaid arrears of taxes, which amounted in 1874 (the fiscal year in Italy is the solar year) to $40,000,000, amounted in 1875 to only $4,000,000, and all the items of the internal revenue had increased to such a degree that the deficit, which was expected to be $16,000,000, was only about $5,500,000, although in this is included a vote of $3,000,000 for railroads. The income of 1875 was $277,500,000, and the outgo was $283,000,000. In taking up the estimates of 1876, he said that, considering that they included considerable sums for railways and other internal improvements, he had at first set down a deficit of $3,000,000, but after seeing the results of 1875 he felt warranted in predicting that not only would there be no deficit, but that there would be a surplus of $3,500,000. No wonder this announcement caused a "sensation" in the Chamber. The law obliges the Minister, besides presenting the estimates for the current year in the month of March, to present also "a provisional estimate" for the year following, and accordingly Signor Minghetti set down his surplus for 1877 at $5,000,000, which caused another and greater sensation. In taking this highly favorable view of the future, he relied much on the working of the new commercial treaties, through which he expected much advantage for the treasury, while remaining faithful to the principles of free-trade introduced into Italy by Cavour, the furtherance of which was to him (Minghetti) a matter of pride.

THE SENATE.

IT is useless to deny that a feeling of great anxiety and apprehension, which is not likely to diminish, has been produced in the minds of intelligent and upright men of all parties by the conduct of the Senate in the Dana case. We do not know at this writing whether he will be confirmed or rejected—probably the latter; but as far as regards the feeling of the country about the Senate, it now makes no difference which is done. The important fact is that the affair has revealed a state of morals on the part of both Democratic and Republican sides of the Chamber which is very injurious even of what remained of popular confidence in the body and respect for it. Nor is the public judgment about the matter shaped by the contrast between Mr. Dana's character and position as an American citizen and that of those senators who have assailed him, though it is painful enough and humiliating enough to the national pride. This contrast was depicted in a powerful and impressive article, entitled "Tableaux," in the *Tribune* of last Wednesday, which we wish every man and woman in the country could read and digest. What Mr. Dana is, however, as compared to Messrs. Cameron and Morton, is a matter of comparatively small moment. What troubles people is that a body charged with such high and weighty functions, and surrounded by so many guarantees for its integrity and independence, should be capable of acting in this way towards any man, even if, instead of being a famous lawyer and literary man, and an honest gentleman, he were an unknown A or B. To hear and *act* on charges made secretly by personal enemies, themselves of bad or doubtful reputation, no matter who was the object of their attacks, were things unworthy of men fit to assist the President in administering the foreign affairs of a great nation. This, however, might have been excused on the ground of haste, and atoned for by a prompt retreat from an unfortunate situation; but the persistence in the original error, on the ground that the letter which this outrage called forth from their victim was not sufficiently respectful, indicates a state of moral dilapidation in which, taken in connection with the recent revelations made about the condition of the civil service, thoughtful men see reason for genuine alarm. For it must be remembered that the Senate is now the greater part of the Government. It has an absolute veto on all legislation and, through its share in the appointing power and in the making of treaties, paramount influence on administration. In fact, it is now half the legislative and two-thirds of the executive branch, and exerts a strong influence on the composition of the Supreme and subordinate Federal Courts. Moreover, it has more permanence than any other branch of the Government. It is the only portion of it which passes through a Presidential term without submitting itself to the popular judgment, and its permanence has been made the more striking of late years by the growing evanescence of the various civil officers. Its character is, therefore, of enormous and increasing importance to the country. Filled with pure, honorable, well-informed, and patriotic men, it is the first deliberative assembly in the world; made up even in great part of jobbers, adventurers, peculators, or demagogues, it becomes a political nuisance of the worst kind —a pest-house the infection from which will eventually poison the atmosphere of the whole country.

That such powers as the Senate was armed with would beget temptation to encroach on the other departments of the Government was foreseen in the earliest days of the Republic. Madison, in discussing the chances of encroachment on the part of the Executive or the Senate, said the danger lay with the latter, but concluded that on the whole more danger lay with the House of Representatives than with either. But Madison formed this judgment without foreseeing the enormous change which has since his day taken place in the constitution of the civil service, and therefore in the power of the Senate over the Executive and the whole machinery of government. Still less did he foresee the control which the civil service would one day exercise over the expression of the popular will, both in the nomination and election of Presidents and legislators. The Senate's share in the appointing power was a comparatively trifling matter when the office-holders were a small body, of whom "few died and none resigned." When they number 80,000, and there is a clean sweep every four years, this share constitutes both an immense privilege and one of the most corrupting agencies to which any legislative body was ever exposed. That the Senate has succumbed, too, few who know it will now deny. It is the very fountain-head of the great national disease which is day by day filling us with shame and foreboding. When the Postmaster-General turns a postmaster out of office, he now formally requests not the President, but one of the senators to fill the vacancy, and he fills it. The Custom-House and revenue offices and those of the Department of the Interior are filled in the same way, and, in fact, there may be said to be nothing left for the President but the diplomatic service and the consulates. If the appointing senator was supervised by his colleagues, the system might not be very bad, however unconstitutional; but he is not. Under what is called euphemistically "the courtesy of the Senate," but which is in reality a sort of corrupt covenant for a proper division of the spoils, each Senator is protected by his colleagues in the arbitrary use of his patronage, without enquiry or hindrance, and the same phrase is made to sustain the arbitrary control of foreign appointments by the Committee on Foreign Affairs. To complete the picture, we must recollect that nearly all appointments are made with a view to regulating the expression of public opinion in the nominating conventions and at the polls—or, in other words, to managing the electoral machinery, which is now of extraordinary complexity—and we then see how vast and far-reaching is the power, either direct or indirect, which the Senate has acquired over the Government through the appointing power. It has already filled the civil service with its creatures, and we are now witnessing an attempt to put its creature in the White House. General Grant has notoriously been for some time in the hands of a kind of managing committee, which *Harper's Weekly* calls the "Senatorial Group," and the rejection of Dana is due far more to irritation at the President's insubordination in sending in a name which was not on their "slate," than to anything else.

It is impossible in the limits of a single article to describe the variety of influences which have combined to build up this remarkable system, but among them may be mentioned, besides the great increase in the number of Government officers since the war, the decline in the character of State legislatures which the past fifteen years has witnessed; the increase in the size, complexity, and costliness of the political machine produced by the growth of population; the vast recent additions of ignorant and manageable voters; the absence since 1860 of a respectable opposition; and the injection into the Senate from the Southern and new Western States of a considerable body of members without character or lawful calling, and without other qualification than recently-acquired wealth. The presence of even a small body of adventurers of this sort speedily lowers the *tone* of a legislative assembly otherwise respectable, through the necessity, which one party or the other experiences daily, of negotiating with them or conciliating them; and for such persons "the courtesy of the Senate" of course only serves the purpose of the light overcoat which pickpockets carry gracefully on their arms when they enter a street-car in quest of purses and watches.

Under all these circumstances, the management of the party machinery falls naturally into the hands of the senators. They are more permanently in office and wield more power than any other members of the party, and have not unfrequently reached their places by the practice of the very intrigues which they are called on to superintend on a larger scale when they go to Washington. The local "managers" all work under the senator as their superior officer, and his failure or refusal to direct them actively is likely to cost him his place. Mr. Conkling, for instance, relies or relied for his chance of controlling the State delegation and getting the Presidential nomination on the skill with

which the Government offices had been used for partisan purposes under his orders.

This leads naturally to the last thing we have to say at present on a subject of no ordinary moment, and that is, that this enormous power of patronage, and the use of patronage in withdrawing nominations, and through them elections, from the control of public opinion, naturally begets a contempt for non-official expressions of public opinion—that is, all expressions of it that do not reach the Senate through the regular channel of the district association, the "pre-primary," the county and State convention, or the district-attorney, marshal, or collector, if there be one. The criticism, for instance, of a hostile newspaper or of a hostile meeting is nearly as revolting or contemptible to a hard-working "Administration senator" as it is to a Prussian general of cavalry, though for less respectable reasons. The curious but incautious outburst of Mr. A. B. Cornell against the Union League resolutions as "impudent," was an interesting revelation of a state of mind which is now that of a large number of the senators, so much so that some of them already boast that they never read the newspapers. Why should they? They have acquired their power, and keep it, through machinery which is not affected either by popular opinion or passion. In fact, they have converted the "ship of state" into a steamboat, in which we are all passengers, but are not allowed either to speak to the man at the wheel, enter the engine-room, or ask for the reckoning, though we see the officers through the glass door playing poker and drinking champagne. The moral of it all is, that to bring them to their senses, and to reform abuses and prevent corruption and make elections free, we must leave them fewer offices to fill.

THE *ALABAMA* JOB.

UNDER the award of the Geneva Court of Arbitration the United States received the sum of $15,500,000 in gold for damages caused through the negligence of the British Government in permitting the escape of Confederate cruisers during the Rebellion. The Treaty of Washington, drawn up in the spring of 1871, was very definite and precise in its provisions. By the first article, reference was made to "differences" between the two Governments "growing out of the acts committed by the several vessels, which have given rise to the claims generically known as the 'Alabama Claims,'" and agreeing that "all the said claims" "be referred to a Tribunal of Arbitration," to be composed of five arbitrators. By the sixth article, the Treaty provided three rules of international law with regard to the duties of neutrals, and, having laid down the law, proceeded to define its application in the seventh and tenth articles by the following very strict clauses:

"The said Tribunal shall first determine as to each vessel separately whether Great Britain has, by any act or omission, failed to fulfil any of the duties set forth in the foregoing three rules, or recognized by the principles of international law not inconsistent with such rules, and shall certify such fact as to each of the said vessels. In case the Tribunal find that Great Britain has failed to fulfil any duty or duties as aforesaid, it may, if it think proper, proceed to award a sum in gross to be paid by Great Britain to the United States for all the claims referred to it.

"In case the Tribunal finds that Great Britain has failed to fulfil any duty or duties as aforesaid, and does not award a sum in gross, the high contracting parties agree that a board of assessors shall be appointed, to ascertain and determine what claims are valid, and what amount or amounts shall be paid by Great Britain to the United States on account of the liability arising from such failure, as to each vessel, according to the extent of such liability as decided by the arbitrators."

By the final article, the Treaty provided that "the result of the proceedings of the Tribunal" or of the "board of assessors" should be "a full, perfect, and final settlement of all the claims." Under these rules, the Tribunal, having the whole case left to them by both Governments, decided, 1st, that Great Britain was liable for "direct losses"—*i.e.*, losses of ships and cargoes, etc.; 2d, that she was not liable for any indirect losses, such as the enhanced rates of insurance caused by the war; 3d, that the United States had no claim for what were known as "national losses," such as the transfer of the commercial marine to the British flag, or the prolongation and increased expense of the war.

They also decided that the only cruisers for whose acts under the Treaty the United States could recover were the *Alabama* and *Florida* (with their tenders), and the *Shenandoah* (after leaving Melbourne). Having thus determined the extent of the liability "as to each vessel," the only remaining questions were, first, whether the Tribunal would award a lump sum or send the case to assessors; and, second, whether they would allow interest, and if so, at what rate. As to the first, the question was merely one of convenience. It has since been suggested that the "lump sum" was really a means of giving damages indirectly for claims which the Tribunal had in so many words directly ruled out. If this country had been represented in the court by B. F. Butler, and Great Britain by Dr. Kenealy, there might, perhaps, be some ground for such a suspicion; but, inasmuch as the American and English representatives were Mr. Adams and Sir A. Cockburn, it is no more than fair to suppose that they did not perjure themselves when they agreed to determine judicially, in accordance with certain rules laid down by the parties, the amount of damages to be awarded, and did not stultify themselves by first unanimously declaring that certain claims were not allowable by international law, and then admitting them by a contemptible quibble. There is certainly no trace of any such intention in the record of the proceedings. With regard to the rate of interest, seven per cent. was claimed by our Government, and six per cent. was allowed by the Tribunal.

Thus far, the reference of the Alabama Claims to the High Court had produced the following results: The Tribunal had decided that Great Britain was liable for the acts of the three cruisers mentioned above, and also expressly decided by separate votes that she was not liable for the acts of the *Georgia*, *Sumter*, *Nashville*, or any of the others. It had also decided that the United States had no claim for "national losses," nor for "indirect damages"; that the "war-premium" men had no claim; that the total amount of direct damages caused by the three cruisers was, with interest, $15,500,000, or in round numbers, calling the time during which interest was running twelve years, $13,500,000 principal, and $2,000,000 interest. This sum the Tribunal gave to the United States as a "trust-fund," to be distributed "according to the tenor and spirit of the award" (we quote the language of the counsel of the United States) among the claimants. It could keep none of it itself. It had collected it as an agent, and must pay it over as an agent. These claimants were now reduced to three principal kinds—shippers, ship-owners, and insurers. As to the latter class, there was no dispute before the Tribunal that all underwriters who had paid as for a total loss stood in the shoes of the original owners, and were, in the technical language of the law, "subrogated" to their rights.

Now, what has Congress done with this trust-money? For nearly two years after the decision of the Tribunal—namely, till the passage of the act of June, 1874—absolutely nothing whatever was done. For nearly four years, during which time it has accumulated from $15,500,000 to more than $20,000,000, drawing interest at five per cent., it has remained in the Treasury. By the act itself the insurers, who had been from the first, by our Government and by all the arbitrators, decided to have the same rights to the money which the claimants themselves would have had, were deprived of half their rights; and a new Court of Alabama Claims was convened, directed not to allow any insurer's claim unless he could show that the sum of his losses exceeded the sum of his premiums, and then to no greater extent than the difference between the two—or, in other words, was expressly directed not to give to the insurers the money which the Government had just collected in court for them. In the second place, the act provided that the claimants should be entitled to interest at four per cent., the difference between this rate and that of six per cent. awarded by the Tribunal being kept back, on what ground nobody has yet had the assurance to state. This, however, was only a beginning. After all the payments that may be made under the act of 1874 there will be a large surplus, and it

remains to be decided how it shall be distributed. The majority of the House Committee have accordingly gravely recommended that the money be paid, first, to the claimants who lost by the vessels for whose acts the Tribunal expressly decided Great Britain was not liable, and for whose acts she paid none of this money; second, to the war-premium claimants, whose claims were expressly ruled out; and then, if there shall be any money left, to the insurers, who are the only one of the three classes who have any valid claims at all. Meanwhile, the State Department, which collected the claims and turned the money into the Treasury, stands by as if it had nothing to do with the case.

It is difficult to say whether the case is made more or less monstrous by the fact that the Committee is very evenly divided in its report, there being a bare majority in favor of the bill reported. This shows that the decision arrived at has been no hasty determination, but is the result of discussion, argument, and examination of evidence; so that it appears, taking this bill and the former act together, that the result of judicial discussion of private rights in a Committee of the House of Representatives is more likely on the whole, after due consideration, to be in favor of simple robbery than anything else.

But the effect of the disposition of this fund made by Congress upon the rights of the particular claimants is a matter of comparatively small concern. The disastrous part of the whole business is the effect upon the reputation and character of the Government and the nation. The *Alabama* Treaty and the subsequent proceedings have not been transacted on a narrow and provincial stage; we have called in the world to witness the noble example set by the two foremost nations of modern times in substituting peaceful methods of settling quarrels for violence, bloodshed, and war. We not only virtually, but in express terms, offered to show a benighted and barbarous generation our love of justice and law by submitting a grave international dispute to the decision of a court of justice. The submission of the Alabama Claims to a *court* was received the world over as a harbinger of the new gospel which was finally to do away with war altogether and put justice in its place. There is now no escape for us. The result will be judged in the light of the promises; and the question that the public will ask will be, not simply has something been substituted for violence, but what is presented to us in exchange? Can it be fraud? When we recall the glowing language that was used six years ago about the "principle of arbitration," it is difficult to believe that the management of the business by the Government has not been from first to last a roaring farce, got up for the purpose of bringing arbitration into contempt. Certainly, if that had been the object, no means could have been better adapted to the end than the submission of a dispute by a trustee to a voluntary court of justice and to rules of law until judgment was rendered in the plaintiff's favor, and then, walking off with the money out of the reach of the process of the court, defying it to enforce its decree for the distribution of the trust-fund, and proceeding to do what he pleases with the money. Bismarck and Moltke, when they hear of this queer triumph of justice over the barbarous instincts of human nature, may well doubt whether there are not some things that are even worse than war and bloodshed. Isolated as America is from the rest of the world both by position and circumstances, and exempted as we are by our immense material wealth from many of the consequences which bad government would naturally have brought in its train, we are always inclined to look on "the bright side" even of our worst errors. But such mistakes as the *Alabama* business has thus far been have no bright sides. It would have been a thousand times better than what has happened that all the money we received from England should have been sunk in the sea, and that the High Court should never have met to illustrate the "principle of arbitration" at all. We should have been then, at least, spared the shame of seeing the Government submitting to rules of law to evade those of justice, and swindling its citizens at home to disgrace them abroad.

THE BATTLE OF THE BOOKS.

MR. DANA may fairly be congratulated, from one point of view, on his treatment by the Senate, for the opportunity it has afforded him of making the public acquainted with the real nature of a transaction in which there was a vague impression in the minds of many people that he had been in some way to blame—an impression which was confirmed or strengthened by the fact that in the controversy between him and Lawrence there had been a judicial decision against him, in which he had, to some extent at least, been held answerable for an infringement of Lawrence's copyright. The shape which the story took in the minds of many people, to our own knowledge, was something of this sort: That Mr. Lawrence was a great master of international law, who had with much honor and authority annotated two editions of Wheaton at the request of and for the benefit of Wheaton's family, but that his last edition gave dissatisfaction to the Republican party during the war, on account of its views on the right of secession and the rights and duties of neutrals; that Lawrence was, therefore, roundly abused as a "Copperhead" and "rebel sympathizer," and that, at the suggestion of Mr. Seward, Mr. Dana was induced to undertake a "loyal" edition of the work as a rival to Mr. Lawrence's, with notes taking the Northern view of the various questions of public law raised by the Rebellion, and that Mr. Dana went to work and did bring out such an edition, but stole extensively from Mr. Lawrence's notes on non-controverted points, and endeavored in a crafty and fraudulent manner to supersede Mr. Lawrence's work in the market, and that on Mr. Lawrence's suing him he (Dana) swore roundly that he had carefully abstained from any use whatever of Mr. Lawrence's labors, but was speedily found out by the Court and exposed in a decision which the New York *World* and General Butler knew of, but nobody else, or nobody but Mr. Dana's unscrupulous partisans, who of course tried to keep it secret. This was the story in its worst form; as it spread it assumed among some of those more friendly to Mr. Dana the form of a charge that Mr. Dana had undertaken a rival edition of Wheaton, and had, being an honorable man, meant to abstain religiously from any use of Mr. Lawrence's notes, but that, being very busy with his professional practice, he had left the greater portion of the work to certain young lawyers, who had helped themselves freely to Lawrence's accumulations, with resulting damage to Mr. Dana's reputation. Of course the great body of the public knew nothing about the matter and cared nothing, and, owing to its nature, probably no effort on Mr. Dana's part would, under ordinary circumstances, have been sufficient to obtain for him a fair and intelligent hearing of his case. His nomination to the Senate would not have procured it either, because outside the small circle who took any interest in his copyright quarrel his character stood too high to call for enquiry or hesitation of any kind. But Providence so ordered it that his two worst enemies, one of them notorious for the badness of his character and the other with a temper that would bear some improvement, rushed on to Washington, on hearing of his nomination, with charges which would have fallen stillborn if the Committee of the Senate had been a tribunal composed of honorable men, and Mr. Dana would thus again have lost the opportunity of a vindication. It so happened, however, that the nomination was very distasteful to some of them, who had other ends in view, and accordingly the appearance of Lawrence and Butler was very welcome and their charges very grateful, and they were promptly acted on and the President requested to withdraw Mr. Dana's name. This at once aroused the attention and indignation of the country, and Mr. Dana has obtained a hearing which the public does not accord to a private controversy once in a century.

It has now been brought out clearly that, whatever Butler said before the Senate Committee, the letter published by him in the New York *Tribune* was the composition of a liar and a ruffian, and that Mr. Lawrence, in acquiescing in it, even tacitly, as a statement of the case against his opponent, rendered himself an accomplice in the lying; that Mr. Dana was not a rival of Mr. Lawrence, but a successor—that is, that he was employed by the Wheaton family to do for them a piece of work which they had previously employed Mr. Lawrence to do, and in which there would have been no question of Mr. Dana's right to use the results of his predecessor's labors but for one thing, viz., an alleged agreement between Mr. Lawrence and Mrs. Wheaton, the evidence of which was a "memorandum" signed by Miss Wheaton, her daughter, but not by Mr. Lawrence, binding Mrs. Wheaton in certain conditions not to make any use of Mr. Lawrence's notes in a new edition without his written consent, and to give him the right to make any use he pleased of his own notes. This "memorandum" never grew into a formal agreement, and was returned by Mr. Lawrence after much fruitless negotiation,

and its validity forms the principal point in the suit now pending. Mr. Lawrence maintains that although he returned it and never signed it, it is a binding contract ; the Wheatons, that, if a contract at all, it was obtained by false and fraudulent representations. There is strong evidence in support of the latter view, that of Professor Parsons and Mr. Little, and the agreement of the Wheatons with Mr. Dana was made in the belief that they had no contract with Lawrence, but were the full possessors at law and in equity of the copyright of his notes, and that therefore Mr. Dana, acting for them, might make what use he pleased of them. The Court, however, held that the "memorandum" was a valid agreement. This was the first point in the case.

The second was whether Mr. Dana had sufficient notice of the existence of the agreement to make him a participant in the infringement of the copyright—if any such infringement there was—and therefore a proper defendant in the suit along with the Wheatons. The Court held that he had no *actual* notice of it. But then, he was intimate with the Wheatons ; he knew that they had a controversy with Mr. Lawrence, although, in order not to be mixed up in it, he declined to receive any communication from them about it or to read the correspondence, and declined, as a matter of propriety, to read a long letter from Lawrence to Professor Parsons, who was the Wheatons' adviser, which Parsons had not read himself, and which did contain an assertion of the Lawrence claim ; and therefore the Court decided that he (Dana) had constructive knowledge of it—that is to say, it decided that if he had heard things which he did not hear but might have heard, and read things which he did not read but might have read, he would have known that Lawrence claimed an interest in the notes. This is the link, and the only one, which connects him with the case.

The third question was, did Mr. Dana, as a matter of fact, the foregoing points being settled against him, infringe Mr. Lawrence's copyright ? Of actual copying of Mr. Lawrence's notes there was no proof, but Mr. Dana himself acknowledged that he used the Lawrence edition as freely as, but no more freely than, he used other works on international law. In passing on this point, the Court followed the rule laid down in England with regard to the copyright of a map, guide-book, or directory, in these words : "Express decision in Kelley agt. Morris is that in the case of a map, guide-book, or directory, or the like, where there are certain common objects of information which must, if described correctly, be described in the same words, a subsequent compiler is bound to do for himself that which was done by the first compiler ; that he is *not entitled to take one word of the information published* without independently working out the matter for himself so as to arrive at the same result from common sources of information ; and that the only use he can make of a previous publication of that kind is to verify his own calculations and results when obtained." (The italics here are ours.) One does not need to be a lawyer to see the extraordinary vexatiousness of a rule of this kind applied to a work on international law, in treating which the illustrations used must needs be prominent historical events, and the literature of which is small in volume and composed very largely of mere iteration of opinions. No man could undertake for a second time the annotation of a work like Wheaton's and pass through a net as fine as this is, and there was, therefore, nothing wonderful in the finding of the Court that Mr. Dana had in some places trespassed on Mr. Lawrence's rights. But it made no decree giving Mr. Lawrence the relief he sought ; it did not enjoin the sale of Mr. Dana's edition ; it simply decided that under this rule there had been infringements, and directed a Master to report what they were. Whether such an application of the rule will stand, will be decided by the Supreme Court. Seven years have elapsed since then and no report has been made. The present position of the matter may be illustrated thus :

Dana is building a house on land adjoining Lawrence's, who asserts (1) that the lot on which the house is going up is his ; (2) that, if not, Dana has agreed never to build on it ; and (3) that he has agreed not to build nearer than within one foot of the boundary-line, and sues him in equity. Dana claims the whole lot, denies having ever made any agreement about it, and maintains that, in any event, the house is not nearer to the line than one foot. To settle the matter, there has to be a prolonged examination of old deeds, surveys, and correspondence, extending over many years, and the Court decides (1) that Lawrence has no claim to the lot, and that it belongs to Dana ; (2) that Dana never agreed not to build, (3) but that there was correspondence between them which did amount to an agreement on Dana's part not to build within a foot of the line ; (4) that the line is difficult to determine accurately, but does lie from *a* to *b* and from *b* to *c*, and that, while no part of Dana's house overruns it, it appears that parts of the out-offices do, and that his eaves overhang it ; but the Court is unable to examine the matter for itself, and refers it to a surveyor to report how it stands with regard to the line as thus laid down, and refuses Lawrence's prayer for an injunction or conveyance, and leaves him to await the result of the report. Dana then says he will appeal to the Supreme Court. In the meantime, three notorious faro-bankers and mock-auctioneers, named Butler, Cameron, and Morton, hearing of the affair, and learning that Dana has been appointed to a foreign mission by the President, collect in the street in front of his house, headed by Lawrence, and begin to shout "Thief ! thief !" and protest against such a man's representing the country abroad. Dana appears at the window and warns them off, and threatens that he will call the police, and then they go back to their business, telling everybody that they knew he was a bad fellow, for he had just lost his temper. In this bit of exegesis we have made no use whatever of presumptions derived from the reputation and history of the parties to the controversy, powerfully as these would tell in Mr. Dana's favor. On this point, indeed, we are inclined to think that all who know them both will concur heartily in the opinion expressed some time ago by a distinguished American scholar and diplomatist *apropos* of this matter, "that Richard H. Dana would steal from no man, and no man would steal from William B. Lawrence."

We must in closing say one word about the letter of which the Senate Committee has made such ridiculous use to cover its retreat from the discreditable position it first assumed. In hearing Lawrence and Butler in secret, and on the strength of their *ex-parte* statements requesting the President to withdraw Mr. Dana's name, it inflicted on him the grossest outrage, as far as our recollection goes, ever committed on an individual of good character, and belonging to an honorable calling, by an official body of dignity or authority. The offer, unofficially and indirectly made, after the insult had been inflicted and made public, to hear Mr. Dana in his own defence, was not a reparation but an aggravation. If Mr. Dana had gone down to Washington and addressed the Committee under these circumstances, his address would not have been an answer, but an appeal *ad misericordiam*, which it would have been degrading to any man of honor to make. As soon as he received an authoritative account of the Committee's action, he wrote the letter to Mr. Boutwell which has been published, and which we are sure will be and has been pronounced by men of character and intelligence on both sides of the Atlantic a perfectly proper letter under the circumstances, containing the right thing said in the right way. The irritation over it displayed by a portion of the Senate we believe to be for the most part feigned. Everybody who knows anything of these gentlemen, and their social and political history, knows that the goodness of their temper and their calmness under harsh language is one of the conditions of their success. So that we are, we think, only doing them justice in treating their horror of Dana's intemperate language as a sly caucus joke which they enjoy mightily among themselves.

THE ROYAL TITLES BILL.

London, March 21, 1876.

PUBLIC interest this week has been concentrated upon one subject—a most important one—the Royal Titles Bill. I have not seen so much unpleasant feeling upon any subject for a good many years as has been exhibited upon this during the past ten days. I do not know that the feeling has yet had time to penetrate very deeply into the lower strata of society, or to take hold on the public mind in the larger towns outside London. But a moaning sound is even now heard in the republican centres, in Newcastle, Sheffield, Manchester, and Birmingham, which may be the prelude to a storm of indignation shortly to arise against the House, or may merely be the distant reverberation of the outburst which undoubtedly is now going on in the metropolis.

When it was first announced in the Queen's speech that the present was deemed a fitting opportunity for making a formal addition to the style and titles of the sovereign, the matter, as I wrote to you at the time, was considered as another piece of *mauvaise plaisanterie* on the part of the Prime Minister—a vulgar joke this time, and smacking more than ever of Mr. Disraeli's passion for the footlights and tinsel of the theatre. But people were interested in other things of graver moment, and if the Queen did not mind gratifying her Premier's fancies, and allowing him the satisfaction of mouthing big words about Oriental potentates and august dignities, it really did not much matter. Mr. Disraeli was getting old, and he had done some public service, and if it was a satisfaction to him to make a grandiose speech about the royal house and the Eastern Empire, and to bring in a bill to add India to the crown titles, the people would not grudge it to him. It was like giving an old circus-horse a sniff of the sawdust to remind him of the antics of his youth. It was, indeed, whispered that it was possible, but highly unlikely, that some members of the royal family were like-minded with Mr. Disraeli ; that they considered the

title of King or Queen not good enough for them ; and that it would be a fine thing to be called Imperial Highness, and to take social position in the courts of foreign emperors along with their connections of imperial rank without question of precedence. But this was hardly credited. We all thought better of the sons and daughters of Queen Victoria, and of Queen Victoria herself, and we could not believe that any Ministry—even the Ministry of Mr. Disraeli—could seriously propose that the addition to the style and titles of the Crown was to imprint the brand of Imperialism upon the British dominions. The first rumor of a suspicion of this proposal that came to my ears was a casual bit of gossip at a dinner-party that Mr. Bright was seriously disquieted on the subject. The popular instincts of the old tribune of the people were excited ; he feared that Mr. Disraeli might make such a proposal, and he would not answer for the consequences in the country if he did.

On the first reading of the bill, the Prime Minister was interrogated upon the subject, but he declined to answer. He, as his manner is when he wishes to impress the House with the solemnity of the occasion, raised himself erect, and, in that style which Mr. Bright once happily characterized as a "mixture of pompousness and servility," dilated upon the impolicy of interfering with the royal prerogative. This solemnity was the reverse of tranquillizing. The Opposition were alarmed, and they plied him with questions as to what title the Ministry would recommend the Queen to take. But again and again he declined to answer, and he wrapped himself up in a mysterious mannerism that argued badly for his cause. It was not until a notice to reject the bill unless the House were told what the title was to be was put upon the Order-Book that Mr. Disraeli consented to come down from his pedestal, and broke his silence with the announcement that the Queen was henceforth to be known as the "Empress of India." "For the future her title will run thus," he said, and he rolled out the words with unction, "Victoria, by the grace of God, of Great Britain and Ireland Queen, Defender of the Faith, and Empress of India"! How the old circus-horse pranced and neighed as he uttered these "august designations"! But the House of Commons, the Ministerialists no less than the Opposition, did not participate in his prancings. They looked, on both sides of the House, and obviously felt, uncomfortable. The House of Commons, whatever some few of the individual members may be, is, in its corporate feeling, a refined and cultivated body. It has no sympathy with the intellectual propensities of charlatanism. In its entirety it is a collection of high-spirited English gentlemen, and it is not easily carried away by the emotions of sycophancy or courtiership. The members felt on this occasion that they were most unnecessarily being dragged through the dirt by the fancies of the Prime Minister—the gilt and tinsel dirt of an inferior theatre ; and not they only, but the prestige, the honorable dignities, and the grand traditions of the British Crown. "Mr. Disraeli," as one man said to me as the Prime Minister sat down with an air of ineffable self-satisfaction on his generally immovable countenance—"Mr. Disraeli, not being content with the degradation of the Tory aristocracy, is now trying to degrade the Crown." This was no overcharged expression of opinion. It described the prevailing feeling of discomfort and degradation, and that feeling of discomfort and degradation has been growing ever since. The metropolitan press, or at least that portion of it which is independent of the Conservative party, has been unanimous in condemning the proposal. Every man you meet in the street, and every sensible woman whom you meet in society, talks of the suggestion with undisguised contempt. The cynically-minded in the clubs make pretty good fun of the thing, but their kindliest criticisms contain a sting—a sting directed not against the Prime Minister or the Ministry alone, but against even more important personages. Only to-day I heard a lamentation that Thackeray was gone. It was thought he might have added an Imperial chapter to his 'Book of Snobs.'

Last Wednesday it was announced that Lord Hartington, the leader of the Opposition, was to move a resolution the object of which was to run the title of Queen against that of Emperor ; and when this was known a sense of relief was felt by all independent men who take an interest in politics. The Ministry, it was thought, would now withdraw their bill, or drop their fantastic proposal to foist this un-English exotic on the Crown, and rest content with the simple incorporation of the word India into the existing attributes of the Queen. But this was not to be. The Ministerialists came down in masses to the House, sick men and cripples even being brought out of their beds to vote, and they carried the bill into committee in spite of their opponents. Lord Hartington never spoke better, and he was well supported by Mr. Forster and Sir William Harcourt. But it was all in vain. The Chancellor of the Exchequer and a young understrapper of the Government called Lord George Hamilton, a son of one of Mr. Disraeli's mushroom dukes, were put up to answer, and the Prime Minister was so assured of victory that he did not think it worth his while to speak. The division was taken at half-past one on Friday morning, and the Opposition were defeated by a crushing majority, larger than any they have had against them on a party fight in this Parliament. And why, you may ask, should this have been if the feeling outside Parliament is as strong as I have said ? The reasons are not quite clear as yet, perhaps they never will be. The Ministerialists strained every nerve of party allegiance, and not one man among them voted with the popular side. The same cannot be said of the Opposition. The leaders and the Radicals were staunch enough ; but in the miscellaneous cohorts which make up the followers of Lord Hartington there is a section who are hardly independent of the influence of the Court. They are a heterogeneous crowd, consisting of ex-lord-mayors and lord-mayors expectant, young noblemen connected by friendship or otherwise with the members of the reigning family, Home-Rulers looking for the release of the Fenian prisoners, and a few others who are drawn by temperament and disposition towards royalty like flowers to the sun. All this section of the Liberal party voted with their natural political enemies on this occasion. Some have seen in this an indication that the whispers, spoken of at the beginning of this letter but discredited, had something in them. I express no opinion upon this point. The Republicans in London, however, have lost no time in drawing some such inference. They seem to think that they can make political capital out of the transaction. The following petition, relative to grants to members of the royal family, has been addressed to the House of Commons, and is being signed extensively throughout the metropolis :

"That no further grant or allowance may be made to any member of the royal family. That an account should be brought before the House, showing the total real and personal estate and income of each and every member of the royal family who may be in receipt of any pension or allowance, and also showing all the positions and places of profit severally held by members of the said royal family ; also showing all pensions, if any, formerly charged on any estate now held by any member or members of the royal family, and, if any such shall have been transferred, at what date such transfer took place" ;

and it cannot for a moment be disputed that the Republican party in the state—at present a very small one—is the one party that has got any good out of this untoward business. The moderate Liberals, who compose the Opposition, have gained nothing, neither have they lost anything. They represented moderation and conservatism by resisting a hateful innovation, and they sustained a crushing defeat. Their action in the matter will tell in the long run, but for the moment it has not apparently done so. The Ministerialists secured a party triumph, but it is no real victory. Already Mr. Disraeli has seen the serious mistake he made. He has damaged himself and his Ministry in the opinion of his own supporters and of all sensible men both inside and outside the House of Commons ; he has pleased no one ; and by his action last night he has apparently failed to ingratiate himself even with the Court. He made a statement to this effect : that under no circumstances would the Queen, by the advice of her Ministers, assume the title of Empress *in England*, and that she would not under any circumstances be advised "to confer a title upon her royal children and her agnates that would denote the Imperial connection." This assurance is satisfactory so far as it goes, but it does not go far enough. If the Imperial title is assumed anywhere in relation to British dominion, it will be only a question of time how long it will be confined to the limits assigned to it. There are always courtly and official persons who will make it their interest and their pleasure to extend the designation ; and that is what excites the suspicions of the country. Why did not Mr. Disraeli make this statement long ago, they ask, if this is what is really meant ? "Why," rather, in the words of Lord Melbourne, "did he not let it alone from the beginning ?"

The bill, however, is regarded as practically safe, and as very nearly sufficiently harmless. It is not likely that the House of Lords will raise any serious opposition to it, though they may press for the exclusion of the word Empress in the proclamation which will follow. Lord Granville will perhaps speak out his mind, as he is understood to have been in close communication with Lord Hartington in the matter, and to have counselled him as to his course of action. Some of the young Liberal peers may also express the views which prevail among all men of sense and taste in the country. But the great majority of noble lords are too closely bound by social ties to the Court to say in public what many of them do not hesitate to say in private, and that is, that the proposal to assume the parvenu title of Emperor is vulgar and demeaning, and even the wish to assume it, if brought home to any member of the royal house, could not fail to slacken and almost to cast adrift the feelings of loyalty and affection with which that house has ever been regarded in this country and throughout the colonies.

THE RUSSIFICATION OF THE BALTIC PROVINCES.

LONDON, March 9, 1876.

A FUNERAL procession always awakens a feeling of sadness, even if the deceased has been wholly indifferent or quite unknown to us in life. Should it then be possible to pass the corpse of a body-politic quite unmoved? Perhaps its life was for a century or more only like a faintly-glimmering spark. Then its death will not strike us much. Perhaps it will even meet with the fate of the Abbé Sieyès, the announcement of whose death made quite a peculiar kind of sensation, because everybody thought he was dead long ago. Yet the fact that a life is extinguished will never fail to make an impression on those who are still living.

It is a very curious coincidence that the political resurrection of Germany is followed so soon by the agony of the only colony proper ever founded by Germany; for, so far as my information goes, everybody is agreed that the Imperial decree abolishing the governor-generalship over the three Baltic or German Provinces of Russia is meant to be their death-warrant. When, about thirteen years ago, I left Livonia, half resolved never again to return to this my native country, I incurred the severe blame of most of my old schoolmates and university comrades, because they thought no one ought to leave the ship when everything indicated a storm infinitely more dangerous than any she had ever had to weather before. My opinion was that she was doomed to inevitable destruction, and that a martyrdom which can do no possible good is simple foolishness. This was, of course, denounced as a threadbare veil with which I was trying to cover a mean egotism and a despicable lack of patriotism.

I should not have dared to tax the patience of your readers with what I have thought or done if it had not been for the reason that I wanted to introduce myself as one who knew something about those hapless provinces, and who has something to support his pretension that he judges them and their sad fate correctly. Only two months ago I spent some weeks in Riga. Nobody had as yet the faintest idea that such a blow was impending over them. And yet the very men who had once judged me so harshly now unanimously declared, heaving a deep sigh: "If we had no family to care for we would at once emigrate to Germany; here is no life; we are barely allowed to vegetate." You may judge what are their thoughts now—for they are confined to thinking; speak so that the world may hear them they cannot. When I complained of the absolute emptiness of the *Rigaische Zeitung* I was answered: The editors are not to be blamed; they dare not, they cannot say anything, and they curse every hour the day on which they turned journalists, for their work is more fruitless than that of the Danaïdes. I venture to assert that now, in all the three Provinces, not a single sober-minded and reflecting man will be found who still believes that the contest allows of any hope, that it is anything but a death-struggle. The abolishing of the governor-generalship in itself can, of course, not have such an effect, though it is important enough. It is the old story of the bundle of sticks which successfully resists every effort, while each stick, taken separately, is easily broken. The immediate effect of the Imperial decree is just the separating of them, but nobody has as yet had the folly or the impudence to suggest that perhaps nothing more is intended. If there could have been any doubt about the ultimate object for which this preliminary measure is to pave the way, the Russian papers have taken good care to remove it. With the utmost directness, they declare that everything peculiar to the Baltic Provinces which distinguishes them from the rest of the empire shall be levelled to the ground, and already they demand with vehement impatience that the axe shall at once strike at the root of the tree by depriving the University of Dorpat of its German character.

The German papers say as little as possible about the whole matter, partly because they do not like to give offence to Russia, partly because we are, in a political sense, a nation of yesterday. Heinrich von Treitschke, in one of his essays, remarks that the political age of a nation is indicated by the time covered by its historical recollections—*i.e.*, not as these are laid down in the writings of the learned, but as they really live in the people; and he points out how short a time that is with us in comparison with England or with France. Here is a proof of the truth of this assertion: the important part for a long time played by these Baltic provinces is so entirely forgotten even by the higher educated classes that it happens quite frequently to a Livonian or Esthonian to be complimented on speaking German so fluently and correctly. So there is nothing astonishing in the fact that the sympathy now bestowed upon them resembles the sun on a somewhat foggy day in December. Two or three saltless phrases of hardly lukewarm commiseration are followed by a long explanation of how the Baltic Provinces are now only reaping what they have sown, and the whole is generally wound up with the exclamation, How can we blame Russia, while we are doing exactly the same thing in Schleswig and in our Polish Provinces?

The first assertion is undeniably true. If the example of the German Knights (*Deutsche Orden*) in Prussia had been followed by their cousins, the Knights of the Sword (*Schwertbrüder*), in the Baltic Provinces, they would have conferred a blessing upon the vanquished natives and secured their own existence. They did not do it for exactly the same reason that it was forbidden in your Southern States to teach the slaves how to read and write. And it was not from indifference or negligence that they did not Germanize the natives. It was left undone with full consciousness, for to elevate them economically or mentally was to endanger the absolute sway of the masters over them. When they at last began to be aware of their fatal mistake, it was already too late; for their eyes were only opened under the pressure of the first half-covert and stealthy attempts of Russia to Russify as well the Germans as the natives. Russia has, of course, not been slow to answer all complaints with the question: Where is your right to call the Provinces German, as only about one-tenth of your population really is German? And it was not possible to give an effective answer. But this narrow-minded and short-sighted spirit has by no means, as all the German papers seem to suppose, been confined to the landed feudal aristocracy, who have thus far, to the almost entire exclusion of all others, constituted the "province" as a body politic. In the Livonian Diet (*Landtag*), in which every nobleman who is the owner of an estate (*Gut*), or who has charge of one, has a seat and a vote, Riga, to-day a city of more than one hundred thousand inhabitants, and with a tonnage larger than that of Hamburg, has but two representatives; and twice it has been due to the objections of Riga that the smaller cities did not get the representation which the nobility was willing to grant them. The peasantry had no political rights whatever, and the cities had no connection either with the nobility or with one another. In short, the whole province was a curiosity-shop of relics from the Middle Ages.

And yet it is not true that Russia is now only doing what Germany does with regard to Schleswig and her Polish Provinces. No one will contend that with these a necessary or likely effect of the Germanizing process will be a more or less considerable loss in their general *status* of culture. This, however, must be the inevitable effect of the Russification of the Baltic Provinces, although it cannot be denied that, so far as the mere laws are concerned, they have of late remained behind Russia in many and very important respects. In spite of that, taken as individuals, they are still, morally and mentally, by far the superiors of the Russians in the average. This the latter themselves acknowledge by constantly complaining that a really enormous percentage of all the offices of trust and responsibility is held by the Germans. And if it is admitted that, in the average, the Germans are still morally and mentally the superiors of the Russians, then also it must be acknowledged that the forcible Russification of the Baltic Provinces is a high-handed attempt against civilization, since, in this case, nobody has dared to plead a paramount political necessity as with regard to ever-revolutionary Poland. If this be so, then just so far as Russia succeeds in her designs she will deprive herself of the best and most tried levers for lifting her from the position of a semi-Asiatic power to a level with the rest of the Western world; for it is universally acknowledged that the Russified German is not only not better but even much worse than the Russian. And she will have to suffer the more from this most impolitic course because the struggle will be extremely stubborn, though it is utterly hopeless for the Provinces. The Germans of those regions are an exceedingly tough race, as is abundantly proved by every chapter of their history, and they have a shield against which many a strong shaft will be dashed to splinters; they are Lutherans, and, upon the whole, not only very orthodox Lutherans, but also Lutherans with the primitive faith of children, which they have remained in so many respects. As long as they are not deprived of their Lutheranism—and, so far as one can see now, neither force nor craft will accomplish that—the mother will lull her child to sleep with a German song, and the dying father will bless his son in German words. And as long as this is so, the Russification will not be complete.

Correspondence.

A SHORT COMMENTARY ON PROFESSOR TIMOTHY DWIGHT.

TO THE EDITOR OF THE NATION:

SIR: I beg a small space in your columns for a brief commentary on the *Epistles of Timothy*. I regret that the work of the Advisory Council so soon requires a defender, and that the defence requires so much artifice

As common fame attributes a very large share of the deliverances of the Council to the astuteness of the lively professor, he may naturally be expected to speak of them with the affection we feel for our own offspring, whether of the body or brain. The Council was compurgator for Plymouth Church, and Professor Dwight is compurgator for the Council. It might be curious to enquire how far in an ascending series the process of compurgation can be efficaciously carried. Coleridge hinted at a difficulty attending the process :

> "The river Rhine it is well known
> Does wash your city of Cologne;
> But tell me, nymphs! what power divine
> Shall henceforth wash the river Rhine?"

The Jesuit fathers were famous experts in moral and theological casuistry. The great Pascal, in the immortal 'Provincial Letters,' exposed and ridiculed their adroit sophistries about "proximate power" and "sufficient grace." "Proximate power" was given to all men to keep the commandments (including the seventh commandment, of course), but all men had not "sufficient grace" to keep them. Those learned fathers also taught that a man might pay another for burning an offending neighbor's barn, if he did it with the right motive ; and the motive *was* right if the money was paid for the *favor*, and not for the *fire*. That precise case is put in the "Eighth Provincial Letter" :

> "A person asks a soldier to set fire to the barn of a man that has injured him. The question is whether, in the absence of the soldier, the person who employed him to commit the outrage is bound to make reparation out of his own pocket for the damage that has followed? My opinion is that he is not. For none can be held bound to restitution where there has been no violation of justice ; *and is justice violated by asking another to do us a favor?*"

See how adroitly the proposition is changed from asking a man to burn another's barn to asking him "to do us a favor"! Upon the same principle, the pious father would say that the wrongdoer is not bound to make restitution to Mr. Tilton for firing his premises, if the wrong was not done with intent to injure Mr. Tilton, *but from another motive;* for "the intention determines the quality of the action." In another letter, Pascal quotes the casuist as saying that if a holy father is caught in a brothel, he may deny it, if his motive is to save the credit of the church ; and in another place he adds that he may *swear* he was not guilty of fornication (interpolating in an undertone that he did not do it before he was born).

By artfully changing the terms of propositions as the argument proceeds, it can easily be proved, as no doubt it often was proved in that Yale College Debating Society the Professor mentions, that a horse-chestnut is a chestnut horse. Was not the Professor himself a burning and a shining light in that debating society? He evidently has given his days and his nights to the study of those Jesuit fathers, and in the practice of casuistry can give odds to his famous teachers. My task, now, is to expose some of his bold fallacies.

Fallacy No. 1.—That the proffer by the Andover Church of a mutual council to investigate a scandal seriously affecting the brotherhood of Congregational churches was invalid, because *only a church can try a church-member*.

The fallacy is in the assumption that the Andover Church proposed a mutual council *to try a church-member*. Any procedure is to be defined, and to be characterized, by the effect it is legally competent to produce. The procedure of a church-trial is competent to the effect, first, of *determining* the question of guilt ; second, of *pronouncing sentence;* third, of *executing* the sentence by excommunicating the convicted member ; but no one pretends that a council can try, sentence, or excommunicate a member of a church. The Andover letter does not hint at a proposal to try, sentence, or excommunicate anybody. The brotherhood of churches was interested to have a thorough investigation, and the Andover Church asked Plymouth Church to join it in calling a mutual council for that sole purpose. Its letter, as quoted by Professor Dwight, says : "We therefore ask you to unite with us in calling an ecclesiastical council *empowered to make a thorough investigation* of this painful case." If Plymouth Church had assented, and a thorough investigation had followed, the council could not have sentenced or excommunicated the member, but must have left *the church* to deal with him according to its own sense of right. If the church had then failed to do what it ought, a council might have been called to consider what further should be done to vindicate the brotherhood of churches. The Professor has the temerity to call such a procedure by a council a *trial* of a church-member. That an investigation is not a trial is shown by the scheme of a commission to investigate, for the Professor does not pretend that the commission can do anything more than investigate, and then leave it to the church to deal with the member.

Fallacy No. 2.—That a council cannot lawfully investigate, but that a committee called a commission, constituted by a council, can.

It is as true in law as in physics, that a stream cannot rise higher than its source. It certainly is true that if a council cannot investigate, it cannot confer a valid authority upon its creature to do so. If a council cannot try a church-member, its creature, whether called a committee or a commission, cannot try him. Having affirmed that a council cannot investigate because it cannot try, the Advisory Council and the Professor turn a sharp corner and upset both their major and minor premiss by affirming that a council can, by its creature, investigate and so try a church-member. If they attempt (as I think they do) to escape this dilemma by saying that the commission can investigate if the church consents, I answer it must be equally true that a council can investigate if the church consents ; and that is what the Andover Church asked, and what the Council advised Plymouth Church not to consent to. The Professor must therefore give up his proposition that an investigation is necessarily a trial, or give up his proposition that a council can constitute a committee to investigate ; and he must also give up his proposition that a consent of Plymouth Church to an investigation, as proposed by Andover, would not have been as valid as its consent to an investigation by a commission. Indeed, the Professor afterwards acknowledges that the local ministers' association may, without the consent of Plymouth Church, investigate and expel the pastor from the association ; and that a council may finally investigate with a view to disfellowshipping Plymouth Church ; but is such an investigation any more or less a trial, or any more or less determinative of the *status* in the church of the incriminated member, than the investigation proffered by Andover?

Fallacy No. 3.—The letter-missive having asked the Council to advise Plymouth Church whether the investigation by the pastor's committee was proper and sufficient, and the Council having advised that it was, that *therefore* the Council had authority to advise upon matters the letter-missive did not submit, viz., (1) That Plymouth Church should reject the proffer of the Andover Church, (2) *and* institute and constitute an investigating commission, (3) *and* enact a sixty days' statute of limitations, (4) *and* hedge the commission with conditions and limitations calculated to shut out more truth than they can let in.

If, as all the church platforms affirm, the authority of a council lies within the four corners of its letter-missive, Jordan overflowed its banks in all the Council did towards further investigation. In advising that the investigation by the pastor's committee had been proper and sufficient, it fully answered the question submitted, and went to the verge of the letter-missive ; and in going further it stepped out into boundless space. The Professor affirms that it would be foolish to advise the church it had done enough, without telling it what more to do ; on the contrary, it was foolish and illogical to advise that it had done enough, and then say it should do more. He is fond of illustrating by supposititious cases assumed to be analogous, but in every case the supposed analogy fails. The validity of all analogical reasoning depends upon a true likeness of the instances. How absurd, the Professor says, when Jones, who has written to be advised whether he has done enough to compose a strife, comes to receive an answer to his enquiry, to refuse to tell him what more to do because he did not ask that in his letter. But Jones and his letter, taken together, are competent to ask any and every thing ; but Plymouth Church and its letter are competent to ask a council to answer only what is in the letter-missive —for the delegates were authorized by their constituent churches to answer nothing else. That the enquiry was not in Jones's letter was of no consequence to Jones and his friend when he came in person to enlarge his enquiry, but that the enquiry was not in the letter-missive was of the most absolute consequence ; and when Plymouth Church asked the Council a question not in the letter-missive, and which the constituent churches, therefore, had not authorized their delegates to answer, any answer to it was as void of validity as if made by a mob assembled at the door of the Council. So the Professor's supposed analogy is specious but not sound.

Fallacy No. 4.—That because a party negotiating for the call of a mutual council may, for a good cause, object to a church or delegate nominated by the other party, therefore it may, as matter of strict right, object, with or without cause, to any church or delegate so nominated, even after having assented to the nomination.

The specific case on which the Council was asked by the letter-missive to advise was, Whether Plymouth Church, after assenting to the nomination and notification of the Church of the Pilgrims and the Clinton-Avenue Church, did right to object to them with the known and declared effect of its defeating the effort to convene a mutual council? That question could have been answered in either of two ways, viz. : (1) By affirming the general proposition that each party had an unlimited *right* to object to any

church or delegate nominated by the other; or (2), by affirming the limited proposition that such objection could be made only for good cause—*i.e.*, the known partiality of such nominee. Affirming the general proposition, viz., the unlimited right to object in all cases, that would include every case, and of course the case of the two churches. Affirming the limited proposition, the propriety of the objection to the two churches would depend upon whether they were in fact partial. If the Council had decided the case on the narrower proposition, it would have been bound to enquire as to the fact of the alleged partiality, and to decide that question of fact; but it is not pretended that it made any such enquiry, or pronounced upon any such alleged fact. It was, therefore, not in a situation to advise that the objection to the two churches was proper unless it affirmed the large general proposition; and it did explicitly affirm it. Instead of supporting that general proposition against Dr. Storrs's formidable assault, the Professor goes off in a tangent about the right to compose the Council of impartial members, and to imagine extreme and exceptional cases of unfitness. Would the Professor, on his own principles, be a fit member of a council to which Plymouth Church or its pastor was a party? But I will not press the *argumentum ad hominem*, and I will content myself with saying that he has failed to support the unqualified right to object; that the Council did affirm that unqualified right; and that the Council had no other basis for its advice that Plymouth Church acted properly in its negotiation with Mrs. Moulton; for it will not be pretended that the Council affirmed, or meant to affirm, that Dr. Storrs and Dr. Budington were by reason of partiality disqualified to be members of the mutual council asked for by Mrs. Moulton.

FALLACY No. 5.—The question the Professor was discussing when he uncaged his allegorical tiger was, Whether the Council properly advised that a member who had *absented* himself, and was also charged with a *scandalous offence*, could, in the exercise of a wise discretion, be dropped for his *absence* without taking notice of his *scandalous offence?* Having stated that question, the Professor introduces his royal Bengal tiger, and supposes himself to say to his neighbor: We can, in the exercise of a wise discretion, determine what animals we will turn loose in our court-yards with low palings. The Professor then triumphantly asks, Because I spoke of animals and discretion, is it to be inferred that I meant I could properly turn a tiger loose in my court-yard? My dear Professor, the question whether, in the exercise of a wise discretion, a tiger could be turned loose in the court-yard, was the very question in debate; the "scandalous" member was the tiger. If you admit that he should not be turned loose, there is no dispute between us. It is the Council's declaration that he may be turned loose, without taking notice that he is a tiger, that we have taken the liberty to controvert. The Council's rule merely provided for a *selection* of the tigers to be loosed; the principle governing the selection being the danger of holding on to the tigers, and not the danger of turning them loose.

Finally, the Professor seems greatly agitated by his apprehensions that Andover will persist in calling a council, and that certain obnoxious persons named by him may be members of it. I am not authorized to say anything to increase or tranquillize his fears. With his knowledge of the extraordinary pains taken by Plymouth Church to exclude from the late Council all delegates who might be suspected of a bias in favor of that church or its pastor, why should not that happy experience reassure him? And as he believes that the action of that Council was inspired, and that its deliverances are stamped with infallibility, why should he not pray for and expect the like heavenly endowment of the next?

Whatever good or ill success has attended the nine-columned effort of the Professor to vindicate the deliverances of the late Council, he has certainly succeeded in making apparent to the public how distressingly anxious he will be to select as commissioners only such persons as will be eager to decide that the accused pastor is guilty.

JOSHUA M. VAN COTT.

BROOKLYN, April 3, 1876.

Notes.

J. B. LIPPINCOTT & CO. publish in several languages the 'Visitors' Guide to the Centennial Exhibition and Philadelphia.' It has very clear maps of the Exhibition grounds and buildings and of the southern half of the city, on which all the points and buildings of interest are designated. The condensed text seems to contain all the information necessary to the tourist for getting about without loss of time and without imposition. A sentence on p. 24—"In population *and commercial importance* it [Philadelphia] is the first city in the State of Pennsylvania *and the second in the United States*"—stands in need either of revision or of division.——F. W. Morris, Springfield, Mass., publishes in a tasteful volume an address on the 'Early History of Springfield,' delivered Oct. 16, 1875, on the two-hundredth anniversary of the burning of the town by the Indians, by Henry Morris. The burning is the principal theme of this address, which is written with great simplicity and clearness, and is excellent of its kind. A steel portrait of William Pynchon serves as a frontispiece, and autographic facsimiles of the early settlers are given in the appendix, which contains a number of original documents relating to Springfield.——A. S. Barnes & Co. announce a 'Report of the Advisory Council held at Plymouth Church, Brooklyn.'——Elihu Burritt will shortly issue, through Brown & Gross, Hartford, a 'Sanskrit Hand-book for the Fireside.'——Macmillan & Co. will publish 'Notes of an Indian Journey,' by Mrs. Grant Duff.——The London *Printing Times and Lithographer* is now bringing out a 'Bibliography of Printing: an Alphabetical List of Books in all Languages relating to the History and Art of Printing (including Typography, Lithography, Chalcography, etc.); with copious Biographical, Historical, and Critical Notes, and numerous Illustrations.'——The Clarendon Press has lately added to the series of Italian texts begun two years ago by Mr. Cotterill's 'Selections from Dante' the first two cantos of Tasso's 'Gerusalemme liberata,' edited by the same gentleman, who has prefixed a life of Tasso and a grammatical introduction, and accompanied the text by copious notes, historical as well as philological. Although so little of the text is given, it can hardly fail to inspire students with a desire to read the whole work, an excellent, inexpensive edition of which for beginners is that edited by Domenico Carbone and published by Barberà at Florence in 1870.—— The 'Théâtre Complet' of M. Emile Augier will shortly be published by Lévy. It will fill six volumes.——The Stuttgart publisher, Auerbach, has honorably sent a compensation to "Edward Strahan," of this city, for using his novel, 'The New Hyperion,' in a German edition just issued.—— We learn from *Nature* that ten unpublished letters of Gilbert White, addressed to Robert Marsham, a Norfolk gentleman, have recently come to light, and are to appear in the Transactions of the Norfolk and Norwich Naturalists' Society. It is a pity they were not in time to be included in the new edition of White's Selborne.——For the purpose of preparing a series of articles on commercial and industrial co-operation in the United States and Great Britain, Mr. Charles Barnard has been sent abroad by the publishers of *Scribner's Monthly*.

—We have before us a copy of the *California Star*, Vol. II., No. 13, for April 1, 1848—"a weekly journal, devoted to the liberties and interests of the people of California, and published in San Francisco." The new territory had just been annexed by treaty to the Union, and the American settlers were being rapidly reinforced by fresh arrivals from "the States"; and this particular issue of the *Star* was prepared for the better information of "our Eastern friends, or residents of any part of the globe." The agricultural resources of the Territory are strongly insisted on (seven men breakfasted on a garden radish "and found it well flavored") and the future of San Francisco as a commercial port anticipated without exaggeration. Judicious prophecy also occurs in this paragraph:

"The gigantic project of Mr. Wilkes, of a railroad from the States to these shores, is rapidly gaining ground and favor in the United States—a project which will ultimately be carried into execution, and needs no comments to show its influence over the destinies of the country. Besides, it appears that the American Government has resolved upon securing the right of establishing a ship-canal near the neck of land which divides the two Americas. If we are to judge from the highly interesting letter of Hon. G. M. Dallas, the Isthmus of Tehuantepec is already selected, and there is every reason to believe that this grand and beneficent project will be realized."

Pending the construction of the railroad, emigrants are earnestly reminded of "the importance of keeping the well-defined '*old road*' to California," and of avoiding short cuts, if they value their lives and property. "The horrible sufferings of those who were overtaken by the winter snows on the California mountains in 1846 are enough to appall the stoutest heart." The white population of San Francisco twenty-eight years ago consisted of adults —males, 575; females, 177; children, "of ages proper to attend school," 60. "Scarcely eight months since, the total number of whites was 375." This was still far behind the "Salt Lake Settlement," from which the advices were to December 24. "Six hundred families are now located in the great valley, with a supply of provisions calculated to maintain them until the season of harvest." The editor has "received information from a reliable source that a large immigration from China may be expected here. We have already two or three of the 'Celestials' among us, who have found ready employment. The mechanics, cooks, and other working-classes of

China would be exceedingly useful here, and would undoubtedly find it to their advantage to emigrate. They would be especially invaluable for the introduction and manufacture of silk in this country." The disadvantages of the Heathen Chinee had not then been thought of.

—While we are on the subject of California, and in contrast with the day of small things just reviewed, we may notice the report of the health officer of the city of Oakland for the calendar year 1875, which has just come to hand. In June of that year Oakland had an estimated population of 25,000 inhabitants—an increase of 20 per cent. over the preceding year. Its health department was organized in 1868, but records were not begun till June, 1870. Judging from the report, the department is now well manned by intelligent officials. The health-officer, Dr. George E. Sherman, has illustrated his vital statistics by the graphic method devised by Mr. Wines and already effectively used by Gen. Walker in his 'Statistical Atlas of the United States.' In this particular the Oakland report is in advance of any similar publication with which we are acquainted. Noticeable points in it are these: that the city has an excess of 2,640 males; that a steady decrease in the birth-rate is apparent of about two in every thousand; that "while more children are born of foreign parentage, the aggregate number of children with parents born in the United States who survive the first year is greater." In the graphic chart of mortality, still-births are indicated. The percentage of mortality among females seems to be greater than among males. On the whole, the death-rate of Oakland is encouragingly low, and with so enlightened a board of health it ought not to get higher.

—In the number of *L'Art* for January 2 (New York: J. W. Bouton) are given two fine woodcuts and an etching as large as the original figure, from parts of Meissonier's "1807." The etching is a fine study by Monzies from the equestrian portrait of Maréchal Duroc, represented by the painter at the Emperor's right hand; and the cuts, almost equally good, are large representations of the rider at the head of the column and the rider flourishing his clarion. The accompanying article by M. Ballu differs from some of the French criticisms which came out on the news that the picture was going to leave the country, in being frankly encomiastic. The purchaser even comes in for a share of the writer's eulogy, and his best friends cannot complain of a want of appreciation in the following little rhapsody: "'1807,' its painter's most important work in size, has been bought for 300,000 francs by Mr. Alexander T. Stewart. This royal art-lover, whom the magnificence of his New York establishments has caused to be named the merchant-prince, possesses one of the largest picture-galleries in the world. It is fine to play thus the part of the Medici in the nineteenth century; and, to sum up in the fashion of an apotheosis, I will say that I seem to see French art covered with gold by American industry." The *Portfolio* (same publisher) commenced in the February number Mr. Hamerton's important series of articles on Turner, and gives another instalment for March. We observe a rather ominous burnishing of weapons preparatory to a bout with Mr. Ruskin. Such an admission as that in the first chapter, that Turner never equalled hundreds of his predecessors in the use of oil-color and the handicraft of their common art, would have seemed treasonable to the "Oxford Graduate," and by him would never have been even introduced for consideration without some contradiction or qualification to deprive it of its force. Mr. Hamerton makes a good point in congratulating Turner in not having been born in a higher class of society—the respectability of 1775 having among its traits a contempt for the practice of art "as deadly to genius as an unbreathable gas is to the animal organism." The illustrations of the *Portfolio* have been quite up to the mark the present year, but we are not entirely reconciled to the cessation of Goupil's fine photogravures, giving the identity of various fine paintings in all but the color. There are three etchings for March, two of them architectural, in which the robust sureness of M. Queyroy's hand and the tentative delicacy of Mr. George's are the exponents of two art-schools; and the third, better than either, executed by Rajon from a fine portrait, self-painted, of Gerard Dow, where that master is represented as a Dutch exquisite in velvet, with a pie-shaped cap adhering by special affinity to the right ear, and the hair in curls.

—As a substitute, perhaps, for the too long discontinued literary and dramatic annual of M. Vapereau, or perhaps as a mate to the 'Année Politique' of M. André Daniel, now in its second year, there has just been published 'Les Annales du Théâtre et de la Musique' (Paris: Charpentier & Cie., pp. xii.-333), edited by MM. Edouard Noel and Edmond Stoullig. To match M. Daniel's book, the best title for this one would obviously have been 'L'Année théâtrale' had it not been pre-empted by the volume of almost worthless newspaper gossip of M. Georges Duval. The value of the volume before us is warranted by the writer of the preface, M. Francisque Sarcey, whose name would never be lent to anything unworthy of careful consideration. From his few words we learn that this is the first of a series to be annually continued. Although inferior in typographical beauty and pictorial embellishment to the dainty and delicate little 'Almanach des Spectacles' which we reviewed upon its appearance last year, it is more ambitious in scope, as it is not content to give merely the facts and figures, the names and statistics, of the French theatrical year, but subjoins criticisms as well. It even notes the novelties of the foreign stage—after a fashion. The sole entrance for these United States is: "Philadelphie—'Ostrolenka,' opéra de Henri Bonewitz (janvier)." It also surpasses the 'Almanach' in the attention it pays to music. Its bibliographical chapter is not as comprehensive as could be wished—no mention, for instance, is made of 'Foyers et Coulisses,' a series of little histories of each of the Parisian theatres now issuing by Tresse. In the summary or review of the year a distinct trouble of the French stage of to-day is well defined—that it is "sterile without losing its fecundity"; and, indeed, the only play of any poetic pretensions which achieved success during the year was the "Fille de Roland." Yet the gross receipts of the twenty-five metropolitan theatres exceeded twenty-five millions of francs, while the general curiosity to see the new opera-house is said to have paid its manager a profit of over a million, although as yet not a single new opera or ballet has been heard in the building. The grand staircase and M. Baudry's pictures have rendered unnecessary any demand upon the muse of either M. Gounod or M. Thomas. Fortunately for the fate of French music, half a score of novelties, from which much may be expected, have been accepted by M. Vizentini, the director of the new Théâtre Lyrique, shortly to be installed in the Théâtre de la Gaieté.

—In Mr. Frederick Martin's 'Statesman's Year-Book' for 1876 (Macmillan & Co.), the part devoted to the United States shows the usual marks of judicious revision and substitution. We observe, for example, statistics, heretofore unpublished in it, concerning churches and schools, commerce and railways, the national debt, etc., etc. Rather curiously, the compiler falls into an important misstatement about school attendance in the United States. Thus he correctly gives, from the last census, the total number of school children as "6,596,466, being upwards of one-sixth of the population." But he adds that "out of this total 6,361,422 were *children of natives of the United States*, and only 235,044 *children of foreigners*, showing an extreme disproportion between school attendance and actual numbers of the existing native and foreign-born population." There is a double error here. The 6,361,422 were *natives* (not "children of natives") of the United States; the 235,044 were *foreign-born* (not "children of foreigners"). The total number of foreign-born children of school age (5 to 17 inclusive) was 546,317, so that the school attendance was 43 per cent. The total number of native children of corresponding age was 11,509,126, so that the school attendance for them was 57 per cent. This disparity is neither very great nor more than was to be expected. On the other hand, probably two millions of our school children were Americans of the first generation, if we include in that category all having a foreign-born father or mother. Mr. Martin's 'Manual' is so valuable and so generally trustworthy that a correction like this becomes of some consequence to those who resort to it.

—The harvest of ethnological publications for the past year has been unusually rich in works of permanent value whose contents bear in an important manner on the general progress of anthropological study. We desire to call attention to two works just issued. The venerable Middendorf, in the 'Transactions' of the Imperial Academy of Sciences at St. Petersburg, has opened his portfolios, closed thirty years ago, and given to students sixteen lithographic plates, representing line for line, without attempt at artistic remodelling, his original sketches from life of the people of Siberia. With this, under the caption of 'Die Eingeborenen Sibiriens,' appear 220 quarto pages, plentifully illustrated by woodcuts and containing his contribution to our knowledge of these singular nomads as a part of his yet unfinished 'Sibirische Reise.' That these sketches are faithful and characteristic is evident at a glance, and they are by no means lacking in expression. One plate is from photographs and represents Samoyeds of the Lower Yenisei. The strange forms of the head, of which these drawings offer a succession of examples, seem more misshapen and Caliban-like than those of any other people, not even excepting Africans. A singular want of uniformity in these misformations is very noticeable, the individual heads varying from cylindro-conic to truncate-pyramidal, but agreeing in receding forehead and deep, coarse, and massive rather than prognathous jaws. There is not that marked resemblance to Eskimo which some writers have fancied they could detect, nor yet any very decided Mongolian physiognomy. No summary appears in the paper of views in relation to the affinities of the various tribes. Indeed, it does not seem evident that

the ethnic relations of the people were deeply studied or were specially interesting to the traveller. It is rather a contribution of solid but not much generalized facts that he presents to us. He remarks that the affinities of the Samoyeds are with the Finns on the one hand and the Mongols on the other, and that this opinion, expressed by him thirty years ago, has been confirmed by philological investigations. The work relates chiefly to the Ostiaks, Yuraks, Samoyeds, Tunguses, and Yakuts; the woodcuts mainly illustrate implements, dwellings, or articles of dress. For the ethnology of the eastern branches of the Ural-Altaic family it is indispensable and almost unique.

—Another and nearly as important work is that of Dr. Georg Schweinfurth ('Artes Africanæ.' Leipzig: F. A. Brockhaus; London: Sampson Low & Co. 1875), which treats of the productions of the industrial arts of the tribes of Central Africa. It relates chiefly to the Dinka, Dyur, Bongo, Mittu, Niam-niam, Monbuttu, Sehre, and Golo tribes, of which it illustrates implements, weapons, dress, ornaments, utensils, and dwellings more or less fully. The writer divides Africa in regard to culture into three districts, corresponding to the movements of trade. Across the northern half of the continent, which maintains a more or less direct commercial intercourse with Europe, we have the district of firearms. Further in the interior is a region supplied by intertribal traffic with European cotton stuffs, with which the inhabitants are chiefly clothed. Lastly, in the very heart of the continent spreads the territory almost free from any contact with Europeans, and where the natives are thrown upon their own scanty resources for clothing and utensils. Throughout Africa a change is progressing which is the reverse of that which would ordinarily be supposed to follow contact with civilization. Intercourse with the outer world, instead of promoting and stimulating, has everywhere had only a destructive influence on native art. The greater the progress on the path of external culture made by any African tribe in modern times, the greater has become its dependence for all objects of refined culture on European industry, which, incessantly intruding by the cheapness of its manufactured articles and the high price it offers for indigenous raw material, everywhere excludes native competition and stifles the inventive impulse. This phenomenon, according to the author, is most marked in the negro states of the central Soudan, where, since their adoption of Islamism, a gradual retrogression of native culture has resulted, and the last traces of native industry threaten shortly to disappear. Hence the fact that in the very heart of Africa, among the rudest, partly cannibal, most secluded tribes, where cotton stuffs and even glass beads are almost unknown, the indigenous mechanical instinct, the delight in the production of artistic work applied to the embellishment and refinement of daily life, the satisfaction in self-acquired property, are best preserved. The Kaffirs and Hottentots, not many decades ago, produced a variety of the neatest works of art, and now offer an almost barren field in this branch of ethnographic research, while their utensils and implements, like archæological objects, must be sought in the incomplete museums of Europe. To this fact the great value and interest of the work under consideration are due, and it is to be hoped that others as competent may follow Dr. Schweinfurth's example. Among the most interesting illustrations are the forms of sleeping-houses and granaries, ingeniously contrived to protect from the attacks of wild animals and termites; also the incision of the lips for labrets and other ornaments, a custom which appears sporadically in Behring Strait, the Sitkan Archipelago, Mexico, Brazil, Borneo, and Africa. The work is neatly published, in parallel columns of German and English, making it available for any American student; and the plates are of excellent execution.

LYTE'S HISTORY OF ETON COLLEGE.*

IT is true that public education came with Protestantism. But Protestantism itself did not come suddenly and abruptly, though a critical point in its ascendancy and the fall of Catholicism is marked by the appearance of Luther. Ever since the thirteenth century the foundation of colleges had been increasing, while that of monasteries had been decreasing. Walter of Merton, who founded Merton College in the end of the thirteenth century, had marked a momentous antagonism, destined to be continually more developed, by excluding monks from his society. In Oxford and Cambridge the monastery school prevailed over the monastery itself, and expanded into a university. At length, in the reign of Henry VII., when Fox, Bishop of Winchester, Henry's great ecclesiastical councillor, was about to found a monastery, his friend Hugh Oldham, Bishop of Exeter, advised him to found a college instead, warning him in words which, vivid as the handwriting on the wall of mediævalism then was, denote remarkable prescience on the part of a bishop, that if he founded a house of "bussing (praying) monks," his monks would be turned out of doors before the building was finished.

William of Wykeham, "the sole and munificent founder of the two St. Mary Winton Colleges," to use the sonorous title which is appended to his name in University exercises, was a zealous Catholic, specially addicted to the worship of the Virgin, and an opponent of the Wycliffites; yet his figure as an artist and statesman-bishop belongs to the Renaissance, and his foundation does so still more decidedly. The Oxford branch of it might in those days be emphatically called "New" College. As in its architecture (the founder's own creation) it marks the close of the scale of beauty through which mediæval art passed, so in its statutes it marks the commencement of classical education. It may be said also to herald the dissolution of the monasteries, for its endowments were provided in part by the confiscation of alien priories. Wykeham's foundation was double: it consisted of a college at Winchester with a school attached to it, and a college at Oxford which received the boys trained in the school at Winchester and carried them through the university part of their education.

Wykeham's two colleges proved a great success, and were imitated by Henry VI. in his foundation of Eton and King's Colleges, Cambridge, as they were afterwards by Wolsey in his foundation of Ipswich and Christchurch; though in the case of Wolsey Henry VIII. broke in, and of the Cardinal's magnificent scheme one portion only, the Oxford College, was carried into effect, and even this on a reduced scale, while Ipswich perished with Wolsey's greatness. Eton may be regarded as a direct offset of Winchester, for it was under the influence of a group of Wykehamists that Henry VI. conceived and executed his noble plan. The king seems in his youth to have shown not only a good and religious disposition but intellectual sympathies, though there must always have been that weakness in his character and understanding which made him a puppet in the hands of his she-wolf of a wife. The details of the foundation, including the negotiations with Rome for ecclesiastical privileges, are fully given by Mr. Lyte, and may be interesting to those who are specially connected with Eton. Perhaps the thing which most strikes the general reader is the commercial value attached to relics and indulgences in an age when religious faith was almost dead and Alexander Borgia became Vicar of Christ amidst general approbation. Before it was completed, the foundation was overtaken by the civil war of the Roses, and, as the work of the Lancastrian king, narrowly escaped destruction at the hands of the triumphant Yorkists. The original design for the buildings was shorn of its sumptuous proportions, and an architectural deformity in the arch of the east window of the chapel remains a monument of the political tempest which had nearly levelled the whole with the ground. The cruel and unscrupulous politicians of that day, however, in England as well as in Italy, were often patrons of art and letters; such was Tiptoft, Earl of Worcester, justly nicknamed the Butcher, and Edward IV. himself was a man of the same character. Nor were the authorities of the college wanting in practical wisdom. With no false delicacy, they threw a cloak over their Lancastrian origin, and removed the effigy of their ill-starred founder from their seal.

The foundation at Eton consisted of a college of priests (a solemn college of ten sad priests, as it is called in one of the documents), a school, and an almshouse. In this we see clearly the filiation of the new educational institution with the monastery; only that the school, which, in the case of the monastery was quite subordinate, has become the important part of the institution, while the strictly monastic element is on the point of disappearance, the fellows of the college being secular priests. The eleemosynary element also has dwindled to small proportions. Thus the Darwinian finds his law of heredity and adaptation preserved; and if he chooses to designate the intellectual influences under which the educational organ of the monastery was developed, while its religious, ascetic, and eleemosynary organs lost their importance, as mechanical, his case will be complete.

Eton College passed like other colleges through the religious vicissitudes of the sixteenth century, the triumph of the anti-ecclesiastical element being marked by the appointment to the provostship of two eminent laymen, Sir Thomas Smith and Sir Henry Savile. During the provostship of Savile the college was visited by Elizabeth and James I., who were received with the usual fireworks of adulatory rhetoric in turgid Latin. Savile tried to give the college, as distinguished from the school, a real importance as a place of learning. He set up a press at Eton which brought out Greek books, and among them the splendid edition of Chrysostom with which his name will be always associated. Savile, in fact, was evidently a man of the Baconian type, and working for the fulfilment of the ideal of which the

* 'A History of Eton College: 1440–1875. By H. C. Maxwell Lyte, M.A.' London and New York: Macmillan & Co.

most elaborate exposition is the *Nova Atlantis*. Eton, however, was too small for a *Nova Atlantis*, and the position which Savile had given it in the European world of letters lasted no longer than his provostship. After Savile's death, Bacon himself was an unsuccessful candidate for the place, protesting (most truly) that he was able to "doe as much good to the college as another, be it square capp or round." Had he only been Provost of Eton or head of any place of learning and science, instead of being a man of the world without real worldly wisdom, what might he not have done, what might he not have escaped!

In the middle of the sixteenth century the system of education is disclosed to us in all its details by a *consuetudinarium* ascribed to Malim, then head-master. The curriculum is almost entirely Latin; Greek, which had flourished as a study in the spring-tide of the Renaissance, having now temporarily declined. The curriculum is:

In the first (lowest) form, Cato and Vives.

In the second, Terence, Lucian's 'Dialogues' (in Latin), and Æsop's 'Fables' (in Latin).

In the third, Terence, Æsop's 'Fables' (in Latin), and selections by Sturmius from Cicero's 'Epistles.'

In the fourth, Terence, Ovid's 'Tristia,' and the epigrams of Martial, Catullus, and Sir Thomas More.

In the fifth, Ovid's 'Metamorphoses,' Horace, Cicero's 'Epistles,' Valerius Maximus, Lucius Florus, Justin, and 'Sysembrotus.'

In the sixth and seventh, Cæsar's 'Commentaries,' Cicero 'De Officiis and 'De Amicitia,' Virgil, Lucan, and the Greek Grammar.

Latin versification, which afterwards assumed an almost portentous importance at Eton, was at this time not so much a part of the curriculum as a holiday exercise. There seem to have been only two masters, the *Magister Informator* and the *Ostiarius*, but the defect was partly supplied by the monitorial system, of which so much use was made at a later period, for the purpose of discipline, by Arnold. The discipline was pretty severe. The Eton scholars were awakened at five by one of the præpostors, who thundered "*Surgite*." While dressing they chanted prayers. Each boy made his own bed, and among them they swept the room. They then went down two-and-two to wash at the pump, which must have been pleasant in winter. Thence they went to the school-room, where the usher read prayers at six, after which hands and faces were examined by the *Præpostor Immundanorum*, and the unwashed were reported to the head-master, who came in at seven. There was a pause at nine, and, we will hope, breakfast, though Malim does not mention it. At ten, one of the præpostors shouting *Ad preces consurgite* recalled the boys to school, where, standing in order on either side of the room, they had to recite further prayers. At eleven came dinner, then school from twelve till three. The afternoon playtime ended at four, and was followed by another hour of lessons. At five the boys again left the school in procession, as Mr. Lyte surmises, for supper. From six to eight they went to work again, not under the master and usher, but under the monitors. At seven there was a slight break for a slice of bread and a draught of beer. At eight the boys went to bed chanting prayers. The holidays were short, and not unvexed by Latin composition. A good deal of the ecclesiastical formalism and "rotatory calabash" praying of the Middle Ages had also been kept up in ecclesiastical places of education, though the mediæval faith was dead. It must have been one of the plagues of a schoolboy's existence, and have effectually implanted in the youthful breast a distaste for religion. Punishments and sports were alike barbarous. The pleasure of tormenting a cock or some other bird was the schoolboy's privilege on Shrove Tuesday.

In the strong, the system no doubt produced fortitude and industry, while many a weak child, cut off from his home and subjected to rough treatment, physical hardship, and a round of dreary labor, must have led a life of misery, if he did not entirely succumb. Sweet indeed to these boys must have been the sound of *Dulce domum pergere*.

The modern character of the school arises from the disproportionate development of an element which in the original design was quite subordinate, if it could be called a part of the original design at all. This was the admission of pupils of the wealthier class, besides the boys on the eleemosynary foundation, as *commensales* or *oppidans*, the representatives of the young noblemen and gentlemen received for education by monasteries. The term *oppidans* (*oppidani*), which is still applied to Etonians not on the foundation (those on the foundation being called Collegers), denotes, however, that these pupils boarded in the town. The growth of this special element was due, no doubt, in part to the vicinity of the court at Windsor and to the smiles of royalty. Eton thus became the great aristocratic school. Winchester and Westminster have the historic character of the English "public school" as well as Eton, but Eton alone has the aristocratic character. It is true that the aristocracy of Eton has been considerably tempered by the parvenu element since commercial wealth has learned to come there for a patent of gentility.

The absurd educational conservatism of Eton, which, till a few years ago, confined a school in the nineteenth century to the curriculum of the sixteenth, besides keeping up a number of senseless and even barbarous rules and customs, may be traced to three causes: the endowments, the paralyzing pressure of the College on the School proper, and the connection with King's College. Endowments place education beyond the sway of mere popular caprice or parental humor; but it cannot be denied that they frequently have a benumbing influence, and that without some stimulating antidote in the shape of control and supervision, they are apt to lend color to the hard saying of Mr. Lowe, that the best thing to do with all the university endowments would be to throw them into the sea. The College had totally failed as a seat of learning—learning naturally tending, not to an isolated college at Eton, but to the great aggregation of colleges in the universities. It had degenerated into a mere almshouse for superannuated masters of the School. But the provost and fellows of the College were the governing body of the whole institution, which they paralyzed by their senile aversion to change. The connection with King's College was perhaps even more fatal to improvement. The fellowships of King's were all confined to boys on the foundation at Eton, who went off, not by examination or merit, but by seniority; and the masterships of Eton, in turn, by a selfish custom for which no justification but habit could be found, were confined to the fellows of King's. Thus Eton training revolved in an unvarying circle of self-complacent localism. To make the matter worse, King's College, in the days of the founder, like New College at Oxford, had obtained an exemption from the university examinations for degrees, the intention of the founder being, of course, to subject his students to a stricter system of examination within his own walls. Thus the single college from which the school could receive instructors was itself a paragon of torpor and isolation. No wonder if Eton education—which was the education of a large section of the governing class of England—degenerated into organized idleness, under pretence of exclusive devotion to classical culture. In the case of clever boys rewards and praise were lavished, and perhaps genius gained in freedom of development part of that which mediocrity lost by the want of a better system. The brilliancy of Canning was a genuine and characteristic product of Eton. But the consequences, on the whole, were disastrous to English society and government.

Of course, the school-life at Eton being very pleasant, and the place itself being beautiful and historic, Eton boys, as they always delighted to call themselves, loved their old school. Nor did the constant study of Homer, which was the great text-book, fail to impart something of a heroic tinge to aristocratic character. Mr. Arnold has somewhere given us an anecdote of an aristocratic statesman in the decline of life and health summoned to undertake a laborious embassy, and fortifying his sense of public duty by a quotation from Homer as a Puritan would by a quotation from the Bible. Perhaps the most graceful expression at once of attachment to Eton, and of the better side of its classical culture, is the epitaph composed for himself by the great Governor-General of India, Lord Wellesley, who, by his own desire, was buried at Eton:

> "Fortunæ rerumque vagis exercitus undis,
> In gremium redeo serus, Etona, tuum.
> Magna sequi et summæ mirari culmina famæ,
> Et purum antiquæ lucis adire jubar,
> Auspice te didici puer atque in limine vitæ
> Ingenuas vere laudis amare vias.
> Si qua meum vitæ decursu gloria nomen
> Auxerit, aut si quis nobilitarit honos,
> Muneris, Alma, tui est. Altrix da terra sepulchrum,
> Supremam lacrymam da memoremque mei."

There is nothing in these lines which, so far as our scholarship can discern, might not have been written by a Roman poet. Nor is there anything in the sentiments they embody which might not have been inscribed on the tomb of a cultivated and generous heathen.

The Public School Commission and the opinion of a scientific age have expanded and liberalized the Eton system of education. Dr. Hornby, the present head-master, among other improvements, has recently introduced music, a softening and refining element of more value, as well as of more universal applicability, than Latin versification. The only special difficulty with which Eton educators have now to contend is the laziness of pupils brought up in wealthy and luxurious homes, and conscious that they will never have to work for their bread.

SCHÉRER'S LITERARY STUDIES.*

WE have often wondered why M. Edmond Schérer, a critic whose privilege it sometimes is, by the acuteness of his insight or the felicity of his expression, to remind his readers of Saint-Beuve, has never undertaken a work of larger proportions than the short journalistic articles in which he has hitherto been content to record his opinions. Such an enterprise seems at present more remote than ever, for M. Schérer has for some time past been devoting himself with increasing zeal to practical politics, and has lately been elected one of the seventy-five life members (on the Republican side) of the new French Senate. Moreover, the present volume perhaps explains in a measure why the author has remained a desultory critic. Clever as he is, brilliant also, abundant in knowledge and excellent in style, he stops short at a certain point. He tends to fall within the limit that the reader has set for him. He often disappoints, he lacks imagination, and he is subject to odd lapses and perversities of taste. He is one of the very few French writers who give the reader a sense of any serious first-hand acquaintance with English literature ; and yet we remember his speaking some time since of the remarkable faculty of the English people for agreeing at a given moment to get excited or infatuated over a nothing or a trifle, as the necessary explanation of the popularity of Thackeray, "a cold, *ennuyeux* writer." A literary critic who does not enjoy Thackeray has certainly a limp in his gait. This impediment in his own carriage however, M. Schérer manages on the whole very skilfully to conceal, and some of the best pages in the present volume are devoted to English authors. They contain, among other things, one of the best criticisms of Taine's 'English Literature' that we remember to have seen—that extraordinary work in which a superb energy has vainly done its best to conceal a fatal want of familiarity with the subject. M. Schérer resents this want of familiarity almost as roundly as a native Englishman, and has in particular some excellent remarks about the author's perverse magnification of Byron. There are indeed few things more singular than the way in which M. Taine steps over the heads of the whole literary group ushered in by the present century—Wordsworth, Shelley, Keats, Scott—and fastens himself upon Byron for the reason that he is more an "Englishman" than the others—more a Viking, a Berserker, a product of north-winds and sea-fog ! M. Schérer well observes that, with regard to Byron, M. Taine stands just where French criticism stood thirty years ago. The author has a long, entertaining, and well-informed article upon Milton, whom he greatly admires, though perhaps the average English reader will wince at his summing-up of his judgment of 'Paradise Lost' :

"'Paradise Lost' is a false, grotesque, tiresome poem ; not one reader in a hundred can go, without smiling, through the ninth and tenth books, or without yawning through the eleventh and twelfth. It does not hold together, it is a pyramid balancing on its point, the most frightful of problems resolved by the most puerile of means. And yet, nevertheless, 'Paradise Lost' is immortal. It lives in virtue of some episodes which will remain for ever famous. In opposition to Dante, whom we must read altogether if we wish really to possess his beauties, we must read Milton only in fragments. But these fragments are part of the poetic patrimony of the human race."

In English we express the foregoing sentiments less trenchantly ; every one is waiting for some one else to begin. But even among ourselves it has been for some time tacitly admitted that with regard to 'Paradise Lost' some of the cargo must be thrown overboard to save the ship. In an article on Bossuet and some of his recent editors, M. Schérer has some equally downright remarks upon sermons in general. "I conclude as I began : the sermon is a false style, and it is false in particular because it has grown old. It has so little human and general truth that it is difficult to interest one's self in it even retrospectively. In vain we consent to place ourselves at the desired point of view, make allowance for time and change, take tradition into account. We must be very fond of eloquence to enjoy it when it is in the condition of pure form—that is to say, of empty form, of rhetoric." On Bossuet in general M. Schérer makes some remarks which have a rather wholesome freshness as against the conventional, superstitious deference to their great classics which has so long prevailed among the French.

"The fact is that Bossuet has no *stock* (*pas de fonds*), or, what amounts to the same thing, that his stock doesn't belong to him. He is neither a *savant*, a thinker, nor a moralist. He never has what we call views, still less audacities. He lacks invention, observation, intelligence. He has a great imagination, a consummate knowledge of the oratorical style, an abundant, magnificent movement of phrase, but he uses these things only to paraphrase the commonplaces of the ecclesiastical dogma and the ecclesiastical morality. His exposition, in spite of its amplitude of form, remains essentially scholastic."

The longest of M. Schérer's papers, and the one we have found most interesting, is upon Goethe ; its interest is the greater from the fact that it appeared after the Franco-Prussian war. Better than anything else, however, it illustrates what we have called the author's limitations and in particular his want of imagination. He remarks upon the fact that since the war the French have begun to pay a good deal of attention to German literature, and he thinks it an excellent sign.

"The Germans," to quote, "have revived against us the right of conquest ; they have attacked us with envious hatred and cowardly insult ; they have placed between us and themselves such offences as cannot be forgiven. But if it is just to detest Germany, it would be puerile on that account to seek to ignore her. It is at an end, we know ; the charm that formerly drew us towards her is for ever broken ; we shall no longer expect from her a single one of the ideas that elevate, of the sentiments that ennoble. So be it, we shall be but better placed to judge her. There had mingled itself with our inclination for German science and literature an enthusiasm which excluded discernment ; in future it will be easier to see things in their true proportions. . . . If we are able to preserve ourselves from the other extreme—deliberate and intentional disparagement—we shall have obtained the noblest of enjoyments : that of judging impartially those who themselves defy all justice."

If M. Schérer has made an effort to be impartial, it is evident that it has cost him something. It may be said, too, that he decidedly exaggerates the "charm" which the French public found, before the war, in German literature. If he speaks of a small coterie of highly cultivated men, his observations have a certain justice ; but French readers in general have certainly never given themselves the least trouble about the literature of the land of Goethe. If they find good reason to hate the Germans now, it is not that they ever loved them. The French have never been duped by the Germans or any one else ; for to be duped implies attention and acquaintance. They have never been duped by any people but themselves. Upon Goethe M. Schérer says a great many discriminating and excellent things, and his article is a very vivid piece of portraiture. But he is guilty of a strange dulness of vision when he declares that he can see nothing but dreariness in 'Wilhelm Meister,' and, indeed, in all the author's literary works except the lyrics and 'Faust.' "Goethe remains none the less," he says in conclusion, "one of the greatest among the sons of men. 'After all,'" he said to one of his friends, "'there are here and there some honest people who will be enlightened by my works, and whoever reads them and takes the trouble to understand me will recognize that he has gained by it a certain inward liberty.' I would write these words on the pedestal of Goethe's statue ; one can give him no juster praise, and, indeed, one can make of no man a higher or more enviable eulogy." We alluded just now to Sainte-Beuve, and it is in place to add that we have often wished that he might have witnessed and survived the late war, if for no other purpose than to show us how he would have spoken of the Germans. The situation would have been a most interesting test of that subtilized and almost etherealized faculty of impartiality which had developed in him in his later years. It would have given play to all his *finesse*—to that strange mixture of fatal compliments and flattering blame. Unfortunately, Sainte-Beuve's acquaintance with German literature was very limited ; one cannot know absolutely everything. He had written about Goethe and two or three other German authors, but he had evaded with characteristic skill any indication of whether he read them in translations or in the original.

The History of Landholding in England. By Joseph Fisher, F.R.H.S. (London : Longmans. 1876. 8vo, pp. 95.)—If Mr. Fisher had confined himself to the period of modern history, he would have produced a useful little book ; for in this period he is quite at home, and has collected a good store of valuable facts. For the early periods he is full of inaccuracies, unpardonable in one who undertakes to write upon this subject. He gives us (p. 18) three classes of the Anglo-Saxons (the upper, middle, and lower classes)—"Earls, Thanes, and Ceorls." He says on the same page that "the Germanic *mark* system has no counterpart in the land system introduced into England by the Anglo-Saxons" : this in the face of Nasse, Stubbs, and even Freeman and Kemble ! Folc-land and Boc-land are compared (p. 19) to freehold and copyhold respectively. On p. 28 we have the old exploded number of 60,215 knights' fees for all England. The name *villein* is said (p. 46) to have come in after the Norman Conquest ; but *villanus* is frequently found, as equivalent to *ceorl*, before this epoch. The "King-maker" is called (p. 50) *Guy* of Warwick. This inaccuracy is all the greater pity because Mr. Fisher has really a certain power of insight in his subject which only needs better knowledge to lead to valuable results. The comparison, for instance, of freehold and copyhold to folc-land and boc-

* 'Etudes Critiques de Littérature. Par Edmond Schérer.' Sixième Série. Paris : Michel Lévy ; New York : F. W. Christern. 1876.

land has, after all, an idea at the bottom of it, and the distinction pointed out (p. 44) in the bearing of the statutes *De donis conditionalibus* and *Quia emptores*, in their relation to feudal tenants and tenants in socage (*liberi homines*, he is fond of calling them), is worth working out with more fulness than he has done. As we have before remarked, the later portions are much better, especially the Tudor period; but even here, although we find much that is very good, we miss any clear statement of the causes which led to that most vital of all social revolutions which severed the English peasantry from the soil which had been their own, and resulted in the state of things which has just come to light in the New Domesday Book.

Memoirs of Eliphalet Nott, D.D., LL.D., for sixty-two years President of Union College. By C. Van Santvoord, D.D., with contribution and revision by Professor Tayler Lewis, of Union College. (New York: Sheldon & Co. 12mo, pp. 390.)—The name of no American college president is more widely known than that of Dr. Nott, and about none has there been more controversy. In spite of all criticism and ridicule, unmoved by the name of "Botany Bay" bestowed upon his college, he held to the methods of discipline which he adopted at the start, and had the satisfaction of living down much of the opposition before he died, conquering it by sheer success. However his policy may have worked in individual cases—and his most ardent admirers admit that no one but himself could have carried it out with equal success—he seems, at all events, entitled to the credit of having been the leader in a great and salutary movement. His administration of Union College was the first step away from the stereotyped routine of these institutions—a movement which has since gone so far and in so healthy a direction. The credit is claimed for him, for instance (p. 157), of having been the first to introduce a "scientific" course by the side of the classical. Still more important was his departure from the stern and rigid method of discipline which everywhere prevailed before his time. His policy was that of confidence, and reliance upon "the elements of a true manhood" which he recognized and relied upon in every young man. His treatment of "secret societies"—one of the great problems of college discipline at the present day—is worth considering. "Each society, as recognized, was required to have a regular or honorary member of the society in the existing faculty, and also a committee appointed by its president, whose duty it should be to consult and co-operate with the president of the college in relation to any of its members who might be becoming remiss in study or irregular in conduct" (p. 32).

The Black Hills. By Richard Irving Dodge, Lt.-Col. U.S.A. Illustrated. (New York: James Miller. 1876.)—Last summer the Interior Department sent a party into the Black Hills, under Mr. W. P. Jenney, geologist, to make a topographical and geological survey of the country, and to discover its real value in agricultural and mineral wealth, about which there had been so many conflicting reports. This party remained in and about the Hills for more than five months, and collected the materials for a good map, a comprehensive geological report, and a trustworthy estimate of the resources of the country. These results are not yet, however, in print. Col. Dodge accompanied this party in command of the escort, and being an officer of nearly thirty years' service, more than half of which has been passed on the Plains, and being also quite without prejudice in the matter, he is capable of giving a judicious account of what he saw; and this he has done, in a very readable little book, composed without any attempt at literary finish, from which the general reader will readily obtain all the information on the subject which he desires. The geological notes and sections, by one of Mr. Jenney's assistants, are sufficient to give a definite idea of the formation of the country, and this is supplemented by some fair lithographs and an excellent map—the most accurate up to this date. In addition, there are discussions of the climate and resources, the hunting, and the action of the miners who were expelled by military authority, considerable information of the guide-book sort, and a few very plain remarks about the Indian question, from the standpoint of what might be called the educated frontiersman.

Col. Dodge's conclusions are these: The Black Hills constitute an oasis, about equal to the State of Connecticut in area, in the dreary waste of alkaline plains; the climate and soil of the lower valleys are well suited to agriculture, and the upper valleys admirably adapted to stock-raising. There is enough gold to pay for sluice and hydraulic mining, but not for simple panning; "gold enough to make many fortunes and tempt to the loss of many more." The early settlement of the Hills is predicted somewhat enthusiastically, but not without the fear that the "squaw men" will first succeed in inciting the Sioux to war.

Fine Arts.

EXHIBITION OF THE NATIONAL ACADEMY OF DESIGN.

I.

THE display now on view at the Academy is very encouraging in quality. There is evidence of lively effort and of a better scholarship. The first is the cause of the almost total absence of slovenly work in the exhibition, and the second causes the artists to perceive more clearly what slovenliness really is, and that it may coexist with the most elaborate finish in the world, if the finish is languidly and unthinkingly applied. It is something rather new to see our artists really trying their strength in broad and strong effects, taking merit *as* effects. Mr. William Hart's cattle-sketch (337), with a touch as palpable and pasty as a Constable, would hardly have been either offered or accepted a few years ago, yet it is a serious advance for him. His thinking has spent itself this time on the composition, on the fling and movable look of the figures, and on the grand scale of values throughout the work; and his reward has come in the fact that this rude picture seems to pant and breathe with open-air life, and that it has a triumphant, luminous quality a thousand times more vivid than any of his "window-gardening" pictures, in which, like a lady concentrating every sort of colored bloom into her jardinière, he has aimed to bring in the whole solar spectrum, in close quarters and concentrated finish, within picture-frames of uncommon narrowness. Another artist who has dared to put his completeness into his plan and not into his pencilling is Mr. Eastman Johnson, whose "Husking-Bee" (285) is more vital than anything he has given us since the "Stage-Coach," and perhaps a little in advance of that. In such a scene as this, where a multitude of eager huskers, drawn up in two lines in battle array, are striving to outdo each other in amount of work, and carrying a tournament of effort over the whole sunny breadth of a corn-field, the sentiment of the scenery is what is paramount. The figures, very properly, are viewed as we view figures in a landscape, as parts of the general effect. It would be a greater fault if an old farmer or a pretty milk-maid reflected the light haltingly or made a false note in the general glitter than if an eye or a finger were imperfectly made out. The innumerable figures here accordingly present themselves, as they should, as attitudes; and in the variety and racy invention of a hundred poses, we are allowed to distinguish the coquettishness of youth, the plodding industry of old age, the tense ambition of the hard worker, winner of many shucking-matches, and the angular motions of extreme senility, good for little more than corn-husking. The golden light on the maize-stalks is more precious than any elaboration of figure could be; the effacement of the distance, where the luncheon-tables are being laid, and the near-at-hand flurry of eager cocks and hens, darting at the corn with the consciousness of a realized millennium, are touches that build up the scene in its completeness, and give us a picture realized in blurred colors—attitudes in landscape like a fair pastoral a little blotted in the humid eye that sees and feels it. This artist, by the bye, who has two styles as distinct from each other as the baritone and falsetto of the man in the comic story, produces a second picture in his "woolly" manner. It is a country father bringing in a milliner's masterpiece to his favorite daughter. This is elaborated in the colored cobwebs Mr. Johnson paints in his less inspired moments. Occasionally he shows, with all the pride of a man who has several handwritings, a picture in which the figure is woolly and the accessories are broad, or otherwise, the distance in Berlin-wool meshes and the figure as firm as sculpture. An artist who sees "breadth" in quite another way from Mr. Johnson, Mr. D. R. Knight, has borrowed from its owner for this exhibition his Salon picture of last year, the "French Washerwomen" (176). Here the idyllic tranquillity aimed at permits a more individual examination of the fair models; the washing-girls are accordingly treated in considerable detail, their beauty is elaborated, the twilight dwells lingeringly on their round arms and faces, the motion of the prettiest is arrested, and that of the others made rhythmic. A distinct poetic effort is admitted, and is not thrown away; for the composition is a harmonious, elegant bas-relief, set with all unity into a low Poussinesque landscape, whose broad dignity envelopes and enhances the human beauty.

A scholar-like intelligence, which we are very glad to see, is obvious in more than one contributor; a betrayal of acquaintance with schools of art that have gone before, in place of the barbaric determination to leap soil-stained from the American earth and instruct the schools that have had the misfortune to exist in other countries. Thus Mr. Samuel Colman, finding himself in the Low Countries, depicts contemporary scenes with a recognition of the way in which the tranquil, delicious Dutch masters portrayed their homes. The "Boats of Antwerp at Low Tide" (449) and "On the Scheldt" (227) are painted in the quaintest affectation of antique style,

just yielding in the proper place to a beaming modern touch of color of which time has bereft the original examples. Here we have the gables notched like staircases, and crowded on each other's shoulders, and the odd round trees appearing above them like chignons ; the lazy, unctuous lap of tideless water, the bat-like hovering of leathery sails, and then, in some happy focus, a glow of basking light in which the modern colorist exerts his freshest powers ; it is like the Van Kessels and Van der Heydens of the Museum, respectfully modernized with a dash wet from the palette of Clays. Mr. Miller, too, shows an intelligent study of past methods of art in his remarkably fine sunset view, "New York from Newtown Creek" (257). A good many Jacob Ruysdaels had been studied, we should say, before the painting of this effect, which respectably sustains comparisons with the best of them. The sky here is broadly intense, with a gradual dying away of light and color towards the zenith, where ranks of gossamer cloud are radiating in transient color-motives like the changeable lights of a pearl-shell. The composition, without being unpleasantly artificial, has a distinct focus and contrasting groups of forms. The narrow water and old rotting sails of stained boats give the scene a Dutch aspect ; and the whole picture has a strength, a reticence, a staying-power, an avoidance of clap-trap, suggestive of the sober poetry of Holland color at its best. Mr. Miller has several other pictures, in limpid gray effects, that are full of science and observation, and indicate a steady advance conquered through hard labor.

"A Woman Serving" (371), by M. R. Oakey, is large, striking, and ambitious. This lady has so often given indication of uncommon power in smaller works, and has promised so very much sometimes in her broad Velasquez-like charcoal sketches, that the exhibition of such a large picture is greeted with unusual interest. It is, however, obviously too heavy an undertaking. It is unmethodical, troubled, and anxious : we see the anxiety of the artist in drawing the hands and the mouth, and wish she could have been relieved of it ; the painting of the antique brocade is enjoyed as a relaxation from the more awful problems of design, and is enjoyed a little too much. But the pose is good—(it is a dark-haired girl of the last century carrying a salver of fruits, such a type as one fancies addressed in sinister tones by a Henry Esmond, with his "Drop the charger, Herodias !")—the flowing sense of a woman's motion in carrying a graceful burden is perfectly given. It is solidly modelled and effectively relieved, and Cottier has framed it in a dull wooden splendor that admirably comports with its sentiment. For a female figure in life-scale, however, if we wish to go to one which easily overcomes everything else in the exhibition, whether portraits or invented characters, we must approach Mr. Sartain's simple head of a contadina (490). No other study of the life compares with it in the most distant way, and from the point of view of its intentions and problems it may be called perfect work. It is a beautiful, plaintive Italian face, looking upward in prayer. The lifting of the brows over the forehead, the sockets of the black hollow eyes, the dark yet transparent olive of the cheek, and the flesh shadows so deep, yet not opaque, show the great promise and present success of this pupil of M. Bonnat. The work has a Southern intensity so imposing as to make it hard to do justice to other efforts very admirable in their way, but emanating from a different condition of feeling. Mrs. Loop's portrait (389), will, however, bear almost any comparison, it is so winning, fresh, honest, and obvious. It is painted in the simplest planes and breadths possible, is like a sculptor's bust just after the pointing-marks have been rubbed away. The expression is the bright and hardy look of a happy matron ; it is a picture we make friends with at once, and we can only congratulate the sitters whom Mrs. Loop will hereafter interpret in such a genial and admirable strain. Mr. Guy, who is now painting a good many life-sized figures, contributes another Italian girl, in carnival finery, and resting on a tambourine (207). The style is unrelenting, finished to the last polish of the epidermis, and completely superficial ; yet the wet globe of a gazing eye, the tough perfection of a healthy peasant's hand, are given, from the outside, with a vigor and perseverance that lend them a kind of interest, as articles of *ciselure* or *bijouterie ;* but the recent sight of a masterpiece like 490 has left the eye unprepared to appreciate a model treated as an object of virtù in the manner of M. Desgoffe. Among these life-sized studies, however, it is impossible to overlook the portrait by Mr. Page. It represents President Charles Eliot of Harvard, and it is a crisp utterance that the most careless promenader cannot pass without notice. It is the peculiarity of Mr. Page, in all his better work, to give us pictures that we cannot regard without the deepest curiosity and interest, whatever we may think of his very individual handling. We must observe that he has made a study of the sitter's character, and delivered a perfectly clear report upon it. However we may like his flesh-tones, his suffused demi-tints, his modelling of muscles or osseous protuberances by strange little clouds of reflected light that play around the temples and the jaws, we cannot but see that he works with intense conviction, and that he uses portraiture in the way of character-interpretation. Here, in a college president standing in his robes, a manuscript in his hand, and evidently addressing an audience, we have delineated the habit of mental command, an elegant self-possession, and that smile which a man's friends take to indicate imperturbable urbanity, but which, in the case of a lean New England professor with close-shaved face, comes very near the smile of the prize-fighter who accepts opposition and is ready to take as to give. Mr. Page exhibits another work, at once of portraiture and restoration, in the bronze bust of Shakspere taken from the German death-mask. We have not space to-day to allude to it, except to say that it is a labor rather of archæology than sentiment, and as such worthy of the closest attention. Beside it, in a very limited exhibition of sculpture, is a dark bronze of Mr. John A. Kennedy, by Mr. O'Donovan, in which the impasto of good painting is well represented, completely overcoming the stubborn tenacity of bronze surface ; and a little medallion by Mr. Warner, not much in itself, but irreproachable, and the work of an artist who has exhibited several works showing great merit and the best education

CUMULATIVE EXERCISE—that is, lifting gently, progressively, and systematically, on the REACTIONARY LIFTER—produces rest and rehabilitation in health. To professional and sedentary persons it affords endurance, and to the invalid the energy which medicine cannot provoke. Ten minutes lifting a day is enough.

Those who try it for THREE months generally buy the Lifter, and continue their practice at home.

A trial may be made at the Health-Lift Co.'s Rooms, 46 East Fourteenth Street, New York, where one may meet many distinguished men and women, and cannot well avoid forming a favorable opinion of Cumulative Exercise, both from experience and observation.

THE STRANGE HILL-TRIBES OF WESTERN CHINA.

THE British race ever and anon proves the excellence of its stock by some new colonizing or exploring expedition that repeats, amid the altered circumstances of our day, the old successes of a people born to traverse the globe—the successes of Drake, Raleigh, and the colonists from whom we spring. No greater motive than that of trade is needful to call out the magnificent energy of this essentially aggressive race in its special virtue of quiet application and patient removal of obstacles. The extension of commerce in the present age elicits those overcoming qualities which are always heroic and were once exclusively warlike.

A large and intensely interesting volume by Dr. John Anderson reports a succession of expeditions from the eastern part of India to the western part of China, under the title of 'Mandalay to Momien.' The problem is to open a commerce between China and India by trade-routes leading overland from the neighborhood of Calcutta, or, better, from Burma to points near the Yang-tse-kiang; by such a conduit the rich products of the Yunnan and Sz-chuen provinces would be directed into British territory without the dangerous voyage by the Straits and Indian Archipelago. The overland route is across the neck of the peninsula of Siam, which is traversed by the two southward-flowing rivers of Irawady and Cambodia. Mandalay, on the Irawady, a royal city of Burma, was known to be the entrepôt of a valuable cotton-trade from China before 1867, at which date but four English freight-steamers had ever ascended to it. The route of the native caravans was reported to be over a distance of sixty miles among the hill countries of Thiennee and Yunnan, with the crossing of about fifty mountains and thirty rivers, to Bhamo on the Chinese frontier.

The expeditions now narrated, in which the names of the intrepid explorers Major Sladen, Elias, Cooke, Margary, Gordon, and Colonel Horace Browne are rendered illustrious, penetrate into countries hitherto almost entirely unknown. The hill tribe between Upper Burma and China, called Kakhyens, who worship twenty-one deities neither Mohammedan nor Buddhist; the Chinese Shans, living a little further east; and the Panthays, warlike Mohammedan Chinamen from the North (of whose conversion to the faith by means of a band of employed Arab warriors or condottieri from Seeyoogwet there is a singular native account), were the three particular tribes which the expedition of 1868 was formed to investigate. The quarrels and rebellions of these hardy races had at that date temporarily stopped the cotton supply in Burma. The enterprise of Major Sladen was at first successful. A British resident was soon appointed and placed at Bhamo, on the Upper Irawady, near the Chinese frontier. In the four years between 1870 and 1874 the steam navigation on the Irawady developed into a fortnightly service, and cargoes worth about £200,000 were carried in one year through Bhamo. English travellers were well received at Momien, in China, the headquarters of the Mohammedan Panthays. These Moslem Chinese, however, rebelled again in 1873 and 1874, causing a suspension of traffic. This outbreak having been quelled, the re-establishment of relations was sought to be made by similar means. At the head of the expedition of 1865 was placed Mr. Margary, a clever young sub-consul, who was sent for from Hanghai. He came overland to Momien, accomplishing the four months' overland journey in safety, but was killed near there by Chinese treachery. The author of this book, returning to Mandalay, descended the Irawady in safety, and now gives a most spirited and informing account of these important though abortive expeditions.

MACMILLAN & CO.'S PUBLICATIONS.

MANDALAY TO MOMIEN. A Narrative of the Two Expeditions to Western China of 1868 and 1875, under Col. E. B. Sladen and Col. Horace Browne. By John Anderson, M.B. Edinburgh, F.R.S.E. 8vo, with Maps and Illustrations, $7 50.

MY CIRCULAR NOTES. Extracts from Journals, Letters sent Home, and Notes written while travelling Westward round the World, from July 6, 1874, to July 6, 1875. By J. F. Campbell, author of 'Frost and Fire.' 2 vols. crown 8vo, with numerous Illustrations from Sketches by the author, $7 50.

ALTON LOCKE: Tailor and Poet. By Charles Kingsley. New edition, with 'Cheap Clothes and Nasty' included, and a Prefatory Memoir by Thomas Hughes, Q.C. Crown 8vo, $1 75.

PREHISTORIC MAN. Researches into the Origin of Civilization in the Old World and the New World. By Daniel Wilson, LL.D., Professor of History and English Literature in University College, Toronto. Third edition, enlarged and revised. With numerous Illustrations on Stone and Wood. 2 vols. 8vo, $12.

ANGOLA AND THE RIVER CONgo. By J. J. Monteiro. With sixteen full-page illustrations from Sketches taken on the spot, and a Map. 1 vol. 12mo, cloth, $2 50.

"This book is somewhat of a rarity in African literature. It contains no hairbreadth escapes, no improbable hunting adventures, and it is written by a trained scientific observer, who has a distinct idea of the sort of information he desires to impart, and a very lucid method of imparting it."—*The Nation.*

FLORAL DECORATIONS FOR the Dwelling-House. A Practical Guide to the Home Arrangement of Plants and Flowers. By Annie Hassard. American edition, revised. With many illustrations. Crown 8vo, cloth gilt, $1 50.

"The author of this delightful little volume is a lady who thoroughly understands her subject, both in its principles and its practical details. The relish with which she takes up, one after another, every form of the decorative use of flowers, and the ready clearness with which she illustrates it, communicates something of her own enthusiasm to the reader."—*N. Y. Tribune.*

"It contains well-considered and tasteful directions for the arrangement of flowers for decorative purposes in the dining-room, on the Christmas dinner-table, the breakfast-table, in vases for drawing-rooms, on mantelpieces, to be worn in the hair or button-hole; also, for wreaths, crosses, for window-gardening, the grouping of plants in rooms, and the like. A book which cannot fail to be useful to those who need advice on such subjects. It is thoroughly practical, and comprehends all that one needs to know."—*Athenæum.*

STATESMAN'S YEAR-BOOK, 1876. Statistical and Historical Annual of the States of the Civilized World. Handbook for Politicians and Merchants. By Frederick Martin. Thirteenth annual publication. Revised after Official Returns. Crown 8vo, $3 50.

"The volume is of such service to men of business and of letters that, once called into requisition, it will thereafter be regarded as an indispensable adjunct of the library and counting-room."—*Chicago Tribune.*

NEW YORK, THURSDAY, APRIL 13, 1876.

The Week.

THE Senate devoted a good part of the week to the silver question. Mr. Randall's bill was deprived by the Finance Committee of the section which proposed that silver change should be made a legal tender for amounts not exceeding $25, and "trade dollars" for amounts not exceeding $50. Instead of this two new sections were offered. The first authorized a new silver dollar, to contain 412.8 grains of silver (instead of 412.5 grains, as did the old silver dollar demonetized by Act of 1873); the new dollar to be a legal tender for sums not exceeding $20, except for customs and interest on the public debt. The second of the new sections authorized the Treasury to exchange these new silver dollars, worth about 90¼ cents, at par for United States legal-tender notes; opened the mints to all who should wish to exchange silver bullion for these dollars at a price to be fixed by the Director of the Mint; demonetized the trade dollar; and provided that the notes taken in for silver should go to the Sinking Fund account. When the bill with these proposed amendments came up in the Senate a vast and varied fund of misinformation was poured into the debate, and, finally, Mr. Sherman withdrew the amendments and the bill was passed. As it goes back to the House, it appropriates money for printing United States legal-tender notes, also for printing bank-notes (this having been added by the Senate), and nothing for fractional notes. It directs the Secretary of the Treasury to issue subsidiary silver coins for fractional notes, and provides that all fractional notes taken in for silver shall be credited to the Sinking Fund.

The House has before it the report of a Committee recommending repayment to Japan of the balance of the so-called indemnity fund, which had its origin in the Shimonoseki affair. This affair may be briefly described as the forcible turning back from its course, in the inland waters of Japan, of an American steamer, the *Pembroke*, by a daimio in active rebellion against the Shogun. This happened in June, 1863. An American ship-of-war was immediately despatched to the disputed passage, and though no damage had been done the *Pembroke*, and the right to navigate the channel in question was by no means clearly within the Treaty, the daimio's fleet was attacked and disabled. Constructive damages to the amount of $10,000 were made out for the *Pembroke*, and were finally allowed, with interest, by the Shogun, in spite of the fact that he repudiated the acts of his rebellious vassal. The pressing of such a claim was most discreditable to our diplomacy, at a time, too, when the South might have placed us in a position exactly analogous to that of the Shogun. A French despatch steamer fared the next month like the *Pembroke*, and the attack was similarly avenged, this time the batteries being destroyed. A Dutch corvette next forced a passage after due warning. These two incidents presently led to a combined assault upon the daimio's stronghold by a fleet composed of English, French, and Dutch vessels, and by a steamer hired by the American Minister to represent this country and to secure a title to part of the plunder. The expedition was completely successful, and, as if it had been expressly authorized by the Shogun, a bill of $3,000,000 was immediately presented for expenses, etc., by the representatives of the powers engaged. It was made thus excessive in the hope that the Shogun would be unable to pay it, and would consequently submit to pressure for the opening of new ports as an equivalent. The pecuniary alternative was, however, preferred under compulsion, and the fine was ultimately paid in equal parts to the four powers—the United States receiving $750,000. The payment of the last instalment fell to the Mikado, who meantime had asserted his supremacy over the Shogun, and his endeavors to have it remitted were so successful in this country that in 1872 the House of Representatives passed a bill to that effect; but it failed to come up in the Senate, and the State Department feeling bound to press for the money, it was reluctantly paid over. After deducting what was paid out to meet claims good, bad, and indifferent, the sum has grown from $750,000 to upwards of a million and a quarter. It has never been covered into the Treasury, and is now in the custody of the State Department. No one can read the simple history of it without feeling that it was procured by extortion from a semi-civilized people in distress, and that, like all ill-gotten gains, it calls for prompt restitution.

The Committee which is investigating General Schenck's connection with the Emma Mine has come to the singular determination that it will allow the General to call witnesses to prove the value of the mine, and he has accordingly summoned fifteen persons, who will no doubt swear the mine is one of the most valuable properties in the world. Lyon will then, of course, have the right to call any number of witnesses he pleases to prove the contrary, and Schenck can subsequently bring up experienced "rebutters," who will make mincemeat of Lyon's case. Besides this, there will be room for searching enquiry into the character for truth and veracity of all the witnesses, so that there is no reason why the investigation should not go on all summer, or indeed should ever come to an end any more than the Beecher case. The absurdity of taking this kind of testimony is amply shown by the language of the resolution of the House under which the Committee is acting:

"*Resolved*, That the Committee on Foreign Affairs be instructed to ascertain and report what action, if any, has been taken by the executive department of the Government in relation to the connection of the United States Minister at the Court of St. James with the directory of the Emma Mine, so called, and also with the prosecution of the Machado claim against the British Government; and that said Committee be authorized to request the Secretary of State to furnish this House such information and correspondence upon the subject as may not be incompatible with the public interest."

Now, the Committee has already found out and knows perfectly what the Executive Department did about Schenck's connection with the Emma Mine, and are in a position to report it to the House. They have not yet looked into the Machado claim at all; and, with this duty unperformed, to go wandering off into an examination of what other people in no way concerned in the investigation think might, or might not, have been a "high price" for the mine, tends to bring the whole investigation into contempt. The opinions of Schenck's fifteen witnesses have no bearing on the question of his *bona fides*, because he did not take their opinion at the time of the sale. All that he knew was what Park and Silliman said about the mine; and it is evident he did not rely, at the time of the sale, upon the value of the mine, but upon Park's guarantee to protect him against loss. All the Committee are concerned with is the political bearing of the case, and as to this the facts are proved already. It looks now very much as if Park were making the same sort of use of the Committee he formerly made of Schenck—that is, he means to get a report from them which will bolster up the mine, and show, to quote the words of one of the gentlemen connected with the enterprise, that "only He who made it" can guess at its value.

Mr. Andrew D. White has written a letter containing his views about Mr. Conkling—both as a senator and candidate for the Presidency—which gives one an odd idea of the kind of political instruction he supplies to the youths at Cornell. It appears, indeed, that Mr. Conkling is his ideal public man. He says:

"The high expectations which led me, and which alone led me, to support him for the senatorship have been more than met, and, though I have differed from him on some minor points, he is so firm and strong on the great points, he has stood the hammering of the press so nobly, and he represents our State so creditably, striking the right key-note in every campaign, that my admiration for him has steadily increased."

Mr. White seems to entertain somewhat the same simple and childlike views about "the hammering of the press" as the President of the United States, but they are much too simple and childlike for the President of a University. Mr. Conkling has only stood "the

hammering of the press" in one particular. It has not brought home to him, as it has to so many of his brother statesmen, any charge of actual theft or embezzlement or fraud, but it has brought home to him the charge of having been the steady and unblushing supporter of the system under which and through which the fraud, falsehood, and peculation which are now being exposed at Washington took place, and of having for years unfalteringly resisted every attempt to enquire into it, and of having stood by every rascal on whom suspicion lighted, and of having during his term of service as senator of this great commercial State contributed little or nothing, either by speech or legislation, towards the solution of the two great problems of the day—the restoration of peace and confidence at the South, and the reform of the national currency. If Mr. White's "admiration for him has grown" under these circumstances, it is a most unfortunate thing that Mr. White should be entrusted with the task of teaching young Americans what and whom to admire. Moreover, to say that a "man has stood the hammering of the press nobly," is to say a loose and ambiguous thing. Whether it is to a man's credit that he has "stood the hammering of the press," depends on how he has stood it. If he has been enabled to stand it through brass and impudence, as Tweed or Fernando Wood, for instance, have stood it, or through conceit and thickness of the moral cuticle, as, in our judgment, Mr. Conkling or Mr. Morton has stood it, it is one thing; if it is through the possession of a good character and lofty conscience, it is another thing; and the difficulty we have in finding an illustration of this last form of endurance leads us to say that we can recall no instance of recent date in which a man of real honor and integrity has had to stand any "hammering" from the press very long. The press often does gross injustice, but we should like Mr. White to tell his young men who the upright men are who, during the last ten years, have been exposed for any great length of time to its assaults.

Great Britain has refused to surrender Winslow unless an assurance is given that he will not be tried for any other offence than the one charged against him, an Act of Parliament having been passed since the date of the last extradition treaty making the exaction of such a pledge a necessary condition of the surrender of all criminals. This is treated by many papers as if it were an act of pure "cussedness" over which Secretary Fish ought to boil with indignation, besides refusing to give the required pledge. That it is an improper mode of arriving at the desired result there can be little question, but that the result is desirable there is just as little. The Treaty is dated 1842; the Act of Parliament 1870. It is, therefore, not reasonable to give the act an *ex-post-facto* operation, so as to make it apply to the Treaty, and it is just as unreasonable to ask this Government to submit without notice to an alteration in a treaty by virtue of an act of the English legislature. But the grievance which the course of the English Government covers is by no means groundless. The Treaty of 1842 enumerates the offences for which extradition shall take place, and of course neither country will surrender for any offences not so enumerated; and Dana's 'Wheaton' lays it down that "nations bound by treaties of extradition have still the right to protect themselves against being defrauded of their right to give asylum. If, for instance, a political refugee, or an escaped slave, or a deserter from military service has asylum by the practice of a nation, it will look behind the mere formal proofs of a crime committed by such person to see that the real object is not to get possession of him for a purpose to which the treaty does not apply. In many cases, the Government of the country making the demand may not be cognizant of the real motives of the parties who have procured an indictment and set on foot the proceedings for a surrender." In other words, suspicion and enquiry are not on general grounds improper, and are not necessarily offensive, particularly when, as in cases like Winslow's, the indictment is not found in the United States courts by proceedings or parties of which the United States has exclusive jurisdiction.

Now, it so happens that at this moment there are two men—Caldwell and Lawrence—who have been surrendered by Great Britain for forgery, on trial before the United States Courts for offences not embraced by the Treaty—namely, smuggling and bribing a United States officer; and the Court has ruled in both cases that it can take no notice of the conditions of their surrender. Under these circumstances, it is eminently proper for Great Britain to look behind the indictment in Winslow's case, and ask for a guarantee that this is the only one on which he will be tried; first, because it has the right to do so on general principles, and, secondly, because the course of our Government in the two cases we have mentioned furnishes specific justification for doing so. The flaw in Lord Derby's case is his putting forward the Act of Parliament as governing his action and making his demand reasonable, as having, in fact, the power to modify a treaty already in existence. It has not and ought not to have any such power. Winslow's case, moreover, is more difficult to deal with than the Caldwell and Lawrence cases, because he may be pursued by the State of Massachusetts for other offences than the one with which he stands charged, and the General Government would have no power to interfere. The rational way out of the difficulty would seem to be to give the assurance, if possible, that what has occurred in the Lawrence and Caldwell cases shall not occur in Winslow's, and then call on Great Britain for a statement of her position with regard to the Treaty, and then either amend or abrogate it, as seems best.

There has been a split in the New York and Brooklyn Association of Congregational Ministers, arising out of the proceedings in reference to the Beecher scandal on Thursday last. The friends of Mr. Beecher produced and carried by a vote of 15 to 9 a number of resolutions providing for the appointment of a committee of five to aid in having whatever charges there may be against Mr. Beecher brought before the commission appointed by the late Advisory Council. Six members of the Association who are in favor of the Andover plan of investigation, Messrs. Budington, Macfarland, Martin, Storrs, Taylor, and Ward, thereupon presented a strong protest against the proceeding, on the ground that it can result in "nothing more than another of those superficial enquiries which have already provoked so much public dissatisfaction." After the adjournment of the meeting Messrs. Budington, Macfarland, Storrs, and Taylor formally withdrew from the Association. The dissentients base their action on the proposition "that the calling of a council by a church to consider its administration of discipline in certain cases without the agency or concurrence of the person affected by that discipline, is a violation of a fundamental principle of Congregational order."

The difference which lies at the bottom of the controversy between Mr. Beecher and the advocates of the Andover plan of trial is simple enough, although it is hidden somewhat under a great cloud of words and under the attempt to make it a question of Congregational polity rather than of general jurisprudence. Mr. Beecher and his church, and the majority of the Ministers' Association which has just split over the case, seek an enquiry conducted on what may be called the co-operative plan—that is, conducted by persons who on the whole believe him innocent, and think his sermons, prayers, and general reputation raise a strong presumption in his favor, and who, in examining charges against him, would be, as he says, "helping" *him* to prove his innocence. The Andover party, on the other hand, demand an investigation of the only kind for which the secular world, which has little faith in "the psychological argument," has any respect—namely, an investigation conducted jointly both by those who believe in Mr. Beecher and those who do not, under the old system of attack and defence, which has now been in use by the courts of the Anglo-Saxon race for a thousand years, and is recognized as the most satisfactory mode of getting at the truth through human testimony, but which the Andover people propose to improve on in this case by discarding the technical rules of evidence and hearing everybody who has anything to say. No other kind of enquiry will satisfy the general public.

We have commented more than once in these columns on the unwillingness of the chromo-civilized to hurt anybody's feelings. Their multifarious activity of course sometimes brings them into collision with each other, and compels them to use harsh language; but they always take the sting out of it by a plentiful intermixture of fulsome eulogy. They sometimes have to call a man a rascal, but they almost always add that they consider him also an accomplished Christian gentleman. An amusing illustration of their mode of "reprimanding" people occurred in the Legislature of this State on Thursday last. Mr. Felix Murphy, a member of the Assembly, got very drunk, broke into the post-office, and stole some of the books and papers belonging to other members. He was accordingly sentenced by a vote of the House to be reprimanded, and was brought to the bar for that purpose. What followed was very ludicrous. The Speaker described his offence, but mentioned in extenuation of it that Murphy was drunk when he committed it, and then said that he was directed to reprimand him for it. Lest Murphy should feel hurt, however, he proceeded to pass the following eulogy on him: "In so reprimanding you, I desire to say what I believe every member will concur with me in saying, that during your experience here as a member you have had always the confidence and the respect and the esteem of this Assembly. Never before have I heard a word uttered against you; never before, I think, have you committed an act which would diminish in any way the respect and esteem of your fellow-members for you." The effect of the address was in fact that of a strong public testimonial to the high character of the estimable Murphy, containing a passing mention of his having broken into the post-office while tipsy. He will probably pass the remainder of his days under the impression that a reprimand is a certificate of unblemished life.

The week in Wall Street passed without important changes. At the Stock Exchange railroad shares declined, tariff receipts and talk of another railroad war having been used by sellers of stocks. The war between the telegraph companies, the rival lines of the Western Union having reduced night rates for the public to the rates charged the press, promises to be destructive of stockholders' interests, although beneficial to the customers of the companies. The last bank statement showed a reduction in reserve which was wholly unexpected; it left the surplus reserve at about $7,000,000; as a result, rates for money were firm. The Bank of England continues to gain specie, and the London money market shows an unhealthy ease, the discount rate for three months' bills being 2@2½ per cent. anywhere except at the Bank of England, where the minimum rate is 3 per cent. After the Senate passed the silver bill, even as amended, the price of silver in London advanced to 53¾ pence an ounce. The gold value of $100 greenbacks ranged during the week between $88 30 and $88 79.

Signor Minghetti had hardly made the gratifying financial statement of which we spoke in our last number, when he was assailed by a combination which drove him from office by a majority of 61 in a total vote of 423. He at once resigned, and Signor Depretis, a member, though not the leader, of the Left, was charged by the King with the formation of a new Ministry. The news of this change came ten days ago by telegraph, the explanation of it comes now. There is no national question which divides parties in Italian politics at present. The Liberals have got all they ever looked for short of a change in the form of the government. There cannot be said to be any Republicans in the small constituency which in Italy elects the Chambers. There was the financial problem, which Signor Minghetti, as we showed last week, had fairly solved, and the country is extremely prosperous. He has fallen, therefore, before a combination of local interests. The grist tax, which is highly unpopular, as it involves a system of vexatious inspection at all the mills in the country, has formed the principal weapon of the Opposition against him; but it was well-known all along that no Ministry could give it up, as it yields $15,000,000 annually. His overthrow, therefore, did not come from this solely, although it was a strong motive with the Venetian deputies. It was the Tuscan members who turned the scale against him, owing to their fear that his scheme for the further Government purchase of railroads would lead to the withdrawal of the head offices of the Southern lines from Florence. They were also alarmed by the proposed removal of the Court of Cassation, which seems to have remained at Florence after the transfer of the Government to Rome. There is no probability of any change in the policy pursued by the old Ministry. The only thing that any Ministry can now do in Italy, or try to do, is to make ends meet.

Things look worse and worse in Turkey. The insurgents in Herzegovina, after a brief truce, have opened a desperate and determined spring campaign, and are applying coercion to the Bosnians to compel them to join them. This has led the Pasha of that province to recommend the proclamation of a "holy war," which used to be the old Turkish mode of rousing the fanaticism of the Mussulman population and getting them to do their best against the infidels; but they are wise enough now at Constantinople to know that the days of "holy wars" are passed, and so he has been recalled. What has unquestionably done most to sustain the courage of the insurgents is not their successes in the field, but the Austrian note, as laying a foundation for future interference, and the condition of the Turkish finances, which may now be said to have completely collapsed. The Imperial Ottoman Bank, through which the Government does its business, allowed it at the beginning of the year a credit sufficient to enable it to pay its January coupons and meet other pressing expenses, but this has been overdrawn, and the bank has peremptorily stopped supplies, and, if it had not been for the assistance of some of the private bankers at Galata, there would have been a default in March on the interest of the loan of 1858, which amounts to about $70,000; but this and all other resources are now cut off. Nobody will lend another cent, and even the salaries of the employés of every rank, except the Europeans, have been stopped. It is said the Treasury still finds the means of honoring the Sultan's drafts for his civil list, but how long this will last it is hard to say, and the opinion seems to prevail in Christendom that as long as it does last he will not know the real state of affairs, as nobody has yet dared to tell him. In the meantime every nerve is being strained to concentrate troops on the Upper Danube at Widdin, in preparation for the spring campaign, and for this purpose the last of the *Redif*—the *arrière ban* of the Landwehr—has been called into the field, in the fear, which is not wholly without foundation, that the Servians may take the field at the opening of the fine weather. The completeness of the financial breakdown must, in fact, bring on a great crisis of some kind before many weeks, and produce the anticipated Austrian occupation of the revolted provinces. Russia, as the St. Petersburg despatches show, is taking as alarming a view as possible of the situation. The spread of the contest into Bosnia, where the Mussulmans are in a majority, will doubtless lead to frightful atrocities.

The London *Times* has published a statement of the public debt of Spain, procured from official sources, which is an extraordinary document. The grand total is $3,500,000,000, or almost the same as the debt of Great Britain. The interest on this, at three per cent., is about $100,000,000, while the total revenue of the kingdom even in good years does not reach $90,000,000. All talk of paying the interest is therefore idle, and the financial question now is, How much must be repudiated? The most the creditors can hope for is 33 per cent., and they will be glad if they can get 3 per cent. even on this. There is not much likelihood, however, of any definitive financial settlement. The new monarchy will probably have to devote its attention to the task of raising more money by loan. That such governments find persons willing to lend is one of the marvels of our time, but the fact seems to be that the promise of an exorbitant rate of interest always draws a certain amount from some quarter or other.

THE NOMINATING CONVENTION.

THE address issued the other day in Massachusetts with the view of influencing public opinion, and through public opinion the National Republican Convention, in favor of a candidate who should thoroughly satisfy the existing demand for reform, will probably be followed by others of a similar character in other States, and it illustrates curiously the want of confidence felt by the best class of American voters in the nominating machinery. The theory of the nominating convention is excellent. Under it the party voters are supposed to select in each district the best men they can lay hands on, and the convention thus formed, after a careful "comparison of views" and much examination of candidates, provides the best possible nominee. The way in which the system breaks down in practice is now so familiar to the public that we need not attempt to describe it. No suggestion for reforming it that has yet been made has much appearance of practicalness. The one usually proffered—the close attendance of voters at primary meetings—has been proved futile, and its futility becomes plainer as population becomes more dense, and the play of political and social interests more complex. There are, in fact, few things more curious in American political history than the elevation of the nominating convention to the rank of an institution, and the addition to the list of each citizen's most solemn duties of that of attendance at the primary meeting. The nominating convention as it exists among us is no part of the American political system or a necessary adjunct of a republican form of government. It is simply an expedient which, when first resorted to, was convenient and useful for doing something which under our form of government may be done in half-a-dozen other ways. It had its origin in the democratic desire to take the business of nominating out of the hands of a class and bring it under the control of the rank and file of the party. As long as it furnishes the means of selecting good candidates, it is a good system; when it ceases to do so, it is a bad system; but there is nothing more sacred or solemn about it than about the paper of the ballot or the wagon which takes a voter to the poll. It is not part and parcel of popular government or of any government. Nor is the primary meeting, which may be called a constituent part of the convention, any more sacred than the convention itself. In fact, there is something almost farcical in the reverence with which the party newspapers and the professional politicians speak of it. To hear them, one might almost fancy that it was the cradle of free government, and that it was the election of delegates to county and State nominating conventions which suggested the idea of republicanism itself. They always talk of attendance at primary meetings as one of the fundamental obligations of man as a social being. The fact is, however, that the fundamental political duty of the citizen is to procure the election of good men to places of trust and emolument; whether he will perform this through the primary meeting and the convention or through some other expedient is a matter to be determined by his judgment as informed by experience. If experience has shown that primary meetings, as a preparation for the convention, do not provide adequate means for bringing the influence of the mass of the voters to bear on the selection of the candidates, so far from its being the duty of the citizen to attend it and give it the countenance and support which result from his participation in its proceedings, it is his duty not to attend it. Whenever any practice or institution has clearly become a delusion and a snare, good men owe it to the highest interests of the country to cease to uphold it.

The conviction that the present system of nominating by convention, beginning with the primary meeting, has ceased to work beneficially, and that there is no reasonable prospect of reforming it, is now a very widespread belief. It shows itself in such addresses as the one we have mentioned, and in the foreboding which finds such frequent expression both in the press and in private conversation as to the action of the approaching Presidential conventions. We presume that there is hardly a man in the United States who would tell you privately and with a grave face that he thought that a Republican Convention at Cincinnati would be governed in its action by a regard for the best interests and sincerest desires of the voters. Everybody fears, on the contrary, that the convention will be a part of what is called the "political machine," and managed by a very small knot of persons, who will carry out their own wishes under the form of popular deliberation. In weighing the chances of the best-known candidates, nobody ventures to assert that the esteem in which any one of them is held by the public affords any trustworthy indication of the fate that awaits him in the convention. In fact, the convention is discussed both in the press and in the market-place very much as if it were a force of nature, like the wind, the strength or direction of which it was impossible to calculate. Few, indeed, would infer from the popular talk about it that it was a direct product of the popular vote, and intended to be a direct expression of the popular will. In short, there is overwhelming evidence that the public confidence in it as an instrument of nomination is gone.

The suggestion of a remedy, however, is no easy matter. It would be difficult if the convention was simply a great assembly of professional politicians, elected by devices created by themselves. It is doubly difficult now that it has passed, in one party at least, completely into the hands of office-holders and of employés of the Executive, holding their places at will. Any attempt to overthrow or set aside machinery thus manufactured and managed is, of course, a work of great labor and expense. In our day the organization of a bolting movement against the party in power, or any movement short of complete desertion to the Opposition, has the proportions and some of the hardships of a popular rising against a large regular army. Leaders have to be improvised, organization perfected, funds provided, and ends and aims definitely settled, and even then the result must be very doubtful. A Presidential campaign in the present condition of American politics and society is on the financial side alone an enterprise of as much magnitude as the making of a great railroad. On the moral side, too, the difficulty would be enormous, even if the object in view were as plain and as widely attractive as that of the Free-Soilers when they broke away from the two great parties which divided the country twenty-five years ago. To-day, such a movement would be directed against corruption and intrigue; but corruption and intrigue are things hard to define, because they consist in the acts of a great number of individual men, and it is hard to form a party against them, because they have no open defenders. The minute we raise the standard of purity, all flock to it, the worst corruptionists among the first. Hence it is that the men whom we know to be most prominent in their debasement of American politics are among the foremost to applaud such mild modes of reform as raising the cry of "put none but good men in office." They know perfectly well that as long as the system which they manage remains intact, the efforts of patriotic citizens to put "none but good men in office" will do them no harm; and they know also that, as long as the duty of attending primary meetings is preached and the management of the meetings is perforce left in their hands, the system will not be shaken.

A remedy of a somewhat clumsy and imperfect kind for the existing evils of party management has been under trial in a half-unconscious way since 1872, and may possibly result in the discovery of some definite form of deliverance. It has been strengthened a good deal by the growing conviction that the Democratic party does not furnish an Opposition, in the proper sense of that word, into which honest men when dissatisfied with the party in power can go, because there can be no genuine opposition without a positive policy. A party which confines itself, as the Democratic party is doing, to simple obstruction, and offers no remedy for existing abuses except the substitution of one set of men in office for another set, is not an Opposition, but a faction. That portion of the Republican party, therefore, which is shocked and dismayed by the use now made of the party machinery, seems more and more disposed to form itself into a kind of corps of observation, with the view of frightening the managers into decent behavior at the convention by the threat of

something or other. It would probably be a threat of desertion, if the conduct of the Democrats in 1872 in nominating Horace Greeley had not taken away all hope and expectation of their offering any refuge to virtuous discontent. As matters stand, the threat is very vague indeed, and we greatly fear the managers of the Senatorial Group will not be much disturbed by it. They know perfectly well what a poser to dissatisfied Republicans the question, What will you do if you do not like the nomination of the convention? will prove. As long as this question cannot be answered in clear and set terms the professional politicians will not be seriously disturbed by the grumblings of what are called the "independent voters."

There is no doubt that much of the inefficiency of the convention system of making nominations would be removed if the civil service were reformed and the office-holders forbidden to act as political "workers," inasmuch as it is their interference which makes the attendance of good citizens at primary meetings abortive, and makes the convention itself a part of the political machine worked from Washington. Were they confined by law and usage to their proper sphere there would be, if not a fair chance, a much better chance of making conventions genuine exponents of the popular will. Indeed, no matter to what political reform we now turn our attention we find the first step towards it must consist in a reform of the civil service. But then, apart from this and besides this, the question presents itself, What is the use of having nominating conventions so large and elected by such complicated machinery? Why, when we wish to select, out of the ten or a dozen men in each party who are sufficiently conspicuous and sufficiently tried, a candidate for the first office in the Government, must we first go to the primary meeting and elect delegates for a county convention, and then have the county convention elect delegates to the State convention, and the State convention elect delegates to the National convention? Is not the direct result of this—we were going to say the direct object of it—to furnish professional politicians with the multiplicity, the complexity, and the troublesomeness with which they play their game and display their peculiar arts, and out of which they make their livelihood? Does not each step in this process add to the opportunities for intrigue, for wire-pulling and pipe-laying, for vexing, wearying, and defrauding the honest citizen who has a lawful calling to follow and believes government to be a means and not an end? Does it not increase the sense, now so prevalent and so productive of political indifference, of the remoteness of the voter's influence upon the actual work of government?

Then, again, when a convention meets for a task so difficult, so delicate, and calling for so much passionless deliberation as the selection of a candidate for the Presidency, why should it consist of five or six hundred members? The size of the body in no way increases its capacity for the work before it. It does not represent the party any better than a hundred men would do. The multitude of voices does not bring any increase of wisdom, because there is no debating, or, indeed, any attempt at persuasion, the opinions of the convention being carefully manufactured by four or five men in the committee-room. The truth is, nobody gains by the size of the convention except the professional managers. It gives them a wider field for the exercise of their art, affords a greater number of problems for their ingenuity to solve, and helps very effectually to conceal the responsibility for whatever makes concealment desirable. Though last not least, as everybody knows, the judgment of an assembly diminishes, one might almost say, in the ratio of its numbers. A large body of men is always ready to be dominated or carried away by passion, and is easily made the victim of deception. There is, therefore, every conceivable reason why the honest friends of reform should begin their work by refusing any longer to participate in or be bound by the huge mass-meetings which the Federal office-holders now get together every four years; and should they not make an honest effort to bring the voter into more direct participation in the work of nomination by the direct election of a body, say, of one hundred or thereabouts, large enough for fair representation of all sections of the country, but small enough for real deliberation, and small enough also to be composed of conspicuous men?

THE CALIFORNIA DISTURBANCE.

THE Supreme Court, in its recent decision on State laws affecting emigration, had not before them the "Chinese question," so-called, and yet it appears from the anti-Chinese outbreak on the Pacific coast that the decision is felt in California to be a blow at the defences erected by that State against the Mongolian invasion. The abstract of the decision already published shows that the Court merely laid it down that statutes (such as the head-money laws of this State) which impose a "burdensome and almost impossible condition" on shipmasters, as a prerequisite to the landing of passengers, "with an alternative payment of a small sum of money for each one of them," is, in fact, a tax on the right to land passengers, and, in effect, on the passengers themselves—inasmuch as they ultimately pay it; that such a statute is a "regulation of commerce," and, when applied to passengers from foreign countries, is a "regulation of commerce with foreign nations" such as is granted by the Constitution exclusively to Congress; and that though there is a class of State laws on such subjects which may be valid in the absence of Congressional action, these can have no reference to matters which are in their nature national, or which admit of a uniform system or plan of regulation.

There can be little doubt that this is a sound and wholesome decision, and, if anything were needed to prove it, we should want no better evidence than is afforded by the present commotion among the Californians over the Chinese immigration. Without going into the details of the matter, or attempting to decide how far the outcry against the Chinese is caused by simple race hostility, how far by the dread of competition in the labor market, and how far by a well-founded dread of the influence that may be exerted upon American institutions and society by the influx of a horde of barbarians, aliens in religion, language, and laws, and absolutely incapable of becoming a homogeneous part of our system, the fact of the existence of this hostility is undisputed, and it will have to be dealt with as a fact. The ground taken by a portion of the press, that the aversion of the Californians to the Chinese is a shocking piece of barbarism, and that what is needed is a change of heart on their part and a stern repression by the Government of all resistance to Oriental immigration, is open to the serious objection that the Californians give no evidence of a tendency to a change of heart, and that it is by no means difficult for them, provided they wish it, to make California so unpleasant a place for Chinamen that they will not come—no matter how much the Government may say they have a right to come. There are a great many ways besides laws affecting emigration by which this may be accomplished. Hitherto, notwithstanding the cruelty and bad treatment to which they have been subjected, they have continued to come, because they have seen an opportunity of making money here which was denied them at home. But if this should be cut off, and it were really discovered that the prejudices of the Californians prevented the employment of "Chinese cheap labor," they would soon cease to desire to emigrate, and the capitalists who have forwarded them here would soon cease to feel any interest in keeping up the movement.

In our indignation at what seems to us the absurd prejudice of the Californians against the Chinese, we are apt to overlook one important thing—the great depth of our own ignorance on the subject. California is the only American community, and, in fact, the only western community from the beginning of history, which has had any experience of the actual effect of a Chinese immigration. The immigration from which we in the Eastern States are obliged to draw all our inferences as to the probable effect of such an experiment has been from countries which are allied to our own by race, language, religion, or customs; and the few Chinese whose acquaintance we have made have been chiefly objects of curiosity to us. To California they have come in numbers, and, speaking a different language, worshipping unknown gods, keeping alive imported customs and traditions, they form almost

a separate caste. Now, such a state of affairs is, under our system of government, very difficult to deal with. In mediæval times it would have been simple enough, because laws and customs would have arisen based on the inferiority of one race and the superiority of the other, as they actually did between the Jews and the Christians, and thus a *modus vivendi* would have been established. But such an escape from the difficulty is forbidden to us by the philanthropy and sense of justice of modern times, as well as by our own example in dealing with the negroes. We certainly cannot have our statesmen spending their days and nights in devising ways to make the "intimidation" of a black man with a jack-o'-lantern on the eve of an election an offence against the United States, punishable by fine and imprisonment, and at the same time allow the San Francisco roughs to pound and pummel and stone the "Heathen Chinee" in the streets of San Francisco because he insists on accepting our invitation to come and live with us.

On the other hand, the Californians seem to forget that while they as yet have had the only actual experience of Chinese immigration, the interest in the matter is not at all local, but national. And this seems to us to be the strongest possible support of the Supreme Court's decision, that immigration is a matter which Congress must regulate. At present it looks to a Californian as if the only interested parties were himself and the Chinamen. He cannot see why Illinois or Ohio should care whether he keeps the Chinese out or lets them in. But, as a matter of fact, Illinois and Ohio have a direct stake in the decision. If the States can really regulate immigration as the Californian now claims the right to do, the seaboard States can, if they choose, virtually reverse the historical policy of the United States and prevent any growth from outside. We do not mean to say that anything like this on a general scale is probable, but what is probable (and, to make its probability clear, we need only recall the sudden outburst of prejudice at various times against the Mormons, against free negroes, in behalf of the "native American" movement, and now against the Chinese) is that so long as Congress leaves immigration to the States to regulate, the States will regulate it in such different ways as to work great injustice to the poor people who are affected by them, and to produce great confusion and unnecessary excitement among ourselves.

Down to the present time there has been comparatively little trouble on this head, because the demand for labor of all kinds in this country has been so great that public opinion has answered all the purposes of legislation, and public opinion has been generally in favor of increasing the supply of labor. But with the country rapidly filling up, wages declining, and the difficulties of making a livelihood increasing, the other cry—that raised by the laborer against the overstocking of the market—is sure to be heard, and when he has the prejudice of race on his side his cry is sure to be pretty loud. All this points to one thing, the absolute necessity of the whole question being considered and settled from a national point of view. The only body that can do this is Congress, and Congress ought to do it because it is a really national and not local concern. It is, in fact, closely related to all the other questions of international trade and commerce, and the confusion which would rapidly be introduced into our system of law and society by allowing it to be "fixed" by local bodies like States, can only be faintly imagined. The time has now clearly come when it will not do to trust any longer to natural causes to solve the immigration question. The picture drawn by Fourth-of-July orators of the welcome which the United States offers the "poor and oppressed of every land" is somewhat out of date, and, while it may still be metaphorically true that we go down to the wharves to "hail them," with a "copy of the Bible in one hand and an American flag in the other," our erring human nature may lead us, after they have landed, into conduct entirely inconsistent with our professions. It must be admitted, too, on behalf of the Californians, that even the "natural right" of everybody to change his place of residence, if such a right exists—and that it is not recognized as existing the laws of most civilized countries on the subject of forced military service prove pretty conclusively—exists subject to the undoubted right to impose restrictions and regulations, and to exact prerequisites as a means of self-protection. This right the Supreme Court expressly affirms, and we can only hope that it will be speedily exercised by Congress as the body now finally determined to be clothed with final power in the premises.

OXFORD UNIVERSITY REFORM.

LONDON, March 14, 1876.

THE Conservative Government under which we exist at present came into office as a defence against the worrying and harassing vigor of the previous Administration, but it seems to have caught the infection of vigor from its predecessor, and even to have taken the disease in an aggravated form. The Gladstone Government was satisfied with disestablishing an effete church in Ireland, and doing tardy justice to a great nation for a piece of culpable negligence on the part of the Home Administration. The Disraeli Government flies at higher game. It proposes to turn upside down the relation which has always existed between the Indian Government and the Secretary of State for India, and to insist that, for the future, the affairs of two hundred and forty millions of people shall be regulated by an official sitting in a snug room in Downing Street at one end of an electric telegraph wire, the other end being in Calcutta, or Simla, or wherever the Governor-General of India may happen to be. It proposes, further, to remodel the hereditary monarchy of Great Britain and Ireland, and (I quote Mr. Disraeli's words—words which any lackey in the kingdom would have been ashamed to use) "to add splendor to the British throne" by setting up a shoddy title of "Empress" in addition to the old historical title of Queen. It also contemplates, in connection with France and Italy, the financial re-establishment of a wily bankrupt potentate, and to perform in Egypt the miracle which baffled the ingenuity of the Israelites of old—to make bricks without straw. And, by way of reposing from its labors abroad, it has turned its attention to one of the most powerful interests in England, the two great Universities, and has introduced a measure into the House of Lords which, if it passes into law, may mould for good or for evil the character of one of our great centres of culture and education for generations to come.

It is on this bold flight of the present Government that I propose to send you a few lines to-day.

Five-and-twenty years ago the Universities were doing, comparatively with their resources, but little good. They were governed by antiquated codes of statutes. Legislation was initiated and the government administered by a Board consisting of the Heads of Houses and the Proctors—an administration which has been well described as an "organized torpor." Debates on University matters were, by statute, conducted in Latin. None were admitted on matriculation who would not sign the Thirty-nine Articles of the Church of England, and college fellowships were restricted to those who could solemnly declare themselves, under the Act of Uniformity, to be members of the church. Professorial teaching hardly existed. Fellowships, with one or two exceptions, were given by favor or for considerations among which learning was the least. The requisites for election at All Souls' College at Oxford, for instance, were birth, dress, and a modicum of learning. The dogma contained in the words, "Bene natus, bene vestitus, et moderate doctus," comprised the modest catalogue of attributes for eligibility. Scholarships were nearly all close. Clerical restrictions were invariably imposed upon those who held any position of authority, and—to sum up the matter in three words—the ecclesiastical spirit of the Middle Ages brooded over the whole life of the Universities.

But a mighty change has come over them in the last quarter of a century. In 1850, Lord Russell issued a Royal Commission to enquire into the state, discipline, studies, and revenues of the Universities, and in 1854 and 1856 he introduced measures founded on the report of this Commission and passed them into law. Under these laws the Universities have been regulated until the present day. Since then there has been good and useful work done where there was little but idleness and inactivity before. In 1850, the whole number of Oxford undergraduates was 1,402; in 1875, they numbered 2,240. The scholarships are now, for the most part, open to competition, and the more important fellowships, instead of being given away by favor or by the accident of birth, are held by those who have gained them by examination. Outside the University circles, too, the University influence has steadily extended. Examinations of pupils trained in middle-class schools have been organized; academical lectures and classes have been established in populous centres; and a "Public Schools Exami-

nation Board" has been set on foot for the purpose of examining thoroughly and independently the leading schools in England. These schools in their turn direct their energies to train up scholars qualified to compete for the University prizes. The head-masters of the fifteen great public schools, nearly all the head-masters of 180 metropolitan and provincial grammar-schools, and most of the assistant-masters in all these schools, are graduates of Oxford or Cambridge. The great body of the clergymen and barristers, all the bishops, and nearly two-thirds of the judges are University men. The national schools and the public board schools are for the most part managed by clergymen who have been trained at one of the older Universities. The Education Office is made up of Oxford and Cambridge graduates. Out of 123 school-inspectors all but ten or twelve come from one of the two Universities. The Civil-Service Commission, in like manner, which superintends the examinations for the civil and military service, is recruited from the same stock, all the commissioners, secretaries, directors of examinations, and examiners having been selected, with the rarest exceptions, from one or other of the older Universities. The present House of Commons, which is not one in which culture predominates, contains not less than 225 members who were educated either at Oxford or Cambridge. In Mr. Gladstone's original Cabinet ten Ministers out of fifteen were Oxford or Cambridge men. In the present Cabinet, Mr. Disraeli is the only Minister who has not received a University education. If he had enjoyed that advantage, his eccentric imagination might have been toned down, and his taste for tinsel and theatrical effects might have lost some of its exuberance.

From these statistics it is obvious that the Universities are doing good work; but Lord Salisbury thinks that they ought to do better. During the time of Mr. Gladstone's Administration every institution in the country was called upon to give an account of itself, and to show cause why it should not be reformed, and the two Universities were no exceptions. A Commission was appointed to investigate the state of the finances of the two Universities, and to report upon them. It was precluded from entering into the general question of the reform of these institutions, or from issuing any recommendations as to the application of endowments. An opportunity of making enquiry as to the effect of the legislation of 1854 and 1856 was thus lost; but, as regards Oxford, Lord Salisbury has entered the field as a reformer. He finds that the report of the Finance Commissioners has brought out a better state of things than was anticipated. The total revenues of the two Universities amount to about £750,000 a year, but it does not appear that this large sum is to any great extent misappropriated. The bursars who have the control of the college affairs have proved themselves to be, if not heaven-born men of business, at least fairly economical stewards of the collegiate property. But it has been manifested at the same time that there is a striking disparity in the expenditure of the different colleges—that whereas some colleges educate their students at £80 to £100 a year per head, others spend £250 to £300 on the same object. It appeared also that the colleges are rich while the University is poor, and that a considerable proportion of the college endowments—amounting in all to about £200,000 a year—is absorbed by what, with more than doubtful taste, Lord Salisbury thought fit to designate as "idle fellowships."

He proposes, therefore, to abolish many of these "idle fellowships," and to divert the endowments which are appropriated to them from collegiate to University purposes; and the machinery by which this diversion and the other reforms contemplated under the bill are to be carried out is the familiar one of an Executive Commission. The members of this body are to hold office for seven years, and they are to wield during that period what is practically despotic power over the University of Oxford, its organization and its endowments—saving only the headships of the different colleges. These are now almost exclusively restricted to clerical holders of the office, and with this restriction Lord Salisbury does not propose to interfere. The Commissioners are to have regard "to the interests of religion, learning, and research," and over professorships, fellowships, scholarships, and emoluments generally they are all but omnipotent. They may suppress, divide, consolidate, annex, or modify any emolument which is a hundred years old. They may put the endowments of any college or of all the colleges into a crucible and mix them up together, and then bring them out quite different things from what they were. They may apportion any endowment to any new purpose consistent with the main design of the founder. They may remove it from the college to which it is appropriated, and apply it to the University or to other purposes connected therewith, provided always they have regard to the interests aforesaid of religion, learning, and research. The only checks upon them are the appointment of three members of the college which is undergoing operation to sit with the Commissioners as representatives of the college, the sanction of the Queen in Council to the statutes framed by the Commissioners, and the acquiescence of Parliament for twelve weeks, during which the statutes are to lie on the tables of the two Houses respectively.

These are sweeping proposals, and it is obvious that, if they become law, a great opportunity is given to make the very best of the University and to turn it out equipped with all the most perfect appliances of the nineteenth century. But when proposals approaching to the character of these have been made by any previous Government, the Commissioners to be appointed have had certain guiding principles laid down for them, either in the act appointing them or in some previous report of a commission of enquiry. Lord Salisbury proposes to leave his Commissioners absolutely unfettered. He has given, as Lord Morley said on the second reading of the bill, "blank powers to a blank commission," and left them to do the best or worst they can. He has indicated a wish that more professorships should be established; that appliances and apparatus for study in science and art should be supplied; that "research" should be endowed; that the number of fellowships should be diminished; and that all matters connected with religion should be maintained *in statu quo—i.e.*, that there should be no diminution and no increase of clerical restrictions. These, however, are but expressions of Lord Salisbury's individual wishes, or, at the utmost, those of the existing Cabinet, and they have no necessary regulating or permanent effect.

The absence of any guiding principles on which the Commissioners must act is a serious blemish in the bill. But there are other blemishes which are more radical, and which rise to the dignity of something worse than blemishes. The tendency of the measure, and the tendency of Lord Salisbury's mind, is to re-establish the predominance of the clergy of the Established Church in the government both of the colleges and the University. University reformers looked for fundamental alterations in the existing constitution of the University. At present, the initiative in University legislation is taken by a body called "Congregation," which includes all Masters of Arts who reside within a mile of Oxford. No worse constituency could be well imagined. There are innumerable parish clergymen and college chaplains and clerical fellows resident within a mile of Oxford, but very few lay Masters of Arts or lay fellows. The laymen are engaged in their several occupations in London and elsewhere in the world outside the ecclesiastical and academic precincts. Liberals wish to see this body secularized, so to speak, but Lord Salisbury leaves it untouched. The heads of colleges are nearly all, *ex necessitate*, in holy orders. Liberals wish to see this restriction removed. Lord Salisbury expressly lays it down in his measure that these restrictions shall be preserved. Liberals maintain that the Universities owe everything to the influence of the non-resident lay fellows, who leaven the lump of ecclesiastical and academic narrow-mindedness contributed by the clerical fellows. Lord Salisbury calls the non-resident fellows "idle," and empowers his Commissioners to suppress all lay fellowships or convert them into clerical fellowships. It is certain that the ecclesiastical bias of the bill will not pass uncensured when it reaches the House of Commons. The Dissenters will rise as one man in antagonism to it, and the Liberal party will support them as they did upon the Endowed-Schools Bill two years ago.

Lord Salisbury has not played his cards with the adroitness that one would have expected from the framer of this measure. In the early part of his speech, in introducing the bill, he hung out a bait to allure the scientific men to side with him. He indicated that some part of the endowment from the suppressed fellowships would be devoted to scientific research and education. But he could not resist a sneer at a body of men for whom he has an undisguised contempt. He complained of the sceptical spirit of enquiry prevalent among men of science, and added that if they could only get professional appointments of £1,000 a year in a religious institution like Oxford they might become like Rabagas in the play, who was a republican when out of office, but who, when he came into power, ordered the troops to fire upon his ancient friends. The gratification of hurling this sneer among an able and sensitive set of eminent men may have pleased the clerical office-seekers and time-servers in the University, but it has alienated the body of men which his measure was intended to conciliate or to bribe into acquiescence.

JULIAN KLACZKO.

PARIS, March 24.

AFTER the battle of Sadowa, Julian Klaczko published in the *Revue des Deux Mondes* a series of articles, which were afterwards put together under the title of 'The Preliminaries of Sadowa.' Everybody was astonished to find the French language so admirably handled by a foreigner. Who was Julian Klaczko? Very little was known of him. He belonged to the Polish emigration, and was one of the habitual visitors of Prince

Adam Czartoryski at the Hôtel Lambert. He did not belong to the aristocratic families of the emigration, he had none of the characteristics of the humbler Poles: he was cosmopolitan in his tastes and habits, familiar with the politics of all the European countries. He had a strong individuality at a time when everybody sacrificed too much to conventionality. There are conventionalities in politics as well as in ordinary life; everybody must kneel before the "idols of the theatre," as Chancellor Bacon said of the divinities of public opinion. Julian Klaczko is of another disposition; he is always inclined to rebel against public opinion. He has adopted the motto of Horatius: "Odi profanum vulgus et arceo." He undertook the defence of Denmark at the time when everybody abandoned Denmark to the tender mercies of Germany and Austria. That he should speak for Poland at all times was quite natural, but he made himself the champion of Austria immediately after the crushing defeat of Sadowa. His book attracted so much attention that Beust, who had undertaken the difficult task of keeping together the *disjecta membra* of the old Empire, called Klaczko to Vienna, made him an Aulic Councillor, and attached him to the department of the Foreign Office. Klaczko was elected Deputy in Galicia, which is a Polish province, and sat in the Chamber of that province. So he became for a time quite an important personage; he was on the most intimate terms with Beust, and he was able to study those inner parts of politics which have always attracted him. He had become an Austrian, but his heart was always in France, where he had spent so many years of his life in poverty and obscurity. As a champion of old ideas, old religions, old dynasties, he had never liked Napoleon III. or the Bonapartes; he had ridiculed to excess the principle of nationalities, forgetting that his own Poland could stand on nothing but that principle; he had always been a partisan of the temporal power of the Papacy, and an enemy of Italian unity. The Imperialists had tried to bring him over to their cause, but all his instincts revolted against Bonapartism, which he identified with universal suffrage, coarse flattery of the people, contempt for all historical rights. Still, when Napoleon was defeated at Sedan, when France was invaded and had to submit to the terrible "væ victis," he alone in a European parliament had the courage to say a word for the victim. It was not his fault if the Parliament of Galicia was distant, and if the speech which he pronounced in it had no echo; I have seen it in print, and shall never forget it. Klaczko tried to prove that the fault of the Emperor was not the fault of France; that Germany must behave as the Allied Sovereigns had done in 1814 and 1815; that a war of self-defence ought not to become a war of conquest; that it behoved the old dynasties of Europe to respect those treaties and those historical rights which had been unfortunately despised by an upstart dynasty.

It was in vain. The shrill little voice was not even heard in the din of the armies. Klaczko was profoundly disgusted with the indifference of Austria. He resigned his post in the Galician Parliament, his place at the Foreign Office, and came back to France. I met him for the first time at Versailles during the first days of the Commune. We happened to have both found an asylum in the house of a common friend. This house was so full at the time that Klaczko had his bed made on the billiard-table. What long and sad conversations we held during the six weeks of this second siege of Paris! Klaczko had lost his illusions about Austria; he had seen the press of Vienna fed on the *Reptilienfund*; he knew better than anybody how weak the central power was becoming between the pretensions of the Magyars and the growing ambitions of the German party of the Eastern Provinces. There was no resource for the descendant of the King of the Romans but to become the instrument of the designs of the ruling minds of Berlin. The Reactionary party of Vienna was bigoted, silly, without ideas; the Progressive party rushed towards the "great Fatherland" as the iron goes to the magnet.

As for France, what would become of her? Her course was plain—she must shake off the memories of the Bonapartist rule, and return to her old monarchy. The Count de Chambord and the Princes of Orleans once united would give back to France the prestige which had been lost during the Revolutionary period and the rule of Napoleon. Such were the hopes of Klaczko, and, what must seem strange, he felt convinced at the time that M. Thiers was only gaining time and was determined to re-establish the constitutional monarchy as soon as the Germans should be out of France. He was almost angry with me when I told him at Versailles that M. Thiers was hostile to the monarchy, and would establish the Republic even with a monarchical Chamber. These conversations took place when everything seemed dark and confused; we heard every night the distant sound of the shells which were thrown from the forts nearest to Versailles.

I only enter into these details to give a more vivid idea of Klaczko; while you read his books you must always remember that he is a Pole, a Catholic, a Royalist, an aristocrat in every fibre of his nature. In a moment of discouragement some months ago he said to me: "I am getting tired of being more Royalist than kings, more conservative than millionaires, more French than Frenchmen." He really will never be tired of feeling strongly on all points; he often represents to me a sort of Julian the Apostate among the new Christians; he is loyal to the old gods; he is sincere in his faith; he is honestly shocked by the vulgarity, the coarseness, and the brutality of many of the new iconoclasts. This sincerity gives a singular charm to his political writings, and, I would almost say, an artistic value. His new work, entitled 'Two Chancellors,' is not only the diplomatic history of the last few years, it is something more; you will find in it the profound analysis of a psychologist delineating human characters—the characters of Prince Bismarck and Prince Gortchakoff, the two most interesting subjects of the day; you will find in it the lamentations of a new Jeremiah, who predicts the end of a world; the effusions of a soul wearied like that of Alfred de Musset when he said:

"Je suis venu trop tard dans un monde trop vieux."

The 'Two Chancellors,' like the 'Preliminaries of Sadowa,' appeared first in the *Revue des Deux Mondes*, and the separate numbers are now united in a large volume. I will say at once that Klaczko's delineation of the policy of Bismarck and of Gortchakoff is one-sided, but from the side on which he places himself it is truly admirable. His book will always be consulted by those who attempt to form a true view of the momentous events which have filled Europe during the last years.

The details concerning the first part of the life of Prince Bismarck have been mostly taken from a work of Hesekiel, which appeared many years ago; they are familiar to the world. Everybody knows that Otto von Bismarck began his career as a *Junker*, a representative of the old high-and-dry Prussian party. Bismarck never was a brilliant scholar; he answered well to this definition of Saint-Marc Girardin: "It is needless for a statesman to know Latin well, it is enough for him to have forgotten it." He is, however, very familiar with the authors of his own race, with the Bible, and with Shakspere. Prince Gortchakoff, on the contrary, prides himself upon his scholarship, upon his beautiful French style; he has been called "the Narcissus of the inkstand." Gortchakoff has never had any occasion to speak in public. Bismarck has made for himself the reputation of an orator. He does not belong to the Ciceronian school; his eloquence is irregular, it knows no rules, but he finds at times phrases which can never be forgotten. Let us imagine, for instance, how a German Parliament must have received these words: "Be sure of one thing, gentlemen, we will not go to Canossa."

Klaczko cites some of these happy expressions. Speaking twenty years ago of the great struggles which were preparing in Germany, Bismarck said: "The decision will not come out of our parliamentary debates, it will come from the God of battles when he lets fall from his hands the iron dice of destiny." In the famous opera "Freischütz," Max, the unfortunate hunter, borrows a cartridge from Robin, who is a diabolical genius, and he immediately kills an eagle and adorns his hat with an eagle's feather. He asks Robin if he can have no more of these cartridges; Robin tells him that they are enchanted, and that he must, in order to have them, give up his soul to the Evil One. Max is afraid, and Robin tells him to his amazement that his soul is already lost: "Did you believe that this eagle was a gratuitous gift?" When the crown of Germany was offered to the King of Prussia by the Frankfort Parliament in 1849, Bismarck, who was still a *Junker*, urged the Hohenzollern not to accept the fatal gift. "Who brings it to our king?" said he: "it is radicalism; sooner or later radicalism will rise before the king, will demand its recompense, and, showing the emblem of the eagle on this new imperial flag, will shout: 'Did you believe that this eagle was a gratuitous gift?'" This is real eloquence. Bismarck may have forgotten these words; the imperial eagle is on the flag of the Hohenzollerns, and it may be that some day German radicalism will demand the price of its "enchanted cartridges."

It is not my object to give even a résumé of this new book of Klaczko; let us only enquire into its object. He has tried to prove that the Russian alliance has been the key-stone of the policy of Prince Bismarck, but that this alliance, while it gave all to Prussia, gave little or nothing to Russia; that the Russian Chancellor has been outwitted by the German Chancellor—that one has got the booty, and the other its shadow. The book has in consequence created much sensation in Russia, especially in the Old-Moscovite or National party. Prince Gortchakoff was once the pet, the favorite of that National, anti-Germanic party; and now Klaczko undertakes to prove that the German Mephistopheles has led the Russian Faust like a child.

Russia, as an empire, has the instinct of its vast and almost boundless strength, it has all the pride and ambition of a young nation; but its leaders cannot help knowing that this great strength is somewhat in a chaotic state; while everything is organized in Germany, everything is organizing in Russia. I would not compare Russian civilization to a mere theatre-curtain; I would not go so far as Prince Bismarck, who being in the habit, while he was in the diplomatic service, of having a new locket made for his watch when he left a country, with a device which characterized that country, had this word engraved on his Russian locket: "Nichts." It would be unwise to take him at his word; and we can recognize the true German doctrine of antinomy in this double opinion of Bismarck, who, though he knew that the gigantic empire of Russia was in a certain sense a useless and dormant force, still never made a single move in politics without securing first the neutrality or, if he could, the alliance of Russia. Nobody knows better than he that Russia, even though her railways are still unfinished, though her army is reorganizing very slowly, is in a certain measure the arbiter of Europe. She acts in the new equilibrium like a great weight, which, if suddenly removed, would derange everything. The imminence of great changes in the East gives much interest to the history of the recent relations between Russia and Germany. While the Russians have been somewhat angry with the denunciation of the faults of Prince Gortchakoff, the French official papers have accused Klaczko of compromising our good relations with Russia; for the French seem to believe now that there exists in Russia a distant Providence who will set all right again in Europe. "Rien n'est bête comme un fait," said Madame de Staël, and as much may sometimes be said of those who tell the facts. We must be simply grateful to Klaczko, who, if he takes away many of our illusions, does not feed us with lies and false hopes. He has shown us Europe as it is, he has presented to us a true Gortchakoff, not the ideal Chancellor whom so many innocent Frenchmen consider as the sentimental friend of France. It is better that we should know that we must trust only in ourselves: "Aide-toi, le ciel t'aidera."

Correspondence.

ANGLO-JEWISH HISTORY.

To the Editor of The Nation:

Sir: My attention has been called to some remarks contained in the issue of your journal of the 10th February on a book lately published by me under the title of 'Sketches of Anglo-Jewish History' (London: Trübner & Co. 1875). The mistakes and misstatements which appear in what I presume to be intended as a notice of my work are so singular, so inconceivable, as to leave me in doubt whether the writer has read the book or whether plain English words fail to convey any meaning to his mind. His errors are so numerous as to render it impossible for me to attempt to correct them; but I must ask you, as a simple act of justice, to permit me to point out some of his more glaring misrepresentations and blunders.

He says: "No historian has a right to demand that his narrative be accepted, *primâ facie*, as entitled to full credence, and particularly not an historian like Mr. Picciotto, who, with almost childlike credulity, and without the least attempt to make a critical sifting of his materials, records as true even the supposed miracles of a Falk Baal Shem, believed in by superstitious people in their time." I will not now discuss the writer's views of historical writing; it is enough for me to indicate the ludicrous mistakes into which he stumbles. The expression of "a Falk Baal Shem" completely exposes his ignorance. Falk was the proper name of the individual in question, and Baal Shem (Master of the Name) was the title given to those who claimed cabalistic powers. The writer's general assertion in this sentence is even more astounding. That he should not have perceived that the account of Dr. Falk's supposed miracles was written in a jocose and ironical strain is not singular in one of his mental faculties. But that a man who assumes the functions of a critic should be unable to understand simple English is certainly inexplicable. I will quote the following sentence, which occurs at the end of the chapter referred to, and which explains itself: "We will not undertake to say whether there is more in heaven and earth than we dream of in our philosophy; whether, as is more likely, De Falk's miracles partook of the nature of the feats performed by Robert Houdin, Professor Anderson, and Dr. Lynn; or whether, as is most probable of all, they were ordinary occurrences magnified into wonders by the love of the marvellous and of the supernatural obtaining in the mind of the vulgar." I leave it to readers possessed of ordinary intelligence to determine whether the above words imply a "childlike credulity" which "records as true even the supposed miracles of a Falk Baal Shem."

The next paragraph of the critic is as accurate and fair as the former. He complains that a branch of Anglo-Jewish history has been almost totally neglected, referring to the legal status of the Jews in England at different periods. He asks: "Can Jews be competent witnesses? Can they make bequests to synagogues and Jewish charities? How about their marriages and divorces?" Again I must enquire whether the writer has perused my book, or whether he is a foreigner, unable to appreciate the value of English terms. All these subjects have been treated in my book. The bequests of Jews to synagogues and charities have been repeatedly adverted to, and a whole lengthy chapter is devoted to an exhaustive account of Jewish marriages and divorces. Moreover, the writer proceeds to adduce certain facts which, he says, "we learn from the Law Reports," without acknowledging that the same facts are related in the work which he professes to review! We leave it to others to judge whether this is impartial or honest criticism.

I fear I have taken up already too much of your valuable space to extend any further my remarks. The observation of the critic with reference to my not having recorded, in an historical account of the Jews of London, the names of Christian students of Hebrew; his absurd comments on a potential blunder which did not occur; his amusing condescension at my non-adoption of his erroneous form of spelling foreign names; and his concluding remarks on the "Star Chamber"—all argue a confusion of mind and a want of acquaintance with his subject seldom met with in a professed instructor of the public.

Requesting the favor of the insertion of my communication in an early number of your journal, I am, Sir, yours truly,

James Picciotto.

London, February 24, 1876.

[Mr. Picciotto has given ample proof in his book that his knowledge of Hebrew is very limited; but in his explanation of the term "Falk Baal Shem" he is for once right, and in full accord with the review in the *Nation*. We have re-read the three pages allotted to this cabalistic mountebank, and, though the narrative of his performances is for the most part neither jocose nor ironical, and everything is described as having "actually" occurred, we find ourselves to have been in error in imputing to Mr. Picciotto downright belief in Falk's miracles. We probably differ with him as to the place which such anecdotes merit in a serious history. Of the "miracles" of a Shabthai Zebi in the XVIIth century, or of an Israel Baal Shem in the XVIIIth century, an account must be given in Jewish history, for they were of deep and far-reaching consequences, and the Chassidism so widely prevailing even nowadays among the Jews in Eastern Europe, is witness how much minds were stirred and how great the commotion was which was called forth by the cabalists just mentioned. But a "Dr. de Falk"—strike him out altogether from the history of the Jews in general, or of English Jews especially, and not the least link will be broken in the chain of events.

Mr. Picciotto is dissatisfied with our remarks in regard to his neglect to pursue the historical development of the legal status of the Jews in England. Nevertheless, our complaint must be reiterated. If anything in Anglo-Jewish history is of captivating interest, it is the history of the legislation and of the application of the laws concerning the Jews. That English Jews were once not admitted as competent witnesses before the courts, and that, until a comparatively short time ago, Jews had great legal difficulties in making bequests to their own synagogues and charities; that, even as late as 1860, an English Chancery Court had to decide on the validity of such a bequest (see 28 Beavan's Reports, in the matter of Michel's Trust)—of all these points Mr. Picciotto has not mentioned one syllable. To say that "the bequests of Jews to their synagogues and charities have been repeatedly adverted to," is a piece of sophistry on his part. He mentioned certain Jewish bequests, but it never entered into his head to treat of the laws of the realm affecting such bequests. To Jewish marriages, it is true, he devotes a chapter; but he has done no justice to the subject, and his treatment of it is superficial and inadequate. There is still a large field left for historical investigations; but the investigator must be able to follow the traces of the organic growth and development of laws and

usages, and to become a pathfinder in the labyrinthian mass o material. Thus, for instance, in regard to the question whether a Jew can testify before a court, see 1 Atkyn, Omychund *agt.* Barker; in regard to marriages and divorces, see 1 Haggard's Eccles. Rep., Lindo *agt.* Belisario; in regard to bequests to synagogues, see Beavan, *ut supra;* see also the English cases cited in Story's 'Equity Jurisprudence,' vol. ii., § 1168. These few references must suffice here. We will only add that even the term "defend," in the technical law phrase "to warrant and to defend," as used to-day in deeds of warranty, originated, as we learn from one of the English 'Year-Books,' in the exceptional legal state of the English Jews in the Middle Ages. But all this, it seems, is a *terra incognita* to our author.

As for our erroneous form of spelling foreign names, we need only repeat that it is simply ridiculous to spell the very common and widely-used proper name "Zebi," *Ziwy;* that there is no reason for preferring the corrupt, vulgar form *Phaibul* (local in Germany and Poland) to "Phœbus," also not a rare name among Jews; nor any for speaking repeatedly of persons bearing the family name *Netto*, while books printed by them in English, Spanish, and Italian prove by their title-pages that the name is "Nieto." A little more of elementary knowledge for his undertaking, and a little less of Spanish *grandezza*, would be not unbecoming in Mr. Picciotto. We can assure him and our readers that our review was not as severe as it might and perhaps should have been.—Ed. Nation.]

Notes.

ROBERTS BROS., Boston, announce 'Revolutionary Times,' by Rev. Edward Abbott; 'Discourses' by the late President Walker, of Harvard College; 'Meditations on the Essence of Christianity,' by the Rev. R. Laird Collier; 'Art-Schools of Mediæval Christendom,' by A. C. Owen; and 'Stories for Summer Afternoons,' by "Susan Coolidge."——Lee & Shepard will publish 'Young Folks' History of American Adventure,' by T. W. Higginson.——'A Centennial Commissioner in Europe, 1874–6,' by John W. Forney, is announced by J. B. Lippincott & Co.——Macmillan & Co. publish immediately 'The Hunting of the Snark,' by Lewis Carroll, author of 'Alice's Adventures.'——An illustrated 'Comic Centennial History of the United States,' by Livingston Hopkins (New York: Carleton), may, if the author has a keen sense of *bouffe*, prove to be very amusing.——John Campbell & Son, Philadelphia, have in press 'The Question of Resumption of Specie Payments Stated and Examined,' by J. W. Schuckers.——J. H. Coates & Co. have devised and will issue immediately a 'Memoir of the Centennial Exhibition,' being an illustrated album in which to write a personal narrative of one's visit; and 'Centennial Notes,' another album to serve for rough notes on which to base the fuller account in the 'Memoir.'——J. B. Ford & Co. have in press 'The *Forest and Stream* Hand-book for Riflemen,' a manual of instructions for the organization and conduct of rifle associations.——M. L. Simonin has just gathered the five articles he has contributed to the *Revue des Deux Mondes* on New York, Chicago, and St. Louis, the Great Lakes, the subterranean riches, and the railroads, into a volume now announced by Hachette & Cie. as in press, under the title of 'La Monde Américain: Souvenirs de mes Voyages aux États-Unis.' There has also just been published in Paris 'Le Pouvoir Exécutif aux États-Unis: Étude de Droit Constitutionnel,' by Adolphe de Chambrun.——Dr. Koner's annual classified catalogue of geographical publications (November, 1874–75) fills ninety-seven pages of No. 60 of the Berlin Geographical Society's *Zeitschrift* (Berlin: Dietrich Reimer; New York: L. W. Schmidt).

—Unlike the library of the late S. G. Drake, of which we spoke the other day, the library of Mr. E. G. Squier, to be sold by Bangs, Merwin & Co. on the 24th inst., might well be purchased *en bloc* by any institution able to command the means. It is, with very few miscellaneous admixtures, composed of works bearing on American and particularly Central and South American archæology and ethnology, and as a collection is probably without a rival. Latin, Spanish, French, Italian, and German publications are plentiful. Eleven bound volumes of pamphlets relate to interoceanic communications, prehistoric man, crania, language, American antiquities, the discovery of America, the South American republics, archæology, etc., etc. Fourteen volumes of newspapers and pamphlets preserve invaluable material for the political history of Central America. A large number of works relate to a canal across the American isthmus. Mr. Squier's own works amount to forty-five numbers in several languages, not including the thirty-five bound volumes of *Frank Leslie's Illustrated Newspaper*, of which Mr. Squier was for some time the editor: at the end of the catalogue a very remarkable bibliography of this prolific writer will be found. Inedited MS., all Spanish, occupy sixty-five numbers. There is a very valuable collection of 152 printed maps, mostly of Mexico, Central and South America, and the West Indies, besides 27 MS. maps. A certain number of engravings, and eight original drawings by Catherwood, complete the variety. We have not the space to indicate individual works of great rarity or importance. With the catalogue is bound up as addenda another library, much smaller, but fairly rich in Americana, containing eight volumes of Jesuit Relations (not including the Dablon of Squier's No. 253, nor the later Relations of his No. 667), and a portion of Humboldt's library, of which the first title happens to be Preston S. Brooks's speech at Columbia on occasion of the presentation to him of a pitcher, a goblet, and a cane. The other works are largely Humboldt's own, most curious of all being the bound folio collection of the savant's diplomas, passports, orders of knighthood, etc., etc.—181 in all; a monument of departed greatness which it seems singular that Germany could ever have let go out of her limits.

—A resident of Waltham, Mass., writes us to make the following correction:

"In the 'Notes' of the *Nation* for March 23 it is said incidentally that the lecture system of this country had its rise in Essex County, Mass. The Rumford Institute for Mutual Instruction in Science and Arts was organized in Waltham, Middlesex County, Mass., Dec. 20, 1826, its chief means of instruction being lectures and discussions, commencing Feb. 10, 1827. Nov. 14, 1828, delegates were chosen to represent the Institute at a meeting at Concord on the 16th of November, for the purpose of organizing a county lyceum. According to Dr. Wheatland, of the Essex Institute, 'On the 6th of November, 1827, the Essex Lodge of Freemasons in Salem voted to have a series of literary and scientific lectures, which commenced in January, 1828'—the first in Essex County. The County Lyceum for Essex was organized Dec. 30, 1829. For twenty-five years the Rumford Institute was rigidly devoted to the letter of the purpose of its organization. Its later history gives point to the subject of the 'Note.'"

Chronologically, our correspondent is in the right. The authority on which we relied, trusting to memory, was a memoir of Francis Peabody, by the Rev. Chas. W. Upham, read before the Essex Institute July 18, 1868, and printed in Vol. I., Part II., of the Institute's Historical Collections (Salem, 1869). Mr. Upham gives a full account of the formation of the Essex County Lyceum, and says (p. 54):

"There had been a few similar institutions elsewhere before. That in Beverly [Essex Co.] has been mentioned. Bernard Whitman, whose memory is dear to all who knew him, and must be cherished for ever by the friends of truth and progress, had, in 1826, established what he called a Rumford Institute in Waltham, and there were one or two others in portions of Worcester and Middlesex Counties. *But it may safely be said that the proceedings at Topsfield and here* [Salem] *originated the institution as a diffusive energy over the country at large.*"

Mr. Upham also gives a list of the lectures in the first two courses delivered before the Essex County Lyceum, which the curious will find worth consulting.

—During the month ending May 10, Connecticut teachers and schoolchildren, to the number of two hundred, have a chance to earn one dollar and an honest distinction in the following manner: Whoever shall plant, or cause to be planted, either on the school-grounds or along any street, five trees, each not less than nine feet in height, and either elm, maple, ash, white-oak, or walnut; and shall report the planting within the time specified to Mr. B. G. Northrop, Secretary of the State Board of Education; and shall further, after August 1, procure and forward the certificate of any school visitor that the five trees are at that date all alive—such teacher or scholar will receive from Mr. Northrop the sum of one dollar, unless a copy of his 'Education Abroad' is preferred. Of all the Centennial manias, this is certainly one of the most rational and useful, and we hope that Secretary Northrop's two hundred dollars will be all called for, and that by next August Connecticut may be from one to two thousand trees the better off in consequence of his offer. That private tree-planting will also be stimulated by it may be expected. The setting out in a favorable place a healthy tree of the longer-lived species is one of the most natural modes of marking the Centennial year, and ought to be extensively indulged in. The measurement of such trees at intervals of five and ten years would furnish valuable data as to their rate of growth, and would also tend to distinguish and preserve them. A State enterprise of a scientific character

has been petitioned for in Massachusetts by Dr. Asa Gray and other eminent citizens of Cambridge. They ask the General Court to purchase in the eastern part of the State a tract of forest land, comprising an area of five or six square miles, to remain a perpetual growth of wood, under conditions favorable to the development of all its spontaneous productions—a reserve not only for the flora but for the fauna of the district. It is intended that the tract shall embrace a great variety of soil and surface, with so little arable land that it would not be missed for cultivation.

—The history of a church is not so difficult to write as that of a county, and though the time is at best short, it seems likely that the Congregational churches of Connecticut will all listen on Sunday, July 9, to an historical discourse, "pointing out especially the relations of the church and its pastors to civil affairs, and recounting the part performed by them in the war of Independence and the recent war for the Union." Such was the recommendation of the General Conference at Norwich last November, and the circular containing it and other suggestions for Centennial observances by the same churches has just been sent out. Pains will be taken to have these discourses written for preservation on paper of uniform size, as well as printed uniformly; and as a depository for the archives of the Congregational denomination in the State, a suitable building has been secured in Hartford. This it is proposed to purchase, by collections made on the date above-mentioned, for the sum of fifty thousand dollars, which if assessed as a poll-tax on communicants would make the rate one dollar for every church-member.

—An injury has, we fear, been inflicted on the Centennial celebration by the acceptance, as a portion of the opening ceremonies, of a "Cantata" written by Mr. Sidney Lanier, which, we understand, is to be sung by a chorus of some five or six hundred voices. It is entitled the "Centennial Meditation of Columbia," and the personification of the universal Yankee nation is represented as indulging in reflections such as—

> "Humbler smiles and lordlier tears
> Shine and fall, shine and fall,
> While old voices rise and call
> Yonder where the to-and-fro
> Weltering of my Long-Ago
> Moves about the moveless base
> Far below my resting-place,"

and much more which reads like a communication from the spirit of Nat Lee, rendered through a Bedlamite medium. In one sense, perhaps, it is suitable to a commemoration of the Declaration of Independence, as it is a practical assertion of emancipation from the ordinary laws of sense and sound, melody and prosody. Seriously, but that the music is already composed for it, we should hope it was not too late to save American letters from the humiliation of presenting to the assembled world such a farrago as this as their choicest product.

—We have no desire to "roll back the ball of discussion" in the direction of Mr. Clarence Cook, but we cannot see why he should object to our description of his treatment of expense in his household-furniture articles in *Scribner's* as "tortuous." On page 809 in the current number, Mr. Cook declares that "he stands by all he has said about economy and simplicity, and the possibility of making our houses attractive without at the same time making ourselves uncomfortable by spending more money than we can afford in furnishing and decorating"; while on page 810 he says:

"Take the table and chair figured in the article for January (No. 5), which one person singles out as being doubtless more expensive than they look. Why were these objects chosen as illustrations? Was it because they were costly? Most certainly not. The writer never asked what they cost, and does not know."

But as an æsthetic moralist (we say moralist, because Mr. Cook's use of epithets shows him to belong to a school which is careful to permit few distinctions between the moral law and the laws of taste), he must know that to advise people that economy and the possession of worthy furniture are compatible, and to assure them at the same time that he has never asked and does not know what this kind of furniture costs, is behavior which the friendly critic will call "tortuous" and the hostile caviller might term a barefaced contradiction. Mr. Cook urges as a further defence that the consideration of cost in the case of the pretty tables, stools, candlesticks, and beds he would have us possessed of, "does not affect us, because their costliness is in their material, in the wood the table is made of, in the stuff the chair is covered with. And it was not their material, but their forms, that was the subject of praise. If a person should take a fancy to either chair or table, and if he should find on enquiry that the cost, as the piece stands in the shop, was beyond his means, let him have the table made out of pine, and the chair covered with chintz; they will give a different pleasure from that they would have given in their original garment, but it will be a new pleasure as good as the old." This seems to us to betray rather a scholastic ingenuity than critical soundness. What pleases us in furniture and household decoration is not simply the form, but the material as well, and no one who can get a mahogany table for his dining-room will be persuaded that a pine table of the same form will do as well, nor by any process of reasoning can the owner of the pine table be prevented from coveting the mahogany table. The most noticeable of the other articles in *Scribner's* for April is perhaps a criticism of Jules Janin, by an anonymous writer, who has not suffered his judgment to be blinded by the success of his subject. Janin was one of those prolific Frenchmen who are read seriously by their own countrymen, but to Englishmen or Americans are simply ludicrous. He was an editor who could write twelve columns a week of dramatic criticism, and to such a man many literary peccadilloes—such as putting Bordeaux on the sea-coast, Marseilles at the mouth of the Rhone, making Smyrna an island, describing Charlemagne as a leader of the first Crusade, and referring to Shakspere, Schiller, Byron, and himself as contemporaries, and uttering a sigh over Shakspere's recent death—may be forgiven. In one of Thackeray's minor essays he quotes from Janin as from a jest-book for the benefit of the Anglo-Saxon world; and yet Janin died a member of the Academy, and has had his *éloge* pronounced by M. Lemoinne. It is impossible to avoid a suspicion that the atmosphere in which such a plant as Janin could flourish must have been the reverse of critical or healthy. In fact, Janin might be taken as the type of the noxious growths by which true literature in any country, if we were to give up the wholesome practice of mutual denigration, would soon be surrounded and swallowed up.

—General Custer's reminiscences are always pleasant reading, and we have found his article in the current number of the *Galaxy* no exception to the rule. He entered West Point in 1857, and therefore would have graduated in 1862 had the old course of five years been maintained. The breaking out of the war, however, and the demand for officers caused by it, induced the Government to fix the term at four years—as it had formerly been. In this way two classes were graduated in 1861, and General Custer had an early opportunity to give proof of his military quality. His career, however, came very near being nipped in the bud by an unfortunate occurrence (of which he gives an amusing account), and which consisted of his violating propriety and duty as officer of the guard by interfering in a fight between two cadets, not for the purpose of bringing it to an end, but to keep off intruders and partisans and enable the boys to have a fair fight. There is always something amusing in the solemnity of military discipline when applied to boys, and it is impossible to avoid a smile in reading of the immediate appearance on the ground of Lieutenants Hazen and Merrill (names which now have only serious associations), and the stern enquiry of the former addressed to Custer, "Why did you not suppress the riot which occurred here a few minutes ago?" or of the subsequent arrest and court-martial of the boy; the specification setting forth that "he, the said cadet Custer, did fail to suppress a riot or disturbance near the guard-tent, and did fail to separate, etc., but, on the contrary, did cry out in a loud tone of voice, 'Stand back, boys, let's have a fair fight,' or words to that effect." General Custer's "War Memoirs" ought to make an entertaining book.

—Mr. G. P. Lathrop has an article in the *Atlantic* on "Early American Novelists," in which he discusses the vexed question of the relation between the Novel and Society. Have we a society "in our midst"? and if so, what and where is it? If it exists, what materials does it offer to the novelist or satirist? As we understand Mr. Lathrop, there is no immediate hope of any satisfactory answer to these questions. He says that what we need is "some one of sprightly instinct and sound judgment, who shall measure the deflections of society from the ideal by his own educated, honest consciousness—not by any imported convention, however excellent in its place—and shall then hit off his observations with wit enough to make laughter drown discontent. The reason of this is that with us there exists no social code to which readers the country through defer; it will be very long before such a code can be established, and none will ever be generally recognized among us, it is to be hoped, not based on principles more generous than those governing Old-World societies." He adds that "American manners in the best and broadest sense . . . as yet only admit of a partial definition. . . . We find in them a prevailing tone of common-sense, compensating for a great deal of vulgarity, a humorous perception of propriety, a fine tact, and great faith in human nature." These, he declares, are "healthy traits," and to these must the appeal be made by any one who wishes to "exhibit our manners." There is a good deal of vagueness about all this, nor can we quite understand what Mr. Lathrop means when he says: "I await with great interest and curiosity, however, novels which shall do justice to the extraordinary and thrilling situation of forty million people who unite in pining for a society, and who, meanwhile, remain absolutely des-

titute of emotions and in some unaccountable way deprived of their human nature." Forty million people in such a case would certainly present an extraordinary spectacle, and even a lonely savage pining for a society, who at the same time should remain "absolutely destitute of emotions" and "deprived of his human nature," would be quite enough for ordinary purposes, though what the novelist whom Mr. Lathrop awaits would do with him it is difficult to guess. These minor doubts apart, there is one peculiarity of American society which, for the past generation, has done much to spoil it as material for literature of the kind Mr. Lathrop has in view, and to which little attention has been paid. We refer to the almost complete divorce which has been effected in the great centres of American life between what is technically known as good society and political life. That portion of the literary class which "exhibits manners"—that is to say, novelists—have, from time immemorial, kept up more or less close connections with society, in the restricted sense of the term; with people who are rich, or well educated, or well born, and masters of sufficient leisure to devote a considerable part of their time to amusement. In most countries, and down to recent times in this country, these same classes have always had a strong hold upon the government of the country. The same people who have formed "good society" have in a great measure governed their fellow-creatures. It was from these classes that down to recent times the political ranks, even in local municipal bodies like the city government of New York, have been largely recruited. The effect of the connection between society and politics was of course to strengthen and invigorate society, and to make it interesting. It gave common subjects of conversation and ambition—gave distinctness and form to character, and, in fact, made a real social *milieu*. This is all now greatly changed. By a gradual process, politics has been made a business extremely distasteful to men of education and to gentlemen who have a regard for their reputation. "Society" has contracted first a distaste and then an aversion to politics as an unclean thing. The result is that a separation has been effected, and politics and society maintain separate establishments. You may go into society for a whole winter in New York and not hear politics mentioned from the beginning to the end, or meet any one connected with "the governing class." Society to be interesting needs politics, and the divorce improves neither. Society becomes frivolous and empty, while politics, freed from social restraints, becomes what we see it in Tweed or Shepherd and the "boys." The exhibitor of manners is therefore nowadays in rather a quandary. If he exhibits the manners of politicians, he finds himself describing a sort of thieves' paradise; while, if he sticks to "good society," as his instincts would prompt him, he finds himself in an atmosphere slightly too inane for literature. There is, we believe, no instance of any well-known American writer of fiction who has gone with success to "society" for his materials, and this, too, in an age when in England it has been to "exhibitors of manners," such as Trollope, Thackeray, Bulwer, and Disraeli, a mine of wealth.

—The death of Mr. A. T. Stewart has probably excited more interest than that of any other rich American in recent times except Mr. Astor, and perhaps he ought not to be excepted. Although Mr. Stewart's life was essentially devoid of romance, there always surrounded it an air of mystery. It was not enough to know that Mr. Stewart came from Ireland, had a good education, built up his enormous business by steady application and industry, and had been, partly on account of his wealth, and partly on account of his services to the Republican party, nominated as Secretary of the Treasury by President Grant. The public curiosity could not be appeased without more knowledge than this. Was it true that Mr. Stewart retained through his career his interest in classical studies, and solaced his leisure moments with Homer and Virgil? Would he have succeeded as he did had he been a man of no education? What sort of a Secretary would he have made if he had been confirmed by the Senate? Did he use his money as a "truly good man" would have done? And last, but not least, what did he mean to do with it? These were questions which the difficulty of obtaining any answer made peculiarly interesting. We do not profess to be able to answer them. There is, however, one point of very lasting and general interest on which such careers as this throw some light, and that is the futility of all attempts to bring about equality in wealth in modern commercial communities. Measured in money, the accumulations of Mr. Stewart went as far beyond what any ordinary merchant can hope for as the acquisitions of the most unscrupulous predatory baron in feudal times could have gone beyond the gains of his rivals; and yet one had only the advantages given by a good training and perseverance, while the other had highway robbery, murder, arson, fire, and sword on his side. Yet starting with no more than an "equal chance," Mr. Stewart finished by controlling the market, and was what the Grangers would call a monopolist. But, on the other hand, though careers like his dissipate the illusions of those who dream of an equality of wealth, they also vindicate the convictions of those who have believed that the true function of the state is not to repress enterprise and ambition by preventing the accumulation of wealth, but to regulate its use and provide against the abuse of the power which comes by it. The vast wealth and business which Mr. Stewart created, so far from injuring the public, were a direct advantage to every one in the community in which he lived. He did not grind the faces of the poor, not because they were his "equals," but because, even if he had wanted to do so, he could not; the triumph of justice and law over force and fraud has in modern times and law-governed countries made wealth a benefaction, not a curse.

—The fifth volume of Lanfrey's 'Histoire de Napoléon I.' (New York: F. W. Christern) includes the period from the battle of Wagram to the march into Russia. The characteristic of M. Lanfrey's style is a readableness that results from clearness of perspective. No details are inserted which lack bearing upon the main issues. In the earlier volumes Napoleon's duplicity was exposed, and his rise in power unravelled, in such a way that one is convinced that he differed from Mr. Benjamin F. Butler not in methods but in scale. In the present volume, his power having passed its height, the growth of his infatuation is clearly proved, especially in his attempt to obtain possession of Spain. The details of Wellington's campaigns are explained as clearly as if M. Lanfrey had been a general, without the monotonous style of most experts. Of our author's lack of acquaintance with other writers upon the same topics we have spoken before, as constituting his chief defect as a historian. An American, in reading this first volume, is made to regret Jefferson's infatuation for the Emperor when he learns that in 1810 Napoleon's minister, Fouché, proposed, in a negotiation with England, that the latter country should unite with France in a joint war against us. If Madison had been aware of this, would he have made war on the side of our chief enemy?

FORSTER'S LIFE OF SWIFT.*

I.

THE cathedral of St. Patrick's, dreary enough in itself, seems to grow damper and chillier as one's footsteps disturb the silence between the grave of its famous Dean and that of Stella, in death as in life near yet divided from him, as if to make their memories more inseparable and prolong the insoluble problem of their relation to each other. Nor was there wanting, when we made our pilgrimage thither, a touch of grim humor in the thought that our tipsy guide (Clerk of the Works he had dubbed himself for the nonce), as he monotonously recited his contradictory anecdotes of the "sullybrutted Dane," varied by times with an irrelative hiccough of his own, was no inapt type of the ordinary biographers of Swift. The skill with which long practice had enabled our cicerone to turn these involuntary hitches of his discourse into rhetorical flourishes, and well-nigh to make them seem a new kind of conjunction, would have been invaluable to the Dean's old servant Patrick, but in that sad presence his grotesqueness was as shocking as the clown in one of Shakspere's tragedies to Châteaubriand. A shilling sent him back to the neighboring pot-house whence a half-dozen ragged volunteers had summoned him, and we were left to our musings. One dominating thought shouldered aside all others—namely, how strange a stroke of irony it was, how more subtle even than any of the master's own, that our most poignant association with the least sentimental of men should be one of sentiment, and that a romance second only to that of Abélard and Héloïse should invest the memory of him who had done more than all others together to strip life and human nature of their last instinctive decency of illusion. His life, or such accounts as we had of it, had been full of antitheses as startling as if some malign enchanter had embodied one of Macaulay's characters as a conundrum to bewilder the historian himself. A generous miser; a sceptical believer; a devout scoffer; a tender-hearted misanthrope; a churchman faithful to his order yet loathing to wear its uniform; an Irishman hating the Irish, as Heine did the Jews, because he was one of them, yet defending them with the scornful fierceness of one who hated their oppressors more; a man honest and of statesmanlike mind, who lent himself to the basest services of party politics for purely selfish ends; a poet whose predominant faculty was that of disidealizing; a master of vernacular style, in whose works an Irish editor finds hundreds of faults of English to correct; strangest of all, a middle-aged clergyman of brutal coarseness, who could inspire two young,

* 'The Life of Jonathan Swift. By John Forster.' Vol. I. London: Murray; New York: Harper & Bros.

beautiful, and clever women, the one with a fruitless passion that broke her heart, the other with a love that survived hope and faith to suck away the very sources of that life whereof it was the only pride and consolation. No wonder that a new life of so problematic a personage as this should be awaited with eagerness, the more that it was to be illustrated with much hitherto unpublished material and was to be written by the practised hand of Mr. Forster. Inconsistency of conduct, of professed opinion, whether of things or men, we can understand; but an inconsistent character is something without example, and which nature abhors as she does false logic. Opportunity may develop, hindrance may dwarf, the prevailing set of temptation may give a bent to character, but the germ planted at birth can never be wholly disnatured by circumstance any more than soil or exposure can change an oak into a pine. Character is continuous, it is cumulative, whether for good or ill; the general tenor of the life is a logical sequence from it, and a man can always explain himself to himself, if not to others, as a coherent whole, because he always knows, or thinks he knows, the value of x in the personal equation. Were it otherwise, that sense of conscious identity which alone makes life a serious thing and immortality a rational hope, would be impossible. It is with the means of finding out this unknown quantity—in other words, of penetrating to the man's motives or his understanding of them—that the biographer undertakes to supply us, and unless he succeed in this, his rummaging of old papers but raises a new cloud of dust to darken our insight.

If Mr. Forster's mind had not the penetrative, illuminating quality of genius, he was not without some very definite qualifications for his task. The sturdy temper of his intellect fits him for a subject which is beset with pitfalls for the sentimentalizer. A finer sense might recoil before investigations whose importance is not at first so clear as their promise of unsavoriness. So far as Mr. Forster has gone, we think he has succeeded in the highest duty of a biographer: that of making his subject interesting and humanly sympathetic to the reader—a feat surely of some difficulty with a professed cynic like Swift. He lets him in the main tell his own story—a method not always trustworthy, to be sure, but safer in the case of one who, whatever else he may have been, was almost brutally sincere when he could be so with safety or advantage. Still, it should always be borne in mind that he *could* lie with an air of honest candor fit to deceive the very elect. The author of the 'Battle of the Books' (written in 1697) tells us in the preface to the Third Part of Temple's 'Miscellanea' (1701) that he "cannot well inform the reader upon what occasion" the essay upon Ancient and Modern Learning "was writ, having been at that time in another kingdom"; and the professed confidant of a ministry, whom the Stuart Papers have proved to have been in correspondence with the Pretender, puts on an air of innocence (in his 'Enquiry into the Behavior of the Queen's last Ministry') and undertakes to convince us that nothing could be more absurd than to accuse them of Jacobitism. It may be, as Orrery asserted, that Swift was "employed, not trusted," but this is hardly to be reconciled with Lewis's warning him on the Queen's death to burn his papers, or his own jest to Harley about the one being beheaded and the other hanged. The fact is that, while in certain contingencies Swift was as unscrupulous a liar as Voltaire, he was naturally open and truthful, and showed himself to be so whenever his passions or his interest would let him. That Mr. Forster should make a hero of the man whose life he has undertaken to write is both natural and proper; for without sympathy there can be no right understanding, and a hearty admiration is alone capable of that generosity in the interpretation of conduct to which all men have a right, and which he needs most who most widely transcends the ordinary standards or most resolutely breaks with traditionary rules. That so virile a character as Swift should have been attractive to women is not wonderful, but we think Mr. Forster has gone far towards proving that he was capable of winning the deep and lasting affection of men also. Perhaps it may not always be safe to trust implicitly the fine phrases of his correspondents; for there can be no doubt that Swift inspired fear as well as love. Revengefulness is the great and hateful blot on his character; his brooding temper turned slights into injuries, gave substance to mere suspicion, and once in the morbid mood he was utterly reckless of the means of vengeance. His most playful scratch had poison in it. His eye was equally terrible for the weak point of friend and foe. But giving this all the value it may deserve, the weight of the evidence is in favor of his amiability. The testimony of a man so sweet-natured and fair-minded as Dr. Delany ought to be conclusive, and we do not wonder that Mr. Forster should lay great stress upon it. The depreciatory conclusions of Dr. Johnson are doubtless entitled to consideration; but his evidence is all from hearsay, and there were properties in Swift that aroused in him so hearty a moral repulsion as to disenable him for an unprejudiced opinion. Admirable as the rough-and-ready conclusions of his robust understanding often are, he was better fitted to reckon the quantity of a man's mind than the quality of it—the real test of its value; and there is something almost comically pathetic in the good faith with which he applies his beer-measure to juices that could fairly plead their privilege to be gauged by the wine standard. Mr. Forster's partiality qualifies him for a fairer judgment of Swift than any which Johnson was capable of forming, or, indeed, would have given himself the trouble to form.

But this partiality in a biographer, though to be allowed and even commended as a quickener of insight, should not be strong enough to warp his mind from its judicial level. While we think that Mr. Forster is mainly right in his estimate of Swift's character, and altogether so in insisting on trying him by documentary rather than hearsay evidence, it is equally true that he is sometimes betrayed into overestimates, and into positive statement, where favorable inference would have been wiser. Now and then his exaggeration is merely amusing, as where he tells us that Swift, "as early as in his first two years after quitting Dublin, was *accomplished in French*," the only authority for such a statement being a letter of recommendation from Temple saying that he "had *some French*." Such compulsory testimonials are not on their *voir dire* any more than epitaphs. So, in speaking of Betty Jones, with whom in 1689 Swift had a flirtation that alarmed his mother, Mr. Forster assumes that she "was an educated girl" on the sole ground, so far as appears, of "her mother and Swift's being cousins." Swift, to be sure, thirty years later, on receiving some letters from his old sweetheart, "suspects them to be counterfeit" because "she spells like a kitchen-maid," and this, perhaps, may be Mr. Forster's authority. But, as the letters *were* genuine, the inference should have been the other way. The "letters to Eliza," by the way, which Swift in 1699 directs Winder, his successor at Kilroot, to burn, were doubtless those addressed to Betty Jones. Mr. Forster does not notice this; but that Swift should have preserved them, or copies of them, is of some consequence, as tending to show that they were mere exercises in composition, thus confirming what he says in the remarkable letter to Kendall, written in 1692, when he was already off with the old love and on with a new.

These instances of the temptation which most easily besets Mr. Forster are trifles, but the same leaning betrays him sometimes into graver mistakes of overestimate. He calls Swift the best letter-writer in the language, though Gray, Walpole, Cowper, and Lamb be in some essential qualities his superiors. He praises his political writing so extravagantly that we should think he had not read the *Examiner*, were it not for the thoroughness of his work in other respects. All that Swift wrote in this kind was partisan, excellently fitted to its immediate purpose, as we might expect from his imperturbable good sense, but by its very nature ephemeral. There is none of that reach of historical imagination, none of that grasp of the clew of fatal continuity and progression, none of that eye for country which divines the future highways of events, that makes the occasional pamphlets of Burke, with all their sobs of passionate sentiment, permanent acquisitions of political thinking. Mr. Forster finds in Swift's *Examiners* all the characteristic qualities of his mind and style, though we believe that a dispassionate reader would rather conclude that the author, as we have little doubt was the fact, was trying all along to conceal his personality under a disguise of decorous commonplace. In the same uncritical way Mr. Forster tells us that "the ancients could show no such humor and satire as the 'Tale of a Tub' and the 'Battle of the Books.'" In spite of this, we shall continue to think Aristophanes and even Lucian clever writers, considering the rudeness of the times in which they lived. The 'Tale of a Tub' has several passages of rough-and-tumble satire as good as any of their kind, and some hints of deeper suggestion, but the fable is clumsy and the execution unequal and disjointed. In conception the 'Battle' is cleverer, and it contains perhaps the most perfect apologue in the language, but the best strokes of satire in it are personal (that of Dryden's helmet, for instance), and we enjoy them with an uneasy feeling that we are accessaries in something like foul play. Indeed, it may be said of Swift's humor generally that it leaves us uncomfortable, and that it too often impregnates the memory with a savor of mortal corruption proof against all disinfectants. Pure humor cannot flow from so turbid a source as *saeva indignatio*, and if man be so filthy and disgusting a creature as Swift represents him to be, if he be truly "by nature, reason, learning, blind," satire is thrown away upon him for reform and cruel as castigation.

Mr. Forster not only rejects the story of Stella's marriage with Swift as lacking substantial evidence, but thinks that the limits of their intercourse were early fixed and never overpassed. According to him, their relation was to be, from the first, one "of affection, not desire." We, on the other hand, believe that she was the only woman Swift ever loved constantly, that he wished and meant to marry her, that he probably did marry her,

but only when all hope of the old open-hearted confidence was gone for ever, chiefly through his own fault, if partly through her jealous misconception of his relation to Vanessa, and that it was the sense of his own weakness, which admitted of no explanation tolerable to an injured woman, and entailed upon a brief folly all the consequences of guilt, that more than all else darkened his lonely decline with unavailing regrets and embittered it with remorseful self-contempt. Nothing could be more galling to a proud man than the feeling that he had been betrayed by his vanity. It is commonly assumed that pride is incompatible with its weaker congener. But pride, after all, is nothing more than a stiffened and congealed vanity, and melts back to its original ductility when exposed to the milder temperature of female partiality. Swift could not deny himself the flattery of Vanessa's passion, and not to forbid was to encourage. He could not bring himself to administer in time the only effectual remedy, by telling her that he was pledged to another woman. When at last he did tell her it was too late ; and he learned, like so many before and since, that the most dangerous of all fires to play with is that of love. This was the extent of his crime, and it would have been none if there had been no such previous impediment. This alone gives any meaning to what he says when Vanessa declared her love :

> "Cadenus felt within him rise
> *Shame*, disappointment, *guilt*, surprise."

Shame there might have been, but surely no guilt on any theory except that of an implicit engagement with Stella. That there was something of the kind, more or less definite, and that it was of some ten years' standing when the affair with Vanessa came to a crisis, we have no doubt. When Tisdall offered her marriage in 1704, and Swift wrote to him "that if my fortunes and humor served me to think of that state, I should certainly, among all persons on earth, make your choice," she accepted the implied terms and rejected her suitor, though otherwise not unacceptable to her. She would wait. It is true that Swift had not absolutely committed himself, but she had committed him by dismissing Tisdall. Without assuming some such tacit understanding, his letters to her are unintelligible. He repeatedly alludes to his absence from her as only tolerable because it was for her sake no less than his own, and the details of his petty economies would be merely vulgar except to her for whom their motive gave them a sweetness of humorous pathos. The evidence of the marriage seems to be as conclusive as that of a secret can well be. Dr. Delany, who ought to have been able to judge of its probability, and who had no conceivable motive of misstatement, was assured of it by one whose authority was Stella herself. Mr. Monck-Berkeley had it from the widow of Bishop Berkeley, and she from her husband, who had it from Dr. Ashe, by whom they were married. These are at least unimpeachable witnesses. The date of the marriage is more doubtful, but Sheridan is probably not far wrong when he puts it in 1716. It was simply a reparation, and no union was implied in it. Delany intimates that Vanessa, like the young Chevalier, vulgarized her romance in drink. More than this, however, was needful to palliate even in Swift the brutal allusion to her importunacy in 'Gulliver,' unless, as is but too possible, the passage in question be an outbreak of ferocious spleen against her victorious rival. Its coarseness need not make this seem impossible, for that was by no means a queasy age, and Swift continued on intimate terms with Lady Betty Germaine after the publication of the nasty verses on her father. The communication of the secret to Bishop Berkeley (who was one of Vanessa's executors) may have been the condition of the suppressing Swift's correspondence with her, and would have exasperated him to ferocity.

MEMOIRS OF BURGOYNE.*

MR. DE FONBLANQUE begins his life of Burgoyne by deprecating the prejudice under which his hero has fallen. "Burgoyne," he says, "the hero of Valencia d'Alcantara ; Burgoyne, the trusted friend and colleague of Fox and Burke ; Burgoyne, the popular poet and dramatist ; Burgoyne, the honest and eloquent champion of oppressed India, is forgotten ; but where is the Englishman or American who does not remember Burgoyne of Saratoga ?" This effective appeal is followed up with the story of Burgoyne's career, in excellent style and temper, and well justifying on the whole the measured eulogy with which the volume opens.

The two Englishmen whose failures crowned most conspicuously the American triumph in the Revolution were Burgoyne and Cornwallis. Cornwallis we know well in another field as an amiable gentleman, able soldier, and upright ruler. We now have Burgoyne likewise exhibited in a new and more favorable light—shown to us not merely as a defeated enemy, but as an efficient officer in other fields of action. Not that his memory is vindicated in every point. He appears in this volume as the author of General Gage's bombastic proclamation, and as devising a scheme to seduce Charles Lee from his allegiance to the American Government. He had no small share of vanity, and is very likely to have displayed an insolence of demeanor towards his antagonists which must have added to the satisfaction with which they got him in their power. As his biographer acknowledges, one cause of his defeat was the serious fault he committed of underrating his enemies. With all this, he showed himself on the whole both able and honorable. He commanded with success in Portugal ; he served with reputation in the House of Commons ; he examined the military systems of foreign nations and reported upon them to his Government with sagacity and insight ; he drew up a plan for the government of India nearly coinciding with that actually adopted afterwards ; he was one of the managers of the impeachment of Warren Hastings ; he was in the latter years of his life a friend and correspondent of prominent statesmen, and seems to have been regarded by them with marked respect.

The interest of the work of course centres in the campaign of 1777, the events of which occupy about a fourth part of the volume. The author discusses (p. 340) Sir Edward Creasy's estimate of the battle of Saratoga as one of the fifteen decisive battles of the world, and is inclined to question its correctness on the ground that it was not even followed by a temporary cessation of hostilities, and was a humiliation on the one side and a triumph on the other, rather than a victory and a defeat. But the question is not merely what did the battle accomplish, but what did it prevent ? Gettysburg is, by common consent, regarded as the turning-point of the war of the Rebellion ; but it was not *decisive* in the sense that Waterloo was—it was rather a drawn battle. If we had been defeated there, it would have been decisive indeed ; and in like manner, if Gates had been driven back and Burgoyne had made his junction with Clinton, the American cause might have been reckoned as lost. The victory of Saratoga did not secure American independence, but it enabled it to be secured.

The principal cause of Burgoyne's failure lies of course upon the surface. His expedition depended directly for success upon the co-operation of Gen. Howe ; and Gen. Howe took just this time for an expedition to Philadelphia, leaving Clinton, with inadequate forces, to support Burgoyne. Burgoyne, it seems, had precise and explicit instructions leaving him no discretion ; his advance from Fort Edward was against his own judgment in pursuance of these rigid instructions. But while he was thus fettered, the co-operating commander had no instructions at all, hardly information, as to Burgoyne's march. This criminal negligence on the part of the British Government is explained by a memorandum of Lord Shelburne, quoted from the recently-published life of that statesman. Lord George Germain, it seems, being about to make a visit in the country, found the despatch to Burgoyne ready to sign, and signed it ; but that to Howe was not "fair copied," so must await his return to town. And there it waited, "pigeonholed in London, where it was found, after the Convention of Saratoga, carefully docketed, and only wanting the signature of the minister" (p. 233). It would be too much to assert, and Mr. de Fonblanque does not pretend, that but for these cross-purposes the expedition would certainly have succeeded. Burgoyne was greatly astonished at the rapidity, the numbers, and the good condition of the troops that rallied about Gates. "I have understated his numbers," he writes afterwards, "in calling them 16,000 ; and sorry am I to add that a better armed, a better bodied, a more alert, or better prepared army in all essential points of military institution I am afraid is not to be found on our side the question" (p. 315). Mr. de Fonblanque himself states the case cogently when, after speaking in general of the risk attending movements "upon double lines of operations," he goes on : "The bases of the two armies, upon the united and simultaneous action of which the whole scheme depended, were separated by several hundred miles of country, rendered peculiarly unfavorable to the progress of regular troops by natural impediments (such as dense forests, numberless creeks and ravines, and an almost entire absence of roads and of local supplies), and defended by a hostile population of high-spirited men, accustomed to the use of arms and to desultory warfare" (p. 334). After the surrender at Saratoga, but before it was known in England, Lord Chatham still said : "The conquest of English America is an impossibility."

The conduct of Congress in refusing to carry out the terms of the Convention and allow the troops to ship for England is frequently censured in strong language ; and it was certainly indefensible. Nevertheless, even on the facts as here presented, it hardly deserves so unqualified censure as it receives. Congress is said to have "repudiated" its engagements on "petty and frivolous pretexts" (p. 319) ; but Mr. de Fonblanque does not

* "Political and Military Episodes in the latter half of the eighteenth century. Derived from the life and correspondence of the Right Hon. John Burgoyne, General, Statesman, Dramatist. By Edward Barrington de Fonblanque, author of 'The Administration of the British Army,' etc.' With portrait, illustrations, and maps. London and New York : Macmillan & Co. 1876. 8vo, pp. 500.

mention at this point the fact, frequently alluded to afterwards (pp. 359, 360, 372, etc.), that the demand of the American Government was that the Convention should be formally ratified by Great Britain before the embarkation should be permitted (see Bancroft, Vol. IX., p. 466). Surely it is uncalled for to hint that this, too, was only a pretext on the part of Congress, and that if this ratification had been made some other pretext would have been found; indeed, Burgoyne, in Parliament, "reproached *both* governments for having taken no steps to carry out the terms of the Convention" (p. 372).

Among the lesser points that deserve attention may be mentioned Burgoyne's estimate of John Adams, frequently expressed while he was stationed at Boston. The leaders, he says (p. 194), "though often the most profligate hypocrites, have among them very able men. I believe Adams to be as great a conspirator as ever subverted a state." On the next page: "I am persuaded your lordship will, with me, lose sight of Catiline or Cromwell in passing judgment upon his character." Again, p. 200: "Adams, who has certainly taken Cromwell for his model, and who perhaps guides secret counsels with more address, soars too high in personal ambition to incline to accommodation. Depend upon it, Franklin, and, greater than Franklin, the instruments and movers of American faction here and in England, are equally this man's dupes."

There are some well-drawn plans of battle-fields, but none of the campaign, which is a real defect. Moreover, while the style of the book is in general correct and graphic, the accounts of engagements are blind and confused; we have found it impossible to follow them out, even with the aid of the plans. For instance, on page 284, *east* evidently stands twice for *west*.

Der junge Goethe, seine Briefe und Dichtungen, 1764–1776. Mit einer Einleitung von Michael Bernays. (3 vols. Leipzig: Hirzel. 1875.)—The present work of Professor Bernays is the most important contribution made of late years to the study of Goethe. We greet it as an additional token of that noiseless but powerful reaction among thinkers which is restoring Goethe to his rightful position in the hearts of his people. In judging Professor Bernays's labors we know not which to admire more, the genial discrimination with which he has characterized Goethe in the Introduction, or the minute pains that he has taken in grouping and editing the texts. The literary-critic and the text-critic are happily united in one person. In the Introduction (nearly one hundred pages), the editor indicates the great stages in the poet's activity. We use purposely the word "activity" in distinction from "development," for the editor shows conclusively that Goethe did not undergo the usual process of development. Of him, if of any one, we can say that he sprang full-armed from the brain of Jove. His earlier works, 'Werther' and 'Götz,' are as complete, as finished artistically, as the 'Divan' or the Second Part of 'Faust.' Goethe had not to struggle long and bitterly with himself for the mastery of style.

But this early maturity begot trials of its own. Unlike Shakspere, Racine, Molière, and Schiller, it was impossible for Goethe to pursue one line of production. He had to change, not his style, but the subject-matter and the form in which he might embody the fruits of his later studies and observations. The artist of 'Werther' and of 'Hermann und Dorothea,' of 'Götz' and 'Tasso' and 'Wilhelm Meister,' is essentially the same, but the tone in which he composes, the world of thought in which he places us, the mood which he evokes in us, are radically different. Hence it was that to his contemporaries Goethe became so unintelligible. Those who had learned to understand and appreciate his pre-Weimarean works were disappointed with the 'Iphigenie'; those who had trained themselves to enter into the spirit of the 'Italienische Reise' and its offshoots were bewildered by the 'Wahlverwandtschaften.' Goethe, having achieved the highest in one field, was forced by the necessary law of his own being to pass to another field whither they could not follow him. We can scarcely blame them, since we ourselves, who view the poet in the perspective of a century, find it so hard to grasp his image in its entirety. As Bernays has justly observed, there is no character in literature who presents such difficulties. His great creations shoot up like isolated and inaccessible peaks, and it is only after patient study of them all, and comparing them with the details of the poet's life, that we perceive them to be a chain resting upon a common substratum. Bernays calls our attention to another point of equal importance—namely, the Goethean conception of "fate." Even in Shakspere we find that tragic fate is often something outside of man's will, some external force or conjecture to which the individual succumbs; in Goethe, never. From beginning to end fate is the result of inner moral weakness; man falls because of the disorganization (*Zerrüttung*) of his own powers. Hence the utter depth of the deeps to which Goethe leads us—deeps which only a Shakspere has sounded, and he only in "Hamlet" and "Macbeth." We have touched upon two of the prominent features in Bernays's Introduction, but the reader will find many more. It is in truth an essay abounding in suggestion.

In the body of the work the editor has adopted a novel and, in our judgment, most excellent arrangement. He has divided Goethe's youth into four sections—first, Frankfort, Leipzig, and Frankfort, 1764–1770; second, Strassburg, 1770–1771; third, Frankfort and Wetzlar, 1771–1773; fourth, Frankfort and Weimar, 1774–1776. In each section we find, in order, letters, then poems, then longer pieces. The section constitutes thus a phase by itself. By reading the letters first, we get the atmosphere in which the poems are composed. We have not the space for speaking at length of the rich materials spread out for our enjoyment. We have for the first time the opportunity of reading in continuity *all* that the youthful Goethe produced, whether in fiction or in familiar letters, just when and as he produced it. The text of poems, works, and letters has been collated carefully with the earliest editions, in some instances with the original manuscript, and Goethe's spelling and punctuation have been restored throughout. Not a few of the letters appear here for the first time. Even the recently published (1875) correspondence with Johanna Fahlmer has been incorporated. The impression made upon us by Goethe's manysidedness, the intensity of his emotion, his preternatural power of expression, is almost overpowering. We begin to understand how Bürger could call him the "inexplicable magician," how Niebuhr, half a century later, could look back with reverent awe to the young author of Götz, who thrilled his people and heralded himself "the first without a second."

Three Northern Love Stories, and other Tales. Translated from the Icelandic by Eirikr Magnússon and William Morris. (London: Ellis & White. 1875.)—The present volume is the latest production in the field of Icelandic saga-literature which has appeared in Great Britain. The respective names of the three love stories which occupy the principal part of the book are: 'Saga of Gunnlaug the Worm-tongue,' of 'Fridthjof the Bold,' and of 'Viglund the Fair,' and the other tales found in the latter part of the volume are a tale of 'Hogni and Hedinn,' of 'Roi the Fool,' and of 'Thorstein Staff-smitten.' All these small sagas are of quite different kinds, the first and the last one (Gunnlaug's saga and the tale of Thorstein) belonging to the historical, the second and fourth (Fridthjof's saga and the tale of Hogni and Hedinn) to the semi-mythical, and the third and fifth (Viglund's saga and the tale of Roi) to the fabulous or fabricated sagas. Of all these the saga of 'Gunnlaug the Worm-tongue' is the most valuable, for besides containing interesting and instructive historical records from the end of the tenth and the beginning of the eleventh century, connected not only with Iceland, the fatherland of the two antagonists and heroes of the saga, Gunnlaug and Rafn, but also with Norway, Sweden, England, Ireland, and the Orkneys, the poetical element of the life and exploits of the persons sketched is throughout the saga brought forth in the most simple and natural, and therefore also the most effective, manner. Helga the Fair, a grand-daughter of the famous Egil Skallagrim's son, the central hero of Egil's saga, had an ardent lover, Gunnlaug of Gilsbakke, to whom she, with her parents' consent, was promised, on condition that he should travel abroad, behave well, and come back within three years. Gunnlaug set out on his journey and travelled far and wide, from one royal court to the other, everywhere gaining fee and fame for his skaldic compositions and chivalry. In Sweden, at the court of King Olaf Eirik's son, he met with another Icelandic skald, Rafn Onund's son, from the same part of Iceland as himself. A contention soon arose between them, which, nourished by proud ambition on both sides, grew into mutual hatred. Rafn left Sweden and reached Iceland, where he asked for Helga the Fair for his wife, and got the answer that if her former wooer did not return at the fixed time, she should be married to him. Gunnlaug was hindered from coming back to Iceland and from calling on his bride at the appointed time. He came too late, and found his beloved one wedded without her consent to his deadly enemy. Nevertheless, he succeeded in seeing his faithful Helga and in having a talk with her, and made her a present of a costly cloak which he had received as a gift from King Ethelred of England. At the next Althing, Gunnlaug challenged Rafn to fight with him in a *holmgang* or duel, on the spot, and thus have their love affairs settled; but neither of them winning, and a law being enacted in the Althing immediately after and because of their encounter, forbidding all duels thenceforth throughout the country, they both went to Norway, where they fought bloodily and slew each other. The fatal result was reported in Iceland and filled every heart interested in the fate of the late combatant

with awe and sorrow. Helga was married to a new wooer who treated her kindly, but her heart was broken and her love buried with Gunnlaug. She expired with his dear gift, the cloak, in her hands. As an historical romance Gunnlaug's saga has a perfect parallel in the beautiful "Laxdœla-saga," which, indeed, is a larger work, but as yet not translated into English.

Fridthjof's saga is noted as one of the most prominent semi-mythical sagas. For the most part it antedates the dawn of Christianity among the common Northern people, although it was put in writing much later, and thus modelled into a characteristic form by some unknown person. It has been preserved in two somewhat different Icelandic originals, both printed in the second volume of the so-called 'Fornaldar-sögur' (Copenhagen, 1829–30, 3 vols.) The present English version is a translation of the first and more complete one. The small songs with which this saga is interspersed are very old, and though some of them lack a perfect metrical form, they may be considered as the oldest elements of the saga. What a great poetical subject is contained in this northern love tale, which is localized in Sogn in Norway, and probably based on facts which occurred here in the so-called prehistoric times, has been shown by the great Swedish poet Tegnér.

Viglund's saga, the last of the longer tales contained in the present saga collection, though a mere fiction and without any historical value, is composed with taste, and is so successful an imitation of the genuine historical sagas that it might mislead even a reader pretty well acquainted with the sagas in their original. Some of the songs put into the mouth of Ketilrid and her lover Viglund belong to the best of their kind, and have no small poetical value.

The tale of Hogni and Hedinn is found in the first volume of 'Fornaldar-sögur,' and is a curious popular composition, based on a short mythical anecdote in Snorre's Edda. It dates from a rather recent time, and is neither very interesting nor of a genuine northern character. Of still less importance is the tale of 'Roi the Fool.' The tale of 'Thorstein Staff-smitten' is an important historical supplement to the 'Vápnfirðinga-saga," in connection with which it would be read with interest, but as a separate work we fear it will be thought less valuable than it really is. None of the comparatively few sagas treating of the historical events which occurred in the eastern part of Iceland during and immediately after its colonization (*landnám*) have yet appeared in English. All the sagas are very short, and constitute an inseparable cycle which might easily be published in one volume.

Shakespeare's Plutarch. By the Rev. Walter W. Skeat, M.A., formerly Fellow of Christ's College, Cambridge. (London: Macmillan & Co. 1875.)—We have here a very modest and unpretending book, but one of solid merit, the main object of which is "to place in the reader's hands so much of the text of North's 'Plutarch' as is necessary for a due appreciation of the use made of that work by Shakespeare." The name of Mr. Skeat is well known to Shakspere scholars, for he has done more than one piece of good service in their behalf; and his work in this instance is planned and performed in such a manner as to be highly convenient and helpful, not only to students of Shakspere but of the Elizabethan literature in general. The lives of Coriolanus, Julius Cæsar, Brutus, Antony, and Augustus furnished all or nearly all the historical matter used by Shakspere in the three Roman tragedies, and the volume reproduces all these entire; it also gives such portions of the lives of Theseus and Alcibiades as contributed any traceable aid towards 'A Midsummer-Night's Dream,' 'Timon of Athens,' and 'The Two Noble Kinsmen.' It may be hardly needful to observe that North's 'Plutarch' was a translation, not from the original Greek, but from an admirable French version made by James Amiot, Bishop of Auxerre, himself a contemporary of Sir Thomas. Amiot's version is on all hands acknowledged to be generally correct and adequate, and also exceedingly spirited. In North's translation, again, we have a choice storehouse of racy and delectable old English, replete with the best characteristics of the language when it was in its most flexible and idiomatic state. Competent scholars tell us it is also, with a few exceptions, faithful to the sense and meaning of the original. In the volume before us we have the English translator's text set forth with scrupulous fidelity, and with ample though nothing of superfluous or irrelevant learning. The editor accompanies the text throughout with a full marginal glossary of archaic and obsolete words and phrases. Next, we have a small body of notes, in the preparation of which Mr. Skeat evinces a highly commendable parsimony of learning, such as ought to be met with more frequently in publications of the kind. This is followed by an exhaustive index of proper names, with references to the pages where the names occur; and this, again, by a carefully prepared glossarial index, with a full accompaniment of similar references: all which renders the work complete in every respect, and thoroughly furnished at all points for the use to which it is addressed.

*** Publishers will confer a favor by always marking the price of their books on the wrapper.*

Fine Arts.

THE MASSACHUSETTS SYSTEM OF INSTRUCTION IN DRAWING.

AN exhibition was held in Boston, week before last, of drawings made in the Massachusetts schools under the guidance of the State Instruction in Drawing. It was of the same general character as previous similar exhibitions, but the larger number of drawings gave opportunity for a fuller display of a variety of work and for a more systematic presentation of it. The exhibition was indeed not wanting in variety: its range extended from measured drawings of simple squares by children of seven years old to oil paintings of ideal heads by persons who were not always outspoken enough to announce themselves (as was the case with one lady) as "Age thirty," or more; while it included in its circuit studies in mechanics, in architecture and ship-building, in landscape and still-life, in ornamental designs for frescoed ceilings, wall-papers, curtains, and tiles, by stone-cutters, carpenters, painters, and other mechanics, and women potentially of every trade. One of the visitors was overheard speaking with enthusiasm of a small exhibition of the same nature at one of the neighboring towns. "As the painter said," she remarked, "that exhibit was *so* harmonious." Perhaps this "exhibit," too, was harmonious, but it was a harmony of spirit rather than of effect. The forces that composed it were marshalled from all quarters. They came from the common-schools, high-schools, and normal schools, from day-schools and evening-schools, from cities and villages and almshouses. The exhibition was so large that one recalled with a certain dismay on entering the two large halls occupied by it that the "careful and critical" scrutiny of the people of the city and State had been asked for it in advance of its opening. The crowds of intelligent men and women who passed through the exhibition-rooms showed in a broad sense a cordial acceptance of this invitation, but whether the scrutiny of the majority of the visitors has been "careful and critical" may be doubted; whether it is possible that it should be so may be equally questioned. The best service the Art Education of the State could render would be to make the next generation capable, as the present one is not, of "careful and critical scrutiny" of art and artistic work.

Still, among the mass of those who were warmly interested, through personal, social, and emotional sympathies, in the work exhibited, there was of necessity a sprinkling of persons warmly interested in the results of the exhibition but coldly critical of the exhibited work. If they lay claim to having been "*carefully* critical" also, they are, in a measure, bound to make known the results of their scrutiny.

The effect of the exhibition, in the first cursory glance (more especially

of that portion of it which was contained in the lower room), was certainly strangely at variance with the declarations of the gentlemen chiefly concerned in the art-education of the State, that "its aim is to teach the elements of practical art, or art as applied to industry." The figures of soldiers, peasants, bandits, and nuns which immediately caught the eye, the countless crayon copies of fancy heads and of portraits, the heads in oil from "approved copies," the studies of the antique from casts, of the nude from flat copy, and even the large frame filled with caricatures, gave the walls a distinctly *academic* air, and suggested the would-be training of artists rather than of artisans. It is not necessary to question here whether these two kinds of training are but parts of one great scheme of complete art-education, or whether this character was intentionally given to a part of the exhibition in reference to the criticism said to have been "frequently made," that the instruction in the Normal Art School "is too mechanical and technical in its character, and that not enough attention is paid to the higher or æsthetic features of art." But the criticism objected to finds its justification in the very class of work above described—work too mechanical and imitative in its character to possess any of the higher or æsthetic qualities of art, while it is valueless for "imparting a knowledge of principles and methods of manipulation for educational and practical purposes," which, to quote still from the official circular, is "the aim." For, indeed, most of the examples of this ambitious style of work exhibit in their lack of real skill in execution the fundamental defects of the method of instruction.

The next impression the visitor perhaps received was of the vast amount of labor, the great expenditure of time, represented on these walls. On a rough estimate there may have been from eight to ten thousand drawings in the rooms (Lowell alone sent 1,657), and this number indicates that many more than eight or ten thousand hours have been spent by men and women and boys and girls in producing these drawings. The question that now arises is whether these hours have been employed in work which is the necessary preparation for more advanced work, or whether much of it is not of a kind which distinctly shows devotion to the special piece of work in hand as an end, and not, primarily, as a means; as, for example, in the very labored execution of the designs for lace And this question regards the theory which has moulded the work. The "dictation exercises" (that is, apparently, drawings made from verbal direction), often of extreme elaboration, given to the school-children, and executed by them with exceeding precision; the exercises in "original design" of these same children, equally elaborate and precise, are, when thoughtfully considered, seen to be exercises in mental accuracy, in ingenuity, in patience, neatness, and dexterity, in the qualities, that is, which kindergarten toys are used to develop at an earlier age, rather than in those powers of observation and representation, the combined powers of the eye, the hand, and the brain, which are as necessary in mechanical drawing as in any other.

It must be repeated till it is believed that, in elementary instruction or drawing, *to copy* is quite otherwise than serviceable when the work copied is *in its general character* much in advance of what the pupil would himself be able to do without a copy, or when the work copied is in its nature unsuggestive. The thought which lies behind the manual labor of the original must be such as to impregnate the mind of the student, or his manual labor as copyist is fruitless. The first of these objections to copying applies to the more ambitious works of this exhibition, the second objection to the simpler ones. For the exercises just spoken of are in essence exercises of copying; the "dictation exercises" are copies from the mind of another; the "original designs" are, by the necessity of the case, copies to a great degree from memory; and in neither of these two classes of copies is there any possibility of quickened perceptions or stimulated thought for the pupil.

On these exhibition walls there was no representation of the direct study of Nature, unless one counts as such the drawing of a dead bird or the painting of an artificially-arranged bouquet, or the pen-and-ink drawings accompanied by lithographs of butterflies and insects; but it is certain that the study of living forms is as necessary to good ornamental design as to good imaginative design, since it is the only material for that true conventionalism which is impressed with the individuality of each designer, a result unattainable when the designer's intelligence has been moulded by the rigidity of already created conventional forms.

But not only was there no representation of the direct study of Nature, there was none of the direct study of real or common objects, if we except a very laborious "likeness," in black and white, of a solitaire, set on a tray, and perhaps one or two other similar drawings, and the more numerous drawings of solid geometrical figures. And yet no one could be found to deny that for persons who wish to use their powers of drawing for practical purposes, quite as much as with artists, the ability to put on paper adequate but not elaborate representations of the things surrounding them is of the first importance. That this ability is not fostered by the drawing of house-elevations by a bleacher, or the very painstaking rendering of the appearance of a church, made from an outline copy, by a mason, may be proved by unanswerable arguments. A vast majority of the better class of drawings, as regards execution, had this character of complete inutility of purpose: one of the most deplorable examples, perhaps, being a pen-and-ink drawing three inches square representing a black and white woollen check, of which the gray squares are worked with the most idle industry. It is a work which if executed as a preparation for engraver's work might have its merits; but even then the choice of subject would still be a great mistake, unless accidentally justified.

The questions which this exhibition suggests are not of temporary nor slight nor merely local consequence. The widespread interest in art-education demands serious consideration. The system at present pursued in Massachusetts is likely to extend over the whole country; but if it is fatally wanting in vital principles, if, by the inculcation of confidence in vain patience and empty knowledge, it increases the conceit of ignorance, it is of great importance that it should, on the contrary, be done away with as soon as possible. Although too large a number of persons are interested in the continuance of the present modes of instruction for any change to be soon made, it is most desirable that the need of change where it already exists, and of warning where it is likely to spread, should be contemplated and set forth. There cannot be too searching an examination of the subject, or too continued a discussion of the principles involved.

PUBLISHED APRIL 15.

I.

Taine's Ancient Regime.

Large 12mo, green cloth, $2 50.

"The principal literary event of the year. The work is altogether the most important one ever undertaken by its author."—*N. Y Evening Post.*

"Deserves to be closely and carefully studied, . . . Strikes us as far superior to his former productions."—*London Saturday Review.*

". . . The literary event of the day. . . . The whole book is to be read."—*Tribune Paris Correspondent.*

"Each page sparkles not only with original thought, but with brilliant and eloquent language Extracts cannot give the reader a proper idea of the grace and charm which pervade nearly every page of this wonderful book."—*N. Y. Evening Post Paris Correspondent.*

A NOVEL BY A NEW WRITER OF GREAT PROMISE.

(Second edition already published in England.)

Miss Molly.

By Beatrice May Butt. 16mo, Leisure-Hour Series, $1 25.

"A charming little tale, of a slight kind, but without a flaw in it. . . . Miss Butt has both the requisites for writing a good novelette: she can amuse you, and she can make you enter into the heart of a true and tender passion."—*London Spectator.*

"'Miss Molly' is as sprightly and pleasant as befits her name."—*London Athenæum.*

HENRY HOLT & CO., 25 Bond St., N.Y.

To Professional Men,
To Sedentary Persons,
To Invalids.

CUMULATIVE EXERCISE—that is, lifting gently, progressively, and systematically, on the REACTIONARY LIFTER—produces rest and rehabilitation in health. To professional and sedentary persons it affords endurance, and to the invalid the energy which medicine cannot provoke. Ten minutes lifting a day is enough.

Those who try it for three months generally buy the Lifter, and continue their practice at home.

A trial may be made at the Health-Lift Co.'s Rooms, 46 East Fourteenth Street, New York, where one may meet many distinguished men and women, and cannot well avoid forming a favorable opinion of Cumulative Exercise, both from experience and observation.

No. 65.

PHYSICAL SCIENCE MADE READABLE.

PROFESSOR AGASSIZ was once mounted in official majesty on a platform, amid a group of college dignitaries, while a celebrated mathematician, as learned as any that New England could produce, went through a demonstration of singular novelty and beauty. "How unfortunate it is," said Agassiz at the close, throwing up his hands with a Swiss gesture of despair, while the mathematical part of the audience was lost in admiration, "that this luminous demonstration is as dark as Egypt for me!" The incident shows how completely, at the present time, science has separated into specialties. In recognition of this state of things a British scientist, Professor Tait, lately of Cambridge and now of Edinburgh University, arranged, two years since, a course of lectures, at the desire of several scientific men among the number of his friends, who candidly confessed that they wanted instruction on the principal points gained in Natural Philosophy since they had left college. The lectures, given with the most delightful directness of speech, as of a talker confident in the general good sense of his hearers, have been reported by stenography, and given verbatim, with a few elisions, in a medium-sized book called 'Recent Advances in Physical Science.' The work is truly remarkable for the breadth of its scope, the presentment with conversational ease of abstruse problems, the ingenuity of its experiments, and the daring with which mighty speculations are handled.

The pretty, azure rings of the tobacco-smoker—represented in the class-room by annular puffs of sal-ammoniac—may be at the bottom of the most fruitful illustration of the motion of matter through space. Sir William Thomson argues that their property of rotation "may be the basis of all that appeals to our senses as matter." The mathematics of fluid rotatory motion—vortex movements without gravitation—are so difficult that only one investigator, Helmholtz, has done much towards their analysis. They will be the problem of the next two or three generations of calculators. Meanwhile, Professor Tait gives a graphic and startling sketch, the best we have seen, of the suggestions included in the vortex-theory.

Calculations of the earth's period of solidification Professor Tait argues to be quite within the scope of possibility from known physical laws and known mathematical processes. From the increase of internal heat found in mining, and other data, he announces the solid period of the earth's surface to have begun not more than fifteen millions of years ago—a few thousand years after which condensation, its crust must have been ready for the reception of life. The lecturer admits the discrepancy between this scientific estimate and the demands of Darwin and the geologists, who require for a comparatively recent portion of geological history three hundred millions of years. He replies: "So much the worse for geology as at present understood by its chief authorities."

The proofs that matter has a grained structure, or is made of particles, are given from the phenomena of the dispersion of light, from the diffusion of gases, from capillary experiments, and from those of contact electricity. The results are of disconcerting definiteness. The particles of zinc or copper—or rather, as the Professor likes better to express it, the coarse-grainedness of their structure—are something more than seven hundred millions to the inch. The particles of air in a cubic inch are expressed by the numeral 3 and twenty decimals (Professor Tait writes these large numbers in the latest improved manner, as 3×10^{20}—that is to say, 3 and twenty ciphers). A drop of water is to one of its particles about as the earth is to a plum.

Professor Tait is admirably clear on Spectrum Analysis, on Transformation of Energy, and Conduction of Heat. His lectures, in fine, express for the lay mind the results obtained by Seguin, Meyer, Coulding, Joule, Carnot, Fourier, Angström, Forbes, Kirchhoff, Loschmidt, and Sir William Thomson.

Books on Science, Natural History, and Travel

Recently Published by MACMILLAN & CO.

LECTURES ON SOME RECENT Advances in Physical Science. By P. G. Tait, M.A., Formerly Fellow of St. Peter's College, Cambridge, Professor of Natural Philosophy in the University of Edinburgh. Crown 8vo, $2 50.

THE UNSEEN UNIVERSE; or, Physical Speculations on a Future State. New edition. 12mo, cloth, $1. [*This day.*

PREHISTORIC MAN. Researches into the Origin of Civilization in the Old and the New World. By Daniel Wilson, LL.D., F.R.S.E., Professor of History and English Literature in University College, Toronto. With Two Colored Plates and One Hundred and Thirty-four Wood-cuts. 2 vols. medium 8vo, $12.

PREHISTORIC ANNALS OF Scotland. By the same author. 2 vols. 8vo, illustrated, $8.

MANDALAY TO MOMIEN. A Narrative of Two Expeditions to Western China of 1874 and 1875, under Colonels E. B. Sladen and Horace Browne. By John Anderson, M.D. Edin., F.R.S.E. With Numerous Illustrations and Maps. 8vo, $7 50.

"There is a very great deal to be learned, both with regard to the natural history of that part of the world, and with regard to the several interesting races of people which form its population. Dr. Anderson's work is a valuable contribution to such a knowledge, and the clear and straightforward manner in which he writes adds greatly to the intrinsic interest of the information with which his pages teem. The illustrations of the country and the people are charming, and the two maps enable the reader to follow satisfactorily the footsteps of the explorers."—*Nature.*

MY CIRCULAR NOTES. Extracts from Journals, Letters sent Home, Geological and other Notes written while travelling Westward Round the World, from July 6, 1874, to July 5, 1875. By J. F. Campbell, author of 'Frost and Fire.' With numerous Illustrations from Sketches by the author. 2 vols. crown 8vo, price $7 50.

GILBERT WHITE'S NATURAL History and Antiquities of Selborne. Edited, with Notes and a Memoir, by Frank Buckland; a chapter on Antiquities by Lord Selborne, and the Garden Kalendar; also a Poem and Letters never before published. With many Illustrations from Drawings by Professor Delamotte, taken at Selborne, and from many curious and interesting objects supplied by the Editor; also a Colored Plate and Map. Medium 8vo, price $12.

*** Also a *large-paper edition*, in two vols. medium 4to, containing, in addition to the above, Thirty Autotype Illustrations from Drawings by Delamotte. Half-morocco, price $40. [*This day.*

"It is unnecessary to say anything of the perennial charm of White's letters, but if anything could add to them it is Mr. Delamotte's admirable views of the scenery of Selborne."—*Saturday Review.*

"Independently of its own merits, and those which the printer and the binder have bestowed upon it, this edition is much in advance of its predecessors. This edition should serve to increase the popularity of a book that can never become flat, stale, or unprofitable."—*London Times.*

HISTORIA FILICUM. An Exposition of the Nature, Number, and Organography of Ferns, and Review of the Principles upon which Genera are Founded, and the Systems of Classification of the Principal Authors. With a new General Arrangement, etc. By J. Smith, A.L.S., ex-Curator of the Royal Botanic Garden, Kew. With 30 lithographic Plates by W. H. Fitch, F.L.S. Crown 8vo, $6 25.

A TEXT-BOOK OF BOTANY, Morphological and Physiological. By Dr. Julius Sachs, Professor of Botany in the University of Würzburg. Translated and Annotated by A. W. Bennett, Lecturer on Botany at St. Thomas's Hospital; assisted by W. T. Thistleton Dyer, M.A., Examiner in Botany, Science and Art Department of the Committee of Council on Education. With nearly 500 Wood-cuts. Royal 8vo, half-morocco, $12 50.

ANGOLA AND THE RIVER CONgo. By John Joachim Monteiro. With sixteen illustrations from Sketches made on the spot, and a Map. 1 vol. 12mo, cloth, $2 50.

"Angola, being remote from the field of British enterprise, is comparatively unknown to us. Therefore, Mr. Monteiro's work is the more welcome as supplying faithful descriptions of country and people. . . . It is a pleasure to find that in no instance has the author yielded to the temptation of describing sensational (and imaginary) adventures, but has given us plain and, at the same time, interesting descriptions of the places and tribes which he has visited during his varied experience, extending over fifteen years; whilst, from the dispassionate tone of his remarks, even when differing most widely from received ideas, we may believe that he is a trustworthy guide."—*Athenæum*

"This volume gives the first detailed account of a part of tropical Africa which is little known to Englishmen. A book which thoroughly exhausts the subject. He gives us the impression of being perfectly honest and conscientious, while his remarks on the geography and zoology of the country, and the manners and customs of the various races inhabiting it, are extremely curious and interesting."—*Saturday Review.*

"The reader must go to Mr. Monteiro's volume itself, every page of which, from first to last, overflows with interest and instruction. It affords a complete and accurate account of the resources of an infinitely wealthy but practically unexplored country, and abounds with the most striking and enjoyable descriptions of tropical life. It will be equally welcome to the merchant, the African traveller, and the idle reader by the fireside."—*Academy.*

"Henceforth there can be no doubt that Mr. Monteiro's work will be regarded as the authority on the country. He is evidently quite at home in geology, zoölogy, botany, and meteorology, and has a skilled eye for the points which a traveller's ought to note in the natives whom he visits. . . . Mr. Monteiro writes in a simple, straightforward style, indulges but little in speculation, conjecture, or moralizing, and every page is so full of interesting and important facts clearly told that the reader will feel constantly in a state of satisfied enjoyment."—*Nature.*

"A new book of exceptional excellence. . . . Its author, Mr. Monteiro, in the fifteen years which he passed in Angola engaged in mining and in exporting the fibre of the baobab tree, enjoyed rare opportunities for becoming thoroughly acquainted with its natural products and the beauties of its scenery, as well as for studying the character of the natives. That he most profitably availed himself of these advantages is abundantly proved in the interesting pages before us. Mr. Monteiro is a naturalist and a keen observer of animated nature, and this gives an added charm to the book."—*N. Y. Sun.*

"The book is as fascinating as a romance, and the woodcuts which accompany it have the rather rare merit of being in a high sense illustrations of the text as well as pictures."—*N. Y. Evening Post.*

"In this entertaining volume Mr. Monteiro records the results of many years of exploration of a region of tropical Africa which, although long known to Europeans, has not hitherto been adequately investigated or described. Although avoiding scientific technicalities as far as possible, Mr. Monteiro's work is avowedly addressed to the general public; it abounds with information of interest to the ethnologist, the naturalist, or the mineralogist, as well as to the geographer—the author proving himself thoroughly well read at all points, and possessed of keen powers of observation."—*N. Y. World.*

"This is somewhat of a rarity in African literature. It contains no hairbreadth escapes nor improbable hunting adventures, and it is written by a trained scientific observer, who has a distinct idea of the sort of information he desires to impart, and a very lucid method of imparting it."—*The Nation.*

"So much novel and instructive matter has been gleaned by Mr. Monteiro during observations in Angola, which did not propose scientific investigation for their first object, that one must regard the country as a remarkably fruitful field for the naturalist, and entertain the hope that it will ere long be explored by parties who shall thoroughly study its resources in every department of scientific enquiry."—*Chicago Tribune.*

"The book before us not only contains an abstract of these earlier events but a most minute description of the various tribes of natives, their curious customs, costumes, and implements, domestic and warlike; and also of the flora and fauna of this most interesting region. To those who delight in intelligent works of travel, Mr. Monteiro's book will prove a mine of pleasure and information."—*Forest and Stream.*

"In point of method and systematic arrangement and clearness of statement and wisdom in leaving out all superfluous matter and personal experiences, this work excels nearly every one of its kind."—*The Churchman.*

"To the thoughtful student of the great problem of African civilization the most interesting portions of the volume, however, are those which bear upon the questions of the capability of the negro race for civilization and mental advancement, and the material development of tropical Africa. Of the former the author forms a low estimate as the result of his long and familiar observations."—*Christian Intelligencer.*

"A most able, interesting, and comprehensive description of the western coast of Africa, between the Congo River and Mossamedes Bay. . . . Nothing of importance concerning the geographic and geologic features of the land, its history, its peculiar plants and trees, the singular habits and belief of the negro, seems to have escaped his notice."—*New Haven Palladium.*

Macmillan & Co.'s Complete Catalogue, with Index, sent post-paid on receipt of six cents.

MACMILLAN & CO., 21 ASTOR PLACE, NEW YORK.

The Nation.

NEW YORK, THURSDAY, APRIL 20, 1876.

The Week.

A CALL for a conference to be held on the 15th of May has been issued, signed by Messrs. W. C. Bryant, Theodore D. Woolsey, Alexander H. Bullock, Horace White, and Carl Schurz, to take into consideration the present alarming condition of public affairs and the best means of "preventing the national election of the centennial year from becoming a mere choice of evils, and of securing the election of men to the highest offices of the Republic whose character and ability will satisfy the exigencies of our present situation, and protect the honor of the American name." The danger they see in the present crisis is "that an inordinate party spirit may, through the organized action of a comparatively small body of men, who live by politics, succeed in overriding the most patriotic impulses of the people, and in monopolizing political power for selfish ends." The proposed conference is to be held in New York, and the call has only been sent about privately to selected persons, and we presume will rely for its influence rather on their weight than on their numbers. What it will do or can do, it is hard to say, except make preparations to put up a bolters' ticket in case neither the Republican nor Democratic nomination is satisfactory. The party objections to it at present begin to appear already, and they are naturally that it will destroy "harmony" in the party; that it is time enough to cry out and protest when bad nominations have been actually made; that it will hurt the feelings of a great many good men who still think the Republican party is abundantly capable of accomplishing its own purification; that the signers are not practical politicians, and that, therefore, the movement can come to nothing. The objections that will be made after the nomination are: that the regular nominee is a noble, good man, who was faithful in war; that the cause of human rights is in peril; that the candidate has always been a civil-service reformer in the best sense of that term—that is, has always been in favor of "putting good men in office" and has constantly recommended such men himself for office; that the people are not to be deceived by this fire in the rear; that Mr. Bryant and Mr. Woolsey, who signed the call, are old men, while Mr. Andrew D. White, who is as good a college president as any of them, and has a large library, and is a lively, active young man, likes the ticket very well; that Schurz is a foreigner; and that discontent and grumbling are bad things in the centennial year.

The Cincinnati *Gazette* gives an explanation of the origin of the scandal with regard to Mr. Blaine which, we suppose, may be taken to be authentic, inasmuch as it seems to come from one of the gentlemen who helped to set it a-going. There was a short time since a meeting in Cincinnati of four gentlemen, whose names are not given, but to whose knowledge it had come that the Democrats had "charges" against Mr. Blaine which would be "sprung" in case of that gentlemen's nomination at Cincinnati, and they therefore felt they must hold a "conference" to "look into" them, on the principle, Mr. Blaine's friends would say, of the old lady who declared that "it was not that she wanted anybody to do anything wrong, but if they did, she did want to know all about it," but, according to their own account, from more patriotic motives. They therefore entered into correspondence with Mr. Blaine, and wrote him a letter which the *Gazette* says he is at full liberty to publish. The conference was not in the interest of any candidate, but was merely held for the purpose of discovering whether these charges were such as to injure Mr. Blaine in case of his nomination, and in that case to enable him to meet them. Now, the Indianapolis *Sentinel* (a Democratic organ) has published a definite charge, supposed to be supported by the statement of Mr. Harrison, a Government director of the Union Pacific road, to the effect that $64,000 were paid to some one by the company on a pledge of some $75,000 in bonds of the Fort Smith and Little Rock Railroad, not worth anything like that sum, and that though Mr. Harrison made enquiries into the matter it was hushed up. The theory of those who make the charge is that Mr. Blaine got this money, which he denies, apparently not on the ground that he had nothing to do with the transaction, but that whatever he did was for the benefit of third parties. A "constituent" of his declares that upon Blaine's recommendation he bought $13,000 of the Fort Smith bonds, and paid $10,000 for them, and that, the investment turning out badly, Mr. Blaine very handsomely took them off his hands at the same price. Mr. Rollins, the Treasurer of the Pacific road, and Messrs. Morton, Bliss & Co., the bankers through whose hands this $64,000 passed, have exonerated Mr. Blaine in "cards," but the *Gazette* says that all this Fort-Smith business only relates to "one of the charges," implies that there is much more behind, that the cards of Messrs. Rollins and Morton, Bliss & Co. "fall entirely short of the mark," and that a full investigation is what is now needed.

There is talk of sending Schenck back to England again as soon as the House Committee reports on him, in case the report finds him guilty simply of indiscretion and not of wilful fraud. This plan, if carried out, would be simply an adherence to the rule which has been acted on in other cases—to heed no criticism of a public servant until the grand jury has actually found a bill against him for some infamous offence. If the Committee finds Schenck guilty simply of indiscretion, it will be indiscretion of so gross a character as to indicate a childish gullibility which, in the case of so old a poker-player, would be little short of criminal; and to send him back without a guardian would be inexcusable. The unhappy Babcock has been again indicted, this time for the Safe Burglary, and Boss Shepherd has gone bail for him. There is as yet, we are sorry to say, no sign of a movement in the army to get rid of him. We must remind those who think the acquittal at St. Louis ought to shield him that he promised a full explanation of the telegrams, which he has not offered, and that he telegraphed to the District-Attorney that he was eager to appear as a witness, but to Luckey, his confederate, that he must prevent his being brought on at all hazards. These things leave a colonel in the army in a position which is untenable, and as long as he has not cleared them up he is not fit company for officers and gentlemen, or for anybody but a Boss.

The bill which directs the Secretary of the Treasury to put in circulation the subsidiary silver coin which the Government has in its possession, by virtue of the Sherman Resumption Act of 1875, became a law on Monday, the President then having signed it. With the Government now fully committed to the purchase of enough silver to make $50,000,000 of dimes, quarters, etc., equal to the authorized issue of fractional notes, preparations are making by the Big-Bonanza managers to have Congress take another "step towards resumption." This "step" will be in the form of a bill authorizing the issue of silver dollars, to take the place of the United States notes, each of which promises to pay to the bearer one dollar. The total amount of these one-dollar notes outstanding at the beginning of the fiscal year was $27,416,863. The proposed silver dollar, at the present price of silver, would be worth a trifle over ninety cents, so that the bill might properly be entitled "A Bill to facilitate the release of the Government from part of its debt, and to promote the interests of the Big-Bonanza mines."

Besides the passage of the Silver Bill, Congress has been occupied mainly with the Belknap impeachment, the case of Hallett Kilbourn, and the Third-class Postal Bill. Belknap has pleaded

to the jurisdiction of the Senate, on the ground that he is no longer an officer of the United States. The Postal Bill has finally passed the same body. The House has, after a good deal of debate, decided to produce the body of Hallett Kilbourn in court, in obedience to the habeas-corpus proceedings, and thus avoided a very disagreeable dilemma, out of which there was really no road except submission or defiance, inasmuch as the House is itself a body of quite as high jurisdiction in the matter of contempt as the courts themselves. The debate was rendered lively by a dispute between Mr. Blaine and Mr. Tucker of Virginia. Mr. Tucker wished the sergeant-at-arms to appear in court by counsel, and so raise the question of the legality of the habeas-corpus proceedings, and, on Mr. Blaine manifesting some opposition, declared that the latter was "no lawyer," and had "often shown" this lamentable fact—an accusation which Mr. Blaine apparently regarded as an imputation upon his mental qualities almost as bad as an intimation that he was "no gentleman" would have been upon his honor, for he immediately thanked God that he was not a lawyer in the sense of the term understood by Mr. Tucker, and had never, as Attorney-General of Virginia, given an opinion that the local authorities of a State might "invade the post-office." To this Mr. Tucker replied that Mr. Blaine, though, as he had previously declared, no lawyer, was undoubtedly "a Pharisee," and began to thank God in his turn, when he was ingeniously interrupted by the Maine Statesman, who made the cause of gratitude to the Almighty appear quite different from what Mr. Tucker had intended. The discussion then branched off in various directions, but, on the House coming back to the merits of the case, soon lost its interest.

The United States Government received from the British Government $15,500,000 as indemnity for the damages done by the Confederate cruisers. This sum was invested by the Treasury in a U. S. 5 per cent. bond. The amount of claims already adjudicated by the Alabama Commission is $5,883,000, and the Treasury now gives notice that on the 24th instant it will receive proposals for this amount of the new 5 per cent. bonds. In addition to the usual conditions under which such proposals are received, the Treasury has imposed the additional one that no bid will be received for a smaller amount than $500,000. This excludes all ordinary investors from bidding, and also furnishes ground for complaint that the arrangement was made out of consideration for the wishes of the Syndicate. It is also not understood why the bonds should be sold for gold, as we believe the claimants were to be paid in currency.

The President has vetoed the bill recently passed by both Houses of Congress to reduce his successor's salary from $50,000, at which it was fixed by the "Salary Grab" Act, to $25,000. The message sent to the Senate with the veto compares the Presidential salary with that of Congressmen, and shows that when the President's salary was fixed at $25,000 a year, members of Congress got only $6 a day, or, at 120 days for the session, $720 a year; their pay has been made seven times as large as it was, while the President's has only been doubled. But there are other reasons much stronger than this *tu quoque* argument for opposing the change. A salary of $50,000 a year for the President of a country of 40,000,000 inhabitants, in which the scale of living is what it is with us, is little enough; indeed, it is far too little, and every one who has looked into the items of the appropriation bills knows that no President has actually lived upon it (to say nothing of $25,000) for years. Some Presidents have appeared to do so, but it is because all sorts of expenses connected with the White House are treated as "side speculations" to be paid for separately. We believe the actual cost of keeping up the Presidency is nearer $100,000 than $50,000, and the only effect which can come from making the salary less than the expense is one of two things: either to make it necessary for the President to beg for favors from Congress (in all which cases we may be sure he has to give an equivalent), or for him to take some means to eke out his expenses, such as those which the Secretary of War, for precisely similar reasons, has been led into. This has never yet been done, but it is well to take warning in time. The reduction proposed by Congress is a pure piece of demagogism, got up for the purpose of putting the Republican party in the position of hostility to the "poor boy," and the Democrats in the position of "lightening the burdens of taxation." There is no use in expecting to get good Presidents unless you pay them well; and if we are to have a general scaling act, let Congressmen begin fairly with themselves, and fix their own pay at the rate they estimate others. On this scale a Congressman would be worth about $250 per year.

The disappointment of the newspapers with Mr. A. T. Stewart's will has, after the enormous amount of space they have devoted to his funeral, and the dithyrambic style in which they have written about his life, something rather comic about it. The will, though made in 1873, gives a few small legacies to old friends and servants, a million to one of his executors, Judge Hilton, and the rest of his property absolutely to his wife, leaving her and Judge Hilton to carry out in their discretion certain unrevealed schemes of a charitable kind which Mr. Stewart says he had in contemplation at the time of his death. The reasons why they were left in this condition seem to us plain enough, and we have endeavored to set them forth elsewhere, nor are they reasons which are in any positive way discreditable to the memory of the real Mr. Stewart, though they may seem so to that of the ideal Mr. Stewart created by the reporters.

By one of the most remarkable testamentary operations on record, Judge Hilton has now, within a week of Mr. Stewart's death, acquired the bulk of his property, worth from ten to twenty millions, transferring to Mrs. Stewart as an equivalent the one million which was left him by the testator for taking care of the estate. In the eye of the law, therefore, we suppose, Mr. Hilton takes the property, charged with the duty of carrying out Mr. Stewart's charities, whatever they may have been. Judge Hilton's character as a public benefactor is therefore of some interest to the public; and it may be worth while to recall the fact that some years ago there was a Ring in this city composed of four gentlemen, named Tweed, Sweeny, Hall, and Connolly; that one of these, Peter B. Sweeny, was put at the head of a body called the Park Commission, and that associated with him was one Judge Hilton. The new Board went to work to benefit the public. They lopped off and cast away the boughs from the trees in the Park where they were most necessary; they allowed quack-medicine advertisements to be painted on the rocks; and, to cap the climax, the old Park Commission having employed a skilled zoölogist by the name of Waterhouse Hawkins to restore some fossils of extinct species of animals, they dismissed Mr. Hawkins, while Judge Hilton issued an order to have the models carted away and buried, and to have the moulds and sketch-models destroyed, on the ground that a naturalist might better employ his time than in wasting it over "dead animals." In fact, they conducted themselves like vandals and public enemies. We sincerely trust that Judge Hilton will devote his suddenly-acquired wealth to private enterprise. Prayers against his attempting to do anything for the public with it might well be offered up in the churches.

The *Times* has succeeded in unearthing a most wonderful tale of oppression and wrong, practised of course by a lawyer, and, better than all, by one of the most eminent and respected lawyers in the country, Mr. Charles O'Conor. Why the story was published the *Times* has not made apparent, as the events out of which it grew can hardly be said to be "news" at this day; and we can only explain it as a piece of that peculiar kind of newspaper enterprise which criminal prosecutions for libel seem to be the only thing calculated effectually to suppress. The story is, in substance, that in the Forrest divorce case Mr. O'Conor swindled his client, Mrs. Forrest, first allowing her to believe that he was serving her without hope of reward, and then appropriating her funds when she had gained her suit. We do not propose to go into the merits of the case, which Mr. O'Conor has laid before the Bar Association,

further than to say this: that it is a case in which no charge whatever has been made by the person supposed to have been injured; that she herself has frequently and in the most public manner expressed her profound gratitude to Mr. O'Conor for his services, and that she wrote a letter in December, 1851, expressly admitting his right to payment in the event of her ability to recompense him for his services; that the fees he secured bore no adequate proportion to the services rendered; and that no member of his own profession has hinted at a suspicion of his professional conduct in the matter. Under these circumstances, the publication of a story insinuating, rather than making, charges of gross fraud is nothing short of a scandalous abuse of the power of the press, and an outrage which we do not believe would be tolerated by the courts or by the public opinion of any civilized community in the world outside New York. Mr. O'Conor at once brought the matter before the Bar Association, and requested an investigation. A committee, consisting of such lawyers as Messrs. Evarts, Choate, and Parsons, was appointed for this purpose, but reported that Mr. O'Conor's statement of the case was a "sufficient answer to anything that had appeared in the public prints or otherwise," and suggested that Mrs. Forrest (Mrs. Sinclair) should have an opportunity to make charges if she wished to do so. To anything short of a thorough investigation, however, Mr. O'Conor strenuously objected, and very properly. A new committee has accordingly been appointed to get at the "bottom facts," though it will doubtless appear that there are no "bottom facts" except a gratuitous libel of a man of unblemished reputation.

The condition of Egyptian finances has furnished a very prominent topic of English politics for many weeks past, owing to the general belief, after the purchase of the Suez Canal shares, that England was going to do something handsome for the Khedive—a belief which was strengthened by the despatch, at his request, of an English accountant, Mr. Cave, to examine his finances. There is little doubt that at the time Mr. Cave went out there was a vague intention in Mr. Disraeli's mind of in some way interfering in Egyptian finance, but it is asserted that the protests of France and Italy led him to back out of it. At all events, Mr. Cave shortly came back, and the Government declined to state what the result of his investigation had been, as the Khedive wished to have it considered confidential, an announcement which caused a panic in the Egyptian securities from which they have not since recovered. The fall has, in fact, been tremendous. The total nominal amount of the Egyptian debt is in round numbers $284,000,000. Its market value in October of last year was $192,000,000. At the end of last month it had fallen to $152,500,000, a depreciation of about nineteen per cent. Since then, however, the Khedive has telegraphed permission to London to have the report published, and we shall probably have it shortly, but the best that is expected from it is that it will show that the Khedive is not actually bankrupt, and that he can recover if he tries. It is hardly likely that this will improve his credit. The money markets of the world are learning at last the great lesson that the credit of a country does not depend on its natural resources, but on the moral character of the government, and therefore statistics about the hogs and the wheat and the ores are no longer of any value for raising the wind. What lenders now ask is, "Are the politicians of your country—the managing men—whether Sultans, Shahs, Khedives, Favorite Sons, or Practical Men, honest and careful persons, with a nice sense of public and private honor, or are they whiffling, quibbling, lying, fraudulent fellows, who do not care what people say or think as long as they can fill their pockets?" The stern and inexorable putting of this question has made the rates for money very low and borrowers very scarce.

The Anglo-Indian Government, which has been losing for two or three years on its remittances to England, and would this year, it is estimated, lose about $11,000,000 owing to the decline in silver, and is every year running a little further into debt for public improvements, has determined to tide over the present crisis in its coinage by a new loan of $20,000,000. The ordinary revenue is about $250,000,000, and the ordinary expenditures about the same, but there is every year an extraordinary outlay of about $20,000,000 for public works, and nearly $12,000,000 were spent last year in the relief of the famine in Bengal. The new loan is to be raised in England, and this will for the present stave off the loss on the remittances to England, and has helped to raise the price of silver in the London market. The unfavorable feature in the condition of the revenue is the large extent to which it is dependent on the sale of opium, the receipts from this source amounting to nearly $50,000,000, or about one-fifth of the total amount. The revenue shows but little elasticity, owing to the fact that the largest item in it is the land-tax, amounting to about $100,000,000, while the customs duties, in which the rise caused by increased civilization would soonest show itself, amount only to about $12,500,000. But then there is remarkable progress. In 1858–9, the year after the mutiny, the revenue was only $180,000,000. In 1863–4 it had risen to $225,000,000. In the present year it is estimated at $255,000,000.

M. Waddington, the new French Minister of Public Instruction, has introduced in the Assembly his bill repealing two clauses of the act passed in the last Assembly which gave complete liberty of university instruction, and restoring to the Government the sole right to superintend the examinations for degrees. The Minister has to sign all the diplomas, and this he says he cannot properly do unless he has the means of knowing what their value is. What is most curious in all this is, that the act of last year, which was the work of the Clerical and Legitimist parties in the Assembly, simply carried out one of the reforms which the Liberals in France have been demanding ever since the Restoration. When they got it, however, they discovered that the Clericals were likely to reap more advantage from it than anybody else, owing to their great power of raising money, and they have accordingly been clamoring for a return to the old system of state control, and are apparently unwilling to face the priests in the field of free competition. Perhaps the best defence of M. Waddington's position is to be found in the fact that a university degree in France is essential to the pursuit of certain callings and the holding of certain official positions, and as long as the Government gives graduates this sort of monopoly it is proper that it should see that the privilege is not abused.

The new Italian Ministry has made a declaration of its policy which contains nothing very radical or startling. As regards foreign affairs, Signor Depretis said they would pursue substantially the same course as their predecessors, and as regarded the tariff would adhere to free trade. He deplored the existence of the legal-tender paper money, and promised to continue the efforts of the Minghetti Ministry to get rid of it. He also promised legislation intended to secure greater independence to the communes and provinces in the management of local financial affairs, and to increase the independence of the judiciary, though we are unable to say in what particular, as the Italian judges are already appointed by the Crown and become irremovable three years after their appointment. He urged the adoption of the new Penal Code now before the Chambers, which effaces the last distinctions between the criminal legislation of the different states of which the kingdom is composed, Tuscany having until now preserved its own Code, and the new Italian Code, promulgated in 1865, having been modified in some particulars as regards Naples. Signor Depretis proposed to try compulsory education; declared himself opposed to the Minghetti scheme of state railroads, but favorable to the improvement of the Tiber and to the better regulation of the management of ecclesiastical property; and, while holding out no hope of a reconciliation between the State and the Church, in the sense in which that phrase is ordinarily used, said that the relations of the Government with the Vatican would not be less friendly than they had been. In short, this first programme of the Radicals in power is as conservative as any Conservative could wish, and promises no sensation.

ESPIONAGE IN POLITICS.

THE explanation offered by General Babcock of his connection with Whitley previous to the safe-burglary in Washington—that he employed him to find out who the persons were who were making attacks upon him in certain papers—is not a very lucid one, particularly as he says Whitley never reported, and as he cannot now remember the names of the papers and never applied to the editors for the desired information. But the mere confession of a man in such a position that he employed a detective to discover the author of a newspaper article, in preference to or instead of asking the editor, is an incident which contains a suggestion of some value for those who may be charged during the next four years with the work of reform in Washington; and it is by no means the only incident of the kind which has come to light in the investigations now pending. Anybody who has followed, even in the most cursory way, either the Whiskey trials or the Congressional enquiries, must have been struck with the part played by espionage, pure and simple, both in the administration of the Government and in the mere manœuvring of politics. Nearly all those who have turned up as actors in these affairs have either employed spies or played the part of spies themselves. They correspond in cipher. They hire men to "shadow" each other. They know each other by slang pseudonyms. They arrange rendezvous in out-of-the-way places. They steal private letters, or hire men to read letters and let them know the contents. They are constantly engaged in transactions which they wish kept secret. They make arrangements to throw other persons "off the track." They pretend to have powerful persons in the dark "behind them." They have "papers," which they hold over each other's heads. They are constantly travelling to and fro, engaged either in the promotion or frustration of a "plot." They have "enemies," not of the tranquil kind known in real life, who confine themselves to mild dislike, but of the theatrical type, who "work" actively with tricks worthy of Satan himself to accomplish their ruin; and "friends" who seek to help them by devices that sometimes seem borrowed from mediæval fiction. Their love for dark ways, in fact, seems almost passionate. Of two ways of accomplishing an object, they prefer the tortuous one, or that which offers the better opportunity for some kind of chicane or deceit.

Nor are the persons who carry on this curious game altogether obscure adventurers or Jeremy Diddlers simply. They are largely Government officials, filling places of trust and emolument, who seem to live in familiar intercourse with a circle of nondescripts without any visible means of livelihood, but whose livelihood, nevertheless, seems well assured, and who, when we catch glimpses of them, are up to the chin in "negotiations," and "agreements," and "compromises," and "offers," and "partnerships"—all of a dubious sort. In their hurryings to and fro, too, they frequently come in contact with the President and Cabinet officers, who watch them apparently without surprise or suspicion, get letters from them, and sometimes proposals that receive consideration. When one of them finds out that another is a liar or a cheat—a catastrophe which seems to be of tolerably frequent occurrence—he never manifests any surprise or disappointment, but simply "breaks off his negotiations" with him; and, what is more singular, the account which each gives the other, even at the first meeting, of his position and standing, is frequently accepted without question. If, for instance, Smith comes to Jones and says that he has Bristow in his breeches-pocket, and controls all the olive-oil now in the market, Jones, far from questioning it, enters into a bargain looking to "an operation" based on the hypothesis that the story is literally true.

The interest excited just now by the safe-burglary in the question whether any Government officer planned it, is leading people to overlook its importance as a revelation of manners. Whether Babcock was implicated in it or not, the fact remains that certain persons connected in some way with the government of the national capital sought to frustrate an enquiry into their use of the public funds by hiring professional burglars to rob a public safe of the books of account, with the connivance of those charged with their custody, and carry them to the door of the most prominent promoter of the enquiry, with the view of fastening the crime on him; and that one of the persons implicated most gravely in the conspiracy was, while under indictment and trial, invited to an evening party at the White House. Now, this most daring and clumsy plot was but the final product of social and moral conditions which had been in existence for years. It was the device of knaves and tricksters, who had so long practised their art with impunity that they had forgotten that there were any limitations whatever on it. So also General Babcock's employing a detective to find out who wrote a newspaper article about him, with a system of go-betweens and rendezvous, instead of writing to the editor, was a thing to which an officer of the regular army in a high social and official position does not come suddenly. It was plainly—supposing the story to be true—the resort of a man enamored of intrigue through long indulgence in it.

A more objectionable state of things, one more corrupting to society and politics, could hardly exist. It will be the first duty of the new Administration, if it be really a reform one, to try and sweep it all away. But as we said the other day, when speaking of the Belknap affair, it will not do to attribute it to a very sudden or peculiar outbreak of depravity on the part of American society or American politicians. The materials for this falsehood and intrigue exist everywhere. The responsibility for bringing them into use lies with the legislature and the public. The war naturally gave espionage a part in the administration of the Government it never had before, and made detectives and "secret-service agents" important personages, and consequently gave fraud and lying and skilled deception a certain respectability. One of the first things that should have been done at the close of the fighting, next to the regulation of the currency, was to throw it out of use, or, at all events, to diminish as rapidly as possible, in the interest of political morals, the occasion for it, by reforms in the imposition and collection of taxes. Far from this, it was, by means of what was called "the moiety system," and a most onerous and complex customs tariff and internal revenue, elevated to the rank of a portion of the normal machinery of government. Every man engaged in trade, were his business large or small, had a spy set after him, and in the great commercial centres the spy became a high public functionary. B. G. Jayne, who filled the place here, had the rank and honors of a great officer of state, and more pay than the President and all the Cabinet put together. He was the friend and confidant of "statesmen" at Washington, and a trusted adviser of the Government law officers, and his daily business consisted simply in laying traps for merchants and getting their clerks and porters to play the traitor and hypocrite towards them. In fact, for many years after the war the collection of the revenue in this city was conducted as if truth did not exist and honor was an empty name, and as if the government of a great Christian nation had no better basis than that of King Koffee Kalkalli.

The connection of political management with this system is close and constant. In fact, the creation and conduct of a nominating convention, from the holding of the first primary meeting to the moment of the nomination, are a piece of work in which trickery and intrigue of divers degrees play the leading part; and the money for its expenses is largely and naturally drawn from jobbery and extortion. At this moment there is enormous activity in the very line in which Whitley and Bell shine, among all the active politicians in the country. They are hurrying to and fro, making proposals and counter-proposals, "blocking each other's game," "heading each other off," concocting "plots," and "laying trains," with just the same arts as those which brought about the safe-burglary. When Simon Cameron goes back from Pennsylvania, and says "it is wonderful how much strength Senator Conkling has been developing within the last few days," he does not mean that Mr. Conkling stands any higher in the favor of the people than he

did a few days ago—indeed, the phrase "developing strength," applied to a candidate, does not touch his popularity with the people at all—he means that Conkling is gaining ground with the small band of men in each State who expect to manage the convention when it meets, through the skill of his own partisans in the secret bargaining which goes on among them; and what we wish to point out is, that in this body, and at this work, detectives like Whitley or Jayne are just as strong and able as Cameron, or Morton, or Conkling—or rather, their ability is the same in kind, though it may be lower in degree. The arguments used and the considerations presented are precisely the kind Whitley would use in trying to get restitution from a burglar or throw suspicion on the wrong man; and, in fact, if we said that political life, as the Senatorial Group understand it and follow it, was a vast detective service, we should not be guilty of any great inaccuracy.

THE DRY-GOODS BUSINESS.

THE *éclat* which has attended Mr. A. T. Stewart's death was, of course, due in a considerable degree to the popular notion of the size of his fortune. The man who has succeeded in accumulating more money than any other man in a commercial community in which nearly every man is striving for money with great eagerness, is necessarily a man of distinction, and his death is sure to cause more or less sensation. But it may well be doubted whether Mr. Stewart would have achieved nearly as much distinction had he made his money in any other way than the way in which he did make it. The riches of a great real-estate speculator, or railroad man, or contractor, or miner, or iron-master, or China merchant, would not impress the popular imagination nearly so powerfully as his have done. He not only made in his lifetime an enormous fortune, but he made it in the most conspicuous, best-known, and, to the large body of American traders, most fascinating of pursuits—the sale of the commodity known as "dry-goods." There is probably no other business in the country on which so much ambition is secretly fed, which furnishes the material for so many day-dreams, and to which the bulk of the young men who engage in commercial pursuits are so powerfully drawn. The percentage of those engaged in all branches of business who have begun their career by "clerking it" in a dry-goods store would, if statistics could be collected on the subject, be found curiously large. So also would the percentage be of those who have tried dry-goods at one period or other of their lives as capitalists, and only turned to other callings after they had irretrievably failed in it. The number of "traders" in dry-goods was greater by far in 1870 than those in any other branch of distribution except groceries, numbering in round numbers 40,000 (the grocers reached 74,000), and this does not include the salesmen and saleswomen and travellers and collectors, who may be set down at least at two to one, or about 80,000. No other traders or dealers number half as many. There were in the country in 1870 3,000,000 farmers and planters, to say nothing of the same number of agricultural laborers. We shall not attempt to guess how large a proportion of the young men just entering on life belonging to this class are eager to exchange the dull and monotonous and exposed life of a tiller of the soil for the shelter, cleanliness, and excitement, and even remote chance of great wealth, offered by almost any kind of exchange business in a city. It is undoubtedly very large, and to most of these youths the dry-goods store seems to offer the most attractive and easy path to the new life, and is undoubtedly the most familiar one. Most of the village heroes the fame of whose "mansion" and diamonds and fast horses, church or college donations, and large "operations" comes back to their birthplace, have started in this way. Every village boy, in fact, thinks if he is quick at figures and can get behind a counter he may rival Stewart or Claflin; and more than this he does not look for in this world. The loftier dreams of intermarriage with counts and dukes, and familiar intercourse with effete monarchs and princes of the blood, come later in life, and are put into his head by his wife and daughters.

This pre-eminence and attractiveness of the dry-goods trade in this country is due mainly to the great purchasing power and varied requirements of American women. In all European countries the country population are mainly peasants, and, even when well-to-do, wear clothes of exceeding simplicity and of a stereotyped fashion. They make next to no demand for silks, trimmings, and great diversity of material, and but little for the finer qualities of goods of any kind. Consequently, there is but little field for enterprise or taste or ingenuity in furnishing them. The dealer who depends on them is satisfied if, like the grocer, he lays in a few great staples, and is able to tell which of his cotton prints have fast colors. Here in the country the tastes of the city women are spread everywhere by the fashion papers and magazines, and cultivated by the passion for equality, and the absence of class distinctions, and the secret social ambition bred by the common-schools and academies. The country boy aspires to sell dry-goods in Broadway or Washington Street, and the country girl expects a city dry-goods man to come out and marry her, and give her shawls and laces or the opportunity of "culture" in picture-galleries and libraries. The consequence is that the dry-goods man has a sphere of activity opened to him such as is presented to no other trader. Women are his principal customers, and their wants are innumerable, whether for use or ornament, and their fancy is a harp of a thousand strings, on which a skilful salesman may play an endless variety of tunes. The chances for great hits, too, in colors or patterns or fashions give the business some of the attractions of gambling, and the changefulness of the popular taste furnishes a restless, eager nature with an inexhaustible stimulus to activity and enterprise. There is no business in which a trader is brought into such constant contact with the public at large, and into such close relations with family life, and into such near perception of its wants and weaknesses.

Mr. Stewart was the first to perceive the opportunities it offered in this country and to avail himself of them, and he derived his success from two things—in the first place, he saw the advantage, in dealing with a timid, non-commercial class like women, who are, nevertheless, eager for new and to them unknown and untried commodities, of having a fixed price which would contain a fair profit and nothing more. This removed one great check on women's purchases by leaving their minds free for choice of goods simply, and delivering them from distrust of their own power as hagglers or bargain-makers. In the next place, he saw the necessity in a country of such rapid growth and unbridled hopefulness, and therefore extensive use of credit, in which the desire for fine clothes generally ran ahead of the means of paying for them, of doing business in such a way as to avoid being swept overboard by panics, which are the tornadoes of American life, and always strike dry-goods men more severely than other dealers. He therefore paid as he went, and gave no credit until giving credit became of no more consequence to him than grammar to the king, and in this way panics became his season of greatest profit, as he was able to buy out his ruined competitors. He rapidly became not simply the greatest but oldest dry-goods house in the country. Indeed, his store has always been remarkable for containing a large number of dry-goods men, once mighty and active, who had "burst up" at seasons when he was making most money, and found refuge in his service. He had perhaps no equal, except the United States Custom-house, in sheltering persons who had compounded with their creditors or been stripped of their savings in Wall Street. In fact, he played the part on the troubled dry-goods ocean of a powerful iron-clad ram, giving all rivals who seemed to be gaining on him a tap of his beak which speedily sent them to the bottom, but then picking up the officers and sending them before the mast as able seamen.

The strong expectation entertained with regard to the provision he would make for charity or art or literature by his will was probably largely due to the influence which great capacity in selling dry-goods exercises on the popular imagination. In no other business is a man's mastery of details and variety and extent of operations brought so closely under the popular eye; and that success

which people could see and appreciate so clearly must qualify a man to be a great and wise public benefactor, is an inference easily made. But the fact is there is probably no business which is less likely to fit one for the hearty and prudent execution of great schemes of public utility. We have no intention of giving expression here to the modern aristocratic contempt for the business of selling goods by the yard over the counter; but the philosophic condemnation of all retail business for its effects on the mind and character is at least as old as Cicero, and has a good deal of foundation. *Re*tail is essentially and above all things *de*tail, and the man who prosecutes it successfully must excel in detail and have a love of it. But there is no surer consequence of this than a loss of capacity for putting work on other people's shoulders, or for confining one's self to the task of general and more or less remote supervision, which is the essential condition of all undertakings that are to have a permanent value. The passion for seeing to everything one's self is a good thing to begin life with, but the man who retains it into his old age is more likely to die a shopkeeper than a statesman or philanthropist, and is not likely ever to find the leisure or the frame of mind for any contributions to art or charity which he has no hope of personally managing, and the working-out of which must be left to agencies which he cannot either select or control. In short, the very traits of character and experience of life which most promoted Mr. Stewart's business success, had probably most to do in preventing his leaving behind any finished and lasting monument. His contributions to the architecture of the city were unmistakable signs of his defects as a public benefactor. None of them contains the slightest recognition of the claims of art, or, in other words, of the existence of any world in which the methods and aims of "business" had no place.

Correspondence.

FALLING INTO LINE.

To the Editor of The Nation:

Sir: A Republican of standing in the party a few days since expressed a decided preference for Mr. Morton as the Republican candidate; I suggested that such a nomination must inevitably drive many Republicans from the support of the ticket. His answer was: "If Morton is nominated, what are you going to do about it? The *party* will fall into line, and the independent Republicans must support a Democrat." I am convinced that he spoke the sentiments of a large number of the party men. Now, what are the Republicans like the *Nation* and its many readers going to do about it? It very much looks as if, with skilful trading, either Conkling or Morton, or some such statesman, will be foisted upon the country at Cincinnati.

Shall we bolt, or can we vote for a Democrat? Certainly not for one of the old party leaders that are now talked of; but we can and will vote for a Democrat of the proper kind. The nomination of any man connected or allied in any way with the present Administration must alienate a large vote, and in any such unfortunate event, and in the absence of any independent nomination, we can support such a man as Governor Randolph of New Jersey, or Henry B. Payne of Cleveland, because the characters of these men always have been of the best. They are honest, capable, and hard-money men. What blindness of the Democratic party prevents the nomination of such men?

The universal disgust and chagrin at the present status of political affairs make it absolutely certain that the *man*, and not the party, will determine the political character of our next President.—Very truly yours,

G. L. W.

St. Louis, April 8, 1876.

THE BANK OF ENGLAND'S RATE OF DISCOUNT.

To the Editor of The Nation:

Sir: May I beg of you the favor to allow me to make a few remarks on the able letter of Mr. George Walker in your number of March 9? For the better understanding of the chief points to which it relates, let us make the supposition that the Issue Department has its office at Whitehall, and that the automaton manages his affairs with no more reference to the Bank of England than to any other bank in the kingdom. By this migration to a new locality, nothing whatever will be altered in law or practice beyond a change of premises. The Bank of England will be seen to be a private bank with a big customer, and with a power of issuing fifteen millions of bank-notes.

1. The first fact that comes out of this position is that the Bank of England need not (and now does not) give itself any concern about finding gold or reserve for these fifteen millions of its own issues till the stock of gold in Whitehall is exhausted. If any notes out of a circulation exceeding these fifteen millions are presented for gold in Threadneedle Street, the Bank of course is bound to provide it, and this it can always do by sending these notes to Whitehall and getting the gold for them there.

2. What the probabilities are of all the stock of gold in Whitehall being exhausted, and thus some of the remaining fifteen millions being presented for payment, is a matter of pure experiment and trial. The wants of the public have been found, in the worst of crises, to keep in circulation many more than these fifteen millions. Hence the governor of the Bank and his colleagues need not ever have their sleep disturbed by the vision of notes issued by the Bank, notes of the fifteen millions, being presented for gold, and no gold in store to meet them.

3. Hence Mr. Walker is quite accurate when he says that "the Bank Act of 1844 is simply and solely an act to fix and regulate the currency (of paper) and to ensure the convertibility of bank-notes." Mr. Walker adds: "The Bank of England is a sovereign, endeavoring, by a system of complex machinery, to do what Lord Overstone and Sir Robert Peel insisted that, under the act, it could do, namely, cause a mixed currency of coin and paper to fluctuate precisely as a purely metallic currency would fluctuate if there were no paper." I will not believe that so highly intelligent a man as Mr. Walker is adopting this nonsense—which I have shown in my book to be nonsense—as his own belief, till he tells me that he does. Nor am I aware of any evidence which brings this belief home to Sir Robert Peel. I rely on Mr. Walker's word "endeavoring"—trying to perform the impossible—as describing not Mr. Walker's futile effort but that of some currency oracles.

4. Mr. Walker is further perfectly correct in saying that "my argument establishes the fact that even now the currency system is not impregnable," but not when he adds that I am unconscious of it. Impregnability, absolute, material certainty of ever being able to get coin for notes, cannot be obtained in this world except by keeping in store a pound of gold for every pound of paper; and no paper currency ever did or ever would do such a thing. It would lose its *raison d'être*.

5. One most important consequence flows from these facts. When the Bank talks of its reserve, and regulates so mischievously the rate of discount by the movements of that reserve, the reserve so thought about and spoken of is its own private reserve in Threadneedle Street, and it has no more reference, so long as the circulation does not approach the fifteen millions, to the reserve in Threadneedle Street for the convertibility of the notes than the reserve of Messrs. Glyn or any other banker in England. As I have explained, thoughts about the currency reserve do not come into play till there is danger of the automaton being exhausted and then some of the fifteen millions turning up for gold. To what Mr. Walker, therefore, calls "the real question, whether the practice of raising the Bank rate to check an outflow of gold is necessary to maintain the *currency* system of Great Britain, as established by the Bank Act of 1844," I answer, it has never yet been necessary. Nay, more—it has never yet been done. The Bank never raises the rate because the circulation may fall to below fifteen millions of notes. The reserve for the notes is exclusively the affair of the automaton in Whitehall, and he manages it by a piece of self-acting mechanism. The fluctuations in the reserve, and the consequent fluctuations in the charge for discount, are events of that purely private bank, the Bank of England. Every bank in London may adopt the same rule, and proclaim a change of rate to its customers according to the state of its reserve, quite as much and as truly as the Bank of England does now: only they prefer, for various reasons, to follow the example of the Bank on most but not on all occasions, as I have shown in my letters to the *Daily News* of last December on the battle of the banks. The thought of the currency, as such, of maintaining the convertibility of the bank-note, I affirm, is always absent from the Bank parlor in Threadneedle Street, though now and then a bank director, in private society, when hard up for a reason for justifying these most injurious but to the Bank very profitable dances of the rate of discount, has been heard to allude to the necessity of looking after the currency.

6. Mr. Walker finds that "I consider too lightly this, the most important function of money, the '*measuring*' power." It would pain me exceedingly if I thought this censure to be well founded. No one can have a higher conception than I have of the supreme importance of steadiness of

value in a currency: is it possible that any one has proclaimed it more ardently than I have? With me it has ever been the one vital, indispensable test of a sound paper currency that it should be of absolutely equal value with metallic, and it seems to me that I detect just a little flavor of falling away from the supreme doctrine in Mr. Walker, which I conceive gives me, in this vital matter, a touch of superiority even over him. He proclaims that "changes in the currency of any country should be in the direction of greater intrinsic value"—I should say rather in the direction of greater steadiness of value. Be it gold, silver, or anything else which is adopted as the tool of exchange, let it be the substance whose cost of production varies least.

I take leave of Mr. George Walker with warm acknowledgments of the courtesy which pervades his whole letter, and of the ability which characterizes it throughout. BONAMY PRICE.

OXFORD, March 28, 1876.

"TALENTS."

TO THE EDITOR OF THE NATION:

SIR: Lord Macaulay, in his 'Life and Letters,' recently published, is represented as having written: "We [Lady Holland and I] talked about the word *talents* and its history. I said that it had first appeared in theological writing, that it was a metaphor taken from the parable in the New Testament, and that it had gradually passed from the vocabulary of divinity into common use. I challenged her to find it in any classical writer on general subjects before the Restoration, or even before the year 1700. I believe that I might safely have gone down later. She seemed surprised by this theory, never having, so far as I could judge, heard of the parable of the talents."

It is neither *talent*, in the sense of 'general ability,' nor *talent*, for 'specific form of ability,' that Lord Macaulay here deals with, but the plural, *talents*.

For many centuries *talent* had no other significations than those of 'desire,' 'inclination,' 'disposition,' and the like; and, from the time when those significations came to have an established rival in one not referring distinctly to will, it must have seemed just as proper to call, for instance, 'readiness of repartee' *a talent*, as to call 'readiness of repartee and of wit' *talents*. Why, then, Lord Macaulay restricted himself to remarking on the plural word only, is not evident. He must have known that *talent* was employed metaphorically by many a "classical writer on general subjects" very long before the Restoration. Can it be that, while he found in *talents* an allusion to the Biblical parable, he found no allusion to it in *talent*?

Even from Johnson's 'Dictionary' he might have learned that Dryden uses *talents*. Add Gosson, 'The Schoole of Abuse' (1579), p. 52 (ed. 1868); Dr. Featley, 'The Dippers Dipt' (ed. 1646), p. 120; Henry, Earl of Monmouth, 'Advertisements from Parnassus' (ed. 1656), pp. 199, 244.

Miege, in 'The Great French Dictionary' (1687), has, "A man of good *talents*—that is, of good parts or abilities, Un homme qui a de beaux *talens*." It is worth noticing that Addison uses *talents* in the *Spectator*, Nos. 62, 225; in the *Tatler*, No. 193; and in the *Freeholder*, No. 39. Steele uses it in the *Spectator*, No. 216. Bartelett uses it in the *Guardian*, No. 103.

In 'Modern English' I have given several pages to *talent* and *talents*, adducing for them passages from numerous authors, from Sir Thomas Elyot (1544) onwards; and my quotations there from books printed before the Restoration might easily be doubled.

Talent, to import "faculty, power, gift of nature," Dr. Johnson characterizes as "a metaphor borrowed from the *talents* mentioned in the Holy Writ"; and we have seen Lord Macaulay's unhesitating pronouncement on *talents*. Is the Johnsonian view to be accepted without qualification? I doubt whether it is, and this doubt I expressed in print some years ago.

In the sixteenth and seventeenth centuries, *talent*, as used by religious writers, usually indicates moral endowment rather than intellectual. It may be that our pious forefathers regarded the former as, more essentially than the latter, innate by divine appointment, for better or for worse; as more a gratuity; as less obviously owing to exertion and cultivation than is the case with specialty of mind. Even so late a writer as Samuel Richardson speaks, after the elder fashion, of "pride" as *a talent*, and so of "illnature" and of "taciturnity."

At first, the broad metaphorical application of *talent* here in consideration was, presumably, with us of Scriptural suggestion. But a *talent* or 'gift entrusted' may be other than spiritual; and already in 1545 Roger Ascham wrote of his "poore *talent* of learnyng." Phrases like '*a talent for* poetry,' '*a talent for* music,' etc., had not, in his age, yet appeared. On the other hand, we have long dropped such old expressions as "*talents* of mind," "the two *talents*, good sense and politeness," etc., etc.

Remembrance of the Biblical parable must, of course, have operated towards popularizing the word *talent*, and towards determining its later significations. But *talentum*, for 'will,' 'propensity,' occurs in a Low-Latin document of the eleventh century; and we should give due weight to the fact that *talent*, in the senses of 'inclination,' etc., common, together with *maltalent*, from the days of Gower and Chaucer, lived on without falling into abeyance, so as not to be too archaic for even Clarendon, Dryden, and Swift. It being, furthermore, a truth of daily experience that an earnest bent for mental activity in any given field of thought is not unfrequently an index of special natural aptitude for excelling therein, a real metaphysical connection is discoverable between Gower's *talent* and *talent* as now current. It seems quite possible, therefore, on twofold grounds, that the more modern senses of *talent* were in part inspired by the now extinct senses which were borne by the word—senses which, as we have seen, were not entirely laid aside in the days of Queen Anne. Otherwise, the confirmation in use of these more modern senses may have been assisted by translators from French and Italian, in both which languages they have long been established, and without any acknowledged relation to the parable in the New Testament.

A discussion of the various shades of meaning which *talent* has had within the two last centuries would require a good deal of detail, and would, moreover, be beside the limited object of this letter.

Your obedient servant,

FITZEDWARD HALL.

MARLESFORD, WICKHAM MARKET, March 31, 1876.

A REVIEW OF MR. VAN COTT'S COMMENTARY.

TO THE EDITOR OF THE NATION:

SIR: With your kind permission I will say a few words respecting the communication of Mr. Joshua M. Van Cott, which was published in the *Nation* on Thursday last. This communication, the facetiousness of whose latter portions is equalled only by the civility of its earlier ones, seems to be the first effort of its author in a new department. The versatility as well as the agility of this distinguished gentleman has been understood for some time past, even in the retired region where I live. He first came to our knowledge as an attorney against Mr. Moulton in the case where this person retracted a libel and was mulcted in the costs, and next presented himself before us as the legal representative of Mrs. Moulton in her ecclesiastical case, from which she concluded to withdraw before it came to trial. As he had thus skilfully assumed a position between the two principal persons in this family, against the one and for the other, it did not surprise us when we found him turning from the defence of the laws of the State to the announcement of oracular responses in the sphere of the church, or learned that he had become, after the Presbyterianism or Reformed Dutch character of his younger days, a main support of what he calls "pure Congregationalism." But being a simple-minded people, who have never seen much of the extraordinary powers of lawyers in the great cities, we had never expected to find him appearing as a commentator on "the Epistles"; and even less, if possible, had we thought of him as undertaking, in addition to this work and at the same time with it, the office of counsel for the five gentlemen who have been criticising the late Advisory Council. As he has so courteously called my letters to the *Tribune* "the Epistles of Timothy," he will allow me, I trust, to say in a similar strain that, while I have been accustomed to regard *Joshua* with much reverence as the leader of the people of God, I have never supposed that he had, by reason of his education or his circumstances, any special fitness for explaining the views of Paul or his younger associates. It will hardly be surprising, therefore, if when he undertakes the work of a commentator he should fall into some errors, and if his earliest effort in the new line should show a few of the weaknesses of a beginner. The greatest men need to be careful when they enter upon an untried field. In a spirit of great kindness, I shall point out some of the slight defects in this new commentary, and thus shall hope to aid the author in avoiding similar mistakes, when he has occasion to write again in the department of Biblical literature.

After a pleasing introduction, in which he calls me a "compurgator," and compares me with the impure waters of the river Rhine, and places my "astuteness" and "adroitness" beyond those of "the Jesuit fathers," Mr. Van Cott declares that his "task is to expose some" of "my bold fallacies." St. Paul, when he had a difficult point to argue with his adversaries, in connection with which he was sure that the result would be to place them clearly in the wrong, was in the habit of beginning with a few conciliatory words. It is commendable in this new commentator that he follows this admirable

method ; and I have to express to him my sense of the favor he has done me, in that, while he evidently felt the painful duty imposed upon him of demolishing both my epistles and myself, he did not forget to give me such a measure of gracious praise at the outset. Such a course is honorable alike to his impartiality and his good temper, and it gives to those who examine his work a perfect confidence, even as they read the first paragraphs, that they will find in it no intentional misrepresentations.

Having thus made me known to his readers, Mr. Van Cott turns to the consideration of my fallacies, and I will take the liberty of following him with some suggestions. These fallacies of which he speaks, and which he calls "bold," are five in number :

I. The first, he says, lies "in the assumption that the Andover church proposed a mutual council *to try a church member*." Whether this be a fallacy or not, let me reply, I was not the author of it. It originated in the Andover church, and if common fame, on which Mr. Van Cott seems to rely so much, is to be trusted, he himself visited the celebrated town where that church is located, in connection with the matter of this proposal. The character of the action which the framers of the proposal designed to take is too well known to make it possible, at this late day, for the learned counsel to change it. Dr. Dexter, as I stated in one of my letters, gives the plan in detail, and leaves no doubt as to what was intended. He speaks of the mutual council as to be called "for the purpose of taking suitable action in the way of clearance or censure of the pastor." He says that it would "take absolute, undeniable, and unavoidable jurisdiction of the whole case" ; that there was no way in which the church and the pastor "could evade such an investigation as it should order, except by confessing judgment" ; and that its result, unless it should "find itself able to declare all allegations against the church and its pastor to be without foundation, would be to relieve the fellowship of the Congregational churches of the contamination of that presence." I have also the highest authority, independent of Dr. Dexter's statements, for saying that the design of the movers in the plan in the Andover church, as expressed to those who opposed it, was the trial of the pastor by a mutual council or an *ex-parte* one. Mr. Van Cott speaks of my "temerity" in calling it a trial, because the Council would not have "excommunicated" the member from Plymouth Church. But the Council, according to the declarations of its originators, was to determine the question of the pastor's guilt or innocence, to pronounce a decision accordingly, and, in case he were adjudged guilty, to inflict "censure." This would be to "try a church member," even though the penalty directly inflicted by the Council were not excommunication. If Mr. Van Cott is not disputing simply about the technicalities of words, this was a trial, and it involved a sentence of censure, which it was expected would drive the pastor from the denomination and from his pulpit. If he is disputing about such technicalities, I am perfectly willing that he should call the thing an "investigation," if he pleases, and not a "trial." The thing itself will not be changed ; and, as I have clearly shown in my letters, *the thing itself, by whatever name it may be called, is a judicial proceeding in the case of a church member such as Congregationalism does not allow to another church.* Mr. Van Cott's suggestion that the whole matter was to be left for final decision with Plymouth Church, so that a second Council would have to be called in order to withdraw fellowship in case the church did nothing after the first Council had given its advice, and thus that the first Council was to make no final or judicial decision, is an afterthought, which entered the minds of his associates and himself after the Advisory Council adjourned, and after the ministry and churches had read its elaborate report showing the uncongregational character of the whole movement. To quote his own illustration, Mr. Van Cott left Andover with a horse-chestnut and he now comes forth from Brooklyn with a chestnut horse.

II. The second fallacy discovered by the learned advocate is, "that a Council cannot lawfully investigate, but a Commission can." "Having affirmed that a Council cannot investigate, because it cannot try," he says, "the Professor turns a sharp corner and upsets both his major and minor premiss by affirming that a Council can, by its creature, investigate and so try a church member." The advocate, like his clients, is so full of the idea of government over the churches, that he does not seem to remember what the nature and function of a Council are. The Commission is not a creature of the Council, in any proper sense of those words. It is the creature of the church, suggested and nominated by the Council. It is a board of referees empowered and accepted by the church, and has a right, therefore, to do what the church authorizes it to do. The Andover plan, on the other hand, proposed a mutual council, and involved in its proposal the design and intention, in case this were not satisfactory to Plymouth Church, of calling an *ex-parte* council. It involved, thus, the constituting of a council by the Andover Church—even to the point of selecting all its members—for the purpose of investigating and trying the case of a member of Plymouth Church, and of imposing censure and withdrawal of fellowship upon him as a penalty. If the learned commentator and advocate does not perceive the difference between things so widely apart as these, we may as well cease to discuss the subject. I will only add on this point that, when Mr. Van Cott states that I "acknowledge that a council may finally investigate with a view to disfellowshipping," if he means *may investigate the case of the pastor*, I have said and acknowledged no such thing. The commentator has read into my text one of his own thoughts.

III. Mr. Van Cott's third fallacy has reference to the letter-missive. This letter-missive seems to trouble the five doctors of divinity and their counsel greatly ; but the learned counsel admits, if I understand him, what his clients have denied. He allows that the case of the pastor *is included* in the letter-missive, only he says that the letter raised a question respecting the past investigation, and had no reference to a future one. If this be admitted, I am glad that the critics have yielded their opposition on this point. If not, I will refer them to a passage respecting this subject in one of my notes to my third letter, published in the *Christian Union* of April 6. I have but a word to add on this matter. If Mr. Van Cott admits that Plymouth Church asked the Council whether the past investigations had been sufficient, and if the Council felt called upon to say that they had not been sufficient to satisfy a considerable portion of the public, then I hold that the question asked necessarily involved the demand for a specification, on the part of the Council, as to what should and what should not be done in the future to supply the past deficiency. If Mr. Van Cott does not think as I do on this subject, he is entirely welcome to his opinion. But he will permit me to say that because he thinks that "Jordan overflowed its banks on this occasion," it does not follow that no one but a "Jesuitical compurgator" could regard it as flowing quietly within its legitimate course. The frequency, indeed, with which, in his past experience as an Old Testament hero, he may have known the Jordan thus to overflow, may have led him to observe the movement of the river at any particular time less carefully than others do. The analogy of Mr. Jones and his neighbors which I used is, in my judgment, a complete one, so far as the purpose for which it was employed is concerned ; and I am willing to leave it to the common sense of my Congregational brethren throughout the land to decide between the distinguished advocate and myself on this point. I think that the Council would have been derelict to its duty if it had told the church that they had not done all that they ought, and then, on being asked what further they should do, it had refused to answer ; and I think that the churches which sent their delegates to the Council, and the churches generally, will agree with me. So much for this fallacy. Let me only say in addition, that when Mr. Van Cott says "it was illogical and foolish to advise the church that it had done enough, and then say it should do more," he says what is quite true, if we only admit one thing, namely, that we *did* advise the church thus. But it happens that we *did not* thus advise it. We said, You have done enough to satisfy yourselves, but not enough to satisfy a considerable number of those in fellowship with you. We therefore advise you to take a further step *for their satisfaction*. If the learned gentleman can find anything illogical in this it would be interesting to have it pointed out. That he may find something which appears to him foolish is very possible, for he seems to regard everything as foolish now except the Andover proposal.

IV. The fourth fallacy, Mr. Van Cott tells us, is this : "That because a party negotiating for a mutual council may, for a good cause, object to a church or delegate nominated by the other party, it may, as a matter of strict right, object, with or without cause, to any church or delegate." This fallacy is one of Mr. Van Cott's own devising. I have never maintained any such position. What I have asserted is, that a party negotiating for a mutual council may, for a good cause, object to a church or delegate proposed by the other party. Mr. Van Cott claims that, if I do this, I must assert, also, that a party may thus object, either with or without cause. I have not said anything of this kind. Let me remind Mr. Van Cott that a commentator, of all men, should be careful not to go beyond what is written. The placing his own ideas in the words of another person, which have no such meaning, is not a part of his proper business. Thus far for myself. As for the Council, it said nothing whatever about objecting in such cases, except so far as the mutual council proposed by Mrs. Moulton was concerned. If Mr. Van Cott will take the pains to examine the result of the Council again, he will find that, so far from "explicitly affirming the unlimited right" of objection, as he asserts, it made no general declaration on the subject. In reference to that particular case, and that case only, it made a statement of its opinion, which was this : that Plymouth Church had the right to

object to the two neighboring churches. The reasons why it had this right the Council did not distinctly set forth in its result, but I hinted at what I suppose them to have been in my third letter to the *Tribune*. They were, first, because Plymouth Church believed the pastors of these two churches to have already expressed their judgment in favor of the other party, and, secondly, because these two pastors had been, in a part of what they regarded as the same ecclesiastical case which, in another part of it, was to come before this Council, in the position of plaintiffs, while Plymouth Church was in that of the defendant. Perhaps Mr. Van Cott, in his legal practice, thinks it is a desirable thing to have the plaintiff one of the judges in a case where he is counsel for the defendant, or perhaps he entertains this view only when he becomes a commentator.

V. The fifth fallacy is found in connection with "the tigers." In illustrating the extravagance, as I regarded it, of the statement made by Dr. Storrs respecting the views of the Council as to the exercise of a wise discretion in dealing with members charged with scandalous offences, I used an illustration of a tiger and other animals. Mr. Van Cott finds a fallacy here, because the member charged with a scandalous offence is always a tiger. I beg leave to deny this. The member charged with a scandalous offence is charged with being a tiger—that is the most we can say of him—or is believed by Mr. Van Cott to be a tiger. But he is not, of necessity and always, actually a tiger. I will not press this point, however, at this time. I will only say that my learned commentator is so affected by his office as counsel for the five gentlemen that he treats my illustration as I had no thought of treating it. I used it for a single purpose and, as I conceive, a perfectly legitimate one. The Advisory Council said that "in case a member openly and notoriously abandons all communion with the church, and is also charged with a scandalous offence, the church *may*, to avoid greater scandal, *use a wise discretion* in selecting the offence on which to separate him from its fellowship." Dr. Storrs, in referring to this statement, maintained that it included *any and every case*, and that the Council would even allow "the forger fleeing to Holland" or "the incestuous person at Corinth" to be dropped on account of irregular church attendance. He said that the doctrine of the Council was that, under circumstances as extreme as these, "the church which such a person disgraces is under no binding obligation to the community, to other churches, to the man himself, or to the Lord and Judge of all, to examine the blasting accusation" against him. Comparing this language with the words used by the Council, "made in the exercise of a wise discretion," I thought the eloquent preacher caricatured what we said. With reference to the extravagance of the preacher's statements, I used the illustration which has been mentioned. When I say we may introduce animals into our gardens according to our wise discretion, I do not mean tigers. Mr. Van Cott may not see the point of my illustration, but I think most other persons will perceive it so soon as they read the passages which I have brought into comparison. In my judgment also, those persons who keep their minds free from prejudice will bear me out in saying that the fallacy which the distinguished advocate thinks he has discovered here, is only in his own imagination. The imaginative faculty is one which even an advocate should keep under some restraint when he enters into the work of a commentator.

Mr. Van Cott closes his communication by saying that I "seem greatly agitated by my apprehensions that Andover will persist in calling a council," but that he is "not authorized to say anything to increase or tranquillize my fears." I beg to assure him that "things are not always what they seem," and that my fears have not risen to the point where they need to be tranquillized. If his clients should authorize him to say anything to increase them, I hope he will not hesitate to say it. They do not, however, seem very likely to do so; for, if we may judge from the expressions of the distinguished counsel whom they have employed in Boston, they are at present mainly occupied with their own fears. This gentleman, in his letter to the Chicago *Advance* of April 6 (the same day on which Mr. Van Cott says he is not authorized either to calm or to excite my feelings), uses the following language: "The Andover Church, to quote a professor, will sell out its job *cheap*, if any other church will take it." I suggest to the learned commentator on my epistles that we wait to see what other churches will do in view of this liberal offer.

TIMOTHY DWIGHT.

NEW HAVEN, April 8, 1876.

[As we have now done enough for fair play, we must decline to give further space to this controversy, particularly as it takes more and more the form of mutual castigation. Dr. Dexter's last letter in the *Tribune* in reply to Professor Dwight is in fact a declaration of war *à outrance*, in which we fear both Plymouth Church and its pastor will be speedily forgotten. We are bound to say, with reference to the collision between Professor Dwight and Mr. Van Cott in our own columns, that we think the former has the best of it as regards "Joshua" and the "overflow of Jordan," while Mr. Van Cott has come off victorious as regards "the tiger in the garden."—ED. NATION.]

Notes.

THE official report of the 'Proceedings at the Centennial Celebration of Concord Fight,' issued at the expense of the town by the Committee of Arrangements, is in all respects a credit to the culture as well as the patriotism of her citizens. It makes an elegantly printed volume of 175 pages, adorned with heliotypes of Ebenezer Hubbard (the restorer of the old bridge), of the statue of the Minute-man of 1775, and of the Rev. William Emerson's diary for the day of the fight. Mr. J. L. Whitney, of the Boston Public Library, supplies a bibliography of the Nineteenth-of-April literature.——M. Viollet-le-Duc might easily add a chapter, and a very instructive one, to his 'Habitations of Man in all Ages,' from the data furnished in the newly issued 'Bulletin' of the United States Geological and Geographical Survey (Vol. II., No. 1). It deals with the ancient remains which abound in Southwestern Colorado and the adjacent Territories, and is fully illustrated with a map and with views of the cave and bench dwellings, whose structure and lofty and almost inaccessible situations make them wonders of architecture. One square tower is shown as perched on an egg-shaped or boulder-like mass, of course out of all reach except by a series of ladders. In general they overhang the steepest cliffs. The skilful builders who occupied them were also artists in pottery, and the specimens of shape and ornamentation here figured are truly surprising. The few skulls found are discussed by Dr. Bessels.——The people of Chicago have been naturally elated by the recent assurance of a reversionary interest in an estate valued at something like four millions. The late Walter L. Newberry provided in his will that if his two daughters died without issue one-half of his estate should, on the death of his wife also, be devoted to founding a free public library in the North Division of Chicago. As the city already has such a public library in the South Division, there is little doubt that steps will be taken to merge it in the proposed Newberry Library, especially as the former has as yet no building of its own, and might indifferently be established in either division. Mrs. Newberry survives her daughters.——The fourth edition of the Boston Public Library's little 'Handbook for Readers' bears date of March, 1876. As we have before remarked, its usefulness is not confined to the patrons of that institution. Any one having access to a library of 20,000 volumes or upwards would find it a most serviceable guide. We may also call attention to the broadside "Catalogue Notes on English History," for popular reading, designed to be posted up in the Library or its branches; to which the remark just made about the 'Handbook' applies equally.——J. H. Coates & Co., Philadelphia, have undertaken the publication of a monthly periodical called *Micro-Photographs in Histology*. Each number will contain at least four plates, illustrating one pathological and three normal specimens of tissues, copied directly from the microscopic objects, and printed by one of the mechanical photographic processes. The photographs will be prepared by Dr. Carl Seiler; the descriptive letterpress by Drs. J. Gibbons Hunt and Joseph G. Richardson.

—We regret to record the death of Mr. Robert Kelley Weeks, which took place in this city on Thursday last. Among our younger poets he was distinguished by a shrinking modesty, a refined taste, and a severe standard of excellence, rather than by strength or originality of diction. The earlier readers of the *Nation* will recall his occasional contributions to this journal. Mr. Weeks's health was always delicate, and this circumstance distinctly tinged his writings.

—Two volumes of the revised—the "Centenary"—edition of Bancroft's 'History of the United States' (Boston: Little, Brown & Co.) have been published, the revision having occupied, as the prefatory note states, "a solid year of close and undivided application." It is not often, certainly, that a revised edition of an American work bears such unmistakable marks of conscientious labor; it is in large part rewritten, and its value vastly increased. The ten volumes of the original work are now to be brought into six, the two volumes before us covering the ground of the first three. This is not, however, a reduction in amount—the volumes are thicker and the print smaller, so that, as nearly as we can judge, there are about a hundred more pages of matter. This is not, however, by any means an indication of the amount of new material, for there have been very considerable omis-

sions. The style is not materially changed. Here and there an epithet has been pruned away, but, on the whole, it is the same brilliant, rather exuberant style that it was forty years ago. Nevertheless, some redundancies have been omitted, and some less important facts have made way for new matter. For example, on page 13 of Vol. III. (Vol. II., page 196, of the new edition) the allusions to Greece and Rome have been struck out, and, a few lines before, where England shines "brilliantly as a beacon," the adverb is dropped. So far as we have examined, the changes are almost always for the better. Often new and interesting facts are brought out. For instance, we must say in future that the Mississippi was first seen of Europeans, not by Ferdinand de Soto, but by Cabeza de Vaca (Vol. I., page 31), who discovered one of its mouths. As an illustration of the additions which add essentially to the completeness or perspicuity of statements, we will refer to Vol. I., page 323, where the old edition (page 407) merely says that the Archbishop of Canterbury (Laud) and others were made "an arbitrary special commission for the colonies." The new edition describes the commission more particularly, and adds that "hitherto their affairs had been confided to the Privy Council." The old sub-title, "History of the Colonization of the United States," is dropped—we think unadvisedly. The ten chapters of the first volume still remain ten, and with precisely the same headings, but the subsequent chapters are recast and often subdivided, so as to give in all forty-three chapters in place of twenty-four. The chapter upon the Aborigines, for example (chap. xxii.), is now made into three. The new edition contains no portraits, and—what seems a serious mistake—no references or foot-notes of any sort. The reader can only guess, therefore, at the authorities for the extensive additions.

—We have received from James Campbell & Sons, Toronto, the 'Canadian Parliamentary Companion for 1876' (eleventh year). As we have nothing more nearly like it in this country than Lanman's 'Dictionary of Congress,' we may describe this publication as in the main a biographical register of the personnel of the Dominion Government and of the several confederated governments, to which are added Parliamentary election returns, letters of the party leaders defining their position, and a variety of other useful information. We have been struck, in looking through the Parliament list, with the significant proportion of members who were either educated or born in the United States, or whose ancestors came from here. Among the latter class the descendants of "Loyalists" (or United Empire Loyalists, as they are also designated) appear in such numbers as to prove that the hold of this "caste" is still strong in Canada. Many of them evidently refer the compiler for their pedigree to Sabine with as much complacency as another aristocracy does to Burke. In the provincial legislatures the American infusion is still more prominent—notably in New Brunswick and Nova Scotia, the paradise of the Loyalists—but also in Ontario and even in Quebec. In the House of Commons one member reports that the head of the Canadian branch of his family was kidnapped from New England, when a child, by Indians, and brought to St. François de Yamaska, where he married a young lady who had likewise been kidnapped. Side by side, too, with the "Loyalists" we meet representatives of those Essex County families which emigrated from Massachusetts in 1763–4 and settled on the St. John, where a hundred years ago they made a gallant but unsuccessful effort to cast their lot with that of the revolted colonies; and where (such was the intermarrying in consequence of their being cut off), probably, the purest Puritan stock on the continent is to be found to-day among their descendants. It may be worth remarking that the Loyalist element in politics is overwhelmingly "Liberal," and we believe the same may be said of the American stock as a whole. Members of the Canadian Upper House only are allowed the title of Honorable, and it does not accompany them into private life. The Canadian Cabinet offers a suggestive contrast to ours in its distribution of functions; thus, where we have one Secretary of the Treasury, they have the Minister of Finance, the Minister of Customs, the Minister of Inland Revenue, the Receiver-General, and the Minister of Public Works (*vice* Supervising Architect of the Treasury Department). The fisheries, too, which are under our Treasury's control, are appropriately linked in Canada with the naval interests of the country, and assigned to the Minister of Marine. The tone sought to be maintained in the civil service of our neighbor is illustrated by one of the regulations for the military college at Kingston:

"The name of any cadet expelled for misconduct will be gazetted, and recorded in the offices of the various public departments, in order to prevent his being admitted to any branch of the public service"

The Government announces that by June 1 the Intercolonial Railway, connecting Quebec and Halifax (time, twenty-four hours), will be in running order.

—A writer in the *Academy* (of March 18) advocates an international congress of librarians for a more effective comparison of notes in regard to the arrangement and management of libraries, public and private. For example, he thinks that such a conference would result in a vast economy in cataloguing new books. By a common understanding, "every English book might be catalogued at the British Museum, every French book at the Bibliothèque Nationale, every German book at the Royal Library at Berlin, every Russian book at St. Petersburg, etc. At a trifling expense these printed slips might be sent to every small or large library, and each of them might have three or four catalogues—an alphabetical catalogue of the authors, a chronological catalogue, a local catalogue, a catalogue classified according to subjects, etc. Even when a library is too poor to buy a book, the slip might be useful in its catalogue." A scheme like this, but restricted to the cataloguing of works acquired by our National Library through copyright, was broached in the *Tribune* nearly a year ago. As we pointed out at the time, the cost of printing and distributing the cards and the cost of house-room for the card-catalogue thus obtained were elements of great importance in the problem, which had not thus far been authoritatively discussed, if considered at all. The writer in the *Academy* would doubtless say that just here would be the usefulness of his international congress; and no one is likely to deny that great advantages would certainly accrue from it. Meantime, the national cataloguing which he favors could be achieved without foreign co-operation. A congress of librarians in the United States could be called at any time, and perhaps never more appropriately than during the present year.

—In June, 1868, a public reading-room was opened in connection with the French National Library, in the rue Colbert, Paris. It was especially designed, and its collections were made accordingly, to attract the working-classes, and to furnish them the elements of general self-instruction, with special facilities for acquiring practical knowledge of the various mechanic arts. The hall was opened on Sundays as well as week-days. In point of attendance the experiment has been increasingly successful. Reckoned at 29,000 in 1868, the number of readers last year was 51,000. Just how these are enumerated is not clear from the librarian's report. He gives a count, made on ten successive days, showing that 1,112 individuals visited the reading-room, of whom 857 came but once, 91 twice, and so on to 12 every day. On the average, the daily attendance for 1875 was 144. The working-classes, including under that term petty employés of every sort, have responded to the invitation, but in their choice of reading have disappointed expectation in two ways. In the first place, the majority have not called for works of popular science or technical manuals, but have shown a decided preference for belles-lettres, history, and travels. In the next place, it is observable that works of fiction, which at first seemed necessary to the collection as a bait to the public in question, pass less and less into circulation. The demand for belles-lettres constituted about 42 per cent. of the whole; history and geography, 29 per cent.; science and art, 21; jurisprudence, 7; and theology, 1. In 1875, 80,227 volumes were given out, representing 61,326 séparate works. The public have proved the utility of catalogues prepared to assist them in their reading—"catalogues méthodiques fort détaillés."

—In Petermann's *Mittheilungen* for March 1 the principal map exhibits very beautifully the sedimentary formations of the continent of Europe; among them, those vast Russian coal-fields of which we spoke the other day. The second map accompanies an account of recent missionary explorations on the Baxter River in New Guinea. Among the notices of current geographical literature Dr. E. Behm replies in a dignified and conclusive manner to Capt. R. F. Burton's flourish against him—"A nous deux, Dr. E. Behm!"—in his 'Gorilla Land and the Cataracts of the Congo.' Dr. Petermann points out how slightly, after all, the blank area of Central Africa has been reduced by Cameron's march between the two oceans; we do not know, for instance, whether the Lualaba is the main stream or only a tributary. In short, we still have a Congo problem to replace that of the Nile. Perhaps it is reserved for Mr. Stanley to solve it for us.

—Mr. Darwin's depreciatory remarks forty years ago about Australia are being curiously avenged upon him. Port Darwin, on the northern coast, struggles in vain to grow into a city worth naming after anybody; while the Government of South Australia, of which it is a dependency, despairing of its coming to anything by "natural selection," are making frantic efforts to force it into significance. Our Melbourne correspondent has once or twice expressed his fear that slavery will be introduced into North Australia. We find in the last number of the Berlin Geographical Society's *Zeitschrift* (No. 60) a well-written paper which throws a good deal of light on the inducements to such a retrograde policy. Colonization on

the north coast has proved a decided failure; up to the middle of last year Port Darwin had cost South Australia $1,150,000 above its revenues. The white population of the coast at that date numbered only 470 souls (inclusive of 62 officials)—viz., 330 men, 60 women, and 80 children. Even this was a decline from the first of the year, when there were 700 inhabitants. The shrinkage went on still further, and was overcome only by the Government importing 170 coolies from Singapore; the whites having discovered that Europeans could not endure the tropical climate except as masters and overseers. The coolies, however, proved not hardy enough for the work expected of them at the Yam-Creek gold mines and elsewhere. Chinese were next thought of, but their independent habits, their acquisitiveness, their hope of an early return to China, and the dearth of women among them, made them too objectionable. Meantime, liberal land-laws and glowing official expositions of the agricultural resources of the northern territory met with no response whatsoever. Neither capital nor labor flocked to the scene. "Die Klugen wollten nicht und die Dummen kamen nicht," says our writer. Premiums were then offered for sugar-raising, but nobody appeared to claim them. Now the Government means to follow the successful example of Queensland in settling her northern parts, and to make plantations to demonstrate the capacity of the soil. Last July it proposed also to make Port Darwin, like Singapore, a free city, and seemed to expect that the mere freedom of the port would secure it an importance equal to that which Singapore has won by its exceptional position in the current of trade. The revenue which would thus be lost to the Government does not exceed $30,000. The Port Darwinists have still another trump in reserve: they count the days when the Government will accede to their desire to have a transcontinental railway built beside the present transcontinental telegraph.

—The *China Review* for November and December, 1875 (Vol. IV., No. 3), does not lack for interesting articles, but we have space to mention only the first two. "The Folk-lore of China," which has been running through several numbers, treats here of superstitions as to various subjects, and of ghosts and apparitions, which abound exceedingly in the Middle Kingdom, and the belief in which is not confined to those of human beings. One very amusing story is of Chang and Li, who were partners. Chang pushed Li into the canal, with the view of getting the whole of some collections they had just been making on joint account. On the first anniversary of this little affair Chang fell very ill, and Li's ghost promptly appeared, threatening the "wicked partner" if he should not restore his money to his (Li's) family. Chang promised, but got well and snapped his fingers at the absent ghost, who punctually turned up, however, on the next anniversary, and frightened Chang into actually keeping his promise. But as things all went wrong with him he removed to another place, where, to his amazement, he met Li in the middle of the street, and by daylight. Asking why he is still tormented, Li answers him: "I am no ghost; what do you mean?" Chang explains. "So," cries Li, "it was not an accident my falling into the river? I had neglected to pay due respect to the spirit of my father, and when I tumbled in the river and was nearly drowned, I thought it a punishment for my impiety." The article on the "Chinese Vernaculars," or, as it styles itself, a plea for the cultivation and use of the vulgar tongues in China, seems at first to impose a great task on the missionaries. Take the unwritten speech of Peking, Hankow, Shanghai, Ningpo, Foochow, Amoy, Swatow, and Canton, etc., says the writer, and "it may be contended that there is almost, if not fully, as great a difference between at least some of them as there is between the language of Spain, Portugal, France, and Italy, or say the German, Dutch, and Danish languages, as spoken to-day in Europe." And again, of pronunciation: "At Canton the natives say, and a foreigner if observing can perceive, that there is a difference between the mode of speech in the western and in the eastern suburbs." Nevertheless, the dialectic differences within a large radius of the provincial city are not so great as those which distinguish the Yorkshire peasantry from their fellows in the South of England; and the *languages*—or such differences of idiom as prevent mutual understanding—are not many, so that only a few versions of the Scriptures would be needed for the whole eighteen provinces, "and the readers of each may be counted by millions." "All Northern and much of Central China will doubtless use the Mandarin colloquial," which has already been reduced to writing and has its version of the Bible. Apropos of Mr. Leland's *Fusang*, a correspondent identifies the country with Japan, on the strength of a traditional colossal tree, *Fusao Boku*, which once flourished on the site of the present Fusiyama. "The Chinese characters which in Japan represent the name *Fusao* are pronounced in Chir a *Fusang*." The editor and founder of the *Review*, Mr. N. B. Dennys, we regret to observe, takes his leave of it with this number.

FORSTER'S LIFE OF SWIFT.*

II.

WE cannot properly understand Swift's cynicism and bring it into any relation of consistency with our belief in his natural amiability without taking his whole life into account. Few give themselves the trouble to study his beginnings, and few, therefore, give weight enough to the fact that he made a false start. He, the ground of whose nature was an acrid common-sense, whose eye magnified the canker till it effaced the rose, began as what would now be called a romantic poet. With no mastery of verse, for even the English heroic (a balancing-pole which has enabled so many feebler men to walk the ticklish rope of momentary success) was uneasy to him, he essayed the Cowleian Pindarique, as the adjective was then rightly spelled with a hint of Parisian rather than Theban origin. If the master was but a fresh example of the disasters that wait upon every new trial of the flying-machine, what could be expected of the disciple who had not even the secret of the mechanic wings, and who stuck solidly to the earth while with perfect good faith he went through all the motions of soaring? Swift was soon aware of the ludicrousness of his experiment, though he never forgave Cousin Dryden for being aware of it also, and the recoil in a nature so intense as his was sudden and violent. He who could not be a poet if he would, angrily resolved that he would not if he could. Full-sail verse was beyond his skill, but he could manage the simpler fore-and-aft rig of Butler's octosyllabics. As Cowleyism was a trick of seeing everything as it was not, and calling everything something else than it was, he would see things as they were—or as, in his sullen disgust, they seemed to be—and call them all by their right names with a resentful emphasis. He achieved the naked sincerity of a Hottentot—nay, he even went beyond it in rejecting the feeble compromise of the breech-clout. Not only would he be naked and not ashamed, but everybody else should be so with a blush of conscious exposure, and human nature should be stripped of the hypocritical fig-leaves that betrayed by attempting to hide its identity with the brutes that perish. His sincerity was not unconscious, but self-willed and aggressive. But it would be unjust to overlook that he began with himself. He despised mankind because he found something despicable in Jonathan Swift, as he makes Gulliver hate the Yahoos in proportion to their likeness with himself. He had more or less consciously sacrificed self-respect for that false consideration which is paid to a man's accidents; he had preferred the vain pomp of being served on plate, as no other "man of his level" in Ireland was, to being happy with the woman who had sacrificed herself to his selfishness, and the independence he had won turned out to be only a morose solitude after all. "Money," he was fond of saying, "is freedom," but he never learned that self-denial is freedom with the addition of self-respect. With a hearty contempt for the ordinary objects of human ambition, he could yet bring himself for the sake of them to be the obsequious courtier of three royal strumpets. How should he be happy who had defined happiness to be "the perpetual possession of being well deceived," and who could never be deceived himself? It may well be doubted whether what he himself calls "that pretended philosophy which enters into the depth of things and then comes gravely back with informations and discoveries that in the inside they are good for nothing," be of so penetrative an insight as it is apt to suppose, and whether the truth be not rather that to the empty all things are empty. Swift's diseased eye had the microscopic quality of Gulliver's in Brobdignag, and it was the loathsome obscenity which this revealed in the skin of things that tainted his imagination when it ventured on what was beneath. But with all Swift's scornful humor, he never made the pitiful mistake of his shallow friend Gay that life was a jest. To his nobler temper it was always profoundly tragic, and the salt of his sarcasm was more often, we suspect, than with most humorists distilled out of tears. The lesson is worth remembering that *his* apples of Sodom, like those of lesser men, were plucked from boughs of his own grafting.

But there are palliations for him, even if the world were not too ready to forgive a man everything if he will only be a genius. Sir Robert Walpole used to say "that it was fortunate so few men could be prime-ministers, as it was best that few should thoroughly know the shocking wickedness of mankind." Swift, from his peculiar relation to two successive ministries, was in a position to know all that they knew, and perhaps, as a recognized place-broker, even more than they knew, of the selfish servility of men. He had seen the men who figure so imposingly in the stage-processions of history too nearly. He knew the real Jacks and Toms as they were over a pot of ale after the scenic illusion was done with. He saw the destinies of a kingdom controlled by men far less able than himself;

* 'The Life of Jonathan Swift. By John Forster.' Vol. I. London: Murray; New York: Harper & Bros.

the highest of arts, that of politics, degraded to a trade in places, and the noblest opportunity, that of office, abused for purposes of private gain. His disenchantment began early, probably in his intimacy with Sir William Temple, in whom (though he says that all that was good and great died with him) he must have seen the weak side of solemn priggery and the pretension that made a mystery of statecraft. In his twenty-second year he writes:

> "Off fly the vizards and discover all:
> How plain I see through the deceit!
> How shallow and how gross the cheat!
> . . . . . .
> On what poor engines move
> The thoughts of monarchs and designs of states!
> What petty motives rule their fates!"
>
> "I to such blockheads set my wit!
> I damn such fools! go, go, you're bit!"

Mr. Forster's own style (simpler now than when he was under the immediate influence of Dickens, if more slipshod than when repressed by Landor) is not in essentials better or worse than usual. It is not always clear nor always idiomatic. On page 120 he tells us that "Scott did not care to enquire if it was likely that stories of the kind referred to should have contributed to form a character, or if it were not likelier still that they had grown and settled round a character already famous as well as formed." Not to speak of the confusion of moods and tenses, the phrase "to form a character" has been so long appropriated to another meaning than that which it has here, that the sense of the passage vacillates unpleasantly. He tells us that Swift was "under engagement to Will Frankland to christen *the baby his wife is near bringing to bed*." Parthenogenesis is a simple matter to this. And why *Will* Frankland, *Joe* Beaumont, and the like? We cannot claim so much intimacy with them as Swift, and the eighteenth century might be allowed to stand a little on its dignity. If Mr. Forster had been quoting the journal to Stella, there would be nothing to say except that Swift took liberties with his friends in writing to her which he would not have ventured on before strangers. In the same odd jargon, which the English journals are fond of calling American, Mr. Forster says that "Tom [Leigh] was not *popular* with Swift." Mr. Forster is not only no model for contemporary English, but (what is more serious) sometimes mistakes the meaning of words in Swift's day, as when he explains that "strongly engaged" meant "interceded with or pressed." It meant much more than that, as could easily be shown from the writings of Swift himself.

All the earlier biographers of Swift Mr. Forster brushes contemptuously aside, though we do not find much that is important in his own biography which industry may not hit upon somewhere or other in the confused narrative of Sheridan, for whom and for his sources of information he shows a somewhat unjust contempt. He goes so far as sometimes to discredit anecdotes so thoroughly characteristic of Swift that he cannot resist copying them himself. He labors at needless length the question of Swift's standing in college, and seems to prove that it was not contemptible, though there can be no doubt that the contrary opinion was founded on Swift's own assertion, often repeated. We say he seems to prove it, for we are by no means satisfied which of the two Swifts on the college list, of which a facsimile is given, is the future Dean. Mr. Forster assumes that the names are ranked in the order of seniority, but they are more likely to have been arranged alphabetically, in which case Jonathan would have preceded Thomas, and at best there is little to choose between three *mediocriters* and one *male*, one *bene*, and one *negligenter*. The document, whatever we may think of its importance, has been brought to light by Mr. Forster. Of his other materials hitherto unpublished, the most important is a letter proving that Swift's Whig friends did their best to make him a bishop in 1707. This shows that his own later account of the reasons of his change from Whig to Tory, if not absolutely untrue, is at least unjust to his former associates, and had been shaped to meet the charge of inconsistency if not of desertion to the enemy. Whatever the motives of his change, it would have been impossible to convince a sincere Whig of their honesty, and in spite of Mr. Forster's assertion that Addison continued to love and trust him to the last, we do not believe that there was any cordiality in their intercourse after 1710. No one familiar with Swift's manner of thinking will deem his political course of much import in judging of his moral character. At the bottom of his heart he had an impartial contempt for both parties, and a firm persuasion that the aims of both were more or less consciously selfish. Even if sincere, the matters at issue between them were as despicable to a sound judgment as that which divided the Big and Little-endians in Lilliput. With him the question was simply one between men who galled his pride and men who flattered it. Sunderland and Somers treated him as a serviceable inferior; Harley and Bolingbroke had the wit to receive him on a footing of friendship. To him they were all, more or less indifferently, rounds in the ladder by which he hoped to climb. He always claimed to have been a consistent Old Whig—that is, as he understood it, a High-churchman who accepted the Revolution of 1688. This, to be sure, was not quite true, but it could not have been hard for a man who prided himself on a Cavalier grandfather, and whose first known verses were addressed to the nonjuring primate Sancroft after his deprivation, to become first a Tory and then a conniver at the restoration of the Stuarts as the best device for preventing a foreign succession and an endless chance of civil war. A man of Swift's way of thinking would hardly have baulked at the scruple of creed, for he would not have deemed it possible that the Pretender should have valued a kingdom at any lower rate than his great-grandfather had done before him.

The more important part of Mr. Forster's fresh material is to come in future volumes, if now, alas! we are ever to have them. For some of what he gives us in this we can hardly thank him. One of the manuscripts he has unearthed is the original version of 'Baucis and Philemon' as it was before it had passed under the criticism of Addison. He seems to think it in some respects better than the revised copy, though in our judgment it entirely justifies the wisdom of the critic who counselled its curtailment and correction. The piece as we have hitherto had it comes as near poetry as anything Swift ever wrote except 'Cadenus and Vanessa,' though neither of them aspires above the region of cleverness and fancy. Indeed, it is misleading to talk of the poetry of one whose fatal gift was an eye that disidealized. But we are not concerned here with the discussion of Swift's claim to the title of poet. What we are concerned about is to protest in the interests of good literature against the practice, now too common, of hunting out and printing what the author would doubtless have burned. It is unfair to the dead writer and the living reader by disturbing that unitary impression which every good piece of work aims at making, and is sure to make, only in proportion to the author's self-denial and his skill in

> "The last and greatest art, the art to blot."

We do not wish, nor have we any right to know, those passages through which the castigating pen has been drawn.

Mr. Forster may almost claim to have rediscovered Swift's journals to Esther Johnson, to such good purpose has he used them in giving life and light to his narrative. He is certainly wrong, however, in saying to the disparagement of former editors that the name Stella was not invented "till long after all the letters were written." This statement, improbable in itself as respects a man who forthwith refined Betty, Waring, and Vanhomrigh into Eliza, Varina, and Vanessa, is refuted by a passage in the journal of 14th October, 1710, printed by Mr. Forster himself. At least, we know not what "Stellakins" means unless it be "little Stella." The value of these journals for their elucidation of Swift's character cannot be overestimated, and Mr. Forster is quite right in insisting upon the importance of the "little language," though we are by no means sure that he is always so in his interpretation of the cipher. It is quite impossible, for instance, that ME can stand for Madam Elderly, and so for Dingley. It is certainly addressed, like the other endearing epithets, to Esther Johnson, and may mean My Esther or even Marry Esther, for anything we know to the contrary.

Mr. Forster brings down his biography no farther than the early part of 1710, so that we have no means of judging what his opinion would be of the conduct of Swift during the three years that preceded the death of Queen Anne. But he has told us what he thinks of his relations with Esther Johnson; and it is in them, as it seems to us, that we are to seek the key to the greater part of what looks most enigmatical in his conduct. At first sight, it seems altogether unworthy of a man of Swift's genius to waste so much of it and so many of the best years of his life in a sordid struggle after preferment in the church—a career in which such selfish ambitions look most out of place. How much better to have stayed quietly at Laracor and written immortal works! Very good: only that was not Swift's way of looking at the matter, who had little appetite for literary fame, and all of whose immortal progeny were begotten of the moment's overmastering impulse, were thrown nameless upon the world by their father, and survived only in virtue of the vigor they had drawn from his stalwart loins. But how if Swift's worldly aspirations, and the intrigues they involved him in, were not altogether selfish? How if he was seeking advancement, in part at least, for another, and that other a woman who had sacrificed for him not only her chances of domestic happiness, but her good name? to whom he was bound by gratitude? and the hope of repairing whose good fame by making her his own was so passionate in that intense nature as to justify any and every expedient, and make the patronage of those whom he felt to be his inferiors endurable by

the proudest of men? We believe that this was the truth, and that the woman was Stella. No doubt there were other motives. Coming to manhood with a haughtiness of temper that was almost savage, he had forced himself to endure the hourly humiliation of what could not have been, however Mr. Forster may argue to the contrary, much above domestic servitude. This experience deepened in him the prevailing passions of his life, first for independence and next for consideration, the only ones which could, and in the end perhaps did, obscure the memory and hope of Stella. That he should have longed for London with a persistency that submitted to many a rebuff and overlived continual disappointment will seem childish only to those who do not consider that it was a longing for life. It was there only that his mind could be quickened by the society and spur of equals. In Dublin he felt it dying daily of the inanition of inferior company. His was not a nature, if there be any such, that could endure the solitude of supremacy without impair, and he foreboded with reason a Tiberian old age.

This certainly is not the ordinary temper of a youth on whom the world is just opening: In a letter to Pope, written in 1725, he says, "I desire that you and all my friends will take a special care that my disaffection to the world may not be imputed to my age; for I have credible witnesses ready to depose that it hath never varied from the twenty-first to the fifty-eighth year of my age." His contempt for mankind would not be lessened by his knowledge of the lying subterfuges by which the greatest poet of his age sought at once to gratify and conceal his own vanity, nor by listening to the professions of its cleverest statesman that he liked planting cabbages better than being prime minister. How he must have laughed at the unconscious parody when his old printer Barber wrote to him in the same strain of philosophic relief from the burthensome glories of lord-mayoralty!

Nay, he made another false start, and an irreparable one, in prose also with the 'Tale of a Tub.' Its levity, if it was not something worse, twice baulked him of the mitre when it seemed just within his reach. Justly or not, he had the reputation of scepticism. Mr. Forster would have us believe him devout, but the evidence goes no further than to prove him ceremonially decorous. Certain it is that his most intimate friends, except Arbuthnot, were free-thinkers, and wrote to him sometimes in a tone that was at least odd in addressing a clergyman. Probably the feeling that he had made a mistake in choosing a profession which was incompatible with success in politics, and with perfect independence of mind, soured him even more than his disappointed hopes. He saw Addison a secretary of state and Prior an ambassador, while he was bubbled (as he would have put it) with a shabby deanery among savages. Perhaps it was not altogether his clerical character that stood in his way. A man's little faults are more often the cause of his greatest miscarriages than he is able to conceive, and in whatever respects his two friends might have been his inferiors, they certainly had the advantage of him in that *savoir vivre* which makes so large an element of worldly success. In judging him, however, we must take into account that his first literary hit was made when he was already thirty-seven, with a confirmed bias towards moody suspicion of others and distrust of himself.

The reaction in Swift's temper and ambition told with the happiest effect on his prose. For its own purposes, as good working English, his style (if that may be called so whose chief success was that it had no style at all), has never been matched. It has been more praised than studied, or its manifest shortcomings, its occasional clumsiness, its want of harmony and of feeling for the finer genialities of language, would be more often present in the consciousness of those who discourse about it from a superficial acquaintance. With him language was a means and not an end. If he was plain and even coarse, it was from choice rather than because he lacked delicacy of perception; for in badinage, the most ticklish use to which words can be put, he was a master.

The Orphan of Pimlico, and other Sketches, Fragments, and Drawings. By William Makepeace Thackeray. With some Notes by Anne Isabella Thackeray. (Philadelphia: J. B. Lippincott & Co. 1876.)—Those who have read Thackeray with pleasure have always enjoyed his sketches and drawings, though possibly those who have put the highest value upon his literary qualities have not been quite ready to admit that he made a mistake in abandoning the pencil for the pen. We confess for our part that the broad caricatures with which the pages of 'Vanity Fair' are illustrated have always seemed to us to blunt rather than sharpen the point of the author's delicate satire, and we have almost felt a pang of regret that he had not been willing to allow us to form an idea, for instance, of the good Dobbin less hopelessly loutish and commonplace than the illustrations represented him. At the same time, how much we should have lost! In the 'Orphan of Pimlico' (a slight sketch of a story, with drawings, which serves the purpose of christening the volume before us), we have a considerable collection of Thackerayan odds and ends that no lover of his can fail to enjoy, collected by his daughter, and published in a luxurious edition. In looking them over, we have found most entertainment in the playing-cards, a complete pack of which, it appears, Thackeray originally intended to turn out. Only a few were done, and of these the one with which the caricaturist himself was, as his daughter says, best pleased is a three of spades made up with very slight changes, except the mutation of the handles of the spades to human noses, and the addition of wigs and clothes, into "Mr. Gibbon, Mr. Boswell, Mr. Johnson." The likenesses are very good. In the same way the ten of clubs becomes an Assyrian battle-scene; the eight of the same suit is used to illustrate a quotation from the second part of Henry IV., and so on. The volume also contains some amusing negro and negro-minstrel sketches (Thackeray was in this country in the heyday of negro-minstrelsy, when "Lucy Neal" and "Dandy Jim" were the accepted African types), and a letter from New York, containing the following lively description of the city: "The entrance to the bay is beautiful; the magnificent woods of the Susquehannah stretch down to the shore, and from Hoboken Lighthouse to Vancouver's Island the bay presents one brilliant blaze of natural and commercial loveliness. Hearing that Titmarsh was on board the steamer, the Lord Mayor and Aldermen of New York came down to receive us, and the batteries on Long Island fired a salute. General Jackson called at my hotel. I found him a kind old man, though he has a wooden leg and takes a great deal of snuff. Broadway has certainly disappointed me; it is nothing to be compared to our own dear Holborn Hill. But the beautiful range of the Alleyghanny Mountains, which I see from my windows, and the roar of the Niagara Cataract, which empties itself out of the Mississippi into the Oregon Territory, have an effect which your fine eye for the picturesque and keen sense of the beautiful and the natural would, I am sure, lead you to appreciate. . . . The house where Washington was born is still shown, but the General, I am informed, is dead and much regretted." Miss Thackeray's share in the work is chiefly noticeable for the thoroughness with which she has collected her material, and the earnestness with which she has done her best to throw any light that could be thrown upon the meaning of some of the more enigmatical sketches. She might, it seems to us, have done less of this with profit, or rather might have done it with profit in a less formal manner.

Cyclopædia of the Practice of Medicine. Edited by Dr. Hugo von Ziemssen, Professor of Clinical Medicine in Munich, Bavaria. Albert H. Buck, M.D., New York, editor of American Edition. Volumes I., II., III., V., X., 1874–5. (New York: William Wood & Co.)—The difficulties in the way of those who wish to know the whole of medicine are really insuperable; yet, without wishing to be an encyclopedist, one may properly desire to read and digest a good part of such a work as the present, with its distinctness, its businesslike style, and its avoidance of the unknown. The work we here notice is one of the most important of those now before the medical public. It is composed of a series of monographs, by a large number of German authors, upon the various classes of disease. The American edition or translation is to be complete in sixteen volumes; and while nothing in the execution of the work shows haste, yet there is every likelihood that the work will be completed punctually, as promised, in quarterly instalments. In this respect it contrasts pleasantly with the 'Nouveau Dictionnaire de Médicine et de Chirurgie Pratiques' and with Reynolds's 'System of Medicine,' which are its rivals in England and France. The very best talent is at work upon it in Germany; as for the translation, it is mainly by American hands, a few Englishmen and Irishmen being engaged upon it, and is very satisfactory upon the whole. The contents of the present five volumes are as follows: I. and II. Acute Infectious Diseases (typhoid, cholera, dysentery, diphtheria, malarial fevers, influenza, erysipelas, variola, etc.), by Liebermeister of Tübingen, Lebert of Breslau, Hänisch of Greifswald, Heubner of Leipzig, Oertel of Munich, Thomas of Leipzig, Curschmann of Berlin, Zülzer of Berlin, Hertz of Amsterdam, Ziemssen of Munich. III. Chronic Infectious Diseases (syphilis, glanders, anthrax, hydrophobia, cysticercus, etc.), by Bäumler of Erlangen, Bollinger of Munich, Heller of Kiel. V. Diseases of the Respiratory Organs, by Jürgensen of Tübingen, Hertz of Amsterdam, Rühle of Bonn, Rindfleisch of Würzburg. X. Diseases of the Female Sexual Organs, by Schröder of Erlangen.

The mechanical execution of the work is extremely good. It may be an objection that the volumes are too large and heavy to be easily held.

Fine Arts.

THE NATIONAL ACADEMY EXHIBITION.

II.

MR. JARVIS McENTEE sends in a cluster of landscapes. The languor which winter possesses, in distinction from its sharp blue moods—a languor which commands and deadens the nerves as completely as the most enervating languor of spring—is what this painter represents with the utmost closeness and subtlety of interpretation. His pictures this year, hung in juxtaposition, seem like so many panes in a casement, opening on the same horizon, the same day, in the same sad land. He is singularly successful in giving the dull vibration of skies muffled with cloud, through which the light struggles here and there, while the greater part of the view is soft with vapory gray in which the bare trees branch like sea-weeds under water. His dramas are perilously simple, depending altogether upon quality, and quality he seldom misses. One of his scenes this year is autumnal rather than wintry, though it is not the fruitful and vintage-yielding idea of autumn, but the bereavement and reverie. The leaves are hurrying down in eddies from a tall grove, and a woman in mourning dress stands fixed in the thickest part of their fall. The tree which especially confers the shower is perhaps a little too fountain-shaped, a little too conscious and voluntary in helping out the idea of leaf-shedding, resembling some of Blake's marginal tree-growths which likewise bend and bestow; our landscapists must remember that scenery is not allegory. The foreground in this picture (202) is a thick strewing of leaves upon water—the majority turning up their ribbed, nether sides, as they mostly do in nature—their abject flatness on the plane of the black wintry pond indicated with almost architectural precision. No. 206, "The Closing Year," has the same foreground of leaves upon water, admirably rendered and easily seized upon for approval; but it is the tone of these pictures, not so easy to indicate, but subtly expressing the tenderness of the frost, which makes them good. This group of pictures is, perhaps, the most fatally bad instance of the pernicious hanging of each painter's contribution together, as practised the present season. It is most unjust to the artist; for if his thoughts for the year have happened to run in the same vein, the similarity of his works is most strongly and unjustly emphasized by putting them side by side; if his pictures are in strong contrast, as, for example, Mr. Moran's, the very difference of effect, fitted and shaped as must needs be upon the unmistakable personality and individuality of the painter, confers a harlequin air most ruinous to sentiment and dignity; while if the exhibitor has innocently ordered a few canvases of the same size, their propinquity reacts on the exhibition, giving it a low, shoppy look than which nothing can well be worse.

Mr. Homer is marked for suffering, in the unkind style of hanging practised at the exhibition. His style, which never sins in the way of excessive modulation, looks bald as patchwork. The committee work their will, and four of his large flats come sliding over the stage to meet each other. Yet Mr. Homer gives us this spring the most admirable sketch he has made since the period of his war-pictures. The exulting freedom with which his brush ripples over the canvas, No. 194, in which a fresh sea is cloven by the fisherman's boat, while his little boys drink in the health and breeze of the young day, is for Mr. Homer a revelation. He has never told a story so well, nor has his pithy economy of expression in telling a story ever become him more. The boatman's bare-foot boy who sits upon the thwart, and whose bright eye evidently sees such enormous horizons as he looks through the curl of spray shaved up by the keel, is as clean-cut a piece of work as the best figure ever blocked out for a shipbuilder by the marine sculptor. The sense of motion, as the vessel leans on the wave, and the inlay of bluish shadow and warm golden white upon the sail, where the shade of the mast falls into its broad lap, are both expressive of the open air, as though quite out from shore. The picture is a thorough-built marine, conveying the illusion that no dust could ever possibly settle upon it. Another painting (193) of Mr. Homer's is almost the equal of this in sincerity and uncontaminated cleanliness of idea. Two girls, with that peculiar moral freshness which characterizes Mr. Homer's girls, and which in some of them becomes a kind of handsome hardness, are walking among the hills, knee-deep in clover; the four-leaved shamrock which one sister has found is balanced by the bouquet of red maple-leaves in the hand of the other. The sense of dustless air, of pastured hillsides, and wholesome maidenhood is perfect enough, but it must be confessed the painter has gone to a considerable expense to get it. His breadth of view becomes breadth of flatness; and the present picture, highly characteristic of a large class of Mr. Homer's work, suggests that if he could represent his hill on a Japanese box in two lacquers, upon which the women should be inlaid, their dresses corresponding in value with one of the colors, and their heads just cutting across the hypothenuse, his secret ideal would be satisfied. It is impossible to treat ungratefully the artist who has given us No 194, but we cannot but think it extraordinary that a person to whom ideas come so abundantly and graciously should frequently throw up the image of some slight sketch-book page upon a screen large enough to furnish a lecture-room.

Mr. La Farge, in his sole contribution (188), has another picture with a very high horizon, but it is not in the least like lacquer, and not in the least Japanese. It is a view, from some upper window, of an adjacent line of shore, the point of sight being unusually high, so that nearly all the scene is filled by the broad green lake of summer grass. A thread of blue ocean stretches across the distance, up to which the verdant pasture reaches all the way, as it does at Paradise, near Newport—intersected in the present view by idle-looking lines of stone fence. A lamb, in the perfect sense of security inspired by the scene, has strayed away from the flock without fear, and lies down in the foreground, all alone with the spectator. This lamb is very well drawn, and is the only piece of drawing in the whole large picture, all the rest of which is pure *qualité*. The "quality" of green in the far-stretching field, the "quality" in the gulf of air which is felt to sink upon it, and the "quality" in the faint bands of heated sea and sky, are what compose the effect. The view is an unusual one to choose, of course, and in its bald features, or approaches to feature, may be called American. In treatment, however, this painting, which owes everything to treatment, is distinctly of the *outre-mer*. No American master—from Cole and Doughty to Cropsey, Kensett, and Church—ever laid paint on so, or made it express this faint haze and respirable warmth. Few European painters would have chosen just such a view, perhaps, and it does not seem to us that empty fantasies of such a kind, demanding an enormous *tour de force* from the painter, and much willingness and a grand effort of sympathy from the spectator, ought to be very often painted, whether in Europe or America; but the merit and influence which make it worth looking at as it hangs, are the gift of other shores and traditions.

Taine's Ancient Regime.

Large 12mo, green cloth, $2 50.

"The principal literary event of the year. The work is altogether the most important one ever undertaken by its author."—*N. Y. Evening Post.*

". . . Strikes us as far superior to his former productions."—*London Saturday Review.*

". . . The literary event of the day. . . . The whole book is to be read."—*Tribune Paris Correspondent.*

". . . Extracts cannot give the reader a proper idea of the grace and charm which pervade nearly every page of this wonderful book."—*N. Y. Evening Post Paris Correspondent.*

BRINTON'S THE RELIGIOUS

Sentiment. Large 12mo, $2 50.

BRINTON'S MYTHS OF THE

New World. Large 12mo, $2 50.

"Justifies the belief that, in whatever Dr. Brinton may in future contribute to the literature of Comparative Mythology, he will continue to reflect credit upon himself and his country."—*North American Review.*

DOYLE'S HISTORY OF THE

United States, in Freeman's Course. With Maps by F. A. Walker. 16mo, $1 40.

PACKARD'S (PROF. A. S., Jr.)

IN THE LEISURE-HOUR SERIES.

$1 25 each.

MISS MOLLY. By Beatrice May Butt. (Second edition called for within a week.)

"A charming little tale, of a slight kind, but without a flaw in it. . . . Miss Butt has both the requisites for writing a good novelette: she can amuse you, and she can make you enter into the heart of a true and tender passion."—*London Spectator.*

ERSILIA. By the author of 'My Little Lady.'

FRASER-TYTLER'S JONATHAN.

MRS. ALEXANDER'S HER DEAREST FOE.

VERS DE SOCIETE. 1 vol.

GIFT'S PRETTY MISS BELLEW.

MRS. OLIPHANT'S WHITELADIES.

WALFORD'S MR. SMITH.

HENRY HOLT & CO., 25 Bond St., N.Y.

The Household Art Co.

OF BOSTON

Will hold a Second Annual Sale at KURTZ'S GALLERY, Madison Square, on THURSDAY and FRIDAY afternoons, May 4 and 5, at 2 o'clock promptly, comprising

Artistic Furniture of special design and decoration for the Library, Dining-Room, etc., etc.;
Cabinets, Chiffonniers, Brackets, Chairs, Tables, etc., etc.;
Brass Fire-Dogs, Inkstands, Candlesticks, Wall Lights, etc., etc.;
Venetian and Illuminated Mirrors, etc., etc.;
Pottery, both antique and modern, a rare variety, etc.

All of the best workmanship and finish. Exhibition on and after Monday, May 1. Sale peremptory.

ROBERT SOMERVILLE, Auctioneer,
Corner Thirteenth Street and University Place.

MARTINEAU ON 'MATERIALISM: Its Relation to Theology,' A REJOINDER to PROFESSOR TYNDALL,

In *ECLECTIC MAGAZINE* for April.

Sent, postage prepaid, on receipt of 45 cents.

E. R. PELTON, Publisher, 25 Bond Street, N. Y.

The Nation.

NEW YORK, THURSDAY, APRIL 27, 1876.

The Week.

THE only thing that can be said with any approach to confidence about the Presidential canvass is that Bristow's chances, if one may judge by the press, seem to improve. Fresh declarations for him appear every day, and the charges made have thus far only benefited him, as they have all been completely disposed of. As regards Mr. Blaine, who may be said to be his only formidable competitor, the tide happens to be running strongly against politicians and persons skilled in the political art, and Mr. Blaine has been imprudently displaying more of this kind of skill than people like. His recent performances in Congress have shown want of an accurate knowledge of the popular temper, and a disposition to rely on expedients which, however useful they may have been at one time, have now little force, and in fact excite suspicion, for the public is very indifferent about questions, and has its attention almost wholly fixed on character. Mr. Blaine's enemies, too, show a disposition not to be satisfied with his late explanation of the Little Rock and Fort Smith matter, and pretend to find a justification for doubt in the sudden departure of one of the witnesses, Hayes, for Europe. Morton's arrangements at the South for bringing in pledged delegations to aid him in the defence of "human rights" seem to have broken down, and he is now so well known as an unprincipled and brassy schemer that he will probably be no more thought of outside of his own State. Among the Democrats, the only man who seems to be making any headway is Mr. Tilden, and, judging in the same way, he is "developing strength" very remarkably, has apparently crushed the opposition in this State, and grows in the Democratic imagination—at the South certainly, and probably in the West—as the time draws near. Mr. Boutwell is said to have been fondly spoken of by Mr. Dawes as his "first choice," and we should not be surprised if Mr. Boutwell returned the compliment; but the matter is hardly likely to go further. It is in the meantime amusing to notice the spread of hostility to "Favorite Sons." These eminent men are now never spoken of in the papers or on the platform but with sneering opprobrium.

Mr. Blaine has made a formal reply in the House to the charge against him which has been for some time afloat, that (in substance) he had made a bad investment in bonds of the Little Rock and Fort Smith Railroad in Arkansas, and that the Union Pacific Railroad Co., which had favors to expect of Congress, had lent him $64,000 on the bonds, or had taken up a loan of that amount made him by others on the bonds as collateral, after the bonds had become worthless. He denies flatly ever having received money by loan or otherwise, directly or indirectly, from the Company in question, and fortifies it by denials equally explicit from the officers of the Company, and from the bankers (Morton, Bliss & Co.) through whom the transaction was said to have been carried out. He explains that he did invest in the bonds above-mentioned, and lost heavily by it, and holds the bonds still; acknowledges that the Little Rock and Fort Smith road was indirectly indebted to the Government for a land-grant, but this was made before the war, and only reached the road through the State of Arkansas, which was really the donor; that the Atlantic and Pacific and Missouri, Kansas and Texas roads did take about $100,000 of the stock of the Little Rock and Fort Smith to help it to complete its connection with them, but that Mr. Blaine only benefited by this, if at all, as a person interested, like the other stock and bond holders, in the success of the road; and that in any event this transaction was a common and legitimate one. In fact, as far as allegation can go, Mr. Blaine has vindicated himself. The only thing further he could do would be to submit his proofs to an investigating committee; but this does not seem necessary, because there is nothing cloudy in the statement. So far, however, from regarding the accusation and defence as things to be deplored, we think they form part of a very healthy process, which is gradually bringing public men to a sharper perception of the proprieties of political life, with regard to gifts, favors, and pecuniary interest in enterprises directly affected, or likely to be directly affected, by legislation.

The Big Bonanza managers have at length shown their hand. Their game was for higher stakes than a market for $50,000,000 of silver change; this having been secured, they propose that the double standard shall be restored. Perhaps Mr. Sherman hesitated at covering so much ground at one stride; in the bill which he reported from the Finance Committee, it is proposed that a silver dollar shall be authorized to contain 412.8 grains, and that it shall be a legal tender for sums not exceeding $20, except for customs and interest on the public debt; and that it shall be exchangeable for United States legal-tender notes, the latter to be cancelled and credited to the Sinking Fund. This bill advances one step beyond the subsidiary coin bill. Mr. Bogy of Missouri moved an amendment, which makes the proposed silver dollar a full legal tender; this he supported in a "powerful" speech. The Senate has passed the Deficiency Appropriations Bill, and the House has, by a vote of 139 to 94, passed the bill for the transfer of the Indian Bureau to the War Department. The bill goes into effect after July 1. Officers will be detailed from the army to take charge of Indian affairs, and the commanding officers of departments will be *ex-officio* at the head of Indian administration within their departments. All contracts are to be made in the same way as those for the army. All religious sects are to have equal rights in the Indian Reservations.

When Mr. Jones of Nevada first made his appearance in the Senate, it never entered into any one's mind that his owning a rich silver mine made him an authority on currency or any cognate question. He brought himself into notice, however, by a sharp, pointed, and, in many respects, able reply to the inflationist absurdities which Morton, Cameron, Logan, and the like were then producing, and which were then justly alarming and amazing the commercial community. But Mr. Jones owed most of the fame of his effort to the surprise it created, and the relief it caused as coming from a Western Senator. It did not raise him in any way to the rank of a financial authority. He has apparently been deceived by it himself, however, into making a long speech this week advocating a double standard, and abounding in the follies and fallacies which Morton used to pour forth about paper-money. In fact, his plea for silver is substantially the same as Morton's for the "battle-born greenback," and the disuse of it as a legal-tender in England and Germany he ascribes to the same cause to which Morton and Logan ascribed their hostility to paper-money, namely, the dislike of the "money-kings" to the poor man's money. The English "plutocrats" like gold because it is a British product, he says, and is scarce and dear, and their imitators on the Continent follow their example. Silver, on the other hand, like paper, is an American product, and is cheap and plenty, and therefore fine money for the poor man. True, it fluctuates greatly in value, and is now falling rapidly—a circumstance which, to the selfish aristocratic financier, seems to unfit it to be a standard of value; to Mr. Jones, however, this is a strong recommendation, because the more it falls the better for "the debtor class." When it rose, the "creditor class" benefited by it; it is now only fair that the debtor should have a chance—with ever so much more of the

same familiar nonsense, and all in the Centennial year. The fact is that Mr. Jones has silver to sell, and his speech ranks with the ordinary "patter" of the razor-and-knife man in Wall Street.

General Belknap, who has the assistance of some shrewd lawyers, is engaged in making rejoinders to the pleadings of the Impeachment managers. He now declares that Marsh's story to Mr. Clymer's committee would not have supported articles of impeachment, but so affected persons nearly "connected with him by domestic ties" as to "greatly afflict him, and make him desire to secure the suppression of that part of the evidence at any cost"; that, therefore, he proposed to the committee that this evidence should be suppressed, while he should admit the receipt of the post-tradership money, "contrary to truth"; that the committee declined this proposition, but that Mr. Clymer declared to him (Belknap) that he should move for impeachment unless Belknap resigned on the next day, March 2, and that, believing Clymer to mean this as a hint that the scrape might so be avoided and reputation saved, he did resign; and that therefore (as we understand the argument) the House is estopped to deny the arrangement made by its agent, Clymer, by which the resignation was procured, or to take any advantage of it now. We would suggest to General Belknap's lawyers that they should not confine themselves to the law of agency, replete as that is with learning on the subject of impeachment. The law of landlord and tenant would furnish them several valuable defences, as, for instance, that in politics a notice of a Congressional investigation is equivalent to a "notice to quit," and *ipso facto* terminates the tenancy, making the tenant or office-holder a mere tenant at sufferance, and not possessed of any real term or office.

The Committee examining into the expenditures of the Department of Justice have discovered that Davenport, the United States Commissioner, received by the express direction of the President large sums of money ($35,000 is the amount given by Davenport, but this seems to be within the mark) for "preventing frauds" in the elections in this city between 1870 and 1875. The story told by Davenport, who is one of the tribe of "detectives" produced by the war, and was, he says, on General Butler's staff in charge of "scouts and spies," is that in 1868, apparently to his great surprise and sorrow, he discovered "the most atrocious frauds"; that he then "consulted with members of the Union League Club," and got the election laws of 1870 and 1871 passed, providing stringent penalties against fraudulent voting; that he then went to work and spent $10,000 in unearthing frauds; that, finding he "was being impoverished" by the good work, he went to the President and asked whether he could not be paid for it out of the Secret Service Fund; that the President thought it might be done, and accordingly issued orders to that effect. We believe there is nothing in the story more than this, and it does not convict the President of anything more than the same kind of disregard for law and liking for arbitrary government that he has frequently shown before. There was nothing in the election laws of 1870–71 to authorize any such payment of money, and the payment of $35,000 to philanthropists because they are "impoverishing" themselves in the prevention of frauds is not a use to which public moneys can be safely put, without at least very careful supervision of the expenditure, which in this case seems to have been entirely dispensed with. It must be perfectly obvious, however, that the whole thing was a job of Davenport's, who got the President to let him have money to prevent frauds in elections just as Sanborn got the Treasury to give him money for detecting frauds after they had been committed. In all these cases the detective comes to Washington, represents himself as horrified at the frauds which some class or other is committing or going to commit, produces his accounts showing that he is beggaring himself in unearthing them, and immediately receives an appointment to continue the good work and pay himself out of the Treasury. It is not the way to carry on the work of government, but it is the way the work of government just now is carried on.

The scandals connected with the Emma Mine have naturally led mining engineers and geologists into a discussion of the duties devolving upon them with regard to reports to "vendors," purchasers, and other interested parties. The *Mining Journal* has very well summed up the tables of the moral law on this head in an article which it might be of some benefit to Professor Silliman to read. The *Mining Journal* thinks that it is the right and may be the duty of the expert to "protest against partial publications, leading to false impressions of his views"; declares that he should avoid "vague generalities which can be misunderstood or misused"; and adds that any one who talks about the "immense" or "inexhaustible" resources of a mine "is simply signing a blank certificate which others may fill out with as many millions as they choose to name." With regard to the price of mines, it points out what seems as yet to have escaped the notice of the Emma investigating committee, that the risks involved in mining are so great that the annual dividend required to support the stock must be proportionately high. "In a region where 2 per cent. a month is paid on secured call loans, a mine ought to promise 100 per cent. Even in California, where the rate of interest is not half so high, 40 or 50 per cent. is the annual dividend required to support the price of a mining stock on exchange. The usual rate of dividend from metal mining (except in those rare cases in which the certain results for years are positively calculable) should be from three to five times the rate of ordinary interest. Evidently, foreign and domestic capital should be invested on the same terms. But this is not the usual practice. Mines are sold in New York or London because investors in those places are attracted by the prospect of returns which are not in San Francisco considered sufficient to cover the risks." This has an important bearing on the Emma Mine enquiry. The dividends talked of by Park—18 per cent.—were really absurdly low, and would have been no attraction whatever to persons familiar with mining property. That is to say, if the mine had paid 18 per cent. on $5,000,000, its proper price would have been not $5,000,000, but at the outside $2,500,000.

There has been a small revolution in Chicago, resulting in the ejection from office of a good many of the office-holders, and the substitution of others who represent the wishes of the taxpayers as distinguished from the "bummers." The popular excitement seems to have threatened at one time a resort to violent measures; overflowing meetings were held, and the probable effect upon the "bummer" faction of hanging to the nearest lamp-post some of its leaders was at least discussed with interest. The rising was in some respects like that against Tweed and the Ring in this city, and will result for the time in an improvement of the condition of the affairs of the city. The whole trouble, there as here, as we have so often observed, is that the good citizens do not perform their political duties by going to the primaries and seeing that none but good men are nominated for office. We trust they will now begin at once, and not suffer the bad men to have it their own way any longer.

The sixty days allowed by the Advisory Council for the production of charges against Mr. Beecher having expired, the Examining Committee of the church is availing itself of the privilege allowed it under these circumstances of calling on the Committee of Three to empanel the Commission of Five to make further enquiry into the case; and the Three are now understood to be at work convening the court. The *Christian Union* requests us to say that Mr. Beecher's friends also desire the kind of trial described by us a fortnight ago as desired by the Andover party, and that they have issued "a general invitation to any one who thought he knew anything against Mr. Beecher to act as prosecuting attorney before the Commission," and, meeting with no response, have offered the place in succession to Professor Smyth and Drs. Storrs and Budington; but it does not say with what result. It adds

that the Andover plan "proposes a trial without any prosecutor, or even any charges to prosecute or reply to, and for their trial it proposes a struck jury, selected one-half by Mr. Beecher's friends and one by his scarcely-concealed enemies, the inevitable result of which must be a divided verdict and a broken court." Of the Commission of Five, on the other hand, it says that it is "a tribunal composed of men against whose judicial fairness no one has yet ventured to say a word, and whose opinions, if they have any, have not been made public." To all of which the obvious reply is, that the Commission of Five, whatever its character, is and will be the creation of Mr. Beecher's friends or of persons who believe in him, and that neither his enemies or accusers nor any impartial body will have either art or part in its formation. It would be, therefore, even if dealing with an ordinary and obscure matter, an unfit tribunal, and one before which Mr. Beecher's accusers cannot fairly be expected to appear either as attorneys or witnesses. It ought surely to have occurred to the *Christian Union* that one very probable reason for the absence of any impeachment of the fairness and competency of the Five is that up to this moment nobody knows who they are to be.

Since the above was written, however, Mr. Moulton has made a proposal for the trial of the case which, as it seems to us, it is impossible for Mr. Beecher, either in the character of an honorable man or of a religious man, to decline, if he cares for any opinion but that of his own church. The proposal is that (1) the parties shall go to trial before the court of law in the case now pending on the single issue that Mr. Beecher committed perjury in procuring Moulton's indictment for libel, all technical objections to be waived, and all witnesses admitted, and the jury to be chosen either by ex-President Woolsey or Mr. George C. Robinson, one of Mr. Beecher's deacons; or (2) before three referees, one to be named by each party, and a third by these two; or (3) before twelve men—six selected by Mr. Thomas G. Shearman and Mr. Edward Beecher, and six by two persons named by Mr. Moulton, *the majority to give the verdict*. This offer cannot, we repeat, be refused with impunity. Moulton is not a looker-on, but Mr. Beecher's trusted friend during the four most trying years of his life, and Mrs. Moulton, whom Mr. Beecher has openly accused of perjury, was also his friend during the same period, and is now a member of a Christian church, in good standing.

Sealed proposals for the $5,883,000 United States 5 per cent. bonds, constituting that part of the *Alabama* Indemnity Fund which it was found necessary to sell to liquidate adjusted claims, were opened at the Treasury at Washington on Monday. Proposals were filed by twenty firms, banks, and companies; the entire amount of these proposals was $68,330,000. Ten proposals were for the entire lot, and these alone made an aggregate of $58,883,000; the largest proposal of the remaining $9,447,000 was for $2,500,000; the next largest was for $1,500,000; there were two for $1,000,000 each; and the remainder were for $500,000 each, that having been the smallest amount for which a proposal could be filed. The highest bid was 103.78$\frac{7}{8}$; it was made by Messrs. Drexel, Morgan & Co. for a syndicate composed of themselves, Messrs. N. M. Rothschild & Sons and J. S. Morgan of London, and Messrs. August Belmont & Co. The bonds were sold for gold, and the price obtained was nearly the market price at the time the proposals were opened. As the *Alabama* claimants are to be paid in currency, the gold received for the bonds is to be sold by the Treasury on the 27th instant. The actual price which the Government receives for the bonds will not be known until the gold is sold.

The Bank of England, which has now nearly 48 per cent. reserve, on Thursday last reduced its minimum discount rate to 2 per cent., and the other discount houses of London are taking prime three-months' bills at as low a rate as 1½ per cent. per annum. At the New York Stock Exchange, the tendency of prices has been downwards, and such substantial properties as the coal railroads have suffered most during the week. The value in gold during the week of $100 greenbacks has ranged between $88 39 and $88 88. The Treasury began paying out silver for fractional currency on Wednesday, and at the Sub-Treasury here less than $100,000 has come out, and for the whole country less than $400,000. This has been from no unwillingness to take it, as probably $4,000,000 to $5,000,000 would be readily taken for pocket-pieces, but because the Treasury has not taken the proper means to supply the demand.

Malietoa, King of the Samoan Islands, has dismissed Steinberger, the *bouffe* emissary sent out by the State Department to improve the ways of the South Sea Islanders, from his position of Premier, on the ground that he is "a liar and an impostor"—ground quite sufficient, we suppose, for the dismissal of any premier. The commander of a British man-of-war took possession of him at the king's request, and placed him under arrest. Steinberger's career appears to have been that of what is popularly known as a "fraud." There was no reason for sending him to the Samoan Islands, and he therefore got himself sent; knowing nothing of diplomacy, he was commissioned as a sort of diplomatic agent by the Administration; and, knowing nothing of either the Southern Seas or of their inhabitants, or of government, civilized or uncivilized, he induced the poor Samoan savages to believe him sent there by a powerful and distant potentate, a Great Father or Brother of the Sun and Moon, or something of the sort, to make them his children and introduce prosperity and progress among them. He accordingly set up a kind of *bouffe* monarchy, with a South Sea House of Lords and Commons, a judiciary, a body of constitutional law, in which, of course, the king was to play the part of lay-figure, while he, Steinberger, administered affairs. The whole affair was a pure farce, and the wonder is how Steinberger got anybody to play it with him.

Mr. Cave's report on the condition of Egyptian finances has been published, with the Khedive's permission, and, though it shows that it is not as bad as it was feared, it furnishes another illustration of the misfortune it has been to semi-barbarous countries to be admitted to the money markets of the world on the same footing as civilized borrowers. The importance of Egyptian, any more than of Turkish, finance to the world outside is not, however, due by any means so much to the amounts involved, or to the prospects of the debtor states, as to the probable effect of their embarrassments on the immediate future of European politics. Mr. Cave gives a deplorable account of the wastefulness and folly of Egyptian administration and of the condition of the Egyptian civil service, which in many important particulars resembles our own, as indeed does the civil service of all barbarous countries. The present revenue is about $55,000,000, and the expenditure, which cannot be cut down, somewhat less; but there is a floating debt, even after the receipt of the $20,000,000 for the Suez Canal shares, of $91,215,000, and it is this which is now driving the Khedive frantic and filling France and England with vague alarm. There has been an idea in London that the Khedive's private estate, which was supposed to be enormous, would somehow be brought to the relief of the public credit if the worst came to the worst, but it now appears that the total revenue from this source is only a little over $2,000,000, and that this, too, is heavily burdened, both with funded loans and a large floating debt of unknown amounts. This statement Mr. Cave made up from figures furnished him by the Egyptian officials, as they would not allow him to see the books or even enter the Treasury building, so we probably do not know the worst. The floating debt is mostly held in France, with the results described by our correspondent on another page. Mr. Cave shows, however, that if the administration were reformed, the unproductive or only remotely productive expenditure stopped, and the whole debt funded in a consolidated bond, Egypt would be able to meet all her liabilities; but this could only be done under European superintendence, which would almost amount to the government of the country; and the question now is whether England will do it alone, let France and Italy do it, or do it in combination with them.

THE POLITICAL USE OF SCANDAL.

WE are not about to attempt any general defence of the methods of the daily papers in the matter of collecting and publishing gossip injurious to the peace or character of private persons, when we say that there has been of late a great deal of ill-considered talk about the recklessness of the press in recent rakings-up and diffusion of charges against public men. Sometimes this comes from orators who are troubled, and not unnaturally, by the effect which the course of the newspapers has in diminishing popular respect for public officers; sometimes from editors who are friendly to the Administration or to the Senatorial Group, and are exasperated by the discredit which the production of "charges" throws on the Republican party; and in both cases we are treated to homilies on the immorality of evil-speaking and tale-bearing. General Hawley delivered one such discourse, unfortunately for him, only two or three days before the Belknap explosion, and others appear every now and then in the columns of papers which still expect "reform within the party," and count upon the continued usefulness of the party. If, however, we look back over the assaults of the press upon prominent public men during the last ten years, we venture to say it would be impossible to discover much, if any, foundation for this view of the matter. We have examined most of what has been said or written on this subject for specific instances of the persecution of men in positions at all prominent without justification or probable cause, and we have not lighted upon one. It is true that charges were made affecting the personal integrity of General Grant in a very reckless way prior to his re-election in 1872, but they were not very long persisted in, and in most cases were promptly refuted. This illustration apparently makes against our position, but only apparently; for it must be admitted that the history of his Administration now clearly shows that the tendencies and associations which have resulted in the recent exposures were then actively at work, and, if the character of the President still remains unimpeached, it is due to the resolute and charitable refusal of the public to apply to him the old-fashioned rule that a man must be judged by the company he keeps. In other words, although the attacks of the papers were wild or altogether false, there existed a state of things which made them in some degree excusable, or at all events prevented their being utterly wanton.

If we now turn to the other men who have been made the object of charges, and who were persistently followed up after they had had reasonable opportunity for defence, we venture to say it would be impossible to point out a single case of gross and prolonged injustice. Who is the man in public life at any time during the past ten years, on whom the press has fastened as corrupt or slippery, who to-day stands before the world as completely vindicated? In some instances, the papers have got hold of the wrong charge, but rarely, if ever, of the wrong man—that is to say, if the persons attacked had not done what they were attacked for doing, it generally turned out that they had done something else of the same character. The newspapers, in other words, have been almost always correct in their charges; their errors have been in their specifications. Of course, this shows that "trial by newspaper" is by no means an admirable thing, by no means a process by which a public man ought to stand or fall. It does not deal out exact justice; it occasionally deals out gross injustice; but it does, on the whole and in the long run, put the public on the track of the wrong-doer. It calls attention to the fact that he has fled, indicates the direction he has probably taken, and follows his trail until the proper authorities are able to secure him.

In these days of strong party spirit this service, rough and clumsily performed though it may be, is one of very great value. The legislature is theoretically the grand inquest of the nation, but occasions may arise, as the history of the last fifteen years has shown, when the majority of the party in power may be so great and the party self-confidence so deep-seated as to cause total abandonment of the inquisitorial function. Since the outbreak of the war, as everybody knows, the Republican party has refused to enquire into abuses, partly through overweening confidence in its own strength, and partly through the conviction that the dangers against which it was guarding the Government were so tremendous as to make administrative corruption of comparatively little moment. Under these circumstances, and during this long period, the press has furnished almost the only check upon fraud and venality in every department. It has made or brought about nearly all the disclosures of official misconduct in municipal, State, and Federal politics with little or no help from the machinery of government, and in the teeth of the powerful efforts of the rings and professional politicians of every grade to throw discredit on it. It was easy to throw discredit upon it, we do not deny, but it has been instrumental in bringing a large number of criminals to justice; and that it has done but little injustice to innocent men we most positively assert. Its general estimate of character has rarely been mistaken.

It must also be said that the charges so frequently made against public men are the offspring and the result of widespread and deep-seated suspiciousness; and this suspiciousness has not been created by the press, and is not wanton. It has grown out of the salient facts of our political and financial history since 1860. From the outbreak of the war until 1873 there was an upward movement in all branches of business and in all industrial enterprises. Nearly every undertaking was in a certain sense prosperous; everybody who had the art of making money was making it, and the great masters of finance were doubling their fortunes in a year. The national and State legislatures and municipal corporations were feeding the flame of this activity by grants and donations and loans which brought the political and the speculative classes into close and intimate relations. Nearly every prominent politician had a speculation of some kind under his wing. The great operators had each a small army of friends or relatives or dependents whom they were helping to make a little money in stocks or bonds. The consequence was that large numbers of people became corruptionists often without knowing it. Politicians accepted favors from financiers often without perceiving the effect it was going to have on their independence, and great railroad promoters came to look on the corruption of legislatures as a legitimate portion of their construction expenses.

The panic of 1873 suddenly sobered people, and turned their eyes to the position they were in and the road they were travelling. The "shrinkage of values," as it is called, and the disappointment of hopes consequent on the panic, brought to light a great number of transactions which would not bear the light, and which, but for the panic, would never have seen the light, and exhibited a good many leading men in relations in which certainly no one ever expected to find them. It is not surprising that under these circumstances the temper of the public should be fierce, fretful, and doubting, and if it should call upon even the most respectable men in political life to give an account of themselves. We view with a sort of melancholy satisfaction the process of liquidation, as it is called, which is going on in the commercial world. We console ourselves, looking at the long lists of frauds and failures which are presented to us every month, by the reflection that, to borrow the phrase in common use, the "rotten concerns are being rapidly weeded out," that "we are getting rid of the dead wood," that "we shall soon touch bottom," and that the process of healthy recovery will then set in. Now, the public sees no reason why there should not be "liquidation" in politics as well as in business, why embarrassed statesmen should not submit their books and file their inventory and retire as well as embarrassed traders, or, at all events, why a politician any more than a merchant should object to having those who trust or employ him look into his affairs; and the public is not far wrong. This is not a time for great touchiness, and is certainly not a time when any man can safely take his stand on his dignity. We have a general mixture of classes and conditions. All trades and callings run into all others. There has been a complete breakdown of the conventional barriers which formerly restricted men in their modes of making money. It is with the utmost difficulty that the press has succeeded, after years

of hard fighting, in getting the Government to stamp with reprobation the promotion of a joint-stock company by a national Minister in the country to which he was accredited. We have seen a doctor of divinity, whose whole life has been passed in pastoral duties, accept unblushingly a commission from the Treasury, which he must, if fit to be a pastor, have known was a job, at a high salary, for performance of duties for which he knew he was totally unfitted. We have seen religious newspapers, for a commission, helping speculators to sell worthless bonds to some of the poorest people in the community. In fact, it has seemed at times of late years as if a man had only to call a thing a "business transaction" in order to release himself in carrying it through from all the restraints hitherto imposed by religion, morality, and manners.

Under these circumstances, it is not surprising and it is not improper that the public should call upon every man who offers himself or is offered by his friends as a candidate for high office, to tell how much money he has and how he got it. The origin of a man's fortune and his pecuniary history are in fact, at this crisis in our affairs, of more importance if he be a candidate for the Presidency than his opinions upon any question of national politics. Dishonesty and connivance at dishonesty are the plague just now of our politics, and dishonesty or an easy temper with regard to dishonest practices ought to be therefore an absolute disqualification for office. As American life now is, and is likely to be for many generations to come, it is not indecent or inquisitorial to require that any man who seeks to take charge of the Government shall make plain to all the world the amount of his fortune and the mode in which he acquired it. The accumulation of money by secret and obscure means has been in all civilized countries in all ages a proper and needful source of discredit, and there is no reason why it should not be so here.

THE WORK OF A REFORM PRESIDENT.

THE intense personal interest which the struggle over the nomination and election of a President causes is so great that there is always danger lest in the midst of it we lose sight of the serious objects which lie behind the mere struggle for place, and which alone give it any meaning. The natural tendency, as the campaign grows warmer, is for all those actively interested in it to look more and more upon the election of the particular candidate they favor as an end in itself, superior even to the attainment of the ends for which the nomination was originally made. This is peculiarly the case in the present campaign, because the nature of the questions now before the country is such that the candidate occupies a far more prominent position than the platform he stands upon, if, indeed, this year there can be said to be any distinctive platforms at all. Every month, as the summer goes on, there will be a stronger and stronger feeling, not only that the salvation of the country depends upon this or that particular man, but that this or that man once elected, the country will be saved, and we need trouble ourselves no more about it.

This, however, is far from being really a true view of the matter. The election of the best of all possible Presidents, and the overwhelming defeat of General Grant and the "Senatorial Group," will release the country no doubt from the disgrace under which it labors now, but, so far from being the end, it will be only the beginning of any real reform. When the good President whom we all hope to see elected is fairly installed in the White House, he will not be able, as some people seem to believe, by this simple fact to "return to the ways of the Fathers," but he will find himself face to face with exactly the same system of political intrigue and corruption which is now at work, and which if it be not upset by him will make him its tool. The dilemma which he will find he has to meet will be that in theory the patronage is in the hands of the Executive, while in reality it is in the hands of Senators and Members of Congress. As a reformer, he will be bound in making all his appointments (and this will be the main work of the first year of his term of office) to enquire solely into the fitness of candidates; as a practical politician, he will be required to ask, "Whom do Ben Butler, Conkling, Simmons, Cornell, and Sharpe (or their counterparts in the other party if he is a Democrat) want to have put in?" There are, as we know by sad experience, two ways out of this difficulty. One is that which was tried by General Grant, of making a pretence of attempting a reform in the system of appointments by taking them from Congress, and then of giving way at the first show of resistance, throwing himself into the hands of the Senatorial Cabal which is really the present seat of administrative power, letting them make the appointments for him, and protesting at the same time that he is doing as well as he can under the circumstances; that it is necessary in politics to be "practical" and make "compromises"; and that it is hopeless to try to carry on a government in opposition to the advice of "influential leaders," and finally winding up by filling the offices with Belknaps, Babcocks, MacDonalds, Joyces, and Averys. This is one way of meeting the difficulty. The only other way is to determine at the outset that the system must be broken up, to defy the politicians to do their worst, and to fall back on popular support for vindication. This is what a reforming President will have to begin his term of office with, so that instead of his election proving the signal for a general "era of harmony," it will be the signal for a sharp and deadly battle between him and the system as it exists, headed by every senator and member of Congress who has a place to fill, with a following made up of the vast hordes of people who live by the trade of politics. It would not be at all surprising if the first result were to be a dead-lock between Congress and the President, the Senate refusing to confirm the President's appointments unless he agreed at least to "pool" nominations with them.

We have not the least question that the country would come to the support of a President capable of taking such a stand, and it is to such a struggle as this that we look forward as the most desirable issue from the present chaotic and disheartening condition of politics. But it is for this very reason that the selection of the proper man for the work that is to be done in the next four years is of so much more importance than even the temporary defeat of the present corrupt régime. What the times demand is a man who, if elected, will go to Washington firmly convinced, not that "good men should be appointed to office"—everybody is convinced of that—but that under the present system good men cannot be put into the offices, and that the way to fill the offices with good men is therefore to strike at the roots of the system itself. In looking for such a man, too, we ought to remember that Grant's Administration should have taught us at least one thing, that we are not likely to find the qualities we need in any man who is either "a part of the thing to be reformed," or whose associations, tastes, and general tone of character are of a low order. The next President must not merely recognize that it is politically unwise to touch pitch. He must shrink instinctively from the defilement of it. If there were not such serious interests at stake, there would be something ludicrous, in the light of what we know (and might have always known) of General Grant's associations and friendships, in the idea that he ever could have been a reformer. A man who selects his associates and friends from that class of society which we may call the Boss class, whether he does so because he thinks Bosses carry too many guns to be despised, or because he really enjoys their society, puts himself into such relations with them that it is impossible for him to be any longer a free man. Down to the Grant period, this fact was recognized by all Presidents; and the spectacle of the head of the Government going about, as we may say, junketing with Bosses all over the country, accepting dinners, testimonials, and "gifts" from them, driving with them, smoking with them, and making himself one of them, was unknown. General Grant, however, has changed all that, and with the natural result. It is impossible for a man to put himself in such a position without incurring obligations, and when the time came for firmness we had weakness instead. There will be just as many Bosses in the country after the election this autumn as there are now, and they will have the aid and support of the Whiskey Ring, Safe-Burglars

and Post-Traders, and all the Babcocks, Harringtons, Butlers, Jaynes, Camerons, Mortons, and Conklings; and the question is whether the next President will make himself their tool or defy them. He cannot, in the work he will have to do, first use them to get power and then throw them aside. He must be either their master or, as General Grant has become, their puppet.

THE HOUSE OF LORDS.

LONDON, April 8, 1876.

AMID the multitude of interesting subjects which are touched upon in that wonderful curiosity-shop of literary, social, and political articles of virtu, 'Lord Macaulay's Life and Letters,' just published by his nephew, Mr. Trevelyan, one cannot fail to be struck by the tone of grave and sometimes bitter foreboding which he uses in speaking of the future of the House of Lords. He fears for "a constitution in which a reformed House of Commons found itself face to face with an unreformed House of Lords." "Nobody," he says, "seems to care one straw for what the Peers say about any public matter." . . . "The institution of the Peerage is evidently dying a natural death"; and so on through different pages in his biography. And yet Lord Macaulay was not a man to whom the Cassandra vein came naturally. His mind was too robust and his temperament too buoyant to permit him to indulge in gloomy vaticination upon any subject, whether private or public. He had nothing of the croaker about him. His native self-confidence and his cheerful disposition and warm heart would not admit of any participation in pessimist opinions. It was not in the man to brood. We must look, therefore, at the times he lived in when these suggestions of future evil were given forth.

For many years previous to 1832 the House of Lords was undoubtedly an institution which wrought more evil than good in the land. To give a single instance, what could have been more pregnant with evil to the state than the perverse resistance which the House of Lords offered to the passing of the Reform Act—a resistance carried to the verge of a revolution which must have steeped the country in the blood of a civil war? Lord Macaulay lived through these tempestuous times, and realized the peril in which his country was plunged by the obstinacy of the hereditary branch of the legislature. But had he lived till now, and seen the rapid development of popular and proletariat forces which are so powerful in England at the present day, I cannot help thinking that he would have regarded the institution whose downfall he seemed to view without trepidation with greater favor than his letters seem to indicate.

Between 1832 and 1867 the House of Lords performed many foolish and some dangerous experiments upon the temper and forbearance of the people, of which perhaps the most notable was the rejection of the Paper-duties Bill in 1860. But during these years the House of Commons was, upon the whole, a sober-minded, independent body of English gentlemen, sent to Parliament to do the bidding (within the exercise of their own unfettered judgment) of a sober-minded and intelligent body of electors. The measures favorably received by such a body of English gentlemen were *prima facie* reasonable measures, calculated to enhance the welfare of the people at large, and in no sense violent or revolutionary. The chances were that any strong opposition offered by an hereditary body of legislators to measures emanating from a House of Commons so constituted was factious and unreasonable; and, if we look through the records of the transactions of the House of Lords during these years, we shall find that seven-tenths of the work which they executed was mischievous. It was obstructive, and it was directed against the reasonable wishes of a reasonable body of representatives elected by the flower of the people. But their obstructiveness never went the length of that of 1831 and 1832; the mischief that they did was more in matters of detail than in matters of principle. Their tendencies always were, and, in the nature of things, must always be, conservative. They have everything to lose and nothing to gain by change, and they cannot help looking at what comes before them from the point of view of their own order. Until 1867, accordingly, we find that their action was for the most part favorable to measures introduced by Tory ministers when such ministries happened to be in power, and hostile to measures introduced by Whig ministries. They prevented some good Whig proposals from becoming law; they postponed the passing of others until in recurring years they were forced by public opinion to let them go; and they took the Whig marrow out of many others. More than once during these years ominous queries were going about as to the utility of the House of Lords as an institution, and doubtful answers given that it was worth preserving just so long as it behaved itself, and did not attempt to play the part of a separate and dominant oligarchy, overriding the other estates of the realm. But we have fallen upon different times. The revolution—that first step towards imperialism—perpetrated by Mr. Disraeli in 1867, the effects of which were felt for the first time in the recent election of 1874, has changed much of the feeling in the country which was hostile to the House of Lords. We begin to feel that the institution of a body of hereditary legislators, who are above and independent of the dangerous influences attendant on popular representation, is a real safeguard in the state.

Members of the House of Commons are no longer independent men. So great is the desire for a seat in Parliament that the electors are able to make their own terms, and those who dictate the terms are neither the wisest nor the best in the constituencies. Rather they are the noisiest and the wildest. In more than one borough constituency which I could mention, the fact that a candidate is supported by the more respectable classes of electors is prejudicial and not unfrequently fatal to his chances of success. The lower orders of voters are jealous of the higher orders, and, being numerically superior, they can carry the man who pledges himself to carry out their wishes or who panders to their jealousies. The success of Dr. Kenealy at Stoke-upon-Trent is an instance in point, and many others suggest themselves to any one who is familiar with the general character of English constituencies.

In these circumstances the utility of the House of Lords is obvious. Individual members of the Lower House are swayed by the impulses of the least reasonable in their constituencies, and the Government of the day, when parties are divided equally, desire to catch the votes of the individual members. Hence they must legislate down to the desires and impulses of the tail of the constituencies. The present Government are carrying out this policy of legislation with reckless indifference to the real good of the community. During the two last sessions they exerted themselves to please individual classes in the state to whom they were under obligations or from whom they look for favors—the clergy, the licensed victuallers, the shopkeepers, the trades-unionists, and the metropolitan slaughter-house keepers. This year they have gone down a peg even beneath these classes. They have pandered to what the newspapers have called "the imperial instincts of the people." Abroad they have initiated a flashy, shallow policy, which imposes upon no one, and which can bring nothing but ridicule and contempt upon the country. At home, they have taken the first step towards debauching the lower section of the electorate, and have inaugurated a political move that even an unimaginative critic may regard as the foreshadowing of the "panem et circenses" policy of the evil days of Roman imperialism. This year's Budget, rightly nicknamed a "Bribery Budget," proposes to increase the income tax (a tax which Mr. Disraeli in his address to the electors of Buckinghamshire in 1874 promised indirectly to repeal) on all incomes over £400 a year, but to relieve the lower incomes even of that which they now pay. In other words, it is proposed to remit taxation on the mass of the borough electors, and impose taxation on the shoulders of the wealthier minority. The class, therefore, that has the voting power in its hands, and consequently the initiation of policy, and especially of foreign policy, is relieved of all anxiety as to the consequences of extravagance. It may drive the country into reckless waste and feel no evil effects, while the minority, which bears the burdens, is powerless to withstand the more numerous but irresponsible majority. Such barefaced pandering to the demos is unprecedented in our time. Philanthropists in this country have flattered it; tyrants have scorned it in time gone by; and agitators have excited it. It has been left to Mr. Disraeli's Ministry to attempt its corruption by unscrupulous and unblushing bribery.

It is as a check on these extravagances and demoralizing practices that the House of Lords can best exert its independent authority. It has precisely the same capacities for good or evil in legislation that the other House of Parliament enjoys in all measures which come before it except—and here is the difficulty—in measures relating to taxation. A "Money Bill" may be thrown out by the House of Lords, but it may not be amended. A "Bribery Budget" therefore, it is true, cannot be dealt with by the Upper House. The Commons are jealous of their privileges in money matters. We are, therefore, at the mercy of an unscrupulous minister with a mechanical majority at his back in all matters affecting taxation. We must therefore submit to this, the first instalment of "the bread and games" policy. But in all other matters affecting the welfare of the state the House of Lords has, in theory at least, a legislative authority co-ordinate with that possessed by the representatives of the people; and of late the House of Lords has not scrupled to exert this authority. Last session an act for the prevention of adulteration of food passed both Houses. In the Commons the Government, scrupulous lest the interests of fraudulent shopkeepers (who are

also voters) should suffer, insisted, in the face of hostile divisions, on relieving the adulterators of all responsibility unless it was shown that the adulteration was effected "knowingly." The Opposition, acting in the interest of the public and not of a class, endeavored vainly to omit this word. The bill went to the House of Lords, and the word was omitted without a division. So, in the Conspiracy Bill of last session, the House of Lords introduced certain provisions against the interests of the trades-unionists which the majority in the popular assembly declined, or were afraid, to sanction. These are but passing instances of the value of an independent house of legislature, which might easily be multiplied. This session the Liberal section of the House of Lords has already done good service in the sense that they have spoken out boldly on matters of importance wherein their testimony is more valuable than the testimony of the Commons. On the Oxford University Bill men like Lord Granville, Lord Morley, and Lord Carlingford have not hesitated to raise up their voices with no uncertain sound against the retention of clerical restrictions. So on that most unfortunate measure, the Royal Titles Bill, a very important body of Peers have entered their protest against the proposal to import the Imperial style upon the ancient monarchy—a protest which, even in our last extremity in this bad business, we fondly hope may have some influence upon our aged, and perhaps hardly responsible, sovereign. Party considerations, no doubt, were too powerful for the good sense and taste of the minority of the House of Lords. But the outspoken and independent words of even the minority are of immense value to the country while we are still under the domination of Mr. Disraeli and his majority. So long as that domination lasts we are not ashamed to say, with something approaching to fervor, "Thank God, we have a House of Lords!" or, at least, a Liberal minority in that House who are not afraid to speak the truth.

FRANCE AND EGYPT.

PARIS, April 7, 1876.

IT was once said of Louis Napoleon: "Il ne parle jamais, il ment toujours." It might sometimes be said of the French press: "Elle parle toujours et ne dit jamais rien." It is curious to notice, for instance, how little has been said about the mission of M. Outrey to Cairo. While Mr. Cave's name has been in the mouths of all Englishmen for the last month, while every newspaper has been discussing the character, the importance, the object of his mission, there has been nothing said in France about M. Outrey, and I doubt if he is much more widely known, at the present moment, in Paris than he was a year ago. The democratic press is much more occupied with the amnesty, the nomination of the new prefects, the validation or the invalidation of the new deputies, than with the defence of French interests in the East.

The mission of M. Outrey to Egypt has, nevertheless, a very great interest; and if the Duc Decazes wanted to have in Egypt a representative of France thoroughly conversant with the traditions, the habits, the people of the country, he could have made no better choice. The Outreys are what we call a Levantine family. In the time of Louis XIV. they were already the commercial and political agents of France in the East. They have for two centuries given consuls to France in the East. This tradition has, however, been broken in our time. M. Outrey, who has now a special mission in Egypt, has represented France in Japan, and if our relations with Mexico could have been renewed he was marked for the post of Mexico. He was in Paris, in what may be called the reserve of diplomacy, when he was asked by the Duc Decazes to go to Cairo, where he had long been consul-general.

We do not know, of course, the tenor of his instructions, and his was essentially a secret mission. But light has been pouring from all directions on the affairs of Egypt. What is perhaps not so well known is the transformation of public opinion in France in relation to the affairs of Egypt since Mr. Disraeli bought his shares of the Suez Canal. Lord Palmerston had always opposed, as much as was in his power, the scheme of the canal and the efforts of M. de Lesseps. It was found, however, not only that the canal could be made, but that it would become perforce the great road to the East, and England's line of communication with India. The imperial dependence of India has become the great prize of England's ambition; her small armies can no longer play in Europe the part which they did in old times; England sees new and powerful unities forming on the Continent, and absorbing those small states of which she once boasted herself the protector. But it is not in the nature of Great Britain to be timid and modest, and the English nation has never adopted the views of the economist school in foreign matters. England must have a field for her energy, and India is more and more becoming that field. Whatever may be the technical defects of the operation made by Mr. Disraeli when he made England an important partner in the Suez Canal, I believe that he gave satisfaction to the national feeling in England. When he made his *coup de théâtre* the national feeling was not aroused in France. We perfectly understand that England will never shut the canal against anybody in time of peace, and in time of war she will shut it whether she owns shares or not against her enemies. We have the satisfaction of having promoted the canal, and dug it, and we still hold the largest number of shares in the enterprise. France has completely renounced all idea of conquering Egypt, and she has done well. "En politique," said once to me a great diplomat, "il faut des idées simples." What is or ought to be for France *l'idée simple?* Of course there is but one, which I need not express, for it suggests itself at once to the mind of a patriot. The possession of Egypt, the primacy of Egypt, is not an *idée simple;* it is one of those old traditions which sleep in the bureaux of the Foreign Office. To me the idea of opposing at present the French influence to the English influence on those petty fields of Morocco, Tunis, Greece, Egypt, seems almost childish. Why should we compromise for a small object our good relations with England, which ought to be carefully preserved for a distant and simple objective? It is perhaps idle in such matters, and even under our Republican régime, to speak of public opinion. There is really no public opinion in France about Egypt and the Khedive, except perhaps among the holders of Egyptian bonds. It is for the leaders of opinion to frame and to choose a policy. Are they to begin war against England on that little field of Egypt or not?

The question, if it were put in this plain form, would be very easily answered; but unfortunately many private interests are mixed up with the public interest. The last Empire allowed the creation in France of some banks which are almost state institutions, and their statutes have permitted them to enter into speculations which are of a dangerous character. Such is the great institution called the *Crédit Foncier*, such is the *Crédit Agricole*. Now, it is no mystery among well-informed financiers that these establishments, which were instituted in the interest of French agriculture (they are essentially mortgage companies), have taken a more cosmopolitan view of their mission. The Khedive has been treated as the greatest landed proprietor in the world. These banks have in their hands an amount of his bonds which is somewhat alarming. The credit of the Khedive and of Egypt (it is one and the same thing) has become too important an element in the credit of an institution which, I regret to say, has somewhat the character of a state institution, as the state chooses its governor and has much to do with its operations. This is a very unfortunate complication; to say things brutally, and at the risk of making absurd suppositions, if the Khedive should fail as Turkey has failed, there would be in Paris a financial crisis which the Government wishes to avoid. The credit of the Khedive must, by all means, be maintained; such has been the theory of our administration and of the French financiers. The French public has somewhat lost its faith in Eastern finances; the collapse of Turkish credit is now complete, and it will, perhaps, be difficult to make the new Egyptian loan acceptable to our capitalists. Left to himself, the Khedive would find but few friends here at present; but if he has the support, or even what may be deemed the support of France, if by some device his credit may be represented as being placed under the responsibility of France, then there is no doubt that the new operation will be highly successful. Our great banks will place in the hands of the public the bonds with which they are now overburdened. Our ingenious financiers have spread for the last few days a rumor which is destined to facilitate their intended operations. A note, it seems, has come from Russia; and what said this note? It informed Marshal MacMahon that Russia had decidedly made up her mind to go into the Eastern question hand-in-hand with France. It was only after an interview between Prince Orloff and the Duc Decazes that it was decided that Egypt must be helped by all means, with or without the help of England. The patriotic gentlemen who spend their time at the Exchange speak of the coming Egyptian loan as "a national operation." You are almost looked upon and branded as a bad citizen if you express any doubt about the credit of Egypt.

Has there been an offer on the part of Russia to France of concerted action in the East? I do not know; but it seems strange that this diplomatic effusion of Prince Gortchakoff should have come so conveniently for the holders of Egyptian bonds; that Russia should have embarked so quickly in so great an enterprise as the division of the inheritance of the sick man; and that she should have taken for an ally in the coming "war of succession" the power which is now the least prepared to go to war. It is strange that Russia should invite France to help the Khedive, when she gives not a sixpence to the great Sultan and gloats over his bankruptcy. Surely, if Russia intends to take Constantinople and offers us Egypt, there

is no reason why the Khedive should not be allowed to become a bankrupt, like his lord the Sultan. The policy of a country like Russia is not conducted by fits and starts; there is a certain sort of continuity in the history of states as well as in the development of every man. It is quite true that Prince Gortchakoff has been startled by the book of Klaczko on the "two Chancellors"; that his enemies at home are secretly enjoying his anger at being represented as the tool and unconscious instrument of Bismarck. It may be that he feels a sudden impulse to "do something," as people say here when they don't know what to do; but to embark in the Eastern question with no better help than the Egyptian Khedive and the knot of international financiers who call themselves the "high finance" in Paris, without any assurance of procuring the active support of the Republican party, which is now in the ascendant in France, would be a very imprudent and extraordinary enterprise.

However, it is not for us to examine how far Prince Gortchakoff may or may not go; our duty is to care first for France, and not to embark in what I might call a new Mexican war. Egypt is not as far off as Mexico, but anything which might lead us in an emergency to an armed occupation of the valley of the Nile would be a great peril. If the *Crédit Foncier* and the banks which form "syndicates" with this great state establishment are placed in possession of the Egyptian railroads, if they become the masters of the Egyptian custom-house—if Egypt, in one word, is pawned by the Khedive—we might be led some day or other to interfere more than we might find convenient in the government of Egypt, and there will be a continual pressure of the Egyptian bondholders on the French Government in view of this dangerous possibility. We have gone back to the "age of gold," and one of its most extraordinary characteristics is the new combination of diplomacy and finance which has become so scandalously apparent lately in Eastern affairs. Have you not a proverb saying that it is better to lose your money and keep your credit? The Turkish Government can hardly follow this advice; it has lost money, credit, and all. Egypt might have become very prosperous under a good administration, but no distant European interference will ever alter the character of its administration; and whoever reads Mr. Cave's report must have little hope for the financial future of that country. We hope, therefore, that France will not get entangled in its affairs. Committees may be appointed and commissioners named to control the receipts; no commissioners will be allowed to control the expenses. The Ottoman Bank in Constantinople has not had the slightest influence over the internal administration of Turkey. What will two French and Italian commissioners in Cairo be able to do to eradicate the vices of an absolute government?

Notes.

HURD & HOUGHTON announce for early publication a translation of Julian Klaczko's 'Two Chancellors.'——'Free, Yet Forging Their Own Chains,' a story of the Pennsylvania mining regions; and 'Familiar Talks with Boys,' by the Rev. John Hall, D.D., are among Dodd & Mead's announcements.——D. Appleton & Co. will publish 'Uncontradicted Testimony in the Beecher Case,' compiled from the official records by the Rev. Lyman Abbott; 'The Warfare of Science,' by President Andrew D. White; a 'Life of James W. Grimes,' former Governor of Iowa and United States Senator, by William Salter; and a 'Life of Alexander T. Stewart,' by James Grant Wilson.——Macmillan & Co. have in press 'Three Centuries of English Poetry' (from Chaucer to Herrick), selections by R. O. Masson; and a 'Manual of Marks on Pottery and Porcelain,' by W. H. Hooper and W. C. Phillips.——'The Violin: its Famous Makers and their Imitators,' by George Hart, is announced by J. W. Bouton.——H. S. Allen, New York, will publish an illustrated history of the United States called 'One Hundred Years' Achievements of a Free People.'——M. E. Dufossé has just issued the first number of *Américana*, "bulletin bibliographique trimestriel des livres relatifs à l'Amérique."——Calmann Lévy, the successor of Michel Lévy Frères, has just published 'Chroniques Parisiennes, 1843–1845,' by C. A. Sainte-Beuve, a reprint, we suppose, from the *Revue des Deux Mondes*. The same house announces as in press 'Dialogues et Fragments Philosophiques,' a volume by Ernest Renan.——*Le Courrier Littéraire* is the name of a new literary weekly, of 32 pp. 8vo, published fortnightly by Sandoz and Fischbacher, Paris, beginning last month. It aims to meet the wants of readers of the present day by "a succinct analysis and rapid judgment" of new works after the manner of the *Athenæum* and *Academy*. Reviews will be anonymous, but each number will contain a longish *étude* signed by some well-known writer. M. François Coppée will be the dramatic editor. Literary correspondence from all parts of the world is promised. A novel stipulation is contained in the prospectus: "The editor promises to return in forty-eight hours the books which he cannot undertake to review."——A highly attractive work is in course of publication by C. Lichtwerck, Berlin (New York: L. W. Schmidt), namely, an album of thirty-two photographs of South American sights and scenery ('Landschafts- und Städtebilder'), with accompanying text, by Louis Rosenthal, for many years a resident and traveller in South America. The views comprise one for Uruguay, six for the Argentine Confederation, as many for Chile, ten for Peru, two for Ecuador, and three for New Granada.

—The *Publishers' Weekly's* enquiry of the trade as to the most salable works on the Revolutionary period elicited the following vote: Lossing's 'Field-Book,' 19; Greene's 'Historical View,' 17; Irving's 'Life of Washington' (four editions), 17; Greene's 'Life of Nathanael Greene,' 12; Sabine's 'American Loyalists,' 12; Frothingham's 'Siege of Boston,' 11; Headley's 'Washington,' 11; Watson's 'Camp-Fires,' 9; 'Letters of John Adams and Wife,' 8; Greene's 'German Element,' 8; Thomson's 'History of the War,' 8; Bigelow's 'Life of Franklin,' 7; Frothingham's 'Rise of the Republic,' 7; Wells's 'Life of Sam. Adams,' 7, etc. In this, as in most of the *Weekly's* previous tests of popular reading, the admission of recent publications detracts from the value of the indication, but there are not so many here that they cannot be readily eliminated. The older and standard works offer some surprises. That Prof. Greene's 'Historical View,' for instance, should hold the rank it does might have been expected; but that his Life of his grandfather should be three-fourths as much in request was, considering the size and cost of the work (3 vols. 8vo, $12), hardly to be looked for. Sabine's 'Loyalists,' too, of which the last edition was, we believe, published in 1864, shows a degree of favor for which, even conceding a Canadian demand for it, we were not prepared. Finally, that one copy of Wells's 'Life of Samuel Adams' (3 vols. 8vo, $12) should be called for say for every three of Lossing's 'Field-Book' (2 vols. royal 8vo, $14) was not antecedently probable to one possessed only of our information. The serious and scholarly works decidedly outrank the others among purchasers; it would be curious to compare with the above statistics the demand for the same works at some one of our public libraries. Backed by school-boy suffrages, we should doubtless see Mr. Headley and Mr. Watson stepping nearer to the front, and Mr. Judson and Mr. J. S. C. Abbott emerging from the obscurity of the rear.

—The Supreme Court of Massachusetts has rendered a decision in the "Bay Psalm-Book" case, dismissing the bill in equity brought by the deacons of the Old South Church in Boston to recover a particular book at present in the possession of the executrix of the late Mayor Shurtleff. The book in question was printed at Cambridge, in New England, in 1640, and is described by Thomas as being "the first book printed in this country." It had once belonged to Rev. Richard Mather (one of the translators), and afterwards to Rev. Increase Mather, and was contained in the collection bequeathed in 1758 by Rev. Thomas Prince "to the Old South Church for ever." The book remained in the Old South library for more than a century; but in the year 1860 there occurred a "mutual interchange of gifts" between the deacons (the custodians of the library) and Dr. N. B. Shurtleff, a noted antiquarian, afterwards Mayor of Boston—Dr. Shurtleff, for his part, receiving the Bay Psalm-Book, and the deacons, on behalf of the church library, accepting Winthrop's 'Journal' and Belknap's 'American Biography.' While Dr. Shurtleff lived he enjoyed peaceable possession of his "nugget," exhibiting it as "his own" to the old-book lovers, and making a fac-simile reprint, which was disposed of by subscription. But after his death, which took place in 1874, the deacons of the Old South, reminded by bibliomanists that they had exceeded their discretion in removing so valuable a book from the trust, commenced legal proceedings for its restoration. The Court (Judge Morton), after a full hearing of testimony as to the facts and arguments upon the law, has now decided that the "statute of limitations" is a sufficient bar to the claim made by the plaintiffs.

—In the *New England Historical and Genealogical Register* for April the opening paper is a genealogical sketch of the Lowndes Family of South Carolina. A steel portrait is given of William Lowndes, a Southern statesman whose name has not maintained itself with posterity like those of some of his contemporaries, though he was the appointed manager of the Missouri Compromise and in other and better ways was a leader in his time. He was the "favorite son" of his State for the Presidency in competition with Crawford and J. Q. Adams, and it is curious to find him the author of a phrase which we quoted the other day from Adams's diary, where it had reference to the very same contingency. Lowndes wrote his wife, Jan. 6,

1822: "The Presidency is not in my opinion an office to be either solicited or declined." Adams, when entreated to contribute money to advance his own election, used to reply: "The Presidency is not an office to be sought or declined," etc. This formula, so convenient for a willing candidate, was heard in our day when Judge Davis was approached in regard to his disposition to stand for the Presidency at Cincinnati in 1872; and it is worth remarking that the consent implied in this Delphic utterance cost the son of John Quincy Adams a nomination at least. Mr. Lowndes, to return to our subject, deserves special remembrance as the author of a scheme of representation in the Lower House which from 1809 to 1865 preserved South Carolina from Parkers, Scotts, Moseses, and Whippers; and which, while we are casting helplessly about for modes of reforming our legislatures, is worth reconsidering. He secured the passage of an act providing that half the representatives should be elected on the basis of population, and the other half on that of wealth. Another interesting genealogy in this number of the *Register* is that of the Folsom family, one member of which, Capt. Joseph L. Folsom, a classmate and intimate friend of Gen. Sherman's, was chiefly instrumental in 1847 in fixing the site of San Francisco. Moreover, with a perfect foresight, he invested $1,500—his all—in the land on which the present city stands, adding to this as he was able; his estate (he died in 1855) is now valued at eleven millions. In the diary of the Hon. W. D. Williamson, journeying from Bangor to take his seat in Congress in 1821, it is recorded: "Prayers in the morning by the Chaplain, the Speaker then takes the chair, calls to order—the members sit with hats on or off at pleasure."

—The literature relating to the spelling of Shakspere's name is not so bulky as that which touches some other moot points in the career of the dramatist, but a good deal has been written about it. It is certainly interesting to know whether, while finding time to make himself familiar with the *Corpus Juris*, to discover the circulation of the blood, and to write the voluminous works which still pass under the name of Lord Bacon, he took any pains to determine the spelling of his own name, or left to chance what letters should compose it. In the May number of *Scribner's* Mr. J. H. Gilmore has undertaken a discussion of this question, quoting White's 'Shakespeare's Scholar' as authority for the following as among the forms which the name has taken at one time and another:

Chaksper,	Shagspere,	Shaxper,
Shakspere,	Shaxpur,	Shakspear,
Shaxpere,	Shaksper,	Shaxpeare,
Shakspire,	Shaxsper,	Shakspeere,
Shaxspere,	Shackspeare,	Shaxburd,
Schaksper,	Saxpere,	Shackspeyr,
Shakespere,	Shakespire,	Shakespear,
Shakespeare,	Shakespeire,	Schakesper,
Schakespeyr,	Shackespeare,	Shackespere,
Shaxespeare,	Shakaspear,	Shakyspere.

Mr. Furnivall admits the existence of only five unquestionably genuine signatures of the poet's, two on his Stratford conveyance and mortgage and three on his will. Of these the first two are Shakspere; of the three will-signatures, two are Shakspere, while about the third there is no agreement, Furnivall making it Shakspere, Stevens and Malone as well as Sir Francis Madden deciphering it as Shakspeare. These autographs seem to settle one point—that Shakspere never inserted an *e* after the *k* any more than his father did before him, the name appearing in the latter's will Shakspear. The result of the study of the subject thus far has not been to produce uniformity, the fashion having changed from century to century, and giving us, in the seventeenth, Shakespear; in the eighteenth, Shakspeare; and in the nineteenth, till recently, Shakespeare. In the struggle for existence, it certainly looks now as if Mr. Furnivall's reading were likely to have the best of it, though the settled pronunciation of the name will always have a tendency to throw an *e* into the first syllable. Perhaps the most remarkable thing about the name is not that there should have been such a struggle over the spelling, but that there should be so little variation in Shakspere's own way of spelling it. In the sixteenth and seventeenth centuries, spelling was notoriously loose, and the spelling of names frequently a mere matter of caprice. In a note to his 'Life of Jeffreys' (who was born in 1648), Lord Campbell says "the name is spelt no fewer than eight different ways: 'Jeffries,' 'Jefferies,' 'Jefferys,' 'Jefferys,' 'Jefferyes,' 'Jeffrys,' 'Jeffreys,' and 'Jeffreys,' and he himself spelt it differently at different times of his life; but the last spelling is that which is found in his patent of peerage, and which he always used afterwards."

—The *Atlantic* contains a very interesting number of Mrs. Kemble's "Gossip," with anecdotes of the Sheridan family, of "that exceedingly coarse, disagreeable, clever, and witty man, Theodore Hook," of whose "loud voice, and blazing red face, and staring black eyes" she declares that she always had a dread. Mrs. Kemble certainly does not give an agreeable picture of an evening at which Hook, when fairly forced into extemporizing at the piano by Mrs. Norton, extemporized upon her as a subject, in a highly satirical vein, so objectionable to the object of the satire that though she was able to restrain her feelings at the time, she subsequently broke out about Hook, "and his odious ill-nature and abominable coarseness, saying that it was a disgrace and a shame that for the sake of his paper, the *John Bull*, and its influence, the Tories should receive such a man in society"—an explanation of his social success, it may be imagined, rather inadequate. The life of Theodore Hook, with his musical knack, his talent for extemporizing verses, his great love of punning, and his equal love for practical jokes, might furnish some magazine writer a good subject for an article on the type—we do not know exactly what to call it—to which he belonged. Hook was by no means the only one of his kind in the society of the period, as the memoirs of the time sufficiently show. He was only the most noted of a set of men, all having some exceptional gift in the way of mimicry or music or verse-making, all finding their way into good society, and all leading a semi-Bohemian sort of life, very much more entertaining, according to Anglo-Saxon ideas, from its close connections with respectability and solid knowledge, than the outlaw life which Mürger has celebrated for France, and imitators of Mürger have imagined could be transplanted to America. Certainly, for the entertainment of others, no Bohemianism has been so profitable to the world as the kind of which Charles Matthews, Theodore Hook, and their friends were the centre. Perhaps as noticeable a thing as any about them is the fact that in the society of the present day, in which a kind of nervous excitement has unpleasantly replaced the rollicking animal spirits that made life formerly merry, they would hardly be tolerated.

—The ventilation of the House of Representatives having become so bad that it was evident that something must be done, a board of officers—composed of Professor Henry of the Smithsonian, Colonel Casey of the Engineers, Mr. Clark, the architect of the Capitol, Mr. Schumann, of the office of the Architect of the Treasury, and Dr. Billings, of the Army—has been appointed to examine the numerous plans submitted by professional ventilators, and to report as to the proper measures to be taken to afford relief. Whatever plan may be recommended, we presume that it will be necessary to make brains a part of the machinery, and that probably the board will find that no plan which they may recommend for the procuring and preserving this portion of the apparatus will be satisfactory. The English Parliament think it best to employ a well-known scientific man and physicist, Baron Percy, to supervise the heating and ventilation of their buildings, and pay him about $20,000 a year for his services. The engineer in charge of the ventilating machinery of the House of Representatives is appointed by the Clerk of the House, and holds his office at his pleasure. He receives $1,800 a year, and it has usually been considered requisite that he should know how to run a steam-engine. It will be of interest to note the changes in this plan recommended by the board, and the action taken thereon by the House.

—It is curious to see how the word *quite*, the synonym of 'entirely,' after coming into use in the sense of 'very' (which is, however, "quite recent"), is now passing current in the sense of 'not quite.' An illustration of this came to our notice in the case of an inventor of a new safety-lamp for burning-fluids, who found he could make no sales because the scientific experts certified that his lamp was "quite safe."

—It is now a long time since we have met with notices of the American knife-eater in the writings of contemporary critics; and when we recollect how frequently he used to be noticed by European tourists, and how he used to be held up to the scorn and loathing of mankind, we are forced to attribute the recent caducity of his ill-fame either to his gradual disappearance before the march of civilization or else to the increasing dulness of appreciation in the critical world caused by the progress of democracy and the breaking down of the old barriers which caste erected between those who eat with their fork and those who shovel with the baser implement. Mr. Proctor, the astronomer, has, however, in his Western travels, in the city of Des Moines, come across a fellow-creature who, as he distinctly avers, amused himself while at table, not simply by eating with his knife, but by dipping the knife (used meanwhile as more timid and delicately-nurtured persons use a fork) into the cream-pitcher and the sugar-bowl, and licking from it the adhering sugar and milk. These atrocities Mr. Proctor has without hesitation denounced, and the press has without reserve endorsed his denunciation. There can be no doubt that, if we are to draw the line anywhere, since the communal use of the sugar-bowl and the cream-pitcher is in reality but one remove from the institution—which we have never heard

of as in vogue except upon the high seas—of the communal tooth-brush, in the interest of civilization we must draw it where Mr. Proctor does. Indeed, we may say that the correct use of the knife and fork, like the correct use of *will* and *shall*, is among English-speaking races the surest and most absolute test of breeding. An American or Englishman who puts *will* where *shall* ought to be, and *vice versâ*, may not be a homicide or a burglar, and a man who eats with his knife may be a good husband and father; but this kind of defence, which is usually urged by genial lovers of their kind, is in reality not a defence, but a plea in mitigation of damages.

—We were inclined to think the change in the Ministry of Public Instruction by far the most serious consequence of the overthrow of the Minghetti Cabinet in Italy. The new incumbent is Signor Coppino, who held the same office in 1867 under Rattazzi, but left no mark on the educational progress of the country, and who has not the reputation of possessing the vigor necessary to continue the reforms instituted by his predecessor, or the independence to resist the attacks on them which will probably not long be delayed. Nevertheless, he has, to his great credit, announced his intention to adhere to Signor Bonghi's policy, and to resign his place if thwarted. The late minister, meantime, if his health is not too much impaired by his extraordinary devotion to his official duties, will inevitably have a large share as heretofore in shaping the legislation relating to public instruction. Some idea of the part which he has played in this respect as a simple deputy in the Italian Chamber may be had by consulting a work which we ought long ago to have brought to the attention of our readers. We refer to Prof. C. Hippeau's 'L'Instruction Publique en Italie' (Paris: Didier; New York: F. W. Christern). This essay was completed on the eve of Prof. Bonghi's accession to the Ministry, and so stops short of the last manifestation of the reformatory spirit by a statesman perhaps the best fitted among his peers by his study of English, German, and American institutions to improve the methods and elevate the standard of education in the Peninsula. But, this deficiency apart, the work will be found to give a very faithful picture of the present state of primary, secondary, and the higher education in Italy, and the organization of the Ministry which has them in charge. It abounds in statistics, but, throughout, it introduces them with a discussion of principles having a general interest, in the course of which frequent comparisons are made with the practices of other countries. Thus, on the subject of gratuitous instruction the author refers to the American device of a school-fund, and shows that our common schools are gratuitous only for the poor who pay no taxes, and that this class is benefited without being invidiously distinguished from those who are able to and in fact do pay. Again, having noted the fact that the choice of text-books in Italy is assigned to the provincial councils, he remarks that when the same question arose in France in 1874, the decision was in favor of centralization. On the subject of female education M. Hippeau has some very encouraging chapters. He cannot praise too highly the zeal, aptitude, and proficiency shown by girls in their studies; he can even say: "The question has been asked in Italy, as it has often enough been with us [in France], How is it that the young men who have finished their classical training are as a rule much poorer writers than girls who have had a much less complete and learned education?" He hopefully anticipates the increase of woman teachers after the pattern of the United States; already there are sixty-four normal schools for them to forty for male teachers. M. Hippeau refers also to the instrumentality of the Hon. Geo. P. Marsh in introducing the kindergarten into Italy, and to the services of the late Mrs. Emily B. Gould and "une riche demoiselle de Boston" in enabling it to take root. But we cannot go further into this interesting work, which is the fourth in a series already embracing the United States, England, and Germany, and which will be still further enlarged by this sincere and able writer.

—When a volume is introduced by a sketch on its cover from the pencil of M. J. G. Vibert and by a preface from the pen of M. Théodore Barrière it claims some degree of consideration. 'Les Soirées Parisiennes' (Paris: Dentu; New York: F. W. Christern) is a collected reprint of the amusing theatrical gossip contributed to the *Figaro* by M. Arnold Mortier under the name of "Un Monsieur de l'Orchestre." It is gossip, and nothing else; light, bright, unpretentious, and enlivened by a wit which, while it never rises to the fineness of Attic salt, never sinks to the coarseness of *sel gaulois*. The volume is neatly printed, and its merit is enhanced by an index of proper names, facilitating the immediate finding of any of the many pertinent anecdotes with which it abounds. The most amusing chapter is a very comic and quasi-macaronic account in Franco-Italian of the first appearance in Paris of the Italian tragedian, Signor Ernesto Rossi. We learn from the description (p. 65) of the first ball given in the new Opéra that American soda-water ("d'excellents sodas glacés à l'américaine") has already been introduced into the magnificent monument of M. Garnier. This shows rapid progress on the part of the Parisians, for it is only nine years since they had their first taste of this delectable beverage at the American restaurant in the Exhibition of 1867.

WILLIAM GODWIN.*

HOW many of our readers have perused a chapter of 'Political Justice'? Probably not ten. Is there any man living whose mode of thought or views of life are influenced by the writings of William Godwin? We venture to assert that there is not a single such person on either side of the Atlantic. Yet 'Political Justice' was once the book of the day. It was as well-known in its time as is now Mill's 'Liberty' or Darwin's 'Origin of Species.' It was admired. It was criticised. It was attacked. Young men read it with enthusiasm. Their elders denounced it with vehemence. The Ministry debated whether or not to prosecute its author; and not the public only, but authors whose names will live as long as the literature of England is studied, considered Godwin a man who, whether to be praised or to be abused, had made his mark in the history of speculation, and might be expected to occupy a place equal to that which has, as a matter of fact, been filled with such theorists as Bentham or Coleridge or Rousseau. Mr. Kegan Paul even now asserts that 'Political Justice' "may take its place with the 'Speech for Unlicensed Printing,' the 'Essay on Education,' and 'Émile,' among the unseen levers which have moved the changes of the times." If by these words be meant that the book should take rank among the highest class of speculative writings, Mr. Paul has, judging even by his own account of Godwin's performance, let the partiality of a biographer blunt the acuteness of a sound critic. But if the expressions cited merely mean that Godwin exerted at one period great influence over contemporary opinion, Mr. Paul's admirable life fully proves the truth of his assertion. Persons of the most different sentiments may be called as witnesses to the effect of Godwin's writings. Coleridge, Grattan, Curran, Horne Tooke, Parr, Wedgwood, and Lamb were each proud to consider Godwin their friend, and Godwin's very defects made it impossible for any man to share his friendship who did not admit the philosopher to a position of the most absolute intellectual and moral equality. A short sentence from a letter of Coleridge tells more of the place held by Godwin than could be gathered from volumes of eulogy: "In Bristol I was much with Davy, almost all day; he always talks of you with great affection. . . . If I settle at Keswick, he will be with me in the fall of the year, and so meet you. And let me tell you, Godwin, four such men as you, I, Davy, and Wordsworth do not meet together in one house every day of the year. I mean, four men so distinct, with so many sympathies."

The attacks of opponents are as strong a proof of celebrity as the admiration of followers, and this mark of fame was not wanting to Godwin. Mackintosh, in his celebrated lectures, attacked Godwinian doctrines with a directness at which the sensitive vanity of their author took offence. Parr denounced from the pulpit the teaching of a writer whose friendship was compromising to the reputation of a liberal ecclesiastic. Samuel Newton had been Godwin's tutor, and valued him as a pupil and disciple. He also sympathized with the reformer's political views; but the publication of 'Political Justice' compelled the Calvinistic divine to break off connection with his pupil. The letters of Newton are, it must be owned, creditable to the Independent minister. Their tone is in two respects remarkable. They display unfeigned respect for Godwin's abilities; they also show keen sympathy with Godwin's political views. "In the perusal," writes Newton, "of your book, I was charmed with your language and with many of your sentiments, and with your general idea of political justice and liberty. I said there were some descriptions, reasonings, and ideas which, for simplicity, for elegance, force, and utility . . . surpass all that I have ever read in Tacitus, Polybius, Montesquieu," etc., etc. The whole tone, in short, of Newton's criticism savors of 1793, when men of the sternest orthodoxy could yet glow with the feeling that a "torrent of political light" was "pouring in upon an oppressed world." Nor must the most famous of Godwin's critics be forgotten. 'Political Justice' will be remembered, long after it has ceased to be read, by the fact that it occasioned the publication by Malthus of his treatise on population.

Godwin was, in short, confessed by the voice both of enemies and of foes to have written the book of the day, and to have by one great effort placed himself among the foremost writers of his generation. Yet despite this testimony to his reputation, his name and his works are now unknown to

* 'William Godwin: His Friends and Contemporaries. By C. Kegan Paul.' London: Henry S. King & Co.; Boston: Roberts Bros.

the mass of Englishmen. Nor is the failure on his part to make an impression on the modern world due to the lapse of time. Bentham was born in 1748 and died in 1831. He may therefore well pass as a contemporary with Godwin, whose life extended from 1756 to 1836. Yet Bentham's works are still alive. Every branch of English law bears traces of his ideas of reform, and all English speculations in the field of ethics or of jurisprudence are affected, by way either of attraction or of repulsion, by his theories. Coleridge belonged to a somewhat younger generation ; but Coleridge has produced an effect on modern English thought unlike anything which can be attributed to the author of 'Caleb Williams.' It is vain to urge as an explanation of Godwin's failure that his method of thought and expression is old-fashioned. The same might be said of Butler. Yet Butler is read, and even the supercilious "Zeitgeist" deigns to criticise his errors. The fallacies of 'Political Justice' have long ceased to receive the compliment of refutation. Godwin, indeed, was "buried" long before he died. By the beginning of the century his renown had waned. Twenty years later, he attracted to his side enthusiastic spirits like Shelley, who rightly admired his dauntless honesty and his noble public spirit, but overrated his originality and logical powers. One disciple was born to him at the very close of his life. Bulwer received at the opening of his career the blessing of the patriarch of English republicanism. The connection between the two men is characteristic. Godwin read with "transport" the pages of 'Paul Clifford,' and wept over the theatrical benevolence which poured forth sympathy over the woes of a gentlemanlike highwayman. Bulwer in return gazed with probably sincere reverence on a democrat of the study, whose abstract speculations had never been tested by any attempt to apply them to the politics of ordinary life.

As readers of Mr. Paul's admirable biography meditate on Godwin's career, the question presents itself, What is the explanation of Godwin's temporary celebrity and of his utter failure to achieve lasting renown or to maintain permanent influence ? Is it that his contemporaries were utterly mistaken in their estimate of his powers, or that the present generation have ungratefully forgotten the services of an original thinker ? Neither suggestion completely hits the mark. The knowledge of Godwin supplied by his biographer—and it is on this basis that the criticism contained in the present article rests—is sufficient to show that neither were men like Coleridge and Lamb utterly mistaken in their judgment, nor is the present age unjust in refusing to Godwin the fame conceded to many of his friends. He possessed considerable gifts. His natural logical acumen had been sharpened by his training as a Calvinistic divine. His style was lucid and impressive. His intellect, though narrow, was not devoid of strength ; his moral character, though wanting in breadth, was distinguished by intense earnestness and absolute honesty. Markedly deficient in originality and humor, he seized with intensity and expressed with clearness the democratic ideas of the time. He was exactly fitted to be the exponent of "extreme" rather than of advanced views. A student of Rousseau and Helvetius, he reproduced their ideas with the fervor of conviction and in the unmodified form which they naturally assumed in the writings of a logician who drew out of every premiss its most extreme conclusions, unhampered by the knowledge of men or the experience of life. He knew more of teaching than of any other profession, and was a successful though severe pedagogue ; yet when he wrote on education he forgot every dictate of experience. "No creature in human form will be expected" in the model state "to learn anything but because he desires it and has some conception of its utility, and every man in proportion to his capacity will be ready to furnish such general hints and comprehensive views as will suffice for the guidance . . . . of him who studies from a principle of desire." The writer who, having once taught any human being, could believe that a child should not be taught the "rule of three" till the young gentleman studies it from a principle of desire, exhibits the sternness of his logic but also gives the measure of his incapacity for testing theory by the facts of experience. One is not surprised to find that the writer of such a sentence constantly trusted to argument in cases where he ought to have trusted to sense, that he wished to reason away differences with his friends which arose from essential incompatibility of character, pronounced all laws bad and the law of marriage the worst of laws, and thereupon not only went through the marriage ceremony like any ordinary mortal, but expended a great deal of useless labor in the attempt to prove that his conduct exactly conformed to his theory.

This intense belief in logic, which is the palpable weakness of Godwin's intellect, contributed in no small degree to his immediate success. It made him the very type of what may be termed "extreme thinkers"—that is, thinkers who carry to their very extreme point views which, as the saying goes, "are in the air." Such men have a twofold immediate advantage. They are in reality the exponents of the current thought of their age, but they seem to themselves and others to be in advance of it. They derive their strength from real sympathy with the sentiment of their age, combined with a delusive appearance of anticipating the thoughts of the future. The position of Godwin may be best understood by comparison with that of a modern writer whose temporary fame was at least equal to the reputation of the author of 'Political Justice.' Mr. Buckle darted like Godwin into sudden reputation. The 'History of Civilization' seemed to many who read it eighteen years ago a revelation. It was the work of a thinker who, devoid of originality, expressed with perfect good faith and with considerable force some few of the predominant sentiments of his time. But even the most ardent admirer will now admit that the name of Buckle will soon be as completely forgotten as that of Godwin. Each author has failed of permanent influence from the same cause. Each was the honest exponent of some of the sentiments of his age. The sentiment changes, and the man who has given it expression thereupon loses his power. If any one wishes to see the difference between a theorist who merely holds extreme views and a writer who to a certain extent looks forward to the future, he should read the extracts given by Mr. Paul from Mary Wollstonecraft's 'Rights of Women.' Did we know nothing of the book but Mr. Paul's extracts, the one passage on female education would show that Godwin's wife had, whatever her intellectual defects, that touch of genius or insight denied to her husband.

But though Godwin's influence is dead, Godwin well deserved the fame which may be given him by the present excellent biography. It is appropriately called 'William Godwin : his Friends and Contemporaries.' It is from his connection with men and women of genius and originality that his memory will live. He must have been one of the most trying of friends, but he certainly was one of the truest. He revived in the modern world that high classical estimate of friendship which, unfortunately, is nearly forgotten. Akin to his devotion to his friends was his infinite sympathy with the intellectual wants and desires of young men. There is something noble in the zeal with which, to the very end of his life, Godwin devoted himself to the young. If he had the faults he had also the virtues of a schoolmaster. He was an affectionate father, but even in his dealings with his daughters he gives way to an affectation of stoical composure which betrays the pedantry of his intellect and conceals the warmth of his feeling. But in his treatment of young men he displays a wisdom, a magnanimity and calmness, which justify the admiration of youthful pupils for a revered teacher. The following reflections on the Revolution are striking as coming from Godwin and as being addressed to Shelley. The latter had urged with bitterness that nothing had been done "within these last twenty years," and Godwin replies by pointing to the irreparable evil which impatience had done to the cause of progress. "It is not after this fashion that moral causes work in the eye of him who looks profoundly through the vast and, allow me to add, venerable machine of human society. But so reasoned the French Revolutionists. Auspicious and admirable materials were working in the general mind of France. But these men said, as you say : 'When we look on the last twenty years, we are seized with a sort of moral scepticism ; we must own that we are eager that something should be done'—and see what has been the result of their doings ! He that would benefit mankind on a comprehensive scale, by changing the principle and elements of society, must learn the hard lesson to put off self and to contribute by a quiet but incessant activity, like a rill of water, to irrigate and fertilize the intellectual soil." This and similar passages from letters to young men explain how Godwin, after he had survived much of his reputation and many of his contemporaries, lived and deserved to live in the reverence of his friends.

CHARLES BAUDELAIRE.*

As a brief discussion was carried on in these pages some months since touching the merits of the writer whose name we have prefixed to these lines, it may not be amiss to introduce him to some of those readers who must have observed the contest with little more than a vague sense of the strangeness of its subject. Charles Baudelaire is not a novelty in literature ; his principal work dates from 1857, and his career terminated a few years later. But his admirers have made a classic of him and elevated him to the rank of one of those subjects which are always in order. Even if we differ with them on this point, such attention as Baudelaire demands will not lead us very much astray. He is not, in quantity (whatever he may have been in quality), a formidable writer ; having died young, he was not

* 'Les Fleurs du Mal. Par Charles Baudelaire. Précédé d'une Notice par Théophile Gautier.' Paris : Michel Lévy ; New York : F. W. Christern. 1875.

prolific, and the most noticeable of his original productions are contained in two small volumes.

His celebrity began with the publication of 'Les Fleurs du Mal,' a collection of verses some of which had already appeared in periodicals. The *Revue des Deux Mondes* had taken the responsibility of introducing a few of them to the world—or rather, though it held them at the baptismal font of public opinion, it declined to stand godfather. An accompanying note in the *Revue* disclaimed all editorial approval of their morality. This of course procured them a good many readers; and when, on its appearance, the volume we have mentioned was overhauled by the police, a still greater number of persons desired to possess it. Yet in spite of the service rendered him by the censorship, Baudelaire has never become in any degree popular; the lapse of twenty years has seen but five editions of 'Les Fleurs du Mal.' The foremost feeling of the reader of the present day will be one of surprise, and even amusement, at Baudelaire's audacities having provoked this degree of scandal. The world has travelled fast since then, and the French censorship must have been, in the year 1857, in a very prudish mood. There is little in 'Les Fleurs du Mal' to make the reader of either French or English prose and verse of the present day even open his eyes. We have passed through the fiery furnace and profited by experience. We are like Racine's heroine, who had

"Su se faire un front qui ne rougit jamais."

Baudelaire's verses do not strike us as being dictated by a spirit of bravado—though we have heard that, in talk, it was his habit, to an even tiresome degree, to cultivate the quietly outrageous—to pile up monstrosities and blasphemies without winking, and with the air of uttering proper commonplaces.

'Les Fleurs du Mal' is evidently a sincere book—so far as anything for a man of Baudelaire's temper and culture could be sincere. Sincerity seems to us to belong to a range of qualities with which Baudelaire and his friends were but scantily conversant. His great quality was an inordinate cultivation of the sense of the picturesque, and his care was for how things looked, and whether some kind of imaginative amusement was not to be got out of them, much more than for what they meant and whither they led, and what was their use in human life at large. The later editions of 'Les Fleurs du Mal' (with some of the interdicted pieces still omitted and others, we believe, restored) contain a long preface by Théophile Gautier, which throws a curious side-light upon what the Spiritualist newspapers would call Baudelaire's "mentality." Of course Baudelaire is not to be held accountable for what Gautier says of him, but we cannot help judging a man in some degree by the company he keeps. To admire Gautier is certainly excellent taste, but to be admired by Gautier we cannot but regard as rather compromising. He gives a magnificently picturesque account of the author of 'Les Fleurs du Mal,' in which, indeed, the question of pure veracity is evidently so very subordinate that it seems grossly ill-natured for us to appeal to such a standard. While we are reading him, however, we find ourselves wishing that Baudelaire's analogy with him were either greater or less. Gautier was perfectly sincere, because he dealt only with the picturesque, and pretended to care only for appearances. But Baudelaire (who, to our mind, was an altogether inferior genius to Gautier) applied the same process of interpretation to things as regards which it was altogether inadequate; so that one is constantly tempted to suppose he cares more for his process—for making grotesquely-pictorial verse—than for the things themselves. On the whole, as we have said, this inference would be unfair. Baudelaire had a certain groping sense of the moral complexities of life, and if the best that he succeeds in doing is to drag them down into the very turbid element in which he himself plashes and flounders, and there present them to us much besmirched and bespattered, this was not a want of goodwill in him, but rather a dulness and permanent immaturity of vision. For American readers, furthermore, Baudelaire is compromised by his having made himself the apostle of our own Edgar Poe. He translated, very carefully and exactly, all of Poe's prose writings, and, we believe, some of his very valueless verses. With all due respect to the very original genius of the author of the 'Tales of Mystery,' it seems to us that to take him with more than a certain degree of seriousness is to lack seriousness one's self. An enthusiasm for Poe is the mark of a decidedly primitive stage of reflection. Baudelaire thought him a profound philosopher, the neglect of whose golden utterances stamped his native land with infamy. Nevertheless, Poe was vastly the greater charlatan of the two, as well as the greater genius.

'Les Fleurs du Mal' was a very happy title for Baudelaire's verses, but it is not altogether a just one. Scattered flowers incontestably do bloom in the quaking swamps of evil, and the poet who does not mind encountering bad odors in his pursuit of sweet ones is quite at liberty to go in search of them. But Baudelaire has, as a general thing, not plucked the flowers—he has plucked the evil-smelling weeds (we take it that he did not use the word flowers in a purely ironical sense), and he has often taken up mere cupfuls of mud and bog-water. He had said to himself that it was a great shame that the realm of evil and unclean things should be fenced off from the domain of poetry; that it was full of subjects, of chances and effects; that it had its light and shade, its logic and its mystery; and that there was the making of some capital verses in it. So he leaped the barrier, and was soon immersed in it up to his neck. Baudelaire's imagination was of a melancholy and sinister kind, and, to a considerable extent, this plunging into darkness and dirt was doubtless very spontaneous and disinterested. But he strikes us on the whole as passionless, and this, in view of the unquestionable pluck and acuteness of his fancy, is a great pity. He knew evil not by experience, not as something within himself, but by contemplation and curiosity, as something outside of himself, by which his own intellectual agility was not in the least discomposed, rather, indeed (as we say his fancy was of a dusky cast), agreeably flattered and stimulated. In the former case, Baudelaire, with his other gifts, might have been a great poet. But, as it is, evil for him begins outside and not inside, and consists primarily of a great deal of lurid landscape and unclean furniture. This is an almost ludicrously puerile view of the matter. Evil is represented as an affair of blood and carrion and physical sickness—there must be stinking corpses and starving prostitutes and empty laudanum bottles in order that the poet shall be effectively inspired.

A good way to embrace Baudelaire at a glance is to say that he was, in his treatment of evil, exactly what Hawthorne was not—Hawthorne, who felt the thing at its source, deep in the human consciousness. Baudelaire's infinitely slighter volume of genius apart, he was a sort of Hawthorne reversed. It is the absence of this metaphysical quality in his treatment of his favorite subjects (Poe was his metaphysician, and his devotion sustained him through a translation of 'Eureka!') which exposes him to that class of accusations of which M. Edmond Schérer's talk about his feeding upon *pourriture* is an example; and, in fact, in his pages we never know with what we are dealing. We encounter an inextricable confusion of sad emotions and vile things, and we are at a loss to know whether the subject pretends to appeal to our conscience or—we were going to say—to our olfactories. "*Le Mal?*" we exclaim; "you do yourself too much honor. This is not Evil; it is not the wrong; it is simply the nasty!" Our impatience is of the same order as that which we should feel if a poet, pretending to pluck "the flowers of good," should come and present us, as specimens, a rhapsody on plum-cake and on cologne-water. Independently of the question of his subjects, the charm of Baudelaire's verse is often of a very high order. He belongs to the class of geniuses in whom we ourselves find but a limited pleasure—the laborious, deliberate, economical writers, those who fumble a long time in their pockets before they bring out their hand with a coin in the palm. But the coin, when Baudelaire at last produced it, was often of a high value. He had an extraordinary verbal instinct and an exquisite felicity of epithet. We cannot help wondering, however, at Gautier's extreme admiration for his endowment in this direction; it is the admiration of the writer who flows for the writer who trickles. In one point Baudelaire is extremely remarkable—in his talent for suggesting associations. His epithets seem to have come out of old cupboards and pockets; they have a kind of magical mustiness. Moreover, his natural sense of the superficial picturesqueness of the miserable and the unclean was extremely acute; there may be a difference of opinion as to the advantage of possessing such a sense; but whatever it is worth, Baudelaire had it in a high degree. One of his poems—"To a red-haired Beggar Girl"—is a masterpiece in the way of graceful expression of this high relish of what is shameful:

"Pour moi, poëte chétif,
Ton jeune corps maladif,
Plein de taches de rousseur,
A sa douceur."

Baudelaire repudiated with indignation the charge that he was what is called a realist, and he was doubtless right in doing so. He had too much fancy to adhere strictly to the real; he always embroiders and elaborates and endeavors to impart that touch of strangeness and mystery which is the very *raison d'être* of poetry. Baudelaire was a poet, and for a poet to be a realist is of course nonsense. The idea which Baudelaire imported into his theme was, as a general thing, an intensification of its repulsiveness, but it was at any rate ingenious. When he makes an invocation to "la Débauche aux bras immondes," one may be sure he means more by it than is evident to the vulgar—he means, that is, an intenser perversity. Occasionally he treats agreeable subjects, and his least sympathetic critics must make a point of admitting that his most successful poem is also his most wholesome

and most touching: we allude to "Les Petites Vieilles"—a really masterly production. But if it represents the author's maximum, it is a note which he very rarely struck.

Baudelaire, of course, is a capital text for a discussion of the question as to the importance of the morality—or of the subject-matter in general—of a work of art; for he offers a rare combination of technical zeal and patience and of vicious sentiment. But even if we had space to enter upon such a discussion, we should spare our words, for argument on this point wears to our sense a simply ridiculous aspect. To deny the relevancy of subject-matter and the importance of the moral quality of a work of art strikes us as, in two words, ineffably puerile. We do not know what the great moralists would say about the matter—they would probably treat it very good-humoredly; but that is not the question. There is very little doubt what the great artists would say. These geniuses feel that the whole thinking man is one, and that to count out the moral element in one's appreciation of an artistic total is exactly as sane as it would be (if the total is a poem) to eliminate all the words in three syllables, or to consider only such portions of it as were written by candlelight. The crudity of sentiment of the advocates of "art for art" is often a striking example of the fact that a great deal of what is called culture may fail to dissipate a well-seated provincialism of spirit. They talk of morality as Miss Edgeworth's infantine heroes and heroines talk of "physic"—they allude to its being put in and kept out of a work of art, put in and kept out of one's appreciation of the same, as if it were a colored fluid kept in a big-labelled bottle in some mysterious intellectual closet. It is in reality simply a part of the essential richness of inspiration—it has nothing to do with the artistic process, and it has everything to do with the artistic effect. The more a work of art feels it at its source, the richer it is; the less it feels it, the poorer it is. People of a large taste prefer rich works to poor ones, and they are not inclined to assent to the assumption that the process is the whole work. We are safe in believing that all this is comfortably clear to most of those who have, in any degree, been initiated into art by production. For them the subject is as much a part of their work as their hunger is a part of their dinner. Baudelaire was not so far from being of this way of thinking as some of his admirers would persuade us; yet we may say on the whole that he was the victim of a grotesque illusion. He tried to make fine verses on ignoble subjects, and in our opinion he signally failed. He gives, as a poet, a perpetual impression of discomfort and pain. He went in search of corruption, and the ill-conditioned jade proved a thankless muse. The thinking reader, feeling himself, as a critic, all one, as we have said, finds the beauty perverted by the ugliness. What the poet wished, doubtless, was to seem to be always in the poetic attitude; what the reader sees is a gentleman in a painful-looking posture, staring very hard at a mass of things from which we more intelligently avert our heads.

CAROLINE HERSCHEL.*

SIR WILLIAM HERSCHEL was by far the most widely-known philosopher of his day in England. His works were of the kind likely to command attention, and from the time of his discovery of *Uranus* in 1781 until his death in 1822 his fame was known of all men. It is somewhat singular in view of these facts that probably there is not a great name in English science of which so little is known in the way of biographical details. Several sketches of his life are extant, notably the *éloges* of Fourier and Arago, but these are quite unsatisfactory. There is even no collection of his complete works in English, a want which is severely felt, and, so far as we know, there is only one complete collection of his papers and memoirs, and this was made after his death by his son and presented to the elder Struve at Pulkova.

Students of his wonderful series of memoirs in the 'Philosophical Transactions' of the Royal Society of London could acquire a knowledge of his scientific life and development; but it has seemed until lately that the time had gone by to expect a true history of the man himself, based on those intimate and personal details which are known only to a generation which has passed away. The life is not yet written; but it is fortunate that we now have in the memoirs of his youngest sister Caroline, who from the very commencement of his astronomical activity was his constant assistant and intimate companion, a series of the most familiar letters and a diary of daily events as well as fragments of recollections which cover the most important years of his life. It is not only that these memoirs are of interest in relation to the history of Herschel himself, but they give to the world a new friend in the person of Caroline Herschel, a friend of whom it would not willingly remain ignorant.

The Herschel family lived in Hanover in mean circumstances; the father, a musician of some note, was in the band of the Guards, and he trained his sons to be musicians like himself, so that in 1755, when the Guards were ordered to England, the father and his sons, Jacob and William, went with them. William was at this time seventeen years old, and his sister Caroline, who was left in Hanover, was but five. After their return to Hanover in 1757 the health of William was so poor that it was decided to "remove him" from the service.* This having been accomplished with some difficulty, William Herschel soon found himself (1772) established at Bath as organist to the Octagon Chapel. Here he led an active and successful life, composing anthems, chants, and whole services for the choir under his management, but devoting every spare moment of the day and many hours stolen from the night to the study of languages and of astronomy.

In the midst of his busy life at Bath, his sister joined him, sharing with him his manifold pursuits, copying the scores of oratorios for an orchestra of one hundred performers, aiding him in the making of reflecting-telescopes, singing in concerts under his direction, and now, as always, devoted heart and soul to all that could advance his cause or make him happy. In 1781 William Herschel discovered a new planet, Georgium Sidus, and from that moment his life was entirely devoted to astronomy. He gave up his lucrative calling at Bath, and became Royal Astronomer, on a salary of £200 a year, and, after a short residence at Datchet and Clay Hall, he finally settled at Slough, near Windsor, which was his home for the remainder of his life. Here he lived in his observatory, with his faithful sister as his assistant, and to the activity of these years his long series of classic memoirs bears witness. As Arago says: "We may confidently assert, relative to the little house and garden of Slough, that it is the spot of all the world where the greatest number of discoveries has been made. The name of that village will never die; science will transmit it religiously to the latest posterity." All that is known of him henceforth is learned through his sister's letters and diary. He was constant in "minding the heavens," observing, as was his constant habit, "every night until daybreak," and only leaving his work for a few weeks in summer and to go [to the Royal Society meetings. Even then he was only absent on the moonlight nights when his work would not suffer by the interruption.

In every way his sister Caroline was his constant helper; it was she who recorded the results of his sweeps—who stood, note-book in hand, by the clock to reduce his observations to writing. It was she who copied them out in full on the succeeding day, bringing order out of what would otherwise have been chaos. In the intervals of work she had her own comet-sweeper, with which she independently discovered *eight* comets. The Royal Society published two of her communications, and she was named Assistant Astronomer by the King, and granted a salary; yet her modest estimate of her own performance never changes: "My only reason for saying so much of myself is to show with what miserable assistance my brother made shift to obtain the means of exploring the heavens." And again: "I did nothing for my brother but what a well-trained puppy-dog would have done. I was a mere tool that he had the trouble of sharpening." As Lady Herschel says of her: "One all-sufficing reward sweetened her labors—'I had the comfort to see that my brother was satisfied with my endeavors in assisting him.'" Under the influence of his inspiring example, she acquired ardor and enthusiasm *as a habit*, and in her old age she writes to her nephew, Sir John Herschel, when she hears of his proposed journey to the Cape of Good Hope: "Ja! if I was thirty or forty years junger, and could go too? in Gottes nahmen!"

She contented herself for many years after her brother's death in her old home in Hanover as well as she could, pining all the while for something, she hardly knew what. Learned societies honored her with their membership, and the work of her declining years, a complete reduction of all the nebulæ observations made at Slough, was rewarded by the gold medal of the Royal Astronomical Society. In all this she retained her simplicity—"What is *that* for?" was her question to every new honor. Her delight was to hear of the astronomical work doing in the world, and to see the men who were doing it. She had always the greatest incredulity as to the performance of Lord Rosse's great reflector: "It was not like the forty-foot," her brother's masterpiece.

Lady Herschel has done the world a service in giving it these letters, and no one can put them down without feeling that he has looked on the inner recesses of a noble life.

* 'Memoir and Correspondence of Caroline Herschel. By Mrs. John Herschel.' With portraits. London: John Murray; New York: D. Appleton & Co. 1876.

* Thus in the Memoirs. Sir George Airy, however, in a letter to the *Academy*, says that he learned from the late Duke of Sussex that it was a case of desertion, which was formally pardoned by the king at Herschel's first interview with him.

THE *NORTH AMERICAN REVIEW* FOR APRIL.

THE two articles in the current number of the *North American* of most general interest are Mr. Wells's on local taxation, and Mr. Lewis H. Morgan's on "Montezuma's Dinner." Taxation, as Mr. Wells observes, has only since the war taken up much of the thoughts and time of the American public. Only one work of any importance relating to local taxation was published in the United States down to 1870. Since that time this branch of literature has been steadily growing. That there should be a steady increase of interest in this subject is not remarkable, when we recollect that the system of taxation generally in vogue in this country is so antique and barbarous that in other civilized nations it has long since been out of date. No such system is in use in Great Britain or France or Germany, and, curiously enough, even in this country, in the case of taxes for the General Government, there is an approximation to a civilized scheme, while in local taxation the time-honored practice of taxing everything—persons, property, debts, and credits, wherever they can be found—is still kept up; and, by the help of inquisitorial processes handed down from the Middle Ages, and the free exercise of the sovereign right of confiscation, the tax-gatherer ekes out ways and means to carry on the State and town and city governments. Mr. Wells, in searching for some parallel system to ours, is unable to find any short of that which was in existence in France a hundred years before the Revolution, and which then led to such unpleasant consequences. It will probably surprise Mr. Thomas Hills—the faithful Boston patriot who goes on year after year proving to his own satisfaction, if to nobody else's, that the plan of making everything out of which a tax can be squeezed pay a tax is the only fair and just one, that taxes on mortgages are not double taxes, and that taxes are paid not by the consumer but by the person to whom they are assessed—to learn that a system very much like his, and supportable only by such theories as his, caused such dissatisfaction and "unpleasant feeling" in France a hundred years ago that most of the persons concerned in the collection of the taxes were driven out of the kingdom, the government upset, the king and queen beheaded, and such a disturbance in general created that Europe hardly recovered from it after twenty years of bloody warfare. There is, to be sure, no reason to apprehend bloodshed in this country or a popular demand for the head of Mr. Thomas Hills, for there are important differences between our system of local taxation and that of France under the old régime. The taxes then were in general commutations in money for some feudal personal services, and bore with frightful weight upon a country in which the feudal system was really a thing of the past, and in which the subject got no longer any return either for services or their money equivalent. In our case the barbarous system we insist upon is simply the result of popular ignorance and inattention, in a country in which the people themselves determine both how much they will be taxed and how the money shall be raised.

Mr. Morgan, in his paper on "Montezuma's Dinner," goes over ground that is familiar to every child who has gloated over the fairy tales of the Spanish conquest of Mexico in the pages of Robertson and his successors, and undertakes to show that from the day when Cortes landed down to the day of the publication of Mr. H. H. Bancroft's 'Native Races of the Pacific States,' there has been a total misconception and misrepresentation of the condition of civilization which the Spaniards found in Mexico. Mr. Morgan, the author of a learned work on 'Systems of Consanguinity,' approaches the subject as an ethnologist, and first asks, not what do the Spaniards, fond as they were of bombast and extravagance and anxious as they must have been to magnify their own exploits, say they found in Mexico, but what was it antecedently possible that they could find there? If ethnology gives an answer to this question, we shall clearly be in a position to weigh the Spanish evidence, and determine what part of it is probably true or what untrue. Now, ethnology does give us the answer we need, for it explains that the Aztecs were simply Indians who had raised themselves to a higher level of barbarism—not civilization—than the other tribes; that they must have had a family, gentile, and tribal organization; that they lived in a community, that they had one communal meal a day; and that there is not the remotest possibility that they can have had anything like a European court, with a king and nobles and retainers. The materials out of which the chroniclers have constructed their marvellous tales of Montezuma's court were simply these: A confederacy of Indian tribes, with chiefs at the head, living in communities, or as Mr. Morgan calls them joint-tenement houses, and having in each house one common meal. It is certainly creditable to the human imagination that on this slender superstructure should have been reared an edifice in which (we follow Mr. Bancroft) "from sunrise to sunset . . . six hundred noblemen and gentlemen . . . passed their time (in the antechambers) lounging about and discussing the gossip of the day in low tones," while the outer courts were filled with "retainers" to the number of two or three thousand; in which we find goblets of gold and silver, elaborate dinners made by "cunning cooks,' chafing-dishes, "four hundred pages of noble birth," a "steward," "aged lords," and a great quantity of other feudal properties and characters that would have seemed to the democratic Aztecs rather out of place.

Mr. Charles Hale, formerly Consul-General of the United States, contributes a paper on the Consular System of the United States. This branch of the public service is almost the only one which has been taken "out of politics"—an act of Congress providing against removals except for cause. *A priori*, we might expect to find the following results: small salaries and rigid supervision of expenses, faithfulness and skill in the service itself, and a disposition in Congress, whenever bent on economy, to cut down the Consular Appropriation Bill, in a rage of virtue. We find all these things in actual practice. The Consular service is, perhaps, the least expensive branch of the Government; twenty years ago there was an annual deficiency of a hundred and forty thousand dollars to be provided for; now there is an actual surplus of a hundred and forty-eight thousand; a comparison with the British service, the only one with which any comparison can be made, shows ours to be self-supporting, while the English Government finds an annual deficiency of $600,000 to be met. This might show either that England pays too much, or that we pay too little, but there is independent evidence that the latter alternative is probably the correct explanation. The salaries we pay are decidedly small, none being over $6,000; there are only seven posts which yield more than $4,000; while all the fees collected by salaried consuls are returned into the Treasury, and the remainder barely support the consuls who have no salaries. But besides this the allowances for clerk-hire and office-rent are made on a scale that in some cases may be called parsimonious, the law requiring, also, for every item regular vouchers:

"There is an infinity of detail involving expense to a consul for which no provision is now made, often in matters insignificant in themselves and not pleasant to talk about. For instance, no American citizen who has occasion to visit a consulate abroad, likes to see the windows dirty and the floor covered with filth. But who does he suppose ought to have washed the windows or swept out the office in the morning? The Government does not allow a cent for any such expense. It would appear to be the theory of the Government that the consul should wash his own windows and sweep his own office, on Jefferson's principle, that one is sure a thing is well done when he does it himself. Even clerk-hire is allowed but at few places; a charge for anything like a porter or messenger would startle the accounting-officers at Washington like Oliver Twist's demand for a second helping of soup. So, also, the visiting citizen is probably pleased to find the consular office warmed in winter; and if it is open in the evening (as very many are kept open for the convenience of travellers, or at certain times, at seaports, for the convenience of shipmasters) it ought to be lighted; but no allowance for fuel or lights would pass in an account. Prior to 1852, indeed, consuls were expected to pay themselves for the paper on which they wrote their despatches and the pens with which they wrote them. Mr. Donald G. Mitchell (Ik Marvel), in his amusing account of his experiences as consul at Venice, attributes the allowance by the Government of charges for official stationery to Mr. Edward Everett's brief term of service as Secretary of State. But even now the consul must pay for the table on which he places his inkstand and paper, and (if not for the chair in which he sits himself) for the chairs in which the people sit who come to see him on business. Bookcases are the only articles of office furniture allowed to consular officers at Government expense; and of these only one at a time. We have known of consuls ingenious enough to construct a plan of a bookcase that would also serve as a table or desk to write upon; but to make a set of chairs of any article that could be vouched for as a bookcase we believe has baffled even consular ingenuity."

It may be seen from this, not what would be the effect upon the consular system of a thoroughgoing reform of the civil service, but what is the actual effect of having a civil service generally unreformed, with here and there a little bit like the one in question removed from the influence of patronage and rotation. The politicians proper, or rather the demagogues in Congress, look upon it as a sort of *corpus vile* upon which any experiment in the way of retrenchment and "lightening the burdens of taxation" may be made, and accordingly we find the Democrats now engaged in an attack on the consuls, who, so far from being wasteful or extravagant, are now actually doing what very few of its other servants are—making money for the Government.

"Dr. Cutler and the Ordinance of 1787" is not a very attractive title for an historical article, inasmuch as the reader has never perhaps heard of Dr. Manasseh Cutler, and has heard or thinks he has heard once too often the sounding of the praises of that monument of statesmanship, the Ordinance for the government of the territory northwest of the Ohio River. But Mr. William Frederick Poole contrives to give new interest to this

well-worn subject, though what he has to tell is not wholly new. Readers of the 'History of Athens County, Ohio,' know that the Ordinance (which was taken almost bodily from the Massachusetts constitution) was not the work of Thomas Jefferson, nor yet of Nathan Dane, who gained the credit of it from being one of the committee which drafted it, but of Dr. Manasseh Cutler of Ipswich, Massachusetts, a doctor of law, of divinity and medicine, a member of many learned societies, an astronomer and botanist of no mean rank, a friend of Franklin and Rush, and withal, as appears by his success with the Continental Congress, an accomplished lobbyist and what would now be called a "promoter" of enterprises. The passage of the Ordinance had its origin in a land speculation got up by Dr. Cutler and his friends, their object being to induce the Government to sell them a quantity of Western lands in exchange for depreciated Government paper, of which there was at the close of the Revolution a glut in the market. The Government had an obvious interest in having the lands opened and the paper retired, while on the other hand the scheme must have promised very considerable profits. Dr. Cutler went in person to New York, pushed the Ordinance through a committee which he appears to have got appointed himself, and finally, with the aid of the Southern States, through Congress. In this way the Southerners were the means of adding to the Union the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin, prohibiting slavery within their limits by the terms of the Ordinance, and so, without meaning it, creating the basis for the growth of a power at the West which was necessarily to end in the doom of slavery in its own home.

Besides the book-notices (which contain two interesting reviews of Tyndall on 'Sound' and Darwin's 'Insectivorous Plants'), the present number of the *Review* also has an article by Isaac F. Redfield on Chief-Justice Chase which, if it had appeared anywhere else, we should have said was unmitigated twaddle. Unfortunately for the writer (though fortunately for the other contributors), the principle *noscitur a sociis* does not necessarily apply in the case of contributors to quarterly reviews.

The Natural History and Antiquities of Selborne. By Gilbert White, with Notes by Frank Buckland; A Chapter on Antiquities by Lord Selborne; and New Letters. Illustrated by P. H. Delamotte. (New York: Macmillan. 1875. 8vo.)—That books have their fates is an old saw that lacks not for modern illustration. In English literature there are two that have had a fortune of their own, setting them apart from all others and conferring immortality upon them in spite of all likelihood and expectation. These are Walton's 'Compleat Angler' and White's 'Natural History of Selborne.' Both have found readers and lovers far beyond the narrow circle of adepts, and of both one edition treads close upon the heels of another. We can recall no books in any language precisely similar that give us Nature unsophisticate as yet with metaphysics, no mysterious mother, but a companion, and Science with so agreeable an infusion of the author's personal qualities as to bring it within the easy reach of human sympathy. These two men had the luck or the wit to stand as children at the knees of Wisdom, and to feel a pure delight in simple things without preaching it. They profess no special goodness of heart, but we cannot be long in their company without being sure that it is the base of character in both. Their books have the same hypæthral charm, the same confidingness of personal enthusiasm that makes originality; above all, the same gift of inspiring us with their own cheerful temper and harmless ambitions. Both Walton and White had the genius to be simple.

The 'Natural History of Selborne' is a striking illustration of Gray's remark "that any fool may write a most valuable book by chance if he will only tell us what he heard and saw with veracity." Not that Gilbert White was not the farthest possible from being a fool. Nor would Gray have thought him one, who himself philandered with his thermometer and kept a naturalist's calendar of his own. But the great merit of White's book is its want of intention to be a book at all, and the conscientiousness of its author as observer and reporter. Of his habitual punctuality we have an example in the volume before us. A facsimile of two successive entries in the parish register is given, one by White (then in his seventy-second year) recording on the tenth of June a burial of the same date, and one by his vicar, in which White's own burial is entered when it was already five days old. He was a good scholar after the elegant fashion of his day, which valued scholarship not for its pedantic niceties but for its civilizing associations and for being the most agreeable furniture of the mind. He was what in those days would have been called a very pretty poet, and wrote some descriptive verses as good as such things can be without a lift from the imagination. He considered the accomplishment of verse one of those to be acquired by a gentleman among the rest, like the Grand Tour. To his nephew, Samuel Barker, he writes that "a little turn for English poetry is no doubt a pretty accomplishment for a young gent, and will not only enable him the better to read and relish our best poets, but will, like dancing to the body, have an happy influence even on his prose compositions." There is something comic in this, but, on the whole, one's smile subsides into a sigh in thinking that the notion of polite training should seem so absurdly old-fashioned after the lapse of a century. The brief *ars poetica* which he sketches for his nephew shows knowledge and good taste. What was poetical in himself is mainly of the passive kind, making him shyly sensitive to the charms and caprices of the visible universe, and giving his prose a virtue of rural suggestiveness more easily felt than defined. More truly than with Thomson, you assist with him at the procession of the seasons; you hear the first adventurous bird; you are one of the gossips sent for when the earth lies-in of her earliest snowdrop; you smell the hay-cock which you do not see; you grow pensive when the falling leaves simulate awkwardly the winged creatures that are flown; you are isolated by the snow whose depth of drift gives a momentary importance to the oldest inhabitant. Nor is White without a humorous twinkle of the eye, observant of due clerical limits, and all the more mirthful for that, as where he speaks of the hen-sparrow "scandalized" at the size of the cuckoo's egg she is brooding, or describes the mobbing of the disabled hawk by the matrons of the poultry-yard. But the inadvertent humor of the book is perhaps its greatest charm. His interest in the placid competitions of the thermometer, beyond Ascot or Derby, his evident satisfaction in being able to say that two millers were struck dead by lightning as proving the severity of the storm, above all, his intense Selbornianism, are inexhaustibly entertaining.

The moral of this book is not the least of its qualities, and it is both high and profitable. It shows how much may be made out of the most secluded life if one only have the wit to be content with it, and how sincerity and enthusiasm may widen the narrowest sphere into relations of permanent interest with the world. Nor even as an unconscious satire does it fail to give us some pertinent intimations. How many warriors, statesmen, philosophers, and poets, who then shook the dust of their awful periwigs into the eyes of a world at gaze, have gone utterly to nothing, while White's inarticulate parishioners keep as fresh in the memories of men as the heroes of Plutarch! A great deal of what is palmed off upon us as history is purely fictitious, because the actors in it are themselves fictions and not solid men, while in White's little commonwealth every meanest member has the antique sincerity of nature. There is something ineffably consoling in the sight of a man so happy through Seven Years' Wars, dismemberments of empires, and French Revolutions, and happy, too, not through a selfish indifference but through wholesome sympathies with innocent and perdurable things.

The edition before us is certainly a handsome one, though not so easy to handle as our old favorite of 1802. The new letters, though few in number, are interesting and characteristic, and the illustrations pertinent and good. But we cannot say that Mr. Buckland altogether answers to our notion as an ideal editor. The prime quality, that of enthusiasm for his subject, he certainly has, but it is an enthusiasm without judgment which calls White the "father of English natural history." What is called the "Memoir of White" is provokingly full of everything but what we want to know, and one finds himself wishing that Mr. Buckland had learned something of the reserve of the fishes for whom he has done such good service. As one of the interesting facts of White's life, he informs us that Queen Anne died in 1714, six years before he was born. And he tells us gravely that the Vicar of Newton Valence "pointed out to me by means of an old army list of March 15, 1786, who the Honorable Daines Barrington was"! From the same gentleman he "learnt that the late Bishop Wilberforce had been a frequent visitor at Newton Valence," and then follows half a page about that clever prelate. Had White been as much concerned with the natural history of bishops as too many of his contemporaries were, he would long ago have gone back to dust with them. We confess that we should have been gladder to know what White's income was than that Mr. Buckland was born "in Christ Church College, Oxford, December 17, 1826," though no doubt to *him* this event was of some consequence. The notes, also, strike us as too discursive, and like the emptying of a naturalist's note-book. It is one of the great charms of White's book that it is not natural history in general, but that of Selborne in particular, and we resent being importuned with facts, however interesting in themselves, that drag us from the seclusion of that happy valley.

English Constitutional History. A Text-book for Students and others. By Thomas P. Taswell-Langmead, B.C.L., late Vinerian Scholar in the University of Oxford, of Lincoln's Inn, Barrister-at-law. (London: Stevens & Haynes. 1875. 8vo, pp. 736.)—For the history of the English constitution we have three standard works, which, taken together, present a nearly complete and continuous discussion of the subject: the Constitutional Histories of Stubbs, Hallam, and May. But a treatise at once brief and complete, with a unity of plan covering the entire ground, and containing the results of the latest scholarship, was very much needed. This want Mr. Taswell-Langmead has undertaken to supply, and, we are glad to say, with complete success. He does not lay claim to any originality in material or treatment, professing to have done nothing but compile from the three treatises above-mentioned; and so frankly is this plan carried out that not only do we find constant references to them and citations from them in the foot-notes, but entire pages in the text are literally quoted from them with the use of inverted commas; nay, at times we have almost their exact language, varying only so much as not to pass precisely as a quotation (*e.g.*, from Stubbs, p. 103, and from Hallam, p. 175). This is done, however, so openly and with such full acknowledgment that a charge of plagiarism would be out of the question. Nevertheless, in spite of the disclaimer of originality and the numerous quotations, not only from these writers, but from others—Bagehot, Green, Freeman, Macaulay, Forster, etc.—the book is far from following its authorities slavishly; its author has thoroughly digested their contents and made a book which is completely his own. He knows how to select materials and how to use them to advantage when selected. For example, the arrangement is entirely original, and is a very excellent one. He has especially had in mind the requirements of class instruction, and with a view to this use he has introduced the entire text of the three most important documents in English constitutional history—the Magna Charta, the Petition of Right, and the Bill of Rights.

Mr. Taswell-Langmead's professional training as a lawyer is the source of one high qualification for this work. His legal definitions are conspicuous for clearness and exactness; for example, in giving the two elements of feudalism (p. 53), where, after describing the personal element of vassalage, he goes on: "(2) The holding of the usufruct (*dominium utile*) of land on the condition of rendering military service, the ultimate property (*dominium directum*) remaining in the lord, the grantor." Where the complete text of documents is not given, we have admirable analyses of their contents; the "Constitutions of Clarendon" (p. 90) afford a striking example of this excellence. The arrangement, which, as we have said, is the author's own, combines the advantages of the chronological and the topical order. It is in general chronological. The first four chapters and the last six are strictly so; between these are interposed six chapters, which are mainly topical, upon the "Administrative System," the "Succession to the Crown," and the "History of Parliament." For the middle period—the fourteenth and fifteenth centuries, which are treated principally in these topical chapters—the author is under the disadvantage that he wrote before the appearance of Prof. Stubbs's second volume, so that this part of his work is on the whole the least satisfactory. Towards the end, also, the growing dimensions of his book appear to have frightened him into a less full treatment than, relatively to the earlier periods, would have been desirable. The period of the Commonwealth is hardly touched upon; Strafford's career is inadequately treated—his policy of "Thorough" is not even mentioned; and, what is unaccountable, no account is given of the results of his impeachment. The student is left to suppose that, if executed at all (which is nowhere stated), it was after conviction upon impeachment, and not by bill of attainder. The "Incident" (p. 558) need not have been mentioned at all in a work like this, but, if mentioned, the term ought surely to be explained. We find some confusion in the use of the terms Great Council and *Curia Regis*, even in view of the definitions of the latter term given in the note to p. 151—as equivalent to 1, the *Commune Concilium*; 2, the *Ordinarium Concilium*; and 3, the *Court of King's Bench*. Undoubtedly in the twelfth century its special use is as "a perpetual committee of the national council" (Stubbs), for administrative and judicial purposes. This was, in a constitutional point of view, precisely the equivalent of the *Concilium Ordinarium*, or Privy Council; but *historically* the two bodies had no connection with each other, but were independent offshoots of the same body, the *Commune Concilium* (the representative of the Anglo-Saxon Witenagemot). As the Great Council became distinctly a feudal court, the *Curia Regis* was detached from it, and became the source of the common-law courts; later, the permanent (Ordinary) Council was likewise detached, and became the source of the Privy Council and the Court of Chancery, while the *Commune Concilium* itself was transformed from a feudal court to a Parliament or Assembly of Estates. This is one of the points in which we miss the influence of the second volume of Stubbs (p. 255).

The subject of the peasantry and its relation to the constitution—one in regard to which Mr. Hallam was still quite in the dark—is discussed in a very satisfactory manner. Certain expressions of the law-writers of the twelfth and thirteenth centuries, borrowed from the civil law or the law of France, have given occasion to an exaggerated notion of the servitude of these classes in England—a notion quite inconsistent with the ascertained facts as to the structure of English society, even as modified by feudalism. The view here presented is essentially correct. There are still, however, one or two points which lack precision and clearness. As a result of the Norman Conquest, it is stated (p. 268) that "ceorls who had land for the most part retained it, either as 'libere tenentes' or as 'socmanni,'" etc., much as if one should say "noblemen or earls." The *socmanni* were a class of *libere tenentes*, being those who held of the lord of the manor by agricultural instead of military services, while other *libere tenentes* held by knights' service. Again, the *villein socage, privileged villenage*, or *customary freehold* (as it is indifferently called) of p. 272 was merely that privileged form of prædial serfdom which existed in the royal manors, or, as they are technically called, the manors in "ancient demesne."

We hope that some American publisher will make arrangements with Mr. Taswell-Langmead to bring out a cheaper edition of this excellent book, with such alterations as may be suggested to him by publications subsequent to his first edition. We know nothing so well adapted to the use of college classes.

A Grammar of the New Testament Greek. By Alexander Buttmann. Authorized Translation, with numerous additions and corrections by the author. (Andover: Warren F. Draper.)—The translator, who modestly withholds his name from the title-page, is J. H. Thayer, Professor of Greek in Andover Theological Seminary, already known as a translator from the German by his version of Winer's 'Grammar of the New Testament Diction,' to which the present work may be regarded as a supplement. The publication of Winer's 'Grammar' was an era in the history of exegesis and exegetical theology. Before this work appeared, theologians had known no restraint from eliciting from the Bible whatever teachings they chose, making their own doctrines the premises from which to deduce the interpretations of texts, instead of making the obvious sense of texts the premises from which to infer doctrines. A century ago, theologians used to pretend that the Greek prepositions and tenses were in the Scriptures used indiscriminately, and that we had a right to assume that one form was used for another whenever such assumption would adapt itself better to the opinion which we wished to corroborate. This loose usage Winer was the first to attack and check. In his 'Grammar' he proved by abundant instances that the writers of the New Testament, though not as accurate as the classical authors, did yet use language with ordinary propriety, and were incapable of the solecisms which theologians had attributed to them. Winer did a work which did not need to be done again; but, by very reason of the magnitude of his achievement, some of its details had to be ignored, and this is why we speak of Buttmann's work as supplementing his. For instance, Buttmann could afford to make more allowances than his predecessor to the usage which he was opposing, and conceded incipient departures from classic usage and traces of Latinisms, the mention of which by Winer would have disproportionately weakened his argument. Buttmann also adopts the habit of modern criticism in giving greater prominence than Winer to the influence of the Septuagint. We would not be understood as implying that Buttmann is more accurate than Winer, because, on the contrary, he shows a decided feebleness of discernment in distinguishing things that differ. As between the two books we should prefer to own Winer, yet the present work is useful from referring to several-fold more texts than Winer, and from the exhaustive indexes, four in number, which are appended to it. Prof. Thayer has added a glossary of technical terms, excellent as far as it goes. We should have inserted many other words, such as *ilacism, cacophony*, which occur in the text. It is made more valuable as a companion to Winer from the fact that whenever Buttmann refers to Winer the page of the latter is inserted doubly, once from the original German and again from Prof. Thayer's translation, which translation, by the way, has the advantage over all preceding translations in using the last (seventh) edition. All other translators of Winer have followed earlier editions—a matter of unusual importance in this department, owing to the fruitful labors of Tischendorf. Alexander Buttmann, let us add, should not be confounded with his father Philip Buttmann, author of the well-known classical grammar.

The Nation.

NEW YORK, THURSDAY, MAY 4, 1876.

The Week.

THE Senate has been occupied in listening to the conclusion of Senator Jones's great speech on resumption and with the impeachment proceedings. General Belknap's counsel have tried without success to get a postponement, first to December and then for two weeks. They will have to argue the question of jurisdiction this week, and stories are now industriously circulated that the Senate will decide that it has not jurisdiction. The arguments, however, in favor of such a decision are so technical that we can hardly believe they will have much weight. The notion that because the process only applies to "civil officers of the United States," the Senate has no jurisdiction over persons who are out of office through resignation, is open to the serious objection that it renders the whole process nugatory, inasmuch as any officer can thus escape it and immediately be reappointed to office, although one of the objects of impeachment is to make such a result impossible. A President who had committed an impeachable offence might resign, and immediately run again for a second or third term, or, if that were not possible, take a seat in the very body which might have disqualified him for ever from holding office. In the sufficiently analogous case of a statute providing that conspiracies between gaugers and supervisors shall be punished by fine and imprisonment, we take it a court of justice would be greatly amused by a plea to the jurisdiction on the ground that the persons indicted had resigned their offices and were no longer supervisors or gaugers. Senator Jones, having gained the ear of the public, has been turning it to very good account, proving not merely that the "double standard" of gold and silver is the proper basis for resumption, but that resumption on a gold basis is "not practical, financially, metallurgically, internationally, or politically." It would require $350,000,000, and to get this we should need at least seven hundred years. "And even this cannot be done unless Austria, Italy, and Russia shall leave us to monopolize all the gold we need before they reform their own debased currency."

These calculations seem to make it advisable either to repeal the Resumption Act at once or to postpone the date mentioned in it at least as far as 2579 A.D. Notwithstanding this, the House has again refused even to repeal it by a vote of 115 to 111. The attempt was made by Mr. Holman, but failed from want of a two-thirds vote. The Senate having insisted on its amendments to the Deficiency and Diplomatic appropriation bills, both Houses have appointed conference committees. The House has also passed a resolution for the appointment of a committee of nine to investigate the Custom-House at New Orleans and other Federal offices in Louisiana. The Speaker has sustained an objection made by Mr. Seelye of Massachusetts to the clause of the legislative Appropriation Bill (which was subsequently passed) transferring the Indian Bureau to the War Department, on the ground that it was no proper part of an appropriation bill, and not germane to its general objects. This is an excellent decision, and will have the effect no doubt of spoiling the chances of many a nice little job which, not having strength enough to stand on its own feet, would have been jostled through both Houses in the rush of the last few days, and then would have obtained the President's signature, under the usual plea that unless he signed the bill the whole appropriation would fall through. The impossibility of vetoing separate parts of bills, while approving the rest, is a great inconvenience, and will always lead to trouble as long as it exists. A constitutional amendment has been introduced into Congress giving the President the right to the separate-clause veto (a power which the governors of this and we believe other States possess), but we ought not to have to wait for the passage of an amendment. It seems a pity that the Supreme Court does not recognize such a right on general principles. As the matter stands at present, a hostile Congress might, if it pleased, render the veto power almost useless by consolidating all its acts at a given session under one head, calling it all an Act to carry on the Government, and then demanding a veto or the passage of the whole. Mr. Blaine on Monday exploded the scandal with regard to his alleged connection with the Kansas Pacific road, by showing that he never had anything to do with the road at all, except in actively opposing it in Congress. The charge arose out of confusion between his name and that of his brother, J. E. Blaine, who invested money in the securities of the company.

In a vague way, it is given out from Washington that since April 20 less than $1,500,000 in small change has been put in circulation—how much less is not specified. At New York, the Sub-Treasurer has paid out less than $400,000. Small change of both descriptions (silver and paper) is at a premium of 3 to 5 per cent., and there is much inconvenience and no little grumbling. At Washington, the question is how to relieve what is called the small-change famine. Mr. New, the United States Treasurer, proposes that silver shall be issued for legal-tender notes, and then held for the redemption of fractional currency as it comes in. This is a good suggestion, and differs from the Bonanza proposition in that the latter would issue silver for fractional notes up to $50,000,000, and as much more as legal-tender notes could be obtained for. A bill to effect this object has been introduced, and is likely to pass. Mr. Boutwell proposes to reissue fractional notes. Senator Jones, it is said, has twenty men preparing a speech for him on the subject. In his last speech he expressed the opinion that the Comstock Lode mines were near exhaustion; this produced a panic in San Francisco, which was checked by the counter-statement of Mr. Flood, of the firm of Flood & O'Brien, at present the largest owners of mines on the Comstock Lode, that the mines "never looked better."

Hallett Kilbourn has been released on habeas corpus, Judge Cartter holding that two punishments—by the House for contempt, and by the courts for a misdemeanor—cannot go on together. It is not at all clear why they cannot, inasmuch as one process seems to reinforce the other. The House has the undoubted right to punish a contumacious witness, and, in addition to this, a statute has been passed making a contumacious refusal to answer a question a misdemeanor. There seems to be no reason why the House may not use both remedies. As the power to punish for contempt is an arbitrary power of undefined extent, we can see no reason why a statute of this kind, affixing a slight penalty, should take it away. The case is more important than it seems, for at the present time, with the air full of accusations of fraud and crime, and with so many of them turning out to be true, it is of the greatest consequence that no unnecessary obstacles shall be thrown in the way of the most searching investigation. An indictment for a refusal to answer a question furnishes no safeguard whatever, for many men who have heavy interests at stake will prefer to stand a trial and even suffer a slight punishment to answering a question, and often they will have it made for their interest to do so. What is wanted is a vague and unlimited power, with terrors for the imagination as well as the body and purse. The power of contempt, both in courts of justice and in legislative bodies, has generally answered this purpose, and we doubt if any other will.

The British Government has decided to release Winslow, and has announced that it will also release Gray, the Wall-Street swindler, and a third prisoner by the name of Brent, as soon as their term of arrest expires. This cannot but be regarded as a most lamentable break-down of justice, for which both governments are to blame. The object of extradition treaties is the suppression of crime, and, while every government has an interest in seeing that the process is not abused, there was no doubt in Winslow's case that there was substantially no room for abuse. The English Government could have easily satisfied themselves of this without requiring any guarantee of the United States, and the United States might at the same time have far better given the guarantee than let the prisoner escape. There would have been a good deal to be said had the Lawrence case never arisen, for the position of our Government is that, as the Treaty itself provides certain specified causes of surrender, it is to be presumed that we will not first demand a prisoner under the Treaty and then try him for some offence outside it. But, unfortunately, this is just what we have been doing in Lawrence's case. Lawrence has been on trial for an offence outside the Treaty, and the District-Attorney has been reprimanded for trying the indictment, while the judge has decided that the Treaty does not bind the court in any way, but that, having got possession of the prisoner, it may try him for any offence of which it has jurisdiction. There would, in the present state of affairs, be nothing surprising if Tweed should determine to pass the declining years of his life in London. Continual travel has probably not that attraction for him that it might have for a younger man, and, though he would perhaps be arrested at the instance of this Government, he could easily be released on the representations of his counsel that, though demanded as an offender against the criminal law, he was really the victim of a "political persecution." The State Department has given notice of the abrogation of the extradition clause of the Treaty.

On Thursday last the United States Treasury sold the $6,105,000 gold which it received for the $5,883,000 United States five per cent. bonds in which part of the *Alabama* Indemnity Fund had been invested. The average price obtained for this gold was 112 42, which made the currency price obtained for the bonds $118 07, or about ¾ below the current market price. Since the gold sale the price of gold has advanced to 113, and sterling exchange has advanced to 4.90½ for short-sight bills—a rate which makes it profitable to export gold coin. The value in gold of $100 greenbacks has ranged during the week between $88 88 and $88 49.

The Utica Convention has met and adjourned, after adopting a platform "reaffirming" the party principles of the last two years, which are, as the *World* would say, "free-trade, hard money, and home rule," and instructing the delegates to St. Louis to go into the Convention "as a unit"—that is, to support solidly the choice of the majority, whoever he may be, and recommending Mr. Tilden as the nominee. The anti-Tammany men appeared in full force, headed by John Morrissey, but John Kelly was too strong for them, and, finding the Convention not disposed to recognize their claims, they left the room in disgust. Whether the action of the Convention means the active support of Tilden or something less is now a point a good deal discussed in the newspapers, there being extremists, of course, on both sides—those opposed to Tilden going so far as to declare that he is not a true-hearted man of the people, but is of a cold, treacherous, and aristocratic nature, and that his pretences of reform are all humbug; while the other party would probably agree with the glowing eulogium of the Cohoes *Eagle*, which modestly admits that for itself "to laud Mr. Tilden is as absurd as to gild the glowing marble," and adds: "From the sources that feed the mighty Mississippi, from the craggy slopes of the Rocky Mounts to the wooded banks of the Monongahela, in every part of this vast continent, from the forests of Canada to the morasses of New Orleans, we find the name of Samuel J. Tilden coupled with the cry of reform." There seems to us little doubt, from the declarations of Mr. Horatio Seymour—who is frank enough to describe the present state of politics as one in which "the Republicans have lost the confidence of the public, and the Democrats have not gained it"—and of other leaders, that the chieftains in this State are determined to fight their campaign out on a reform basis; and this in New York of course means the nomination of Mr. Tilden.

The Republicans of California and Massachusetts have both held their conventions, and adopted platforms strongly in favor of civil-service reform and a good candidate for President. The Massachusetts convention put at the head of its delegation Mr. R. H. Dana, jr., and he will have the assistance of men of the standing and ability of Mr. J. M. Forbes and Judge Hoar, whom Messrs. Morton and Conkling will find, when they get to work, are "practical" men, not "idealists" or "visionaries." The general impression is that the Californians will support Blaine, while the Massachusetts delegation will be for Bristow. The Bristow movement shows every week decided gains in strength, its latest addition being Bristow Clubs in Boston and Cincinnati, and we suppose we may add the new Reform Club in this city, which has been organized by the better part of the Union League, for, though not avowedly in his favor, it is in such hands as will naturally conduct it into support of him. This Club, with Judge Emott at its head, and with most of the leading Republicans and Reformers in the city as its managers, and free from the depressing influence of the society of Messrs. Sharpe, Bliss, and Davenport, demands resumption, civil-service reform, retrenchment, and for a President "a statesman of tried character, in sympathy with the best sentiments of the people on all public questions, conversant with the affairs of government, discriminating and independent in the choice of public servants, one who will thoroughly reform the public service, and whose name alone will be a guarantee of official integrity, of wise and prudent administration, and a fearless enforcement of the laws."

There is no doubt that Mr. Bristow has endeared himself to a very large constituency by his manner of meeting the charges which his enemies have been industriously bringing forward. The ordinary way of meeting accusations of fraud, embezzlement, or other crimes in politics is for the statesman accused either, first, to "hurl back the foul-mouthed insinuation," and having hurled it back to consider himself by this simple process vindicated; or, second, to request an immediate investigation by his own party, and then get the investigating committee to postpone action till the election is over; or, third, to go before it and, after explaining that the crime actually committed was not fraud or embezzlement, but really was obtaining money under false pretences, get a unanimous exculpation from the committee; or, fourth, to declare that the whole thing was a "newspaper lie" unworthy the attention of any self-respecting statesman; or, fifth, to get out of it by simple perjury. Of all these different processes the public has grown somewhat tired, and it has been as refreshing as pure air in a pest-house to have at least one man come forward, as a man of honor and a gentleman naturally would on being charged with crime, and demand his accusers' proofs; and, instead of manifesting a desire to have the thing "die out," to show the strongest inclination to kill it himself at once, and in disproving it not merely to exonerate himself, but to cover his slanderers with the shame that ought to cover them. This Mr. Bristow has been doing very successfully; and the astonishing and novel spectacle of a politician in office meeting his accusers with the indignation of an honest man has probably won him many supporters in the last two weeks.

The enemies of Mr. Blaine are not satisfied with his denial of the charge that he received $64,000 from the Union Pacific on a pledge of Little Rock and Fort Smith bonds, even though he is supported by the denials of the officials of the road and the bankers supposed to have been concerned in the transaction. Mr. Harrison of Indianapolis, a Government director, has published a card, in which he says that in September, 1872, his attention was called to the fact that the road held these bonds, and that on trying to dis-

cover what the explanation was, Mr. E. H. Rollins—who now denies that Blaine had anything to do with it—begged him to go no further, as an investigation would ruin the political career of Mr. Blaine; and that this statement was subsequently repeated in the presence of a witness, another Government director. Mr. Harrison also says that when the Crédit-Mobilier investigation was going on, he called the attention of the chairman of the investigating committee, Mr. Jeremiah M. Wilson, to these bonds, but Mr. Wilson said nothing about it. Twenty-three days later an attempt was made by Delano, then Secretary of the Interior, to have him (Harrison) removed from his position of a Government director. He offers to go before the Judiciary Committee of the House and make oath to this. Mr. Rollins refuses to be "interviewed" on the subject.

Meantime, an investigation has been ordered by the House, and, whether it leads to any damaging revelations as to Mr. Blaine or not, one thing is quite certain, that it will throw light on a very dark piece of railroad history. The Little Rock and Fort Smith Road was a carpet-bag enterprise, and issued bonds and stock in a way that would make a Granger's hair stand on end. The "company of Boston gentlemen," as Mr. Blaine calls them—or the Ring, as it has been generally known—that got up the road, for every thousand dollars they received issued two thousand dollars' worth of bonds and two thousand dollars' worth of stock; so that Mr. Blaine's payment for his bonds of "the regular price fixed for their sale" does not mean precisely that he paid dollar for dollar. His statement, too, that the road got nothing from Congress, but "derived its life, franchise, and value wholly from the State," is misleading; for, though the State of Arkansas was the intermediary between Congress and the road, the real donor of the land-grant which gave it all its value was the United States. Mr. Blaine's statement, also, that the only act passed by Congress after the land-grant affecting the road was simply to "rectify a mistake in previous legislation," is we believe misleading. It appears from his statement that Mr. Blaine bought his bonds in the summer of 1869. At that time an act of Congress, passed in the spring of the same year, restricted the road to $2 50 per acre in sales of its grant. On March 8, 1870, another act was passed removing this restriction. All this may in no way show that Mr. Blaine did anything he ought not to have done: while, however, he may be a very good and frank man, the Little Rock and Fort Smith Road may be a very bad and mysterious corporation, and the latter seems without doubt to be the case.

Governor Rice of Massachusetts has vetoed the act of the Legislature of that State legalizing the marriage of Mr. James Parton with his step-daughter, on the ground that it is "contrary to sound principles of legislation and to the good of society." Few persons will, we suppose, question the truth of this statement, and there seems to be very little disposition in any quarter to take any other view of it. Whatever may be thought of the policy of a statute forbidding such marriages, it is quite clear that if any change is to be made it should be a general abolition of the restriction, not by withdrawing a particular marriage from the operation of the statute. This is not special legislation—it is not legislation at all; and there is probably no subject involving the relations of persons in civilized society that we could less well afford to have tampered with in such a way than that of marriage. It would be bad enough for a legislature to undertake to exempt favorites from taxation, or to pardon for crime, but not so bad as for it to introduce chaos into the marriage laws. The objections to it are precisely the same in kind with those that we make to the laxity of many Western States with regard to divorce. Any rules on the subject of marriage that are not uniform or that tend to make people reckless as to entering into it, whether by making it easy for them to escape its bonds or by making the legalization of forbidden marriages easy and open, tend to bring the family itself, home, and the civilization which they preserve, into contempt. It is by a poetical sort of justice that Mr. Parton, who has always been a worshipper of the "dictates of Nature," should by this little oversight be suddenly made to feel how very disagreeably they may be interfered with by those of law.

The poor character of the security of first-mortgage railroad bonds issued with no other basis of invested capital than that derived by the sale of the bonds themselves, has now been pretty well learned through the unfortunate experience of the holders of many such issues. Though the bonds were really backed by little or no prior expenditure of capital, they had, in almost all instances, the apparent support of a paid-up capital stock of an amount equal to or greater than the debt; this paid-up stock being generally issued as part of the contract price paid to a construction company, in whose hands it represented the profits of a contract made for no other purpose than that of legalizing such issue. In some cases, however, even this legal fiction was dispensed with, and the paid-up capital stock, as it was termed, was issued as a bonus to the original parties who subscribed for the bonds, without even the nominal existence of any valuable consideration. We are glad to see that the legal position of the holders of such stock is about to be judicially tested, a portion of the creditors of the Leavenworth, Lawrence and Galveston Railroad Company, whose stock was distributed in the manner last described, having determined to institute a suit against the stockholders on the ground that they are individually responsible to the extent of the par value of their stock. There can be no doubt that in such cases as this the existence of what is called full-paid stock operates as an inducement to people who purchase the bonds in the market. The Grangers used to maintain that they were the parties injured by the transaction, inasmuch as the company immediately put up its rates so as to pay dividends on the stock; so that what the creditors ought to do, on the Granger theory, would be to get a mandatory injunction compelling the Leavenworth, Lawrence and Galveston Railroad to put up their rates to a point which would make the stock worth par. But this simple remedy, for some reason, does not seem to have occurred to them.

The effort in Parliament to alter the Queen's purpose of assuming the new title of Empress of India resulted in nothing more than a sharp debate on Thursday, Mr. Fawcett being the active mover in opposition. On the same day the Royal assent to the bill was announced to the House without eliciting any demonstration, and on Friday the proclamation of the title appeared in the *Gazette*. There could be no better illustration of the different ideas attached to the same name in different countries than is afforded by the feeling which this incident of Mr. Disraeli's Administration has caused in England. Britons have long been proud of their British Empire, and have long been accustomed to speak of their Indian Empire, but in either case have used the term in a purely territorial and impersonal sense, and one in which it was not the correlative of Emperor at all. "Emperor" has retained on both sides of the Channel its Latin equivalence to "Cæsar," and Cæsarism is a principle of government as repugnant to Anglo-Saxons as it has now become to the last victims of it, the French themselves. In England everybody is perfectly well aware that the British Empire will gain nothing in unity or solidity by giving a new style to the Queen's relations to India, while the best sentiment of all classes shrinks from adopting a title which in their eyes is as disreputable as it is meaningless and superfluous. The depth of this feeling and the amount of opposition it produced have caused the Germans some amusement, and generally, perhaps, some surprise. Their more intelligent writers, however, perceive the true merits of the controversy, and analyze correctly the contrast between English mortification over Victoria's assuming the title of Empress and German exultation over Wilhelm's taking on that of Kaiser. In the latter case, the title was a pledge and a symbol of national integration and regeneration; in the former, a sign of no organic change whatever, but merely of a vulgar yearning for a sounding and showy appellation on the part of the chief ruler of a purely constitutional monarchy.

THE PROSPECT OF A GENERAL WAR IN EUROPE.

THAT time-honored resource of the American editor at a loss for a subject, "the imminence of a general war in Europe," seems just at present to have more attractions than it has had for some years. The money markets of the Old World are now in a state of depression which is almost unprecedented for its depth and duration, and there is apparently no sign of recovery. Part of it is undoubtedly due to the magnitude of the defaults in the obligations of various semi-civilized governments, but its prolongation is largely the result of the increasing feeling of uncertainty about the fate of European Turkey. The recovery of confidence, indeed, seems impossible as long as the accumulation of explosive materials continues in the valley of the Danube and on the shores of the Adriatic, and that it does thus far continue and increase there is no question. The Austrian plan of pacification has proved a total failure. The acceptance by the Porte of the Joint Note of the three Great Powers, with the adhesion of France and England, has exercised absolutely no influence on the status in Herzegovina. The promised reforms and conditional amnesty have been duly proclaimed, but they have not only been treated as nullities by the insurgents in the field, but have not been even partially carried out by the Turkish commander, and this not so much for want of will as for want of power. In all Turkish wars, the regular army is but a portion of the force by which hostilities are carried on. There is sure, in the first place, to be a considerable force of irregular cavalry, known as bashi-bazuks, composed of volunteers drawn from the half-robber population of Kurdistan and the other regions of Asia Minor bordering on the Persian frontier, who are totally undisciplined, and whose employment on detached service and reconnoitring gives them ample opportunity for the plunder and murder of the Christian population. Telling these people about the Sultan's reforms, and about the equality of the Christians and the new common citizenship of men of all creeds in the Empire, is telling them of impossibilities, or improbabilities so wild as to be the next thing to impossibilities. In the next place, as every Christian revolt is a rising against Mohammedanism, every Turk becomes a soldier in it, whether he is called into the army or not, and feels that he serves the cause nearly as much by cutting the throat of his next-door neighbor, or carrying off his wife or daughter, as by enlisting in the army; and the consequence of this is that civil war in Turkey involves an amount of social dissolution which could hardly take place in any Christian country in our day, whatever the differences of race or creed. In fact, the mediæval state of mind which sees in wholesale massacre a possible political expedient, can probably be now nowhere met with out of Turkey. The Christian refugees who have gone home under the promise of amnesty find that, though it is all very well on paper, the irregular troops and their Turkish neighbors know nothing about it, and every day the imagination of the insurgents in the field is tired, and the Sultan's proclamation covered with ridicule, by the news of fresh atrocities.

Moreover, they have, as they are finding out, calculated rightly with regard to the effect of their protracted resistance on the surrounding states. In Servia the popular enthusiasm has proved too much for the Government, the militia is being called out, a forced loan is proposed to pay the expenses of the armament, and we may any day hear of a rush over the border and a collision with the Turkish troops. If Montenegro keeps out of the fray, it is mainly owing to the fact that a large proportion of her fighting men are already engaged in it, and the news from Roumania reports active military preparation in that quarter also. All this, too, is accompanied by open encouragement from the semi-official press in Russia; and the rumors about the Czar's weariness of business and desire to abdicate are believed to have reference to his anticipation of a sudden necessity for the solution of the old Turkish problem. If it has to be a military solution, and Russia has to take part in it, he does not, it is said, feel equal to the cares and responsibilities of the undertaking, but will retire and leave it to his son, who is eager to precipitate it, and would not regret its bringing him into collision with Germany. Indeed, the fate of Turkey is now said to be dependent on the result of the conflict going on in Russian councils between the Old Russian party, headed by the Czarevitch, and the German party, headed or supported by the Emperor himself. Should the former get the upper hand, the Emperor will bow to influences which in Russia are stronger even than the Czar, and let younger men meet the resulting crisis. In that case, sufficient encouragement would be given to the Servians and Roumanians to reinforce the insurgents, and if Austria intervened there would be a collision between her and Russia, in which Germany would probably take part at once. Documents have been published at Rome showing that Count Andrássy expected war with Russia on this question as long ago as 1870, and that he assigned to Turkey the task of reconquering the eastern and northern shores of the Black Sea, while Austria set up the Polish kingdom again. Things have changed a good deal since then, and if Poland were to be set up Germany would have more to say about it than any one else, while Turkey, whatever she may have been then, is certainly no longer equal to the task of conquering anything from anybody. The Austrian occupation of Herzegovina and Bosnia, as a piece of police duty, is the step which ought most naturally to follow next, but this is said to be retarded by the strong objection of the Magyars, who now weigh so heavily in Austrian councils, to any Slavic additions to the Empire.

On the whole, we presume nobody's judgment as to what will happen next is worth much, because it will depend on the result of the fighting, in which nothing decisive has occurred, or is likely to occur as long as Turkey has only insurgents to deal with. The troops are being steadily frittered away by disease and the sword, but they are also being steadily reinforced, because the Mussulman population bears drafting better than any other in Europe, and the Christians will still bear a great deal of taxing. The insurgents, too, draw as much help in men and supplies from over the border as unconquerable hate and increasing hope need in order to protract the struggle, and probably nothing decisive will occur until Servia or Roumania intervenes. This will probably draw after it the intervention of one or other of the Great Powers, and then it is impossible to foresee the nature and extent of the struggle which will follow. One thing is certain, and that is that Bismarck will never permit the Empire to be seriously menaced by any new political combination in the East, and it is almost equally certain that in case Turkey breaks up, the very existence of Austria will depend on her securing such additions to her Slavic population as will compensate her for the loss of the remainder of her Germans, which every one admits is now only a question of time. Financially considered, the more quickly the crash in Turkey comes, the better. Her restoration is now impossible, and in her present decrepit condition she contains the materials for an explosion, the mere waiting for which must have and has a paralyzing effect on business. If her European provinces, too, were brought under an orderly and well-established government, it would be almost equivalent, in many of its effects on production and trade, to the discovery of a new country of great fertility and as large as France, and would give an enormous stimulus to the commerce of the Mediterranean.

PURIFYING THE PRIMARIES.

THE exultation of a certain part of the Republican and Reform press in this city over the row at Utica between the Tammany and anti-Tammany leaders, Morrissey and Kelly, is difficult to account for or explain. It is only six months since a precisely similar row, followed by a bolt on the part of Morrissey into the "Reform" party, ended in identifying the Republican and "Reform" cause for the time being with that of the most corrupt and shameless gang of politicians in the country, having a retired prize-fighter at its head, and for a tail a real proletariat, who live on "wages" extorted from the public under the guise of taxes by the politicians who owe their power to tax to the votes of this same proletariat bought by the proceeds of taxation. The reform-

ers and honest people who were misled into voting the "Reform" ticket at the election last fall, did so under the idea that the movement was directed against the "one-man power" and the tyranny of Tammany Hall and the Boss system. We endeavored to point out at the time that the hope was a simple delusion; that the tyranny of Tammany Hall and the one-man power and the Boss system did not come from the existence of a club having legal authority to use a corporate name and seal, and own a piece of real estate; and that Morrissey was himself a Boss just as Kelly was a Boss—the difference between them being that Kelly was trying to be a good Boss and use his power for the advancement of good government, while Morrissey was a bad Boss, and was trying to get into power by an open and barefaced appeal to communism. The only result of the alliance between Morrissey and the Reformers that did or could come was the covering of the cause of reform with ridicule and contempt; the appearance as a senator at Albany of Morrissey in the character of a *bouffe* reformer, who was going to destroy Tammany Hall and its wicked sachems, and restore the country to the pure and simple democracy of an earlier day; the filling of the offices with little Morrisseys; a renewed assault by the proletariat upon the pockets of the taxpayers; and no perceptible diminution of the power of the Tammany-Hall, the one-man power, or the Boss system whatever.

That many good people should have succumbed to this swindle last fall was perhaps natural; but, in the name of common sense and decent government, we must protest against its being played over again this year. That Morrissey is fully impressed with the desirability of trying it is evident from his proceedings in the Utica Convention, at which he denounced in the same strain as last fall the tyrant Kelly, and announced himself as the upholder of popular rights against fraud and oppression, and made vague threats of the terrible consequences which would ensue if he were not admitted. In the wrangle which followed, both Bosses in the most open way laid bare the real source of their troubles in words so plain that we should think it would be possible even for the *Post* to understand them; Kelly declaring that it was in fact "an utter impossibility to hold primary elections in New York that would be equitable and fair," and Morrissey, with great candor, admitting, in the genuine Boss dialect, that "the whole of the delegates on both sides were a fraud," and indignantly adding that some of the credentials came from a meeting which "was purported to be held at a brown-stone front"—evidently, in the estimation of the Convention, a strong point; the idea, as Morrissey said, of primaries being held in "gentlemen's houses" being preposterous.

The meaning of such admissions as this is plain enough. It is that the primary, as a political institution in the large centres of population and politics, is dead and lifeless; that it is used only as a cover for the real operations of a campaign; and that its formal employment at the present day is merely an instance of what is called a "survival." The early notion of a primary was that of an assemblage of the citizens of a particular locality and party, for the purpose of deliberation and comparison of views as to the selection of candidates. Now, the citizens stay at home, and the candidates go themselves or send representatives, and the nominations made by them are the result of combinations and bargains based on the number of offices or the money controlled by the bargaining parties. But this is not a peculiarity of the Democrats. It would certainly be a most singular state of affairs if the primaries of one party remained pure democratic gatherings, while those of the other had become what Morrissey and Kelly describe them. And such is not the case. In all the places where population is concentrated, the Republican primaries are of just the same kind as the Democratic, and produce just the same results. Tammany Hall bears just the same relation to the Democratic primaries of one side that another organization does to the Republican primaries. This other organization is not a society, and does not need a charter nor the power to hold real estate, for it represents one of the most powerful corporations in the world, and has its clubs scattered all over the country, with headquarters, and Bosses, and one-man power, and dictation, and tyranny, wherever there is a collector, a supervisor, or a postmaster.

There is not much chance that Morrissey will become an important leader in the Presidential campaign, for his instincts, and those of his followers, will lead them naturally to the support of the national Democratic ticket, even when they are most resolved upon a local reform movement. But it would certainly be a reason for substantial regret if any honest reformers were to mistake the real meaning of movements like this, or were to be led astray either by outcries against "dictation," "arbitrary rule," or the "one-man power," into believing that if the primaries are only purified all will be well. There is a close resemblance, it must be observed, between the delusions on this subject spread abroad by Morrissey and his kind and those which disturb the brains of many Republican reformers. The Republicans, for instance, who went to Syracuse and opposed the Conkling movement, made a great deal too much of cries closely resembling Morrissey's and a great deal too little display of the real feelings that took them there. The outcry made by them against "pledging" was natural enough, for, under the circumstances, "pledging" meant nothing but Conkling; but the appeals of the leaders to the Convention's supposed love of fair play and fondness for democratic institutions and freedom of debate must have seemed very funny to Cornell, and Sharpe, and Spencer, who knew how the Convention had been got together, and how it would have gone unless outside intimidation, through the press and by other means, had been vigorously used before it met.

It is not "dictation" and "tyranny," or the "one-man power," that we are fighting against, and that we want to see put down; but the lamentable fact, so pithily stated by Morrissey, that the "whole of the delegates on both sides are a fraud," and that we have a system which, no matter what party be in power, produces such results. From this point of view—and we know that in saying so we shall not be suspected of any want of sympathy with the motives of reformers in either party—the success of such movements as that at Syracuse against Conkling seems almost at times regrettable, because they tend to confirm people in the false hope that we can get good government again by reforming the primaries, by getting the fabled good citizen to "attend to his political duties" and see to it that "none but fit men" are nominated to office. Reform in the mode of making nominations must be found in the direction of making the work simpler and easier, and providing a way in which the votes of persons who do not care to adopt the ticket of either party may vote without throwing their votes away. The "primary," as now constituted, cannot, at least in the large cities, be reformed, as long as it is as far away from the actual nomination as it is now, and as long as it leads to so many nominations at every election. With fewer persons to nominate, and with a process by which fractional minorities could combine on candidates of their own, we should be in a fair way to secure the public that intervention in the choice of its own officers which it is the business of "primary" politicians to prevent.

Notes.

ROBERTS BROS., Boston, have in press 'Revolutionary Times,' by Mr. Edward Abbott, whose well-executed paragraph histories of the United States and of the Revolution are already before the public.——Sheldon & Co. will soon publish a work on the 'Doctrine of Prayer,' by Dr. P. H. Mell, of the University of Georgia; and one on 'Commenting and Commentaries,' by Mr. Spurgeon.——Henry Holt & Co. announce that they will republish Mr. Taswell-Langmead's 'English Constitutional History,' reviewed in the last issue of the *Nation*. They have in press a volume by the late Robert K. Weeks, entitled 'Twenty Poems,' in the midst of the preparation of which the author died.——A 'History of Independence Hall, Philadelphia,' by Col. Frank M. Etting, will be shortly published by J. R. Osgood & Co.——John Wiley & Sons have in press 'Practical Notes on the Construction of Iron Highway Bridges,' by Alfred P. Boller, C.E.——Bulletin No. 37 of the Boston Public Library continues the

check list for American local history (the present instalment being all about Boston), and furnishes abundant bibliographical information concerning America before Columbus, and concerning Autographs. ——Mr. W. W. Skeat has begun in *Notes and Queries* a series of occasional articles on the "Chronology of English."——Under the direction of the Royal Society of Literature, there will shortly be published in London 'The Autograph Commonplace-Book of John Milton,' executed in permanent photography, by the Autotype Company, with an introduction by Alfred J. Horwood.——From B. Westermann & Co. we receive Part 14 of Spruner's 'Historical Atlas,' of which the maps represent the Frankish Empire under the Merovingians, and under Karl the Great and his successors to A.D. 900; the sixth plate of "Deutschland's Gaue"; and Germany from the beginning of the tenth century to A.D. 1137. A large number of side-maps fill out the first two plates.——The number of recent German works relating to the United States is indicated by the reviews in a single number of *Ausland* (for Feb. 28), viz., 'Reiseblider und Skizzen aus Amerika,' by T. Kirchhoff (Altona, 1876); 'Amerikanische Skizzen,' by Prof. Karl Knortz (Halle, 1876); 'Die Prairien des Westens,' by Prof. R. von Schlagintweit (Cologne, 1876); 'Amerikanische Skizzebüchelche,' a rhythmical description of American society, by G. Asmus (Cologne, 1876); and a new edition of Lieut.-Col. Max von Versen's 'Reisen in Amerika.' ——Besides M. Simonin's 'Monde Américan,' Mr. Christern has received M. Léon Chotteau's 'La Guerre de l'Indépendance (1775–1783)—les Français en Amérique,' to which M. Laboulaye furnishes an introduction. M. Chotteau has already been preceded in this field, and in French, by our countryman Mr. Thomas Balch.

'—At the meeting of the Maine Historical Society held in Portland, March 30, there were read papers by Judge Godfrey, of Bangor, on "Norombega"; by Judge Williamson, of Belfast, on "Gen. Samuel Waldo"; by R. K. Sewall, of Wiscasset, on "Cairns in Maine"; by Gen. J. M. Brown, of Portland, on "Carrying-places of Maine Rivers"; and by Hon. Wm. Goold, of Windham, on "Fort Halifax." Mr. Goold's paper gave a thorough history of the construction, locality, etc., of Fort Halifax, on the Kennebec, in the present town of Winslow. There remains of it now only a dilapidated block-house, the only one extant, we understand, of scores in New England a century ago. A part of Gen. Brown's paper traversed the same region, as Arnold's expedition to Quebec, narrated in the diaries of so many of those engaged in the expedition, took the route up the Kennebec past Fort Halifax, and by the carrying-place from the Kennebec to the Chaudière; the length of this carry appears to be only three and three-quarters miles. The seventh volume of the Society's papers, which is nearly ready, will contain essays on early Indian history in the vicinity of Bangor, by Judge Godfrey; Pemaquid; the voyages of Champlain, by Gen. Brown; early Spanish settlements on the coast of Maine, by Mr. Sewall; a history of the Bingham purchase; a paper respecting the old families on the Kennebec, by Mr. Allen, of Norridgewock; and a number of memorial papers, including a history of the Gardiner family and others.

—The Harvard Summer School of Geology is to be continued the coming summer on the ground of its work in 1875, in the neighborhood of Cumberland Gap. Profiting by the experience of last year, considerable improvements will be made in its methods of study and exploration. The excursions will be extended as far as the Black Mountains of North Carolina. The connection of the school with the Kentucky Geological Survey will enable the students to take part in all the actual processes of a geological and topographical survey. The presence of eight competent instructors has been secured. The fee of fifty dollars is designed to meet the expenses other than the cost of instruction. Students will be received up to June 15, and as the number to be admitted is increased to fifty, there will doubtless be room for all who may desire to enter the school.

—One of the latest changes talked of at Harvard is an enlargement of Gore Hall, the library building. In 1841, when the forty thousand volumes then constituting the library were moved into it, the Hall was thought to be of sufficient capacity to hold the accumulations during the present century. Since then one hundred and nine thousand books have been added to the library. Fit storage failed long ago, and, besides the inconvenience to which the authorities have been forced of breaking up the symmetry of classification in the alcoves by transferring books to other than their proper departments, the division of the alcoves and the shelves piled up in the galleries have seriously interfered with the light. The Hall, also, as every one knows who is familiar with it, affords no private room for the librarians or workroom for the assistants. But, although some relief is necessary, we regret, because we think the final result will be so unsatisfactory, that the change is to take the form of an addition to the present structure. The claims of learning, the reputation of the college, the proper preservation of the books, demand a new building. There is an opinion prevalent, we know, that President Eliot considers the present edifice adapted to its purpose, and prefers to enlarge rather than build anew. But a great quantity of testimony can be brought forward to prove the unsuitableness of Gore Hall. It will be enough to refer to Mr. Sibley's —the head librarian's—constant opinion, reiterated in the 'Harvard Book,' and none too strongly expressed: "Gore Hall is not perfectly secure against fire, is at no time of the year entirely free from dampness, and is so ill-planned as to require all the work of the library to be done under great disadvantages." As to President Eliot's plan, we judge it to be no preference, but a *pis-aller* to which the want of funds too often compels college presidents. At the commencement of his administration (1869–70), indeed, he said: "If suitable working-rooms were added to the library, it would be an excellent building for its uses"; and (1870–71) "the corporation have repeatedly enquired, through competent experts, into this alleged dampness, and are entirely satisfied that there is now no ground whatever for such an allegation." But two years after, the opinion of the corporation appears to have changed, for, in addition to the former steam apparatus, a wrought-iron furnace was put in "to keep the atmosphere of the library drier than it has been." We doubt much whether the president would refuse a gift intended for a new library building. The objections to Gore Hall, aside from those mentioned by Mr. Sibley, are that whatever beauty the building may have will be destroyed by the addition, as an enlargement of it was never contemplated. The funds for the purchase of books ought to be increased, and are likely to be, and another enlargement will be called for in another thirty or forty years. Besides, the sum required for the enlargement is so very great, $80,000, that friends of the college may ask reasonably: Would not a little stronger effort secure $200,000 or $250,000, so that a hall may be erected fit for the proper storage and use of books, constructed especially with reference to enlargement, and better representing the resources and the taste of the graduates of the college? Perhaps the consent of the graduates might be obtained to divert the Class Subscription Fund to this purpose. Subscriptions to this fund have become languid, and a change in its object might revive some interest in it.

—The *American Socialist* is the name of a new weekly paper published at Oneida, in this State, and edited by Mr. John H. Noyes. We do not know the precise nature of the connection between the *Socialist* and the *Circular*, except that the latter has disappeared, and that the new paper is in some measure its heir. The *Socialist*, however, is not merely the organ of the community at Oneida (though, like it, it is devoted to the "enlargement and perfection of home"), but also of the Shakers, Harmonists, Eben-Ezers, Zoarites, and Bethel-Aurora societies as well, and, as we understand it, of any other sect or organization which is working in good faith to break up the narrow slavery of what we may call the feudal Home and introduce phalansteries of some sort. "This," the editor says, "is really the principal problem of Socialism. The oracles of ordinary society say that a home should be limited to man, wife, and children. Fourier held that a normal home should contain eighteen hundred persons! These are the two extremes of opinion on this question." We observe, by the way, that a correspondent of the *Socialist*, says that he has "lived in homes varying in number from one [it is needless to say that the celibate home, if home it may be called, is here referred to] to several hundred," and his experience and observation lead him to regard "one hundred and twenty-five as about the right number to form a complete home." As the key to the domestic position handed down to us from the dark ages is undoubtedly the institution of monogamic marriage (resting on the basis of assault and battery, bargain and sale, or individual preference), it is hardly necessary to say that Mr. Noyes proposes a vigorous assault on it. Indeed, we believe the Beecher Scandal has served in the Oneida community as an awful warning to the faithful of what lying, hypocrisy, slander, libel, and other bad practices come directly from the custom of "single marriage."

—In the number of the *Socialist* before us is given an account of the "Old Guard" of Socialism, or, in other words, a list of some of the thinkers of 1843 who used to write for the *Phalanx*, with extracts from their opinions, which, it would seem from later "utterances" of the same gentlemen, have undergone some change since that time. Mr. Horace Greeley, it is true, were he now in the flesh, need not feel that there was anything to be recalled or recanted in his declaration in the *Phalanx* that the "renovation of the world" must come through "union, harmony, and the reconciling of all interests, the giving scope to all noble sentiments and aspirations"; but it may be doubted whether Mr. George Ripley (described as "formerly a Unitarian minister, founder of 'Brook Farm,' for many years literary editor of the New York *Tribune*, and editor of the

'New American Encyclopædia'"), if he were now uttering his views on these questions, would draw the following depressing picture as "a truthful type of the effect of civilization on human nature": "Humanity is now all dissevered—tongues—heads—hearts—arms—limbs—all tumbling and jostling one another in the fierce whirlpool of this dislocated society." In 1843 it seems that Mr. Charles A. Dana (described as "a member of the Brook Farm Association, afterwards editor of the New York *Tribune* and of the 'New American Encyclopædia,' Assistant-Secretary of War, and editor of the New York *Sun*") expressed his beliefs and hopes as follows: "When the future condition of humanity lies before us, and we behold a united race moving in beauty and intelligence to the fulfilment of its divine destiny, all present men and achievements sink into insignificance. But to be reassured and convinced that our efforts are not worthless or ineffectual we need only to look back to civilization. Measured with it, the most defective of our associations is a paradise"; while Mr. Parke Godwin (described as "editor of the New York *Evening Post*, author of a popular view of the doctrines of Fourier, 'Constructive and Pacific Democracy,' a 'History of France,' etc.") used language of this kind: "The time has come when all partial movements of reform must fulfil and complete each other, and flow together in one onward, mighty movement toward Universal Unity: Unity of Man with Man in true Society; Unity of Man with God in true Religion; Unity of Man with Nature in Creative Art and Industry. Our flag is given to the breeze; its threefold motto is full of the power of faith and hope and charity. Let all true hearts join in its benediction, and aid in its fulfilment!" "The future is ours—the future is ours . . . . We want the love and wisdom of the Highest to make their daily abode with us; we wish to see all mankind happy and good; we desire to emancipate the human body and the human soul; we long for unity between man and man in true society, between man and nature by the cultivation of the earth, and between man and God, in universal joy and religion." The *Socialist* does not revive these utterances in a spirit of mockery, but, on the contrary, declares that their work was the "noblest which men ever undertook," and "though hidden for a season" "will live for ever."

—In the April number of the *New Quarterly Magazine*, a periodical scarcely three years old but of considerable pretensions, there is an extraordinary article on "Artemus Ward and the Humorists of America," which is only another instance of the left-handed ideas held by some English critics on the subject of American literature. The article opens by asserting that "Artemus Ward will assuredly hold a place with posterity in the famous line which begins with Rabelais and ends with Charles Dickens"; then, after refusing Irving a claim to originality, it continues: "Lowell, the author of the 'Biglow Papers,' and Wendell Holmes, both excellent writers, are hardly acknowledged as humorists in Europe, and the reputation of Hawthorne, deservedly high as it stands, owes hardly any of its eminence to his fame as a humorist." Then the writer discovers "this in Mr. Brown which distinguishes him from most other humorists—that he was a dramatic artist of decidedly great power. His conception and delineation of the character of the showman, quite apart from the jests which he makes him utter, come very near to true genius. Setting aside the conceptions of Dickens—the Gamps, the Wellers, and the Pecksniffs—we greatly doubt if this century has produced any character of greater comic power, any that will float longer down the stream of time, than the Artemus Ward of Mr. Charles Brown. He never speaks but in character." After this we are not surprised that it was in England "among the higher classes of literary men that the young American was first recognized as a true genius"; although it is a little startling to be told that "even our philosophers delighted in his freshness and originality, and Mr. Carlyle himself has been heard to speak of him emphatically as the 'divine Artemus.'" In short, the writer seems unable to see either where the real merit of Ward lay or what its limitations were. He has apparently no acquaintance with John Phœnix, the predecessor and preceptor of A. Ward. There are also many petty errors, such as the misspelling of Mr. Browne's name, and the assertion that the Ward letters have not been collected into one volume, and that the first ones were contributed to *Vanity Fair*. The article ends with criticism of Mr. Clemens ("Mark Twain is a jester, and very little more") and of Mr. Harte ("a versifier . . . . who, once or twice, reaches to real pathos"). For the benefit of those who have thought 'Condensed Novels' to be the best book of its kind since the appearance of Mr. Punch's 'Prize Novelists,' we may make one final quotation: "Bret Harte, like Mark Twain, has written parodies which, if anything, are worse than those of his brother humorist."

—Captain Eyre M. Shaw, of the London Fire Brigade, has just published a modestly-written pamphlet on the causes and prevention of fires in theatres, which is well worthy of careful consideration in this country, where the conditions are for the most part the same as in England. Although there is no building which should be more substantially constructed than a theatre, there is also none which can be built so cheaply—too often cheapness and haste compete. According to Captain Shaw, a theatre should be divided into as many distinct parts as may be possible by fire-proof walls firmly built into the external walls; all offices and dressing-rooms should be integral parts of the building, and not merely tacked to it; the theatre should not touch the surrounding buildings (the laws of one European country require that an alley thirteen feet wide be left on every side); there should be separate exits for each class of spectators, and these exits should be as large and, above all, as many as possible—two for three hundred spectators and three for five hundred are required by law in one country. The sense of security felt in such a building would go far towards preventing a panic. Captain Shaw's suggestions, of which we have noted but a few, are simple, and the result of common-sense and experience; yet neither in England nor America do architects always think it necessary to answer these requirements. In this city most of the leading theatres (and especially Booth's) are well planned; but in other parts of the country, and particularly in the West, this is not the case. Theatres there are even to be found on the second story, over stores, with exits through long, narrow passages and down steep stairs! The architect who has given the most attention to the subject is undoubtedly M. Charles Garnier. He has set forth the result of his studies in print in 'Le Théâtre,' and in fact in the new Paris Opéra, which Captain Shaw thinks is likely, "for years to come, to be, in respect of convenience, comfort, and safety, the model theatre of the world," and of which a full description, with plans and illustrations, can be found in M. Nuitter's 'Nouvel Opéra.' He had his working plans lithographed, and in the Boston Public Library may be found one of the only three sets known to exist. Captain Shaw's pamphlet includes an account of the five fires at the earlier Paris opera-houses, and a list of theatres destroyed by fire, in which we note not a few faults of omission and commission—*e. g.*, the burning, in 1875, of the Opera-House at "Nevada, U. S."

—The *Revue des Questions Historiques* for last October contains three articles of peculiar interest for students of the Middle Ages. The first is by M. Boutaric (author of 'La France sous Philippe le Bel'), upon the origin of feudalism, especially in the institution of Immunity. It is an admirable paper in every way; the most important special points made are in drawing attention to the fundamental distinction between the fief and the *censive*, or land held by agricultural service, and in showing from the documents that the development of feudalism in France was slower and later than has usually been assumed: its full development does not come before the eleventh century. The second article is by M. Robion, on the rural population at the close of the Crusades. As M. Boutaric shows the full establishment of feudalism to have been later than is generally assumed, so M. Robion shows that its force was weakened much earlier than is generally supposed; that even at the beginning of the thirteenth century, and so more and more all through the century, the condition of the peasantry was steadily improving. The third article—a very long one—by M. Longnon, is upon the geography of France at the close of the Hundred Years' War—a study which has never before been made in detail. A map in illustration of the text is published in the new edition of the 'Life of Jeanne Dare' by M. Wallon, just published by Didot; the same author prepared a map of France in the time of St. Louis for De Wailly's magnificent edition of 'Joinville.' The rest of the *Revue* is occupied chiefly with book notices, of which a very large number is given. This review, by the way, is distinctively Roman Catholic, and its theological opinions are of course very prominent in the reviews—not so much so, however, as to prevent a very fair and even highly laudatory review of Ranke's works. In the three leading articles this theological bias is hardly perceptible.

—Dr. Friedrich von Bezold, whose monograph, 'Zur Geschichte des Husitentums,' we noticed some months ago (*Nation*, No. 512), has published (in 168 pages) the second division of 'König Sigmund und die Reichskriege gegen die Husiten.' The first division, published in 1872, covered the period of the first three Crusades (1419 to 1423); the present division extends to 1428, embracing the fourth Crusade. Between the third and the fourth (1427) lies an interval devoted mostly to negotiations and diplomacy, in which the Hussites appear to have labored sincerely for a reconciliation. In this interval falls the death of the great Puritan leader, Ziska (1424), the rule of Coryiut, and the rise of the new leader, Procopius. It was the overwhelming victory of Procopius at Aussig (1426)

that aroused Germany anew, and excited to the fourth Crusade in the following year. Frederic of Brandenburg, the founder of the House of Hohenzollern, appears throughout as the leading spirit of the Anti-Hussite movement, and in this last stage we find prominent an Englishman, Cardinal Henry Beaufort, whom we know very well in English history and in Shakspere. Another instalment will probably bring the work down to the Council of Basel in 1431.

—The German excavations at Olympia appear to have stimulated the Russian ambassador at Athens to a similar enterprise. We find the following in the *Stoa* of Athens (March 10):

"A new Scythian invasion threatens the antiquities in Tanagra. M. Papaerhegopoulos of Athens has purchased the lands of numerous Tanagraians, with the purpose of making excavations, the yield of which, it is said, is to belong to the Russian ambassador. Let the Government see to it that our ancestral possessions are not plundered in broad daylight."

Also the following in the *Star of the East* (Athens, February 26):

"Philotheos, Archbishop of Serrai, in Macedonia, has lately edited from a Greek MS. of the library of the convent of the Holy Sepulchre, in the Fanar at Constantinople, two epistles of Clement, Bishop of Rome. It is now reported that there exists in the library of the convent of St. John the Baptist, at Serrai, a second Greek MS. of the same father, dating from the beginning of the eleventh century (1008). This MS. consists of forty-nine sheets, is written in double columns, upon pages of vellum of unusual size, is addressed, in the form of a letter, to James, the brother of the Lord, and has the title: 'Life of the Holy Martyr Clement, Bishop of Rome, disciple of the holy Apostle Peter.' Heretofore, only the Latin translation of this work was known to be in existence."

TAINE'S ANCIEN RÉGIME.*

TAINE is not an original thinker or a brilliant writer. He is an intelligent and industrious disciple of De Tocqueville. He has thoroughly mastered the principles of his teacher, and though he has added to them no original conclusions of his own, he has brought together an immense mass of facts in support of the views laid down by De Tocqueville in *his* 'Ancien Régime." Taine's book might, in fact, be considered with justice an appendix to De Tocqueville's treatise, containing a mass of citations and extracts in confirmation of the theories contained in the body of the book. As far as Taine's general views of French history are concerned, he has the merits and also displays the deficiencies of his teacher. Wherever De Tocqueville is strong, there Taine is strong also. Where De Tocqueville failed to grasp any aspect of his subject Taine's insight also fails him. De Tocqueville, for example, certainly failed fully to appreciate the permanent injury done to France by the ruin of French Protestantism. He failed, also, as compared with a writer like Quinet, fully to understand what may be termed the spiritual side of the Revolutionary movement. Precisely the same shortcomings can be discerned in Taine. He alludes very cursorily to the persecution of the Protestants, and, curiously enough, never seems to trace the connection between the triumph of Catholicism and the increase of centralization, to which he, in common with all writers of his school, ascribes the ruin of the *ancien régime*. Nor, again, does he enter into the strong side of the philosophic movement which preceded and no doubt in part caused the Revolution. He devotes, as might be expected from his antecedents, a large portion of the present volume to the literary history of France during the eighteenth century. The book entitled 'La Propagation de la Doctrine' is interesting reading, but it is, in our judgment, the least satisfactory portion of Taine's work. He never seems fully to enter into the character of the writer whom he criticizes. His criticism is sensible, but it is, if the truth may be said, not a little commonplace.

But to state that the first volume of 'Les Origines de la France contemporaine' will not entitle its author to take his place among historians of the first rank, is quite a different thing from denying that the book has noticeable merits. It is a successful attempt to collect together a body of actual facts about the state of France towards the end of the last century. When we reflect how much obscurity has been thrown over the history of the Revolution by its having been made the theme of rhetoric, of imagination, of invective, or of eulogy, we can scarcely feel too grateful to a man who makes it his business to dismiss as far as possible all vague generalizations, and put before the world trustworthy information as to the actual condition of France before and during the great change which transformed the France of Louis the Sixteenth into the France of Napoleon. Taine has attempted honestly to ground every statement he makes upon an elaborate investigation of authorities on whom reliance can be placed. No one who has not a far greater knowledge of French history than scarcely one educated man in ten thousand can pretend to, is in a position to determine whether so careful a student as Taine has or has not fallen into errors; but the candid reader will not fail to be convinced that the work is one which deserves careful attention, and which has at least two very considerable merits.

The first merit is that the facts which it contains give reality and substance to many general notions the truth of which every English or American reader would admit without fully appreciating their real bearing or force. Thus most of our readers will easily concede that the French *noblesse* excited popular ill-will through the possession of unjust privileges, but it is easy enough to make this admission and yet at the same time entertain very vague and indefinite conceptions as to the nature of these privileges, the persons by whom they were possessed, and the causes which rendered the privileges and their possessors odious to the French nation. Nothing will more certainly dissipate all such vagueness and haziness than a perusal of Taine's first volume. In place of the general outlines supplied by De Tocqueville you have put before you a minute picture of the condition of French society. As you read page after page of petty details and trifling anecdotes of small importance in themselves, each adds a new touch to the drawing, till you may be said, almost without exaggeration, to see the nobility as they actually existed immediately before 1789. Two or three points in their position then become so clear that they can scarcely be overlooked. It is manifest that Burke was perfectly right in the estimate which he formed of the amiability and liberal spirit of the younger nobles. There never was a class of men who on the whole were less inclined to play the part of tyrants or had less power to play the part if they had felt the inclination. It is impossible in the limited space of a newspaper article to bring forward the numerous and in themselves trifling facts by which Taine conclusively proves that, at any rate during the latter part of the eighteenth century, the nobility and the upper classes generally were filled with benevolent though very ignorant good intentions towards the poorer classes. What every gentleman dreaded was to be thought wanting in "sensibility." In this there was much of fashion and something of affectation; still, the benevolent impulse actually led to acts of benevolence. The nobles showed at times a strange readiness to surrender privileges which they themselves felt to be unjust, and the churchmen of France, in spite of all their faults, often performed liberal acts of charity towards the poor. But while this is true, there is another side to the picture which Taine brings into the clearest light. The privileges of the nobles were utterly incompatible with the good administration of government. Put shortly, the result of these privileges was that the whole weight of taxation was thrown more and more on the poorest classes. Till the system is examined in detail its injustice is hardly credible, yet no one who has read the chapters which Taine entitles "Le Peuple" (the expression can hardly be adequately translated into English) can doubt that the poorer a man was, the greater was the relative proportion of taxation which he paid. Taine computes that the persons who were liable to the *taille* (and these included all except the privileged classes) paid as direct taxes, in the shape of taxes payable to the king, of tithes and feudal dues, rather more than eighty-one out of every hundred francs of net income. If this view be even approximately correct, the smaller proprietors were deprived by crown, church, and nobles of more than three-fourths of their annual revenues.

Side by side with the existence of this crushing weight of taxation must be put the fact that the privileged classes (*privilégiés*) openly escaped from bearing their share of the burden. Nor was this the whole or nearly the whole of the grievance. The immediate sufferings of the peasants arose not from the action of the central government, but from that of the neighboring noble. The nobles in many cases exacted the *corvée*. The nobles kept the game which the farmer was not allowed to destroy. The nobles exacted tolls and feudal dues of every description, and meanwhile the nobility, while they exerted every odious privilege, did not for the most part perform any of the duties which in England or Germany fell to the great landowners. The richer nobles or gentlemen were absentees, and were, indeed, from causes which Taine elaborately explains, all but compelled to live at court. The poorer members of the aristocracy lived no doubt among their neighbors, but this fact was not by any means in all cases a gain to the peasants. Taine brings out, what we do not remember to have seen before brought into prominence, the extreme poverty of a large number among the nobility. Their property was mortgaged or sold. They had sunk in many cases below the peasantry in wealth. Nothing remained but their privileges. They were compelled to live on their feudal rights. Poverty, therefore, made it necessary for them to exact every penny which they could claim even from the very poorest. One example is sufficient to

* 'Les Origines de la France contemporaine. Par H. Taine. Tome I. L'ancien Régime.' Paris: Hachette et Cie; New York: F. W. Christern. 1875.
'The Ancient Régime. By Hippolyte Adolphe Taine. Translated by John Durand.' New York: Henry Holt & Co. 1876.

show the evils resulting from the possession of privileges without wealth to support them: The nobles still retained in many cases the right of administering justice throughout their domains. This right was constantly turned to money. Judicial places and reversionary claims to judicial places were put up for sale by indigent nobles. This is as if in England in the last century the squire of the village had been accustomed to keep a private law-court for his own tenants, and to sell the administration of justice therein to the highest bidder, and therefore probably the least reputable of the local attorneys. Another circumstance must also be noticed: all the noblesse belonged to the privileged classes, but privilege was not confined to the nobles. Their immunity from taxation was constantly extended to their tenants and servants. Every person in the employment of government, every postmaster, every petty official, every person who could by hook or by crook attach himself to the administration, could claim exemption of one sort or another. A rich man could hardly fail in one form or another to obtain privileges and exemptions. The towns, again, threw the burdens of the state on the country, and within the towns the richer citizens contrived to shuffle off some tax which they ought to have borne on to the shoulders of the poor. If you add to this that the mode in which the taxes were levied was at least as oppressive as their amount (and that this was so cannot be doubted by any one who has studied the fifth book of Taine's volume), it becomes easy to understand the misery of the poor and also the hatred which was gradually accumulating against the men whose exemption from taxation was a main cause, and no doubt seemed the sole cause, of the intolerable sufferings of the people.

The second merit of Taine's treatise is that his vast accumulation of facts constantly suggests conclusions which are not directly drawn by the author himself. Englishmen, for example, are constantly perplexed to account for the French passion for equality. A study of life under the *ancien régime* fully accounts for the origin at any rate of this sentiment. Inequality, or in other words privilege, was, down to the Revolution, the actual source of half the evils under which France suffered. The evils which it caused were felt in all the transactions of daily life, and these evils the Revolution in fact removed. If any one reflects for how great a length of time a sentiment will often survive the state of things which gave rise to it, he will see little cause for wonder that in 1876 Frenchmen should prize above all things the equality which not a century ago was in reality the great need of the country. Another phenomenon of modern French society is, it may be suggested, in part at least attributable to this same source. The desire for Government employment which certainly distinguishes modern Frenchmen is almost certainly, like so many other features in French society, a legacy of the monarchy. In the eighteenth century Government employment had two great recommendations: to the ordinary man it offered an escape from many burdens; to the man of energy or benevolence it offered the one sphere for display either of political ability or public spirit. The attraction in this case has also survived the state of society which made Government employment specially attractive. In nothing, however, does the suggestiveness of Taine's facts appear in a stronger light than in that occasional tendency to force upon the mind of the reader an inference to which Taine himself does not, as we have already pointed out, appear to attach as much importance as it deserves. The conclusion that the fall of Protestantism gave, if not a deadly, yet certainly a most serious blow to the prosperity of France, is one which the Catholic sympathies of De Tocqueville disinclined him to draw. Here as elsewhere Taine is silent where his teacher has not spoken, but the facts he collects tell their own tale. Thus he cites, incidentally, in a note the following statement as to the town of Blet: "It formerly had a large population, but the civil wars of the sixteenth century, and especially the Protestant emigration, caused it to be so deserted that it now (1783) contains, instead of 3,000 inhabitants which it used to hold, not more than 300; and this is the case with all the neighboring towns." With this quotation should be compared almost the only other passage in the volume having reference to French Protestantism. The following sentences form part of a passage too long for complete quotation:

"In 1717 a conventicle of seventy-four Protestants was surprised at Anduze. The men were sent to the galleys, the women to prison. In 1724 an edict declared that every person who should take part in a conventicle, and that every one who should directly or indirectly hold communication with the Protestant preachers, should be condemned to have his property confiscated. Every woman guilty of these offences must have her hair shaved and be imprisoned for life, and every man was to be sent to the galleys for life. . . . In Languedoc, down to the very approach of the Revolution, they used to hang Protestant ministers and send dragoons against Protestant congregations who had assembled for prayer in the mountains. At one of these assemblies M. Guizot's mother received shots in her dress."

RAWLINSON'S PERSIA.*

WE can well imagine that in reading the last proof of this portly volume Canon Rawlinson's feelings may have been akin to those so graphically described by Gibbon when he reached the end of his life-work. For eighteen years the author has been industriously elucidating the history of Western Asia with the aid of the wonderful accumulation of new material afforded by the deciphering of the Assyrian and Persian inscriptions, the recent translations of Oriental writings, the numismatics of the several dynasties, and the vast architectural remains of the various races which successively bore sway from the Hindu Kush to the Mediterranean. Thus bringing to bear upon many of the most obscure points of history all the direct and subsidiary information resulting from modern scientific research, his remarkable series of volumes—the 'Herodotus,' the 'Five Oriental Monarchies,' the 'Sixth Monarchy' (Parthia), and the present 'Seventh Monarchy'—form a monument to his well-directed industry of which English literature may well be proud. There are few scholars of the present day to whom the historical student owes a larger debt of gratitude.

In his modest preface Professor Rawlinson speaks of this work as bringing to its completion the ancient history of the East, to which he has so long devoted himself. We trust that this is not to be taken as a valedictory, and that we are not to look forward to his abandonment of a career so useful and so honorable. There yet remains a theme, the worthy treatment of which would form a fitting complement to the task already performed—the rise and establishment of Islam. Such a work, embracing the results of the investigation and criticism of the last fifty years, is, so far as we know, yet lacking to the English reader, and for it the author's conscientious study of original sources, his clear and connected narrative, and his cool and impartial habit of thought, render him especially fitted.

The 'Seventh Oriental Monarchy' is in no way less interesting than its predecessors. The sudden revival of the Persian nationality under Ardeshir Babegan, or Artaxerxes, the son of Babek, is a very striking episode in Eastern history; and the tumultuous reigns of his successors, involved in endless struggles with Rome on the West, Armenia on the North, and Tartar hordes on the East, varied with occasional intestine commotion, offer a series of vicissitudes of the most stirring character. The picturesque effect of the whole is greatly heightened by the startling contrasts observable in the imperfect though elevated civilization of the Sassanians, where the lofty practical morality of Zoroastrianism is seen constantly struggling with the barbarous tendencies of Oriental despotism. These contrasts are well brought out by the author in his occasional sketches of the internal condition of the Empire, and in his descriptions of Sassanian art, as shown in an interesting and well-selected series of illustrations of coins and architectural remains. Perhaps, indeed, he might have been less sparing in his use of the romantic stories told by Tabari and other Oriental writers—stories which, however apocryphal, yet have their value as reproducing popular tradition and belief.

Possibly also it might not have been amiss to develop in more detail the religion of the Sassanian epoch. In the account of the debasement of Mazdeism under Parthian domination we do not observe any reference to the curious allusion of Moses of Chorene (lib. ii. c. 88) to the worship of an idol of Ormazd by the Iberians, which, if trustworthy, is a very significant fact. In describing also the religious revival which was one of the leading features of the Sassanian revolution, we think it might have been well to consult some of the later sacred books of that period, instead of referring exclusively to the Zendavesta. The extreme sacerdotalism of the Sadder, for instance, throws abundant light on the acquisition of power by the priesthood in the Sassanian political system. So the duty of the sovereign to watch with constant solicitude every detail of the material welfare of his people—a solicitude to which Professor Rawlinson repeatedly calls attention—may be traced directly to the precepts so forcibly enunciated in the Dinkard. Among few races have religious tenets exercised so powerful an influence as among the Zoroastrian Persians, and their theological speculations are well worthy the closest study of their historian. The introduction of Magism and idolatrous worship under the Achæmenidæ may safely be held to have had its share in the downfall of the first Persian Empire; and so one element in the collapse of the Sassanians may perhaps be looked for in the changes undergone by Mazdeism. Zarvanism, for instance, to which Professor Rawlinson barely alludes, introduced a permanent and radical alteration in the primal dualistic belief, by making both the Good and Evil Principles subordinate to Zarvana Akarana, or Limitless Time; and this,

* 'The Seventh Great Oriental Monarchy; or, The Geography, History, and Antiquities of the Sassanian or New Persian Empire. Collected and illustrated from Ancient and Modern Sources. By George Rawlinson, M.A.' 1 vol. 8vo. London; Longmans; New York: Scribner, Welford & Armstrong. 1876.

again, in the system of the Minokhired, took the shape of inevitable Destiny as the power supreme over the affairs of men, thus emasculating the robust ancestral faith of the Persians with the enervating poison of Fatalism in its worst form.

It also seems to us rash to assert without qualification (pp. 622–3) that the dualistic conflict in Mazdeism was endless and eternal. What may have been, on this subject, the primitive teaching of Zoroaster and his disciples can perhaps hardly at this day be determined positively, though some passages in the earliest Gathas seem to point to an eternal struggle. There can be no question, however, that under the Sassanians the orthodox belief was in the final triumph of Ormazd over Ahriman at the expiration of the nine thousand years allotted to their mutual strife. At the Frashokereti, or final deliverance, all created beings, save Ahriman, are to be saved by the Messiah Saosyans, to be born of the virgin Eredhat-fedhri, when, after a battle of Armageddon, evil shall finally cease, and the good creation shall exist undisturbed throughout eternity. So thoroughly was this an essential part of faith, that its profession is a test of orthodoxy in the Khordah-Avesta and the Dinkard.

We cannot but think, moreover, that Professor Rawlinson is in error in adopting the generally received opinion that animal sacrifices formed part of the original Mazdean worship; but to prove this would require more space than we have at our disposal. We observe, also, that in his description of the Homa ceremony, he speaks of the distribution of the Homa juice among the worshippers after the officiating priest had partaken of it. In this he differs from Haug ('Essays,' p. 239), our best authority, who says that after the preparation of the Parahoma, or sacred liquor, it is tasted only by the priest, the remainder being thrown into a well. The point is not without interest in consequence of the strange similarity between the Izeshne sacrifice (the regular form of Mazdean worship, in which the Homa offering occurs) and that of the Mass. The Draona, or thin wafer of unleavened wheaten bread, which is consecrated by the priest and then eaten by both priest and laity, is not unlike the Host; while the cup seems to have its prototype in the Homa or Vedic Soma. Now, it is well known that in the early Christian church the laity were admitted to communion in both elements. The Manicheans, whose heresy consisted in an effort to fuse together the Christian and Mazdean systems, borrowed from the latter the refusal of the cup to the laity, and their administration of communion in one element was, in the fifth century, regarded as a test of their heresy (Leon. PP. I. Serm. XLII. c. 5). It is, therefore, interesting to trace the introduction of this Mazdean practice into the Latin Church, which, among other innovations derived from Manicheism, adopted the withholding of the cup from the laity, and this so irrevocably that she was unmoved both by the revolt of the Hussites in the fifteenth century and the earnest pleadings of orthodox Germany at the Council of Trent.

The strange career of the communistic heresiarch Mazdak and his deluded followers is briefly but clearly traced out by Professor Rawlinson—the illogical favor at first shown to them by Kobad I. with the revolution which it entailed, and their subsequent massacre both by Kobad and Chosroes I. They were not, however, finally exterminated by the latter, as stated in the Index (p. 679). We learn from the 'Dabistan' that in the middle of the seventeenth century Mazdakanians still existed in Persia, where copies of their sacred book, the Desnad, were in circulation, though the dangerously revolutionary nature of their doctrines obliged them to keep their faith concealed from the authorities.

Possibly, if the 'Seventh Oriental Monarchy' shall, as it deserves, soon pass into a second edition, the author may deem it consistent with his plan to elaborate in more detail the religious system of the Sassanids; but, whether he does so or not, his work will remain as a standard authority on a most interesting period, and all who consult it will join with us in hoping that he will not consider his mission accomplished. Great as is the amount of good work that he has performed, it only leads us to wish for still further benefits from his indefatigable labors.

THE GERMAN COINAGE.*

PROF. JEVONS, in his recent work on 'Money,' remarks that so much discussion has been recently devoted to paper money and the numerous kindred forms of credit as to produce an impression that the specie basis itself—that is, the coinage—is a point of perfect rest. This is peculiarly true of the United States, where for fifty years past gold coin in circulation and silver coin larger than half-dollars have been so rare as, when seen, rather to excite curiosity. Specie with us meant, at the best, a means of foreign remittance and an index, sometimes acting very violently, of the condition of the banks. But if we consider that in the last five years silver has fallen relatively to gold about fifteen per cent., or the full amount of the premium on gold as compared with our paper, the problem in this regard has evidently become serious. The Bank of France holds some 350 millions of specie against less than 500 millions of notes. Yet the greatest obstacle to positive resumption seems to lie in the difficulties of the double standard. It is better to have a paper money alone which is practically on a par with gold, than to make that paper redeemable equally in gold or silver, with the result that the former would infallibly be drained off, leaving silver alone as the actual basis, at least for the time, and thus creating a considerable depreciation in the paper resting upon it. The German Empire seems to have successfully encountered a corresponding difficulty by its establishment of the single gold standard, and that, too, in time to escape the consequences of the heaviest fall in silver; so far, its finances are in better condition than those of France. But in other respects the reverse of this is true. The world has seen with surprise that, notwithstanding the payment of the war indemnity, Germany has seemed to become steadily poorer and more depressed, while France has exhibited unusual prosperity, and the Bank of France, by having the courage to accumulate an enormous mass of specie, has brought its inconvertible paper to par, and left indeed no obvious reason, except that above mentioned, why actual redemption should not take place.

This state of things has nettled the Germans not a little, and the book under review was written to show that it cannot be charged to the operations of the coinage law. Two accusations are especially deprecated by Dr. Bamberger: first, that a valuable opportunity was lost for promoting an international money, by adopting a coinage readily interchangeable with francs, already in such extensive use; and second, that after the accumulation of a large quantity of gold by the mint, the new coin was paid out at such a time and in such a manner as to lead to its export in large quantities, causing some mirth among foreigners and a good deal of internal dissatisfaction. While, however, we appreciate the general soundness of the analysis of the operation and effects of money and the exchanges, we are obliged to confess that upon the two particular points in question the answers do not appear to be conclusive. As we understand it, the true idea of international money is that each nation should make its coins—that is, the portion of them which is represented by the universal standard gold—of such size, weight, and fineness as to be simple multiples of each other, and readily interchangeable in large or small sums with the least trouble of calculation, and without any international legal-tender quality. Dr. Bamberger says that people would be liable to loss by foreign depreciated or worn coin intruding into their domestic circulation. But, first, any state allowing its own coin to be depreciated would be simply thrown out of gear and find that its coin would only circulate at home, where it was legal tender; secondly, worn coin would seek its own home for the same reason; and lastly, if any nation suspended specie payment, and resorted to paper, its demonetized gold, flowing to other countries, would simply make money more abundant there, without any disturbance of the standard. In fact, it would be the highest compliment to the legal-tender coinage of one country that its company was sought for by all the best coins of other nations. Dr. Bamberger says that monetary conventions inconsistent with national freedom are necessary for a common money, and urges the bad effects of the convention of 1857 between Prussia and Austria, in consequence of which, through the increase of paper money in Austria, the silver of the latter flowed in to depreciate the double currency of Prussia; and, again, of the convention of 1865 between the Latin countries, in consequence of which, through the depreciated paper of Italy, the silver of the latter flowed in to disturb the currency of France; after the suspension in France, too, her silver caused similar inconveniences in Belgium and Switzerland. But these, as remarked, are objections against the double standard. As regards gold coin, no convention seems to be required. On the other hand, nations which have the single standard provide themselves with silver-token coins for change, by making them legal tender for small amounts only, and limiting the amount of the total production. Through the medium of the gold coins these tokens would be brought into simple arithmetical relations with those of other countries; but if those countries, through misconduct or misfortune, are compelled to export their coin, the silver would take the form of simple bullion, and could not depreciate the tokens whose artificial value it could not share. We quote one sentence from Dr. Bamberger which, though it does not appear to furnish any sound argument against international circulation, does set forth with amusing *naïveté* the reason of the German distaste for it: "What irony, for example, would lie in a common coinage which at Paris should be stamped with the motto, 'God protect

* 'Reichs Gold' (Studies upon the Standard and the Exchanges). By Ludwig Bamberger. Leipzig: F. A. Brockhaus; New York: Westermann. 1876.

France'—that is, God will give us back by-and-by Metz and Strassburg; and at Berlin, with the motto, 'God with us'—that is, God will help us to defeat your purposes." We consider as unrefuted the charge that Germany, by preserving a fractional difference in her gold coin, did adhere to the traditional policy of isolation, in preference to promoting the comfort, the convenience, and the friendly intercourse of mankind.

As to the second point, Dr. Bamberger maintains that the export of coin depends upon the state of the exchanges; that these were adverse to Germany from causes antecedent to the war, which even the indemnity did not overcome; and that the new coinage furnished merely the natural and proper means of meeting indebtedness. He sets forth very clearly both the general principles governing the exchanges and the peculiar circumstances acting between Germany and France; but we think he does not sufficiently appreciate the fact that the power which has control of the currency can, by contraction or expansion, powerfully and almost immediately affect the exchanges, and that the German Government, by paying out its new gold coin while the exchanges with the existing currency were nearly at the exporting point, merely caused the former to glide over the old money and leave the country. Had they, with a sharp eye on the exchanges, withdrawn the old coin and notes in just sufficient proportion as they paid out the gold, they might at least have escaped the disadvantage and discredit of its loss.

We take leave of this interesting treatise with the remark that a translation of it would surpass in value most of our original literature on kindred subjects.

RECENT NOVELS.*

THOSE who remember that pleasant novel, 'My Little Lady,' will gladly take up another story by the same author, but 'Ersilia' will hardly be found as attractive as its predecessor. The heroine, Princess Zaraikine, is represented as an attractive, generous enthusiast, more like a woman of thirty than one of twenty-three, who has been deserted by her husband, and, thinking him dead, falls in love with and is about to marry an Englishman, when the detested Prince returns to the surface of society and brings about a great deal of confusion. The narrative is awkward, with long parentheses, and digressions and perplexing interchanges between the first and third persons, so that the pathos is diluted by a feeling of weariness, but, on the other hand, the people are for the most part vividly drawn, and there are here and there pretty bits of description of scenery. The story, as a whole, is made up for a direct attack on the reader's emotions—which is fair enough, for one does not take up a novel for scientific instruction—but at times the author of 'Ersilia' seems to have overdone the depressing scenes, as where the Prince who has just shot in a duel the man whom the Princess expected to marry, tries to keep his wife from seeing him when he is dying.

In 'An Odd Couple' Mrs. Oliphant portrays a milder and more frequent form of marital unhappiness, which, however, by a little stretch of the art of the novelist in search of an interesting plot, leads to the separation of the husband and wife, Mr. and Mrs. Tremenheere. The father retains the daughter and the mother takes the son, and both suffer from Mrs. Oliphant's gentle satire, who always writes as if she had observed countless households and was never weary of describing the amusing scenes that took place before her. Her field is a very narrow one; she seldom goes outside of the parlor in her simple but charming stories, unless it be to give a little rap at some clergyman or other who is affected in church; but on her own ground she is without a rival. She is a worthy successor to Jane Austen. 'An Odd Couple' appeared as the Christmas story of the London *Graphic*, and hence when issued in book-form it gives us an impression of rather light weight, but it is admirably adapted for what was originally intended. Her 'Curate in Charge' is more complicated than 'An Odd Couple,' in spite of its sudden end, which seems more like a freak of the printer and binder than the result of the writer's determination, unless, indeed, as she has done before, she is going to give us more of the story of these people in another novel. The curate in charge, Mr. St. John, is a simple-minded, unworldly parish priest, who, after retaining a position for twenty years, is turned out by a very highly cultivated young man from Oxford, who knows more about old china and rare engravings than he does about human nature. Mr. St. John finds himself about to be cast out helpless into the world, without means or hope of support for his four children. Two of these are daughters, Cecil and Mabel, and they are both admirably described as few besides Mrs. Oliphant can describe young girls. Cecil's generous practical nature is especially well drawn. As we have said, the book ends suddenly, but it clearly points to her happy marriage.

'Miss Hitchcock's Wedding-Dress' is like a farce told in the form of a novel, with about as much literary merit as goes to the making of the poetry on very filagreed valentines. A slighter, more trivial story it would be hard to find. If 'Mrs. Jerningham's Journal' had not happened to hit the fancy of the public, it is probable that 'Miss Hitchcock's Wedding-Dress' would not have appeared. Its proper place would have been in the newspaper of some fair, where there is always a demand for what bears the same relation to real literature that the buying and selling at such places do to the ordinary routine of commerce.

Those who like the novels of Miss Rhoda Broughton will be glad to hear of 'Comin' thro' the Rye,' which, if it is not written by that author, yet reads like the work of a favorite disciple and a warm admirer of her books. All the rowdiness of Miss Broughton's stories is to be found here—if anything rather exaggerated—with a love-story different from hers in its strict preaching of exalted morality. The best part of the book is that which describes the heroine's childhood; the accounts of her "governor's" domestic tyranny, his bad temper, and her pranks with her brothers and sisters, are very amusing and indeed they narrowly escape being pathetic. When the love-story appears, the book falls off, and it ends in as shocking bad taste as can be imagined. The last words of her lover sent to the heroine speak of going through "God's rye." But good taste is not this writer's strong point. Indeed, her vulgarity is amazing in quantity and quality, but yet she is bright, and her book is in its way entertaining. There is a great deal that is natural in the telling of the story, and a great deal of *life* in it which is often lacking in French novels that are artistically more perfect, and in German novels that bear witness of infinitely more pains on the part of the writer. Slapping on the back, pillow-fights, and romps of every sort crowd the book from cover to cover; but the heroine, who never opens her lips except to talk the loudest slang or to make irreverent remarks about her elders, is a well-drawn creature, and her two lovers, the good one whom she does not like, and the bad one whom she prefers, are by no means sticks. The plot is not a very new one, but it is told so as to leave a lump in the throat of the unfastidious reader.

'Diana Carew' portrays the pursuit of a young woman by two or more lovers, of whom she chooses the one least worthy of her, rejecting for him a young earl of enormous wealth and a very eligible elder brother. If 'Guy Livingston' had never been written, Lord Rexborough's thin flanks would be less prominent, and Lady Gwyneth's fastness less aggressive, and Charles Montague would not have seemed so like a friend of our infancy, and the languor of his blue eyes and the elegance of his manners would be possibly more imposing than they are likely to be to novel-readers accustomed to tiger-like heroes and their cloying success. But out of this somewhat threadbare material the author has made a story which has some slight claims to novelty, in that the heroine does not marry one of her good lovers and become happy, but marries instead the less noble one and is really happy, so that after all she knew better than her readers what was best for her. While 'Diana Carew' is not exactly a rowdyish novel, it gives descriptions of very unpleasantly fast society, in which ladies take pleasure in making boys drink too much, in flirting madly with every man they meet, in playing at cards for money—in a word, in coming dangerously near some of those older amusements of English society immortalized in plays that are, for satisfactory reasons, never put upon the stage.

'Pausanias, the Spartan' will serve better as a memorial of the filial affection and respect of the present Lord Lytton than of his father's skill in the writing of delightful romances. The historical novel is always a difficult problem for an author, because in his anxiety to get his history right he is apt to let the romantic part go by the board, and a critic who has a reputation to make will be likely to regard an anachronism as a much more serious fault than a wholly unnatural character or an impossible combination of incidents. If the novelist succeeds, however, the history sinks into comparative insignificance. Lord Lytton, in urging the claims of this book, asserts that his father was peculiarly able to treat of this subject, not only by "the intuitive penetration of character and motive which is common to every great romance-

writer," but also by his "habit of dealing *practically* with political questions, and [his] experience in the active management of men." But what sort of a novel is it probable that General Washington would have written? Yet, surely, if *à priori* arguments of this sort can be admitted, he could have made his fortune by writing romances; and, with regard to Lord Lytton's intuitive interpretation of characters and motives, perhaps the less said the better. Nothing could be vaguer than the figures representing abstract qualities or literary formulas which fill his books. German and French critics always set him much higher than do those who speak his own language. Karl Hillebrand, in his last volume, acknowledges all his faults, but asserts for him that, although his philosophy and his poetry are equally empty, he yet has a feeling for them both, and, moreover, that he has an air of refinement which atones for all his deficiencies. These critics may perhaps be able to praise 'Pausanias.' To most of us it will seem to be a vain attempt to make human beings out of musty remains, and to picture before us a state of society of which our means of knowledge are almost nothing. One thing is tolerably sure, however, and that is that no man or woman, outside of some few theatres, ever walked about and talked as do the characters in this novel, which, especially in view of its unfinished condition, might well have been left unprinted.

Mr. James Payn is a busy writer, but there are some other qualities which he lacks. In his latest novel, 'Halves,' the hero falls in love with the ward of a disreputable attorney, and in order to be near the object of his affections he begins the study of the law in her guardian's office. This guardian at dinner one day makes mention of a compact he had made with his brother, when they were both much younger, that if either should ever make any money he would share it with the other if he were in need. Soon afterwards the other brother appears, sun-burned, white-bearded, with a menagerie of tropical animals and birds, and at first, being considered rich, is petted; afterwards, he gives himself out for poor, and receives all manner of contumely and ill-treatment from his sister-in-law and brother, who had been thinking a good deal about the compact. In short, this sister-in-law does not seem to have read many novels, or her conduct would have been discreeter; she would not have turned the wanderer out of her house when he really had more money than he knew what to do with. In other respects the conduct of this lady was reprehensible, and especially in endeavoring to poison her husband's ward with a horse-hair sofa, not at one meal but homœopathically, the horse-hair being cut into infinitesmal pieces and sprinkled like salt or pepper on her food. Quite as startling is the dummy who draws an annuity, and who is really as lifelike as any one in the book. It would be unnecessary to give all the ingenious intricacies of the plot: of course the young hero marries the girl who survived the attempt at poisoning her, and they inherit all the rich brother's money, while the others come to bad ends, one, indeed, becoming a member of the "Ring" of this city, according to Mr. Payn.

'Davault's Mills' is well-written, and displays here and there pleasant touches of humor and intelligent observation, but it lacks the compactness which is needed for the successful treatment of a story. The development of the plot runs on too calmly, and the conversations of the characters, although natural enough in themselves, sometimes give too little aid in bringing matters to the necessary crisis, so that the eager reader of novels, accustomed to more fiery draughts, will perhaps find this tale pall upon his taste.

Any one meditating a trip to Brooklyn or to Jersey City and exceedingly anxious to wile away the monotony of the journey, will perhaps be satisfied with two brief novelettes, 'The Summerfield Imbroglio,' by Mr. Mortimer Collins, and 'A Lucky Disappointment,' by Florence Marryat. At the end of the voyage the books may well be left in the ferry-boat, for it would be hypercritical to say that they are not better reading than the framed advertisements or the "Warnings to Passengers."

History of the United States. By J. A. Doyle. With Maps illustrative of the acquisition of Territory and the increase of Population, by Francis A. Walker, Professor of History and Political Economy in the Sheffield Scientific School of Yale College. (New York: Henry Holt & Co. 1876. 16mo, pp. 404.)—Mr. Doyle's 'History of the United States' will be found, we believe, one of the very best of Mr. Freeman's series, and, as an "outside view" of our country, deserves to be welcomed and widely known among us. In such an outside view the idea of proportion is one of the most important points, and in the present case it is an interesting and significant one. The book is in the main a history of the colonial period, which occupies considerably more than half of its pages, the events which led immediately to the Revolution being introduced on page 224. Comparing this with leading American historians, we find that Eliot gives to this period only 179 pages out of 466, and Hildreth two volumes out of six—neither of these historians, by the way, coming down to so late a period as Mr. Doyle. As might be expected from this proportion, the history of the American Republic is meagre and unsatisfactory, while that of the colonial period is admirably full and clear. Even for this period we do not approve of the arrangement, although we admit that no possible arrangement is free from objections. Still, it appears to us clear that the colonial period as a whole is properly divided into two parts, the first embracing the planting of the colonies, ending with that of Pennsylvania in 1682; for the settlement of Georgia in 1733 was a mere incident. Again, we are inclined to think that the most perspicuous arrangement in this period of colonization is, after narrating the settlement of Jamestown, to take them up in three groups—New England, the Middle States, and the South—treating each of them by itself until the revolution of 1688, which forms nearly as important an epoch in American as in English history. But Mr. Doyle, after a chapter bringing the history of Virginia down to the Revolution, does the same by New England in six chapters, following these with Maryland, New York, the Carolinas, the Quaker colonies, and Georgia, with a chapter for each in the order here given. Two chapters then bring the military and the internal history down to the commencement of the Revolution. We think that this arrangement deprives our colonial history of the unity which really belongs to it.

Besides Prof. Walker's excellent maps, he has corrected a number of errors in detail, as we are told in the Note. He very properly, however, did not venture to alter Mr. Doyle's judgments, otherwise he would unquestionably have challenged the surprising statement, p. 335, that the Abolitionists "ventured to put forward the doctrine that Congress ought to suppress slavery." Other statements, correct in themselves, carry a false impression, because the compression of the post-Revolutionary period made it impossible to enter sufficiently into detail. For example, p. 299, after speaking of certain excusable removals from office by Jefferson, it is said, "Later Presidents, however, have, without any such excuse, followed his example," nowhere intimating that this gigantic abuse began with Jackson, twenty-eight years later. So, on p. 336, John Brown at Harper's Ferry is represented as the attacked party.

King and Commonwealth: A History of Charles I. and the Great Rebellion. By B. Meriton Cordery and J. Surtees Phillpotts. (Philadelphia: J. H. Coates & Co. 12mo, pp. 399.)—This is a very excellent little book, containing probably the best brief history of the Great Rebellion—or rather, as it is now often called, the English Revolution—that is to be found. It has two conspicuous merits that are not always found together: it is very good in its treatment of constitutional points, and it is full of well-selected and interesting incidents. A very instructive table at the beginning gives an analysis of the English Government in the seventeenth century, in which the arbitrary features are distinguished from those that rest upon law, by being printed in italics. This depicts very forcibly to the eye the nature and the details of that great contest against Prerogative which forms the most important single series of events in English history. The first chapter is in great part a commentary upon this table, and is sufficiently full and explicit upon everything except the arbitrary side of Civil Judicature. In regard to this, no reason is given for mentioning the *Council Board* by the side of the *Star Chamber;* moreover, there were other arbitrary courts of the same character as the *Council of North* which are not mentioned—for example, those of the Welsh Marches and of the Duchy of Lancaster. The battles are well described, and illustrated with a number of plans—a peculiarly valuable feature, as we do not remember any generally accessible book that contains them. The judgments of men and events seem to us generally just, but the authors do not appear to have made use of Mr. Gardiner's studies with regard to the early career of Strafford; even Strafford and Laud have a right to more credit than they receive here, and it would noways lessen their deserved infamy. The book is always interesting, by reason of its matter, but the style is neither easy nor correct.

Life-Histories of the Birds of Eastern Pennsylvania. By Thomas G. Gentry. (Philadelphia: Published by the Author. 1876. In two vols. Vol. I., 12mo, pp. xvi.–399.)—In spite of what might be inferred from its

'Halves: A Novel. By James Payn, author of 'The Best of Husbands,' etc., etc.' New York: Harper & Bros. 1876.

'Davault's Mills: A Novel. By Charles Henry Jones.' Philadelphia: J. B. Lippincott & Co. 1876.

'The Summerfield Imbroglio. A Tale. By Mortimer Collins.' Boston: Loring. 1876.

'A Lucky Disappointment. By Florence Marryat.' Boston: Loring. 1876.

typography, this treatise gives a great deal of information not to be found in any one of the works on American ornithology which have multiplied so rapidly of late. Mr. Gentry's previous minor writings showed him to be a close and careful observer, and on his first appearance in book-form he brings together a large amount of novel and interesting information relating to the habits of our familiar birds, noting many minutiæ which escape most persons, and which form little part of the conventional practice of ornithology. He pays special attention to the matter of food, taking many inventories of the actual contents of stomachs examined, identifying the insects and fruits by their technical names; and is likewise strong on the subject of nidification and its accessories. We repeat, that we have in this treatise a decided acquisition; and after our surfeit of compilation and repetition, we like the flavor of anything fresh. Mr. Gentry's book is nothing if not original; and we are quite sure that this contribution will at once put him in the category of authors to be quoted from for an indefinite period. There is no technicality about the book; the classification and nomenclature are after Dr. Coues; the literary execution is open to much criticism, especially when the writer essays poetry. We trust the author may find a publisher for his second volume, if for no other reason than that the mechanical execution may be more worthy of so excellent a treatise. The present volume looks as though it might have been printed at a village job-office.

Die Klage, mit vollständigem kritischen Apparat, etc. Herausgegeben von Dr. Anton Edzardi. (Hannover: Rümpler. 1875.)—Like Bernhardt's edition of 'Vulfila,' the present work is a striking evidence of the rapid strides made by German philology. As a specimen of typography and minute research into manuscript readings it stands even higher, perhaps, than Bernhardt's work. The 'Klage,' or dirge, is an appendix to the 'Nibelungenlied.' It is composed in a different metre, and by another and inferior hand. It consists in part of a résumé, so to speak, of the 'Lied,' in part of other matter, and has always been regarded as a valuable commentary to the greater poem. By an ingenious arrangement of the page the editor has made evident to the eye the variants contained in eleven manuscripts, as well as his conjectural restorations of certain passages of the lost original from which all the present versions are assumed to have sprung. He has thus done more for the 'Klage' than Bartsch has done for the 'Lied' in his would-be variorum edition of 1870. In fact, the present work makes us regret more keenly than ever the want of a similar edition of the 'Lied,' which is so much more important in every respect. An Introduction of eighty-five pages gives the editor's views of the various manuscripts, of the style, vocabulary, and origin of the poem. These views coincide in the main with the Pfeiffer-Bartsch theory (see *Nation*, No. 561). It becomes thus more and more evident that scholarly ingenuity, after years of angry and fruitless controversy, is at last working out a tolerable solution of the mystery that once attached to the great German mediæval epic.

Fine Arts.

THE PENNSYLVANIA ACADEMY.

THE new Academy of Fine Arts was opened on Saturday week, and, as an enterprise perfected without Governmental aid, a machine for æsthetic culture set up by a few private persons, it must be accepted as unique. New Yorkers have had sufficiently dinned into their ears, perhaps, in orations at the Metropolitan Museum and other suitable appeals to liberality, the unprecedented gifts which made its erection possible—how twenty-three persons paid $10,000 each almost at once, and the rest of the cost was raised as fast as needed, entirely from the exertions and liberal example of the President. While enjoying the happiness of a city so rich in Mæcenases, and giving all credit to Mr. Claghorn for his energy, we must set down the historical fact that the Philadelphians have pretty much starved out their artists in building them a house. During the years that the enthusiasm available for art-patronage has been directed to this scheme, the emigration of painters from the city has been noteworthy. New York has profited by the circumstance; and it will take years of conciliation and a total change of bent for the patrons of Philadelphia to revive the once flourishing breed of painters whom they have sacrificed for certain stones and mortar.

The building is at Broad and Cherry Streets, protected all round by open thoroughfares or land owned by the Academy, so that the problem of lighting is solved for all time. The construction is tasteful, in what we believe is called the Lombard-Gothic style, an order which is able to combine realism and nature-study in the ornament with general suavity of line and proportion. An art-museum, as it demands light from the ceilings, cannot well be a lofty structure; and the side-aspect of this Academy, with its great depth, approaching three hundred feet, is a little shed-like. But the façade on Broad Street is handsome and decorative, with an air of great honesty in construction. The material is everywhere arranged in masses; the interior stairway contains stones comprising three steps each of fifteen feet width; the stair balustrades are massive bronze; the well in which the stairs are placed, decorated to a great height with a carved diaper-pattern in gold and colors, is broadly rich in effect. The best counsels were invited as the work progressed. For the draining of the floor of the modelling-room, and its arrangements for hoarding masses of moist clay, and abundant water facilities, advice was asked of Mr. Roberts the sculptor; similarly, for the largest life-class room, the lighting was not projected until after taking advice from the professor of the Sketch-Club life-class, Mr. Eakins. The arrangements are, therefore, practicable as well as enormous in scale. A good thought was the providing of a private door for the

admission of the life-models near the porter's office, so that these personages are not seen by those inside the building until they emerge in what may be called a plastic condition from the dressing-room. The Academy contains a fine collection of plaster-casts amassed during the past seventy years, and varying in date from the old Louvre casts presented by Napoleon, to the latest moulds obtainable in Europe. Its picture-museum is well-known. Everybody refers to it for the study of West—a study not so entirely without reward as it is the fashion to pretend. The "Christ Rejected," "Death on the Pale Horse," "Paul at Athens," though too gigantic to be fully distended by the artist's afflatus, are a perpetual appeal to the great classic principles without which no good historical picture can be constructed. The examples of Allston, Leslie, and Gilbert Stuart are admirable. A pair of large views by Joseph Vernet, from the Joseph Bonaparte Collection, are unsurpassed in their way in Europe, and there are interesting examples by Le Brun, David, Gaspard Poussin, Salvator, Van Goyen, and Van der Helst. The directors' enterprise in buying up certain unwieldy but instructive *rejetons* from the Paris Exposition, such as Faruffini's "Macchiavelli and Borgia" and Gastaldi's "Parisina"—works medalled in France—has endowed the Academy with large furniture-pictures, which its enlarged wall-space now greatly needs; a similar spirit has made it the repository of certain Teutonic melodramas, more remarkable for ponderosity than fineness, and slightly boring the ordinary visitor with the unheard-of names of Wittkamp, Guffens, and Schweminger. The works in marble begin with a fine colossal antique from Greece, temporarily mounted on the front of the building; it is in a decapitated state, though the proper head has been identified in the British Museum, and a cast can doubtless be procured; in modern sculpture, there are Steinhauser's "Hero and Leander," Lombardi's "Deborah," and various other works, by such men as Ceracchi (one of the founders of the first Academy), Rush the woodcarver, Rinaldi, Powers, and Mosier. Story's "Jerusalem," a favorable example of his overrated literary style, was unveiled at the opening. Of the antique casts, largely increased in number lately by the intelligent selections of Mr. Sartain, it is unnecessary to speak further, except to emphasize the fact that they are the completest collection in this country. The largest work of Mr. John Lough, a British sculptor who, though immortalized by Mrs. Browning in 'Lady Geraldine,' has been forgotten by the world for thirty years—a "Battle of the Centaurs," with twenty life-sized figures in a pyramid—was installed in the principal corridor, and exhibited to the public just as the English papers were announcing the artist's death.

The opening of the building also marked the resumption of the usual spring exhibitions, held since 1811, we believe. There were several reasons why the annual exposition could not be expected this year to be a success. Every effort having been strained to fill the American department at the Centennial, the present display is confessedly inadequate. It comprises, however, among a sad infirmary of invalides, a good bust by Howard Roberts, illustrating the nursery myth that children are produced "Out of the Cabbage"; Mr. Humphrey Moore's "Almeh," a life sized group of two figures, not heretofore exceeded in technic in this country, and doing justice to the painter's successive instructors, Gérôme, Fortuny, and the two Madrazos; a couple of Mr. W. T. Richards's best works, with examples of Rothermel, Hamilton, and E. Moran; a head of an Italian boy, by Mr. W. Sartain, perhaps a little finer than even his "Contadina" at the New York Academy; efforts by the Sketch Club and by the Philadelphia group of etchers, among which P. Moran's "Dying Lioness" is remarkably good; and, in fact, the exhilaration of a cupful of sack to an intolerable deal of bread.

The Pennsylvania Academy is an example of an art-conservatoire conducted mainly by the patronage of the rich. It is to be watched as a typical instance of the behavior of such an institution lifted completely out of the keeping of the artists. Our New York Academy, an ambitious affair retained within the hands of the artists themselves, has had a rather piteous history of debt and jealousy. Whether there is more life in an Academy saved from such vicissitudes, under the rule of a kindly despotism, it is for the Philadelphia institution, the oldest and richest in America, to prove.

BOOKS AT LONDON PRICES.
Now Ready: Catalogue No. 8 of Rare, Valuable, and Curious Books, free on application.
JOHN EVANS, Importer, 194 Fulton St., Brooklyn, N.Y.

John Wiley & Sons,
15 ASTOR PLACE, NEW YORK,
Continue to Import Books and Periodicals to order. Orders are forwarded semi-weekly by the steamers of Wednesday and Saturday, and answers may be looked for within six weeks. Catalogues and Bibliographical Works are kept for reference, and may be consulted at all times. Catalogues and cheap lists of particular publishers are supplied gratis on application.
SPECIAL ATTENTION given to the procurement of rare and valuable Books, Engravings, etc., for public and private libraries.
BOOKS bound to order in England and France by noted binders for amateur collectors.
BOOKS and PERIODICALS can be mailed direct to any person or public library from England and France.
BOOKS which have been published *TWENTY YEARS* may be imported free of duty.
PUBLIC LIBRARIES, SCHOOLS, and COLLEGES can import through us *two* copies of any book, etc., free o duty.

HAMILTON'S
London Catalogues
Will be ready in a few days. Catalogues gratis, and orders received by applying to
JOHN WILEY & SONS, BOOKSELLERS,
15 Astor Place, New York.

Part XVII. contains upwards of 2,000 vols. of Second-hand Books in all departments; Part XVIII., Portraits and Miscellaneous Engravings; Part XIX., Educational Works.

Messrs. Pott, Young & Co.,
COOPER UNION, NEW YORK,
Announce that, having perfected an arrangement with MR. GEO. W. FORD (for many years connected with Messrs. John Wiley & Son), they are prepared to import books to order from the Catalogues of London Publishers and Book-Dealers on the most favorable terms, and to give such information to book-buyers as may be desired. All pains taken to procure rare and "out-of-the-way" books.

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O.
Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price

Choice Engravings.
A select and rich collection of Rare Engravings and Etchings will be found at the rooms of
HERMANN WUNDERLICH,
3 JOHN STREET, NEW YORK.
The assortment comprises the masterpieces of Rembrandt, Dürer, Schöngauer, Lucas van Leyden, Raimondi, and others. It also contains exquisite proofs by Morghen, Toschi, Longhi, Desnoyer, Wille, Sharp, Masson, Nanteuil, Edelinck, etc.
Collectors and Amateurs will find his Portfolios well worthy of Examination.
PRICES MODERATE.

A FULL STOCK OF
Books in Foreign Languages.
Subscriptions for Periodicals.
SCHOENHOF & MOELLER, Importers and Publishers, 40 Winter Street, Boston.
Catalogues sent on application.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 84½ Pine street, New York.

FOR any Book Desired or Information respecting Prices and Editions, address LOCKWOOD, BROOKS & CO., Boston, Mass., who will promptly reply. Books carefully forwarded, post-paid, on receipt of advertised price. Send for catalogue of our own publications.

The Nation.

NEW YORK, THURSDAY, MAY 11, 1876.

The Week.

THE refusal to surrender Winslow does not seem at this moment to be final. It appears from Mr. Fish's letter to Mr. Hoffman that the British have at least in one case recently, but before the passage of the Act of 1870, done what they are now seeking to preclude us from doing, by trying for larceny a man named Heilbronn, who was surrendered by the United States for forgery, while there are other precedents less directly in point, but all tending to show that the practice between the two countries has been heretofore in accord with our present claim. The point was also raised in 1873 in the Queen's Bench in the Bouvier case, under the English extradition treaty with France, but was disposed of by showing that the French Government did not need to give any pledge not to try a man for any other offence than the one for which he was surrendered, inasmuch as its practice in this matter was settled by a circular of the Minister of Justice in 1841, addressed to the French magistrates, forbidding the trial of any extradited prisoner for any offence but the one for which he had been surrendered, and directing that whenever in any case evidence of a new crime should come to light in the course of the proceedings, a fresh demand, with the usual formalities, should be made on the country from which the criminal had come for his surrender on this new charge. As this circular was based, we believe, on general principles of international law, and not on any municipal enactment, and as the French have bestowed more attention on the subject of extradition than probably any other nation, it seems to confirm the position we ventured to assume a month ago, that the British would have been justified in asking us for the pledge in Winslow's case and all other cases, without regard to the Act of 1870; and that it was a mistake on their part to plead that Act in defence of their course. Their Government had the right to do what it is doing before the Act was passed. The effect of the Act on them is to compel them to exercise this right in all cases. On our duties it has, of course, absolutely no effect whatever. The English press, too, seems to be under the impression that this Government cannot give the required pledge as regards its own courts, and that when a prisoner gets into the hands of the United States courts they may try him for any offence they please. This also is a mistake. The District-Attorney has full control of all prosecutions, and is an officer of the Executive. The difficulty arises only with cases like Winslow's, which are cognizable only by the State courts. Here the Federal Government cannot give any pledge, but the difficulty might be got over by Congressional legislation, making a pledge from the State government one of the papers necessary to put the extradition machinery of the Federal Government in motion against persons guilty of offences within the jurisdiction of the State courts only.

The Senate has been occupied during the week chiefly with hearing the arguments on the question of jurisdiction after resignation. General Belknap's counsel seem to rely chiefly on the inconvenience of an officer of the Government becoming liable to impeachment for an indefinite time after he has ceased to be an officer and maintain that the framers of the Constitution could not have intended such an absurdity. That it is inconvenient for the culprit is no doubt true, but for the Government and the public it is just the reverse. The statutes of limitation with regard to criminal offences will always make it possible for people in Belknap's position to escape the meshes of the law; and the value of the process of impeachment is, that notwithstanding this possible evasion of punishment, there is one way in which they can always, as long as they live, be brought up and disqualified from all further official malfeasance. The unlimited character of the jurisdiction as to time is, therefore, instead of being an inconvenience, its highest recommendation. The counsel for the defence have endeavored to draw an appalling picture of the abuse of the process likely to follow from a decision in favor of jurisdiction over resigned officers, through wholesale impeachments of obnoxious politicians by a Senate and House in accord with each other. That this peril is wholly imaginary is proved by the fact that impeachment is a process which is hardly ever used, simply because it is cumbrous and takes up a great deal of time. The arguments by both sides have been strong, that of Mr. George F. Hoar attracting a great deal of attention because of its outspoken denunciation of corruption "in all its forms." The House has discussed and passed by a majority of fifteen votes the bill to carry out the Hawaiian treaty. Speeches were made against it, and the job was pretty well exposed; but the argument that the House could not, by refusing its support, nullify the action of the treaty-making power, seems to have been the conclusive one.

The Democratic investigators could hardly have done Senator Morton a more valuable service than by accusing him of fraud in the levying and equipment of the Indiana troops during the rebellion, and thus drawing attention to his "war record," which is all the "record" he has that will bear examination. Of course, there was nothing to be found out. Mr. Morton is not a peculator; he is much too 'cute and far-seeing for that; and he, like ever so many others, did render valuable service as "a war governor." Like Butler, his tastes and character made him a prominent and valuable man in times of tumult and disorder; and in those times he acquired a reputation and popularity which enabled him to play successfully the part of an unscrupulous and unprincipled demagogue afterwards; and, as with Butler, one of the test-signs of the triumph of reform will be his disappearance from public life. The war was hardly over when he appeared (in 1867) with Butler as the advocate of a plan for defrauding the public creditor and disgracing the country by paying off the bonds in greenbacks. When the President produced his plan of civil-service reform three years later, Morton was one of its bitterest opponents, and the most ardent supporter of the present corrupt and degrading system of appointments to office, which he pronounced the best civil service on this planet. When the currency question came up in 1874, he characteristically appeared as the advocate of inflation, and delivered speeches by the yard in its defence containing folly and falsehood in about equal proportions. Through the whole of General Grant's Administration, too, he was the principal friend and counsel in the Senate of all the disreputable carpet-bag interest at the South, and the supporter of every adventurer whom it sent up for admission to Congress. In fact, he has, during the last eight years, associated himself with only one piece of useful and honest work—the proposed change in the mode of electing the President. The rest of his activity has been purely mischievous and corrupt. It ought to be said for him, also, that with characteristic audacity he changes his opinions within twenty-four hours if he concludes they are not popular. The war has probably made no worse contribution to American politics than he except Butler, and it has made many bad ones.

They have made another serious mistake in assailing the President with interrogatories as to his absence during the summer from the seat of government, and enabled him to deliver them a crushing reply. He shows that it is none of their business where he spends his summer unless they mean to impeach him—and in that case they ought not to seek their information from him, because he is not bound to criminate himself—or unless they mean to legislate about the matter, which they do not propose. He therefore declines to state in

detail what executive acts or duties he has performed at a distance from the seat of government and how long he has been absent from it, but simply says that he has discharged all the duties attached to his office, and that the present facilities for communication are such that he has been able to discharge them as well when absent from Washington as when present in it; he denies that the Constitution imposes on the President any limitation as to the place in which he shall discharge them, or that there is any act of Congress which imposes, or seeks to impose, such limitation, and adds that, if there were, he should disregard it. He sends with the message a memorandum showing that every President, from Washington down to Lincoln, was absent a great deal from the seat of government, and performed during such absence numerous executive acts. There can be no doubt that the choice of the place where the President shall do his work is one of the many things which are necessarily left to his discretion, and which must be left to his discretion. If he persistently resides in a place in which he cannot properly attend to the public business, and the public business suffers thereby, of course he may be impeached, as for any other malfeasance in office; but neglect of duty is not to be inferred from his place of residence. The fuss which some of the Opposition have been disposed to make of late years about General Grant's passing his summers at Long Branch, has been thoroughly characteristic of the disposition to sham reform shown by many of our politicians. They are greatly agitated about the salaries, for instance, but not about the quality, of employés; and think it a great scandal that the President should not pass the hot weather in Washington, but are not troubled about his passing his time when there in dividing the public service among Congressmen as "spoils."

Mr. Chittenden, Park's attorney in the Emma Mine investigation, has been trying a little sharp practice with Mr. Clarence King's report on the property. Mr. King first saw the mine on June 8, 1873, and on June 11 made a report showing that the mine was worth little or nothing, and substantially proving that this fact must have been known when Park and Stewart effected the sale. He has been having some correspondence with the House Committee, from which it appears that Mr. Chittenden wrote a letter to the chairman, in which he says that he "consented" that a private letter of Mr. King's should go upon the record, because, as he thought, it would not add weight to Mr. King's opinion, and incidentally managed to allude to Mr. King's visit to the mine as having taken place on June 18, so as to make it appear that he wrote his report first and looked at the mine afterward. Mr. King, who is a mining expert of experience, ability, and unquestioned character, became naturally indignant at this misstatement, and wrote to Mr. Hewitt on the subject. Mr. Hewitt writes in reply that Mr. Chittenden's letter is "a most disingenuous production," and his "consenting" to Mr. King's letter going upon the record is imaginary, inasmuch as he, Mr. Hewitt, was the person who gave his consent, after Chittenden had accused him of suppressing the letter, which he, Chittenden, thought might contain something more favorable to the mine than Mr. King's official report.

The report of the Committee appointed last January to investigate the Texas frontier troubles recommends the passage of a joint resolution requiring the President to keep on the Rio Grande border two regiments of cavalry in addition to the garrison troops, and, whenever it is necessary, to send the troops, if in close pursuit of robbers with their booty, across the river, where they are to have power to "use such means as they may find necessary for recovering the stolen property and checking the raids, guarding, however, in all cases against any unnecessary injury to peaceable inhabitants of Mexico." This may at first sight seem a violent remedy, and open to the objection that we have no right to throw troops into the territory of a friendly state; but the Committee show that the right to do so for the purpose of putting down brigandage and recovering property undoubtedly exists, when the friendly power is unwilling or unable to afford redress through its own internal machinery. This is the case with Mexico. Through incompetence or connivance, she has allowed the occasional cattle-lifting raids natural to such a border as that on the Rio Grande to develop into a well-organized system of plunder, until a regular robber community has grown up on the Mexican side, provided with a kind of government, a police, and a very effective militia, well armed with the best weapons, and supporting itself entirely by raids upon American property. The Mexican Government professes the warmest desire to rid the country of this pest, but has not shown any ability to carry its promises into execution; and, from the career of Cortina, one of the leaders of the robbers, who began as a common cattle-thief, has been indicted over and over again for murder and other crimes, and finally by patient industry worked his way up to a brigadier-generalship and a position of great honor and dignity as a Mexican patriot, it may be inferred that there are permanent causes at work in Mexican society which interfere with the execution of justice. The stories got up by the Mexicans, to the effect that the raids from the Mexican side are counterbalanced by raids from our bank of the river, are treated by the Committee as without foundation; they declare that the tale is on its face false, because while the American side of the river is a tempting field for cattle-raiding operations, there is nothing on the other side to steal. Our side of the river is rich and defenceless, theirs is poor and armed to the teeth, with a population ready for plundering descents. The history of the border during the war, when the active cotton trade which sprang up with the Southern Confederacy, and the consequent influx of population, brought the raiding to an end, shows how the future growth of Texas will probably drive the robbers away; but meanwhile something ought to be done.

The scarcity of small change continued until Saturday, when it was relieved by an order from Mr. Bristow directing the Sub-Treasuries to pay out silver on checks and drafts calling for currency. The extent to which payments will thus be made is not officially announced, but it is understood to be to $2,500,000 to $3,000,000, enough to break up the hoarding of fractional notes and silver. The order did not come a moment too soon, and it would have been better had it been issued earlier. The price of silver has fallen to 53d. in London, under sales by the German Government. In Congress, two new bills relating to silver change have been introduced—one by Mr. Randall, which proposes that the Government shall continue in the silver business and shall buy $25,000,000 more silver bullion than it now has authority to do. The other was introduced by Mr. Wells, and it proposes that the mints shall be opened to all who have silver bullion, that the Government shall coin this at a fair rate, and that the limit of new subsidiary silver shall be $25,000,000. The difference between the two bills is, that Mr. Randall's would have the Government take the risk of the fluctuations in the market price of silver, and that Mr. Wells's would, while securing all the profits to the Government, have it avoid the chances of loss. Wall Street continues in a state of ferment over the railroad war, in which the New York Central maintains the position of independence recently taken, while the other lines have combined against it. Rates have been reduced, but the war thus far has been less demonstrative than in previous conflicts, and it is surmised that each party to it would welcome a settlement on honorable terms. This surmise rests on the certainty that every line must lose by a continuance of the war, and that no one of them is in a condition in which, whatever its local advantages, it can afford to make sacrifices. Money continues extremely abundant here and in London. Gold shipments have been renewed on a large scale, not because gold is wanted in London, but because there is a dearth of other kinds of remittances. The value in gold of $100 greenbacks has ranged during the week between $88 59 and $88 89.

The annual Woman's Suffrage Bill has come up in the English House of Commons, and has been defeated by an increased majori-

ty, the debate having been made remarkable beyond that of former years by a strong speech in opposition from Mr. John Bright, whose brother, Mr. Jacob Bright, is now the principal male champion of the measure. Mr. Bright admitted that he voted for the bill in 1867 under the influence of Mr. Mill, and Mr. Mill, in his 'Autobiography,' says that he (Mr. Bright) had on that occasion changed his mind under the influence of the arguments used in the discussion. Mr. Bright now says this was a mistake; that he voted for the bill under the influence of sympathy with Mr. Mill and admiration for him. He now opposes it because, he says, it is based on an assumption which he pronounces totally false, namely, that men and women form two separate and hostile classes in the community; because he thinks the extension of the suffrage to women would increase the disorder and corruption of elections, introduce strife into families, and increase the political influence of "priests, parsons, and ministers." Mr. Bright's desertion of the cause strongly confirms the view we have all along taken in these columns of the extent to which the Woman-Suffrage movement was indebted to Mr. Mill's influence for the attention it attracted a few years ago.

Its sudden growth was part of the great outburst of radical and Positivist enthusiasm which showed itself about 1855, and lasted down to 1870, and led so many people to look for a new Heaven and a new Earth, and to conclude that the best thing to do with all human institutions was to change them. In this Mr. Mill was the leader, and his influence and authority gave a large number of very high-minded persons a confidence in their own schemes and ideas which was at times comic. Since his death, his weight as a social philosopher has been steadily declining, and some of the reforms which he sustained have dropped very much out of sight, and both the French wars and the sequel to our own have caused a great sober-mindedness to descend on the world which is unfavorable to social and political experimentation. It must be said, too, that among the men the Woman-Suffrage movement has been helped more by female influence, or, in other words, the influence of sex in its more refined form, than by logic. The male champions shrink, like all true knights, from the frowns of the drawing-room, and love the gentle glow which comes from the applause of the lunch and the tea party. In fact, when one sees what can be done in even the viewless fields of speculation by the force of female flattery, one wishes it could be used for industrial purposes. If the means of applying it in this way could be discovered, it would make steam and water power seem feeble instruments of material progress.

There is talk of a conference between the representatives of the three Great Powers at Berlin or Vienna over the Eastern Question, which has had a reassuring effect, as indicating that Russia does not mean to pursue an isolated policy at least just yet. In the meantime, the German press has been discussing the rumor of the Czar's projected retirement and the accession of the Czarewitch with so much freedom and so many signs of uneasiness that the North German *Allgemeine Zeitung* administers to it a grave and carefully worded rebuke. This is apparently supposed to have emanated from high quarters, and to have been called forth by an article in the semi-official *Journal de St. Pétersbourg*, disapproving in a patronizing way, which recalled unpleasantly the relations of Germany to Russia in the old days of the Emperor Nicholas, of the proposed acquisition of the Prussian railways by the state. The *Allgemeine Zeitung* article warns the German press against "overestimating Russian friendship" and against "treating Russian friendship as an absolute political necessity to the German Government," and reminds it that the Russian alliance can only be valuable as long as it is based on mutual respect. It adds that even if the Czar does retire, which it thinks improbable, the Russian press might easily be led to mistake the true nature of the relations existing between the two countries if the German press were to show any uneasiness at seeing the throne occupied by the great-grandson of Queen Louisa of Prussia, the grandson of Princess Charlotte of Prussia, and the son of a Princess of Hesse, who is hardly likely, it says, "to abandon the traditions of his ancestors and tear asunder the ties cemented by three predecessors."

The news from Bosnia and Herzegovina is, that it is acknowledged now on all hands that the Andrássy plan of pacification is a failure, the insurgents having absolutely refused to accept it, even after a threatening remonstrance from General Rodich, the Austrian governor of Dalmatia, and that, even if they had accepted it, the Turkish Government would have been unable to carry it out, owing to want of money; that a large body of Grenzers, or Borderers—about 6,000 strong—formerly composing the Austrian military colonies on the Turkish frontier, only abolished six years ago, and even now soldiers by descent and by instinct, crossed the frontier into Bosnia, well armed and well led, easily overthrew the Turkish irregulars sent against them, dispersed several small garrisons, and effected a considerable rising of the Christian population, so that the area of the conflict has spread, and its gravity has greatly increased. There are also reports of a rising in Bulgaria, and a bloody riot has occurred at Salonica, owing to the alleged attempt of the American consul to prevent a Greek girl from turning Mohammedan. The facts are not yet clearly given, but the result was serious—the French and German consuls having been massacred. The time has evidently come for an Austrian occupation of the disturbed districts, if it is to be made at all; but the objections to this are numerous and weighty, both in the eyes of Austria herself and of Russia and Germany. What is to be done next will probably be decided on in the Conference at Berlin. Russia is said to be in favor of drawing a close cordon around the disturbed districts, and then allowing the combatants to fight it out.

In Spain, the Government has been having a valiant conflict with the Pope over the grant of liberty of worship by the new constitution, which the Pope declares is not only in conflict with the Concordat, but will, if carried out, bring down unnumbered evils on the country. In fact, nothing is more curious than the facility with which the Church adapts its views about toleration to the latitude in which it speaks. In England and America, it favors the largest liberty; in Spain, and everywhere else where there is the least chance of getting the aid of the police in suppressing freedom of worship, it protests lustily against having Protestants allowed to open their mouths in prayer or praise outside their own houses. An attempt in the Cortes to amend the constitutional provision, so as to confine dissenters to private worship, was voted down by an overwhelming majority, which is a good sign. A new difficulty, hardly less formidable than the Carlist war, has arisen with the Basque Provinces, from which the rest of Spain—*i.e.*, the conquerors in the late struggle—demand that the *fueros*, or local privileges, shall now be taken away, while the Basques as firmly declare that they will defend them at any cost. The *fueros* amount in the aggregate to practical independence, and make the connection of these provinces with the Government at Madrid hardly greater than that between our States under the old Confederation. The Basques and Navarrese elect their own municipal councils, which elect provincial assemblies, which levy the taxes and administer the government and appoint their own provincial governor, who is on a footing of equality with the corregidor—a royal commissioner sent down by the king, and who resides in the province, but has no authority, and resembles a diplomatic representative more than anything else. The share of the provinces in the national taxes is paid in a round sum by the local authorities, as if it were tribute, and it is very small in amount, and they are not subject to the conscription. They pay, in fact, no direct taxes at all, except for the support of the clergy, and, while they are cut off from the rest of Spain by the custom-house and have no right to trade with the Spanish colonies, they have absolute freedom of trade with the rest of the world. It can be easily seen that privileges of this kind, which have been held time out of memory, are not likely to be surrendered lightly in a country as badly governed as Spain.

THE REFORM OF THE PLATFORM.

THERE is, of course, nothing to be said against the strong desire and determination of the reformers in the Republican party that the person nominated for the Presidency at Cincinnati shall be himself a reformer, and not one of the men who, as has been well said, "are part of the thing to be reformed." To be a reformer, too, the candidate must be, as we endeavored to point out a fortnight ago, not simply a man who is in favor of reform in the abstract, or who is willing to do as much for reform in the Presidential chair as the existing party usages will permit, but a man who is willing to sacrifice himself for reform, willing to fight for it with the Senate and House and all the Managers, and suffer for it the endless vexations which they can inflict on him, and to trust to the people to support him in disregarding party usages. He must be a man, in short, like General Jackson, of sufficient force of character to make a revolution in the Government. Jackson made a revolution by converting the offices into party "spoils," or, in other words, by disregarding the existing usage for the gratification of his own malignity and ambition. We must now have a man who will again make a revolution and destroy the existing usage, and this time in the interest of the public; but to do this he must be, as Jackson was, a fighting man, not afraid to "embitter sentiments," or to "destroy harmony," or to "antagonize" prominent public men, or "hurt the party."

There cannot, then, be too much care taken in the choice of the candidate, for much if not all will depend on him. But, on the other hand, we trust reformers will not overlook the platform, and treat it as of no consequence, because of late years it has become, in the hands of the managers, a mere form of words signifying nothing. On the contrary, the present appears to be an excellent opportunity for reforming it as well as for reforming the candidates. It ought to be borne in mind that the platform of the party in power should differ materially from that of the party in opposition. The latter may be, and indeed can hardly help being, a mere piece of criticism, or a general declaration of principles. The former, on the other hand, should be a genuine programme of the policy to be pursued both in administration and legislation, by which the party may be afterwards judged. The Republican party has never, during its whole existence, had the kind of platform which we now need. Its object being first the restriction of slavery and then the preservation of the Union, and these being ends which admitted of large and picturesque description, while the means to them had in the nature of things to be left in the main to Providence and time, the practice of making sober and minute plans and specifications has died out among politicians. The platform of both parties has become a piece of turgid rhetoric, abounding in glittering generalities, and carefully avoiding any distinct and definite promises, and consequently supplying no means of holding the party to any strict and proper responsibility. It would have been impossible, at any time since 1865, to fasten on the Republican party any ordinary sin of commission or omission by the aid of its platforms, so carefully vague have their utterances been on all prominent topics of the day. In fact, so long as it does not actually organize a rebellion for the overthrow of the Government, it is at present useless to try to convict it out of its own mouth of any wrong-doing. It says a thing ought to be done, but does not say *when* it ought to be done; or it recommends a thing so shadowy that no critic or fault-finder can himself point out *how* it could be done; or it solemnly affirms something which no sane person ever thinks of denying, or proposes to defend something to which there is nowhere the least sign of hostility; or proclaims its desire for something to which nobody but a brute or a savage would refuse his consent. Even when it makes a specific recommendation, as, for example, of a return to specie payments or of a reform in the civil-service, it is almost sure to be so general in its terms that the party cannot be held bound to the passage of any "particular measure" which the wit of man could devise.

The general result is that the platform has become simply a display of fireworks, with which the professional politicians amuse the public during the few weeks which intervene between the nominations and the election, well knowing that after the election it will be forgotten, or that, at all events, there is nothing in it which can be made a handle of against the party management. Take as an illustration the declaration of the Philadelphia Convention in 1872 with regard to civil-service reform. It was very sweeping, and seemed to be an emphatic endorsement of the plan of reform the President was then pursuing and a condemnation of the old system. Nevertheless, when Congress met, all, or nearly all, the leading Republicans treated any attempt to change the old system with ridicule and contempt, and did so openly and without any regard to the platform.

Now, we do not mean to say that the platform should contain drafts of bills, or should even specify with minuteness what Congressional enactments should provide, or what course the Administration ought to pursue; nor do we undertake to fix the degree of particularity with which it should speak on any subject. This is a matter which must necessarily be left to the judgment of the framers of the resolutions. We simply wish to call attention to the fact that the platform must, in order to restore a proper sense of party responsibility and furnish the public with a test of party sincerity and efficiency, describe with reasonable accuracy not only what the party proposes to do, but *how* it proposes to do it. With regard to civil-service reform, it ought to give us, not general approval of reform only, or even a general proposition that reform consists in appointing good men and keeping them (for we have had this already, and it has done no good), but some account of the process by which the reform ought to be effected, sufficiently minute to enable us to ground a positive charge of treachery and deceit on any leader or manager who shirks or opposes it. And this and all else ought to be expressed in plain, homely, unambiguous English, free from cant and from bombast.

We will take leave to add that if it contained not one word about anything but civil-service reform, it would be all that the times demand; for the condition of the civil service includes almost every evil of which the American people have at this moment to complain. The seat of all the fraud and corruption and infidelity and inefficiency and negligence is to be found in it. Everything which is now most denounced in the pulpit, in the press, on the platform, and by the fireside can be surely, and for the most part directly, traced to it. Suppose the laws were faithfully executed, the taxes honestly collected, the public accounts correctly kept, all branches of the administration performed with vigor, skill, and efficiency; suppose nominations were really made by the people; suppose the best men in the State found it easy to get them; suppose the public service were attractive to that large body of the upright, sober, efficient who, unfit for strife, are willing to give faithful labor for small pay, if accompanied with security; suppose legislation were carefully considered, and framed in the light of the most recent experience of the civilized world; suppose men who had given special attention to particular subjects were listened to by Congressmen, and found little difficulty in becoming Congressmen themselves; suppose there was among all classes, and especially among the rising generation, a revival of that splendid and ennobling interest in the problems of the art of government, as applied to complicated commercial societies like ours, which distinguished the American people at the close of the last century and the beginning of this; suppose the game of trickery, chicane, and humbug which Morton, Conkling, and their kind call "politics" were to fall into disuse, and the persons who play it consigned to obscurity or forced into some honest pursuit, what should we, as citizens of a free state, have now to lament? Why, nothing—absolutely nothing. There might still be fraud, and corruption, and bad legislation; but the way to cure them, as far as may be in a world inhabited by mortal men, would be clear. The philanthropist or statesman or reformer would still have work to do in abundance, but they would work with hopefulness, and be able every day to count their gains. And what is it that hinders this most desirable consummation?

Simply, the usurpation by the legislative branch of the Government of the Executive power of making appointments to office, and the use of the power thus usurped to further the selfish aims of individuals in the almost total disregard of the public interest. The usurpation is, in fact, so great and far-reaching in its consequences that it has effected a change in the structure of the Government. The President, as he now exists, is no longer the President provided for by the Constitution; the legislature is no longer the legislature provided for by the Constitution. It has a host of new duties, to which most of its time is given, and is armed with new rights, for the protection of which almost all its votes are directly or indirectly cast. The public service is no longer the machine contemplated by the Constitution. It has no one responsible head; it works under no system of discipline or accountability. It resembles no corps of which the framers of the Government had any knowledge or foresight, and none which now exists in any civilized country. Nor is it organized either on American or foreign experience of human nature, or with reference to any peculiar needs of American business or society. It is in all respects peculiar, barbarous, unprecedented, and unparalleled. In short, the Government we live under is essentially different from that which was founded for us eighty-nine years ago, and is essentially worse, and essentially unfitted to the needs of a modern state; and the change has been effected not by legislation, but the insidious growth of an abuse begun by an unscrupulous President, and perpetuated and converted into a system by two generations of adventurers and intriguers. If the Republican party, then, wishes to bring the Republic back to the simplicity and purity of the earlier days, it must restore the old distribution of powers and duties, and reorganize the civil service on ordinary business principles. The task does not seem a great one, if we think only of the amount of labor it would require; but if we think of the effect it would produce, it seems worthy to rank with any of the greatest political changes of modern times.

SOME REASONS WHY SILVER DOES NOT CIRCULATE FREELY.

THERE is at this writing a very unpleasant hitch in the process of substituting silver for fractional currency. The fractional currency somehow disappears, and the subsidiary coins fail to appear, and the scarcity of small change is so great that it brings a premium of three or four per cent. It is now proposed to meet the difficulty by a new device, not thought of previously, namely, the redemption of greenbacks in silver, the cause of the present scarcity being supposed to be the failure of the public to bring in the fractional currency in sufficient quantities or with sufficient rapidity. Indeed, the Secretary of the Treasury is understood to be of opinion that $10,000,000 of the $40,000,000 of fractional currency supposed to be afloat have been destroyed, and will, therefore, never have to be redeemed at all. But there is also no doubt that the silver already issued is being hoarded in considerable quantities, by some from the novelty of the thing, and by others doubtless in expectation of a rise. At all events, the work of placing silver small change in the hands of the people is not going on by any means as easily and pleasantly as its promoters anticipated, and there is a good deal of doubt and difference of opinion as to the cause. This is very unfortunate, because "resumption," to be thoroughly successful, ought to succeed rapidly. There ought to be no question about it or want of belief in it on the part of the public, and no need for supplemental resumption, or for any patching up of the original process; and it was the fear that just such difficulties as these might arise that caused much of the opposition to the whole scheme.

The following little table, which recently appeared in the Boston *Herald*, and which is correct, helps in some degree to explain the difficulty that silver coin has in getting into circulation, and we commend it to the careful study of those who think silver small-change the first financial need of the day:

	Silver per oz., British Standard.	Silver per oz., American Standard.	Dollar in Subsidiary Coin.	Gold value of Greenbacks.
1871.....	61⅛d.	$1 20.6	96.9c.	89.5c.
1872.....	60 d.	1 18.9	95.5c.	89.0c.
1873	59¼d.	1 17.9	93.9c.	87.9c.
1874.....	58½d.	1 15.4	92.7c.	90.0c.
1875.....	57 d.	1 12.4	90.4c.	87.0c.
1876 (first quarter)	54½d.	1 07.5	86.4c.	88.1c.

Two things are worthy of note in this table. One is the suddenness and recentness of the fall in the value of silver, which has made it possible for it to circulate side by side with greenbacks at all; the other is the narrowness of the margin which separates it from the greenbacks now, and the smallness of the rise in its gold value, or of the fall in the gold value of the greenbacks, which is needed to make it impossible for it to circulate at all, under the well-known rule, which is now called "Gresham's law," which forbids the currency of two kinds of money of unequal value. It must be borne in mind, too, that the possibility of keeping silver afloat among us does not depend, as is usually the case, on its preserving a certain relation to a fixed and stable commodity like gold. On the contrary, it depends on its preserving a certain relation to another kind of money even more unfixed and unstable than itself, namely, irredeemable paper; so that, in making our calculations about it, we have to take into account, not one set of fluctuations, but two. We have not only to watch the ups and downs of silver, but the ups and downs of greenbacks, which are even more inscrutable than those of silver, because the quantity of silver on the market is regulated by the returns made by the mines to human labor and capital, while the value of greenbacks depends largely on the votes of a body of men mostly ill-informed with regard to the nature and functions of currency, and strongly disposed to treat the standard of value as an affair of sentiment or party interest. When we hear Senator Jones, for instance, recommending us to use silver as our standard of value, because America is the great producer of silver and odious England the great producer of gold, or Henry C. Carey urging us to have a non-exportable standard of value, because we shall then have a truly American money all to ourselves, we feel prepared to have some other statesman recommend the use of an India-rubber yard measure, because caoutchouc is a truly American product and is best worked under American patents.

Now, when the public sees the suddenness and recentness of the fall in silver, it naturally asks itself whether what has come down so suddenly may not as suddenly go up again. In fact, silver has fluctuated in the most alarming way within the last two months. It has been as low as 52¼d. in London since March 30, and now stands at 53½d.; it may be 55½d. by the 1st of June; and one of these slight oscillations might any day suddenly carry it out of the country, even supposing greenbacks to remain where they are to-day as valued in gold. But then on this point there is no certainty either. We are on the eve of a Presidential election, in which the currency question will be a leading issue; and although we believe the Republican party is on the whole sound on this question, and that the Republican candidate will in all probability be elected, we believe also that the greenback heresy has made considerable gains since Congress met; that a large proportion of the Democrats, in and out of Congress, are more or less affected by it; and that there is a feeling of uncertainty about the whole matter prevalent through the country which has much to do with the prevailing business depression. With this fog hanging over the future value of the greenback, and this very small interval between the value of the greenback and that of the new subsidiary coin, it is not surprising that the coin is found to stick fast in people's pockets and drawers when it leaves the Treasury.

It is difficult to avoid the belief, too, that both the discussions of the silver question and the legislation about it have helped to deepen the prevailing uncertainty and anxiety about the financial future, and thus to prevent the success of the silver experiment, apart altogether from the mathematical aspect of the matter. So far from being a stimulus to resumptionist opinion, we think it has weakened it, because it has revealed in a somewhat striking way the depth of

that passion for dishonesty and love of crooked ways by which some of our public men seem to be affected, as by scrofulous humor in the blood. Among the eager supporters of this scheme of silver resumption are a good many who a year ago were preaching fervently against all metallic money as barbarous and "monarchical," and lauding paper or leather money as the true democratic money of the future, but have been seized of late with an eagerness for silver money, as soon as they found that silver was fluctuating greatly in value; and they are now as anxious that the Government should resume in silver as they were a year or two ago that it should not resume at all. That is to say, their hostility to metallic currency vanished as soon as they found a metal which had lost or was losing the qualities which have, since the dawn of civilization, caused metals to be used as money. As long as silver was tolerably stable in value, and therefore fitted to be a standard, they would none of it; as soon as it began to resemble paper in its capacity of increase, and in the fluctuations of its purchasing power, they took it up, thus giving strong reason to believe that what they seek in a circulating medium is not a standard of value so much as an instrument for fraud. They have taken to silver as "the poor man's money" and the money of "the debtor class," because in its present condition it would, as a legal tender, afford abundant opportunities for cheating and give trade an aleatory character. The best money to them is what the rest of the world would call rogues' money, and as long as it is rogues' money they care nothing whether it is dug out of the ground or made of pulp and printed.

Twenty years ago, England and Portugal were the only countries in the civilized world using the gold standard exclusively. The others used silver, or both metals. Since then Germany has given up silver; so has Holland; so have Sweden and Norway and Denmark. If Russia and Austria could resume specie payments, they would undoubtedly resume in gold. Austria is at this moment endeavoring to accumulate gold for the purpose, and so in a smaller way is Russia. In the Imperial Bank at St. Petersburg the stock of gold is steadily increasing, that of silver steadily decreasing. We here in 1873 abandoned the double standard, and fell back on gold exclusively. The only countries which hold on to silver now are France, Italy, Belgium, and Switzerland, forming what is called the Latin Union, but these have had to enter into a convention restricting their coinage of silver to a certain fixed amount for each state, and, unless all signs fail, when France resumes specie payments she will resume in gold. The reason of this general abandonment of silver is simply that the late enormous increase in its quantity, and great fluctuations in its value, were depriving it of the qualities necessary to a standard of value, and converting it into rogues' money. Is it not marvellous and humiliating that it is this very circumstance which makes it attractive to many of our own statesmen, and causes them to clamor for having it made a legal tender, if not for any amount, for as great an amount as possible? They are so republican, they say, that the mere sight of a monarchy or aristocracy seeking honestly to pay its debts and keep its contracts, gives in their eyes a certain dignity and elevation to cheating and counterfeiting.

Of course, all this is no argument against the use of silver coin as token money, and legal tender for small amounts, if you have a gold standard in actual use. But it is an argument against it if you are living on irredeemable and depreciated paper. The problem of keeping it afloat then offers too much uncertainty, and too strong a temptation to gamble in both the metal and the paper. Attempting to use it, too, as we are now doing, before we have made any adequate arrangements for the restoration of gold payments, is producing new and unnecessary complication in the whole financial problem, causing the purchase of silver for more than it is worth by the sacrifice of gold which we need for other purposes, arresting the export of silver in place of gold, and rousing in the breasts of politicians, by the use of a depreciated coinage in the discharge of lawful debts, that rage for tortuous modes of dealing with the public obligations to which the prolongation of our financial imbroglio is largely due.

SCEAUX.

PARIS, April 21, 1876.

IT is no great distance from Paris to Sceaux, where once lived the celebrated Duc and Duchesse du Maine. I lately had the curiosity to see what remained of their famous estate. You reach it by the most singular little railway, constructed on a plan now quite abandoned. The carriages are made to run over the most complicated curves. You pass by the great reservoir where the waters of the Vanne were brought by the celebrated M. Haussmann—a work quite worthy of the Romans, which will soon supply Paris with abundant and pure water. The small line of railway stops at Sceaux, after passing under the new aqueduct, which reminded me of the aqueducts of the Roman Campagna, though it lacks their noble proportions and looks more like a common railway viaduct. Sceaux is on the top of a lovely hill, covered with orchards and small villas. The old estate is completely surrounded, as were all royal parks, by a wall. It belongs now to a grandson of the famous Marshal Mortier, one of the great Napoleon's iron marshals; and I was conducted all over it by him. The Marquis de Trévise—for such is the name he bears, as his grandfather was made Duc de Trévise, and he is only a younger son—devotes his energies and all his surplus revenue to the complete restoration of the old palace. The grounds, fortunately, have not been altered; they are a magnificent specimen of the noble art of Le Nôtre, the great gardener, who deserves to hold his place in the Pleiad of men who surrounded the "grand siècle" with its glorious halo; he disposed the alleys, the terraces, the water-works, the canals, the ponds, in that admirable style which can be seen at Versailles. Through one great alley you see on the horizon the old tower of Montlhéry, so famous in the Middle Ages. The numerous springs have been well collected, and form a most beautiful system of water-works, which adds much beauty to the trees. I may be suspected of partiality, but in my opinion the Le-Nôtre system of gardening, which formed a sort of transition between architecture and wild nature, is most admirable. It is quite different from the English gardening, with its winding alleys and conscious disorders. It has a beauty of its own, made of order, of symmetry, of simple forms.

At the time of the Revolution, Sceaux was the property of the Duc de Penthièvre, often called the "bon Duc." The people of Sceaux were very much attached to him, and even the Convention never troubled him in his solitude; but after the execution of Louis XVI. and Marie Antoinette he retired to a small house in Normandy, where he was allowed to die in peace. Sceaux was confiscated, and given over to the Commissioners of the Convention; all the works of art and the furniture were transported to Paris and placed in the museums. The place was left without any protection, and every piece of brass, of iron, of lead, soon disappeared; the great railings, the balustrades, and even the marble slabs of the mantels, were robbed. When Marshal Mortier took possession of it, the old palace was an empty shell. It was too large for modern life, and the son of Marshal Mortier built a new house, which is still palatial, but only of moderate proportions. This house was occupied for several months during the siege of Paris by the German troops, and there is now absolutely nothing left in it. The mirrors and mantels are broken, the floors in front of the chimney-places are burnéd, and will have to be changed.

Of the old buildings of the time of the Duchesse du Maine only two remain—one was the picture-gallery, and was used for a long time, indeed until now, as a barn. The walls are still beautiful; the ceiling has been destroyed, and, instead of pictures, you see only the roof. The present owner intends to restore this gallery, which fully deserves it. It is rather odd that in this great work of destruction one small pavilion has always been respected: it is called the "Pavillon de l'Aurore." The middle room is covered by a cupola, in which there is a magnificent ceiling of Lebrun's, which has been engraved. There are two side rooms, of very small size, which had also ceilings by the same artist; but these have been carried off by the Marquis de Trévise to his new hôtel in the Champs Elysées, and will be replaced by copies. Lebrun is not my favorite painter, but he had much "noblesse," and, if you once admit his mythological style, it must be confessed that his drawing was good and his color sometimes very happy. This "Pavillon de l'Aurore" was the favorite haunt of the Duchesse du Maine; in it were spent the famous *grandes nuits de Sceaux*, which are not yet forgotten.

The Duc du Maine was a son of Louis XIV. and of Madame de Montespan. He married the second daughter of the Prince de Condé. He was a great favorite of Louis XIV., who allowed him in the Parliament, to the great disgust of the old nobility, a place between the princes of the blood and the peers. He bought the house of Sceaux, where Colbert, and after him M. de Seignelay, had spent large sums of money, for a million of livres. There were, besides, statues in the gardens to the value of 100,000 livres.

None of them remain now except a very few, among the number two groups over the gates by the famous Coysevox, who has left such remarkable works at Versailles and in the Tuileries. Saint-Simon has related in the minutest details every incident of the life of the Duc du Maine. Louis XIV. gave him all sorts of prerogatives, loaded him with money and with favors. He could never make him a legitimate child. The Duchesse du Maine espoused, of course, the cause of her husband ; but she could not help despising him, and her conjugal life was full of storms. She consoled herself for the inconveniences of her position with the pleasures of Sceaux. She spent there much of her time, and maintained quite a court of her own. As many as five hundred followers and servants were established on the estate and in the palace. She had her poets, her prelates, her abbés, her musicians, her painters. She spent untold sums of money on fireworks, balls, comedies. She had a fondness for the stage, and kept playing comedies with her ladies and gentlemen, and with some old comedians, who gave her lessons. The whole Court used to go to Sceaux, and had to applaud the little Duchess, who entered into her rôles with the greatest confidence.

This is the way in which Saint-Simon describes the Duc du Maine : "With the *esprit*, I will not say of an angel, but of the Devil, whom he resembled so much in malignity, in blackness, in perversity of soul, in bad services to all, in good offices to nobody, in profound combinations, in haughty pride, in exquisite falsehood, in numberless artifices, in measureless simulation, and, moreover, in charm, in the art of pleasing, amusing, those whom he wished to please ; he was a coward in heart and spirit, and so much so that he was extremely dangerous, and most capable, if only it was underhand, of going to the most terrible extremities to oppose what he feared." This sentence, which stops your breath, is truly Saint-Simonian, as well as this picture of the Duchess : "He was moreover tossed about by a woman of the same sort, whose *esprit*—and she had an infinite amount of it—had been spoiled and corrupted completely by the constant reading of novels and plays, into the passions of which she threw herself so completely that she spent years in learning them by heart and in playing them publicly herself. She had an excessive courage ; she was enterprising, audacious, furious, only knowing the passing passion, and postponing everything to it ; indignant at the prudence and the measures of her husband, which she treated as miseries of weakness, whom she reproached with the honor she had done him in marrying him, whom she belittled and humbled before her, treating him as a negro, ruining him fundamentally, without his daring to say a word." Such was the happy couple who lived at Sceaux. The ambition of the little Duchess knew no bounds. She had the pride of a Condé, and when death began to play havoc with the direct line of Louis XIV.'s children; when Monseigneur first, called the Grand Dauphin, and afterwards the Duc de Bourgogne died, the Duc du Maine seriously thought he might become king of France. Louis XIV. by degrees had obtained from Parliament resolutions more and more favorable to the children of Madame de Montespan. In the end, the Duc du Maine and his brother, the handsome and silly Comte de Toulouse, were declared true princes of the blood and capable of succeeding to the crown. The Duc du Maine became the personal and bitter enemy of the Duc d'Orléans, who stood between him and the throne. He made himself the intimate ally of Madame de Maintenon, in the hope of governing Louis XIV. entirely through her. Through her influence, Louis XIV. made a will which practically gave all the power to the Duc du Maine. When this will was read in a solemn session of the Parliament, there was a sort of stupefaction. The will was full of instructions as to the *bastards*, the education of the future king, Madame de Maintenon, and Saint-Cyr. It established a Council of Regency, and gave to the Duc du Maine the care of the children of the young king.

Parliament did not respect the will of Louis XIV. ; it gave to the Regent the whole of the regal power, and the Duc du Maine fell from the height of his ambitions and hopes. The Duke and Duchess became the open enemies of the Regent. Lagrange-Chancel, who wrote the infamous "Philippiques" in which the Regent was accused of having got rid by poison of the children of Louis XIV., was an inmate of Sceaux, and one of the favorite poets of the Muse of the *Pavillon de l'Aurore*. The Regent kept him a little while in prison, and then pardoned him. He showed himself equally merciful in the affair of the Cellamare conspiracy, in which the Duc and Duchesse du Maine took a part. Cellamare was the Spanish ambassador, but was disavowed by his Government. The Duc du Maine was arrested and kept in confinement at Doullens. His arrest took place at Sceaux, when he was coming out of his own chapel, which has now become the church of the place. At the same moment, Madame du Maine was arrested in Paris by the Duc d'Ancenis, who was captain of the guards. She was conducted to Dijon, where she was kept in the Château under the guard of her own uncle, M. le Duc. Afterwards she obtained permission to go to Châlon-sur-Saône, and to stay in a neighboring château. She regretted Sceaux, and began to make revelations. In her interrogatories, she brought strong accusations against Cellamare and others, and tried to save her husband's credit as much as she could. She was finally allowed to go back to Sceaux, where the Duke also returned.

The time of the "grandes nuits" was past ; the court of Sceaux became deserted ; only a few followers remained faithful to the fiery little Duchess. It may be that the quiet beauty of the scenery consoled her for all she had lost. Even now, after all the ravages of revolution and of war, it is impossible not to feel it. The work of Le Nôtre survives the work of painters and sculptors ; and there is a strange poetry in the old deserted estate, in the dormant waters, in the long avenues now covered with grass. The Duchesse du Maine was, so to speak, the caricature of a great woman. Sceaux, though it is not very large, is not a miniature of Versailles ; it is as beautiful in its natural lines and dispositions.

THE QUESTION OF THE GERMAN RAILWAYS.

GERMANY, April 21, 1876.

IF our railroads had already found their historian, some of the chapters of the book would be counted among the most drastic illustrations of the political misery of Germany up to 1866. The pettiest Prince could, and very often did, throw obstacles in the way of enterprises upon which, at no very remote day, the very existence of the nation was to depend. The proverbial German patience had to be exercised to its utmost extent to overcome these difficulties, created not by any interest of these pocket-states in conflict with the interests of the great whole, but merely by the pride of sovereignty of their rulers—mostly ciphers in every respect but the mischief they could and did do. If common report may be relied upon, the heartburnings caused by the railroad question in its early stages are even at this day not wholly extinct. It is said that one of the Princes in 12mo yet in existence is still made to undergo punishment for his former bad behavior toward one of the main lines, by having to wait a considerable time for all the fast trains at the station where it is joined by the branch-line traversing his "state." This may be, and probably is, a fable. An undeniable and universally-acknowledged fact, however, is that it is principally due to the checkered aspect of the old German map, for which the schoolboy's paint-box was far from containing colors enough, that our railroad system is at present in a most unsatisfactory condition. The former inability of our governments to procure in any way whatever large funds, and their mistaken policy with regard to railroad-building, have contributed their share to bring about this result. There are to-day not less than sixty-three different and, in the main, independent railroad administrations. In going from Karlsruhe to Berlin—*i.e.* traversing about half of the whole extent of Germany from south to north—one travels on seven different roads. The passenger has, at least on the main lines, comparatively little to suffer from this state of things, but the merchant, and anybody else who has to send goods a great distance, is made to feel the evil consequences of it in a high degree. It is absolutely impossible to calculate beforehand, with any exactness, the cost of freight. Last fall, a member of the Prussian Landtag, before removing from the Rhine to Berlin, enquired at the proper place how much the transporting of his furniture would cost. At Berlin, a bill was sent in considerably exceeding the amount stated. He paid it under protest, and brought his complaints before the proper authorities. Then sixty thalers, more than one-sixth of the whole amount charged, were returned with the statement that the calculations of both officials, the one at his former place of residence and the one in Berlin, had been wrong ; but it was added, as an excuse, that they could not be blamed very severely for it, because the goods had to come over four different roads, each of which had different charges.

Now, if four different tariffs are an excuse for such a miscalculation, inasmuch as the whole number of railroad tariffs in Germany is 1,357, the chance for just complaint seems very remote. It is therefore not astonishing that even one of the most important cities in South Germany, where political prejudices would tend to favor a leaning in the opposite direction, should call this chaos "simply insupportable." The necessity of a comprehensive reform is indeed admitted almost without an opposing voice. The question was brought before the authorities of the Empire at an early date, and several attempts have been made to remedy at least the worst features of the present system, or rather lack of system. So far as my knowledge goes, it is also not denied by anybody that some good has been effected by the "Reichs-Eisenbahnamt" (Imperial Railroad Bureau), while, on the other hand, a large

majority contend that the little it has been able to do only serves as an additional proof that it is constitutionally incapable of accomplishing what the national welfare requires as the very least that should be done. The Prussian Government has based this opinion upon the broad principle that such a gigantic task never can be solved unless there is, instead of the right of a hardly more than advisory superintendence, full authority given, which, of course, also implies full responsibility; in other words, it wants all the railroads to become, in the course of time, the property of the Empire, and is now asking the consent of the Landtag to enter at once upon the realization of this plan by tendering to the Empire the Prussian railroads owned by the state. Your readers will have known long ago that in Saxony, Bavaria, and Würtemberg the Government and the Chambers are heartily agreed in the most decided opposition to the whole project, while Baden and Hesse-Darmstadt seem to have resolved upon a prudently reserved attitude, so that they may be sure of getting the best terms in case it should be necessary to yield. What the chances of the project are in the Prussian Landtag appears to be as yet a little doubtful, though the prevailing opinion evidently is that the Government will secure a majority. That the Ultramontanes will be in the opposition is a foregone conclusion, as they are, in their present mood, opposed to everything tending to increase the strength of the Empire. Among the *Fortschrittspartei* the disposition of the majority also seems to be pretty decidedly unfavorable. The National Liberals, with perhaps a few exceptions, are agreed with the Government in principle, so that with them the only question will be whether they can come to an agreement about the details; these, however, also involve questions, nay, principles, of the greatest importance and a change of the constitution.

From the first moment the most prominent members of the party have declared that their assent would depend upon the willingness of the Government to give sufficient guaranties against an easy abuse of the enormous power to be entrusted to the Empire. I say purposely to the *Empire*, and not to the *Government*, for one of the principal guaranties asked will be that the Reichstag shall also in this respect be a co-ordinate power, exercising in some respects, as for instance the determining of the tariff, a direct and controlling influence. The absolute necessity of this will be readily admitted even by the staunchest partisans of the project, because the uncontrolled power over the railroad tariffs would also actually give the Government full power to weigh exclusively in the scales of its own wisdom the respective claims of free trade and a protective tariff—a question which, in consequence of the general prostration of business, has of late been agitated with great and constantly-increasing vehemence. But that is not all. The friends of the project are further agreed that the immediate consequence of its adoption would have to be the creation of two Cabinet Ministers of the Empire—one for the finances and the other for everything relating to the means of communication (*Verkehrs-Ministerium*). This would involve a change of the constitution, and the opposition in the Bundesrath would gladly avail itself of the opportunity to use the constitutional cloak as a domino which might, to some unusually dim eyes, effectually cover their aversion to yielding anything more of their sovereignty to the wants of the Empire. A private understanding with the Chancellor on this question will, therefore, be deemed sufficient until after the main question has been carried. That this will be soon the case is hardly likely, for the minor powers are thus far to be considered as unanimous, and they will have the majority in the Bundesrath. That was, however, foreseen, and therefore it does not deter the Chancellor from pursuing his plan as if its ultimate success were certain. And in this he most likely is right, provided our whole political structure be not shaken once more to its very foundations by a general European catastrophe. The corner-stone of the present Empire was the Zollverein, which was laid by Prussia at a time when she had almost renounced her rank as one of the five great powers of Europe, when Germany was hardly more than a geographical name, and when the opposition to her plans was quite as unanimous and much more passionate than it is at present. Her present task is easy in comparison with what she then undertook and accomplished; and certainly it is not to be supposed that a Bismarck will strike his flag where an Eichhorn knew how to keep his flying. He has already announced in a formal and official way what he will do next in case he is left in the minority in the Bundesrath. Prussia will then at once set herself to buying up as fast as possible all the railroads within her own boundaries. The importance of this the Opposition understand full well. The Würtemberg Minister, Von Mittnacht, who indulged in a rather unexpectedly vehement philippic against the Chancellor's project, had to confess: "I do not contest that Prussia, if she concentrates all the railroads in her territory, will acquire an enormous power, but we cannot suppose that she will abuse it." Well, the thing is only that what Mr. Von Mittnacht would consider an abuse, Bismarck is likely to deem the best use he can make of it. As the acquisition of this "enormous power" is with him avowedly a means to attain his ultimate end, it is rather strange to suppose that he will not use it to further his purposes.

I have, in this letter, purposely refrained from commenting at all upon the economical and political bearings of the project. Even French writers admit that, leaving aside whatever is quite peculiar to Germany in it or would have a strong bearing upon the decision of the great question how far state-sovereignty will be absorbed by the Empire, it is an experiment, the success or failure of which would be in the highest degree instructive and valuable to all the rest of the European powers; and, furthermore, that Germany is in a better condition than any of them to make the experiment in such a manner that the experience gained will render possible the deduction of general principles. If this be so, it must be very indifferent to your readers what your correspondent happens to think on a question of such paramount importance. They will be better served if, in due course of time, he furnishes them with an abstract of the opinions of the different political parties, as they will be expressed in the debates of the Prussian Landtag.

Correspondence.

GENERAL ART INSTRUCTION.

To the Editor of The Nation:

Sir: The late sharp criticisms in the *Nation* upon the present method of art-instruction in the public schools of Massachusetts create a desire to know what scheme the writers would wish to substitute for that which is now in vogue. Every one must agree with the article of April 13, that it is extremely important that this subject should be thoroughly discussed, and, I would add, always in a liberal, just, and courteous spirit.

As the writers of these criticisms have been striving to destroy the present building, will they not kindly state in what manner they would wish to rebuild the edifice? Many persons would be very glad to have them draw up an exact scheme, *without vagueness*, which might be practically carried out, so that the ideas of the critics may be clearly understood. What methods would they employ in the public schools by which the children should be led up to the power of making the most beautiful and artistic designs, when they become artisans? What would be the best teaching in advanced art-schools for those few who should develop so much talent that, upon leaving the public schools, they should wish to devote their lives to the pursuit of pure art-training?

Trusting soon to see an answer to these questions in your columns, believe me, Very truly yours, C. A. L.

Cambridge, Mass., April 24, 1876.

[In reply to our correspondent, "C. A. L.," we must preface a direct answer to his questions by saying that we do not believe that any useful scheme of art-instruction can be organized and put into operation on a large scale. Instruction in *art* cannot be carried out in public schools, because it can be imparted only to pupils of advanced development and with special gifts. And instruction in *drawing*, which perhaps is what is now often meant by "art-instruction," is equally removed from the category of common-school studies by the fact that under present conditions a sufficient number of competent instructors do not exist, either here or in Europe, and cannot be quickly called into being. We consider the recent movement in Massachusetts a mistake, even if it were judged only on this ground, since by ignoring the necessity of trained teachers it shows a wholly inadequate estimate of what is rightly involved in art-instruction, and of the proper means of artistic training for industrial or other ends. Were we to suggest anything as a substitute for the "scheme now in vogue," it would be one which should modestly undertake, in the lower schools, the simple training of eye and hand to see and represent visual objects of common observation with a sufficient degree of correctness, without immediate consideration of any kind of artistic effect or elaborate finish of execution. By this discipline would be disclosed such artistic capacities in individuals as might be afterwards developed.

As to the details of such a scheme, it is not possible under present conditions to settle them so as to frame an entirely complete,

comprehensive, and final system; indeed, we would offer especial warning against any so-called "well-digested" popular systems of recent growth. These systems all take their character from the general tone of modern thought, which is commercial and not artistic, and, when carefully examined, they prove to be lacking in the consistent development of the great principles which underlie all serious, intelligent work, whether of imaginative or decorative art. These principles may be derived from the study of the best schools of art, and they are applicable to our needs as to those of all art-students; they may be "clearly stated" and "practically carried out," though many details of method and procedure in instruction must require experience to perfect.

A scheme of instruction in drawing for the lower schools, based on these principles, might be somewhat as follows:

1. Elementary training of the eye in accuracy of measurement of formal line, and of the hand in precision in drawing it—not formal *patterns*, which are ugly things of necessity, and destructive of delicacy of perception.

2. Elementary training of eye and hand in precision of vital lines —*i.e.*, lines which describe the contours of natural and mostly living objects.

3. Exercise in color without chiaroscuro.

4. Training of the eye in perception of the gradation of shade in natural objects, and of the eye and hand in rendering it.

5. Training of the eye in discernment of linear perspective.

6. Exercise in color with simple chiaroscuro.

This we consider about as much as can with any security be undertaken. The effort to teach children any sort of "original design" is utterly short-sighted and futile.

In advanced schools for pupils who had received this elementary training, and still more in special art-schools, wherever truly competent instructors could be found, something more like proper art-instruction might have place. Such general principles of design as are capable of definition and illustration might be taught, with the aid of collections of carefully-chosen examples. And we should say that the directors of such instruction would do well to seek guidance from the older schools of art—as Florence and Venice—rather than from the recent ones of England, Germany, and France.

But all this should be done, in our judgment, with a view simply to the culture of individual perception, thought, and feeling.—Ed. Nation.]

Notes.

D. APPLETON & CO. have published in two volumes the second, thoroughly revised edition of Darwin's 'Variation of Animals and Plants under Domestication.' It is, perhaps, worth remarking, as showing the concatenation of all works of genius, that Darwin acknowledges in his preface (p. 10) his indebtedness to Malthus ('On Population') for help towards the doctrine of Natural Selection; while, as we lately pointed out in our review of Godwin, the latter's 'Political Justice' was the occasion of the publication of Malthus's work. The 'Variation of Animals' was reviewed on its first appearance in the *Nation* of March 19, 1868 (Vol. VI., No. 142).——Roberts Brothers have bound together Mr. Hamerton's 'Sylvan Year' and 'Unknown River' in a convenient 12mo volume with large print. The connection between these two very dissimilar works is to be found in the fact that the scene of each is laid in France, and that Mr. Hamerton gives us his delightful companionship *al fresco*. The etchings of the quarto edition of the 'Unknown River' are not reproduced, and, in fact, they could better be spared than the text, in our opinion, agreeable as many of them are. In their place, a portrait of the author himself is very acceptable. Roberts Brothers have also bound together the earlier and later poems of Christina Rossetti—the 'Goblin Market, and Other Poems,' and the 'Prince's Progress, and Other Poems'—retaining the separate paging and title-pages. This, too, will be welcome to all who love genuine poetry.——The foreigner and the native excursionist alike are beset already with numerous guide-books—none quite so admirable as some foreign models we could mention. The Riverside Press issues 'Boston to Washington,' which readily splits up into 'Centennial Guide-books to the Leading Cities of the United States'—to wit, New York, Washington, Philadelphia, etc. It is a not very juicy or inviting compendium, and while it may compete in accuracy (as far as it goes) with Appleton's 'Handbook of American Cities,' the latter is more evidently the product of skill and industry, and of an ambition to bring everything down to the very latest date. The illustrations of the 'Handbook' are also good and fresh. The 'Official Guide-book to Philadelphia,' by Thompson Westcott (Porter & Coates), appears to be an excellent performance in every respect. It exceeds 400 pages, and is profusely illustrated.——A weekly paper devoted to the industrial interests of women, and called the *New Century*, is to be published at the Woman's Department, Centennial Grounds, Philadelphia, whither communications and subscriptions ($2 for six months) may be directed. It will take cognizance of women's work as represented at the Exposition, and will seek especially to obtain information and statistics concerning the newest openings for women in trades, handicrafts, art, the professions, etc.——Geo. P. Rowell & Co. send out an eleventh-hour notice that their newspaper pavilion at the Exposition will have a corner for specimens of old newspapers and other curiosities of journalism—for example, such as abounded at the South in the straits of the civil war. They should be sent to the pavilion. By consent of the owners they will, at the close of the Exposition, be "transferred to some historical society or museum."—— A. Williams & Co., Boston, have just published in large 8vo, illustrated, the 'Celebration of the Centennial Anniversary of the Evacuation of the British Army, March 17, 1776, etc.,' with Dr. Ellis's oration; and in square folio a 'Heliotype of Washington's Autograph Address to the Officers of the American Army at Newburgh, March 15, 1783.' They have also for free distribution a pamphlet of twenty-nine pages issued by the Massachusetts Society for Promoting Agriculture, which contains a list of prizes offered by them (to all Massachusetts landowners), ranging from $400 to $1,000, together with explicit directions for procuring and setting-out certain trees, and Mr. C. S. Sargent's essay on tree-planting noticed in No. 561 of the *Nation*.

—A new method of advertising has been devised which, now that attention is called to it, we have no doubt will meet with much favor. It consists in getting a charter from Congress for an institution to promote the particular thing for which notoriety is desired, said institution to be located in the unfortunate District of Columbia and to be called "National." For instance, House Bill No. 2680 is "a bill to incorporate the National Surgical Institute of the District of Columbia." From a large and illustrated handbill of this institution, which, it seems, flourishes in Indiana and one or two other places, we learn that it consists mainly of a Dr. Allen, who advertises himself as specially skilled in the cure of deformities and private diseases. Following this, we shall no doubt have a National Institute chartered by Congress for Smith's Expectorant, Brown's Magnetic Baths, and Jones's Pain-Killer. We foresee difficulties in store for those legislators who attempt to nationalize their own doctors in this way; but from the advertisers' point of view the idea is magnificent.

—In *Lippincott's* for May we have a translation of Turgenef's "Watch: an Old Man's Story." The story is not long, and as usual it contains one female character of great loveliness; but a more sordid and despairing background to set it off has scarcely been invented even by this writer. Mr. Hart's "Berlin and Vienna" takes for its starting-point the question, "The downfall of European Turkey being conceded as a foregone conclusion, which of the two races, the Slavic or the Germanic, is to oversee and carry out the reconstruction of the region of the lower Danube?" Berlin and Vienna are then considered not as rivals but as co-workers in effecting a "Pangermanic reflux"; and the conclusion is reached that if Prussia could be got to favor a North-German colonization of the Danube, Austria could probably build up there in time a really German nation. Doubtless, when the time comes Prussia will prefer to send emigrants that way rather than to America; but doubtless, too, she has some calculations in regard to Austria which concern the upper sooner than the lower Danube. Mr. Hart gives a good deal of interesting information about the two capitals. "An Old House and its Story" tells of Benedict Arnold's country-seat, Mount Pleasant, near Philadelphia. Of Arnold and of André we hear again at greater length in *Harper's*, André in particular furnishing material for a number of illustrations in Mr. Lossing's "Romance of the Hudson," as well as in Mrs. Rebecca Harding Davis's "Old Philadelphia." This is all pleasant reading, for, one must confess, we are nearly a hundred years off from the treason and the hanging, and can read of both with nearly the same equanimity as of the Mischianza. Mr. Hudson Holly writes sensibly in *Harper's* of "Modern Dwellings"; of his designs we need hardly speak, as he does not withhold his own appreciation of them. In "Daniel Deronda" we reach a crisis at last, and leave Gwendolen engaged to Grand-

court ; and, as we may say, borrowing a Celtic locution, "there's a pair of 'em."

—The May number of the *Galaxy* contains an article by Mr. Marcus A. Casey, called "A Plea for a Patriot," in which the once-familiar and now rather neglected services of Thomas Paine to the cause of liberty in the last century are recalled. The article contains, in the extracts it reproduces from Paine's writings, the best possible apology for the decadence of his fame, and makes it evident that his writing, such as it was, in the cause of Independence derived its chief value from local and temporary causes. Its popularity is now certainly difficult to understand. The following passage from No. 3 of the *Crisis* would hardly be considered in these days a conclusive argument :

"The natural right of the continent to independence is a point which was never yet called in question. It will not even admit of a debate. To deny such a right would be a kind of atheism against nature ; and the best answer to such an objection would be : '*The fool hath said in his heart, there is no God.*'"

Nor is the satire of the following, from No. 5, addressed to Sir William Howe, quite equal to Junius :

"But how, sir, shall we dispose of you ? The invention of a statuary is exhausted, and Sir William is yet unprovided with a monument. America is anxious to bestow her funeral favors upon you, and wishes to do it in a manner that shall distinguish you from all the deceased heroes of the last war. The Egyptian method of embalming is not known to the present age, and hieroglyphical pageantry hath outlived the science of deciphering it. Some other method, therefore, must be thought of to immortalize the new knight of the windmill and post. Sir William, thanks to his stars, is not oppressed with very delicate ideas. He has no ambition of being wrapped up and handed about in myrrh, aloes, and cassia. It fortunately happens that the simple genius of America hath discovered the art of preserving bodies, and embellishing them too, with much greater frugality than the ancients. In balmage, sir, of humble tar, you will be as secure as Pharaoh, and in a decoration of feathers rival in finery all the mummies of Egypt."

Paine was a useful man, as his active employment by the leaders of the time sufficiently shows ; but the total explosion of the "natural-rights" philosophy on which he, like so many other pamphleteers of the day, based his appeals to the public, has left his writings without point or applicability.

—The daily life of the journalist has always been wrapped in a good deal of mystery, and there is no part of it less open to the light of day than that which relates to his means of sustaining life. The banker's, the merchant's, and the lawyer's meals beget very little curiosity or interest, but doubt always surrounds the food and drink of the journalist. Where he eats or what he eats is alike unknown, and the attempts now and then made to furnish a key to the enigma have not generally been crowned with success. The *World*, which with one or two other papers has been recently devoting a good deal of its time to what may be called controversial gastronomy, has been investigating the subject of dining in New York, apropos of the closing of the New York Hotel, a house formerly well-known as the headquarters of a certain class of Southern society (which, however, had more enlightened and advanced views on the subject of cooling drinks than on that of cooking), and gloomily declares that "prohibitory prices still rule in nearly every house"—a state of affairs which ought to give a valuable hint as to the financial prospects of hotel property to the writer of the depressing money article in the *Tribune*. The *World* then proceeds, in the interests of economy, to investigate the question of what a really simple dinner can be had for—what the *World* calls "a good but not extravagant dinner of several courses"—and, proceeding experimentally, makes out a *menu* from the bill of a restaurant showing that the cost of such a dinner would be between five and six dollars, or about $2,000 a year. "No wonder," the *World* adds, "those who can live abroad do so." This dinner includes soup, fish, two courses of meat, two kinds of vegetables, two kinds of dessert, coffee, Cognac, and a pint of La Rose claret, costing no less than two dollars, and the sum-total does seem to amount to a "prohibitory" price. We are sorry to see that though the *World's* article is entirely impersonal, there is a tendency among its contemporaries to sneer at this *menu* as the product of the excited brain of a hungry and ill-fed man, rather than as representing the actual dinner of any person or class of persons of whose habits the *World* is likely to be cognizant. One paper has pointed out that the *World* does not give this as an actual dinner, which it has had means of trying, but as one which it has "made out" from a bill of fare, and intimates that it is really a dinner for two persons, not one, and that therefore the cost should be reduced to $3 70 ; but to this the *World* replies that the portions are not big enough for two, speaking on the point with a warmth that indicates a settled conviction ; while another paper publishes a communication from a correspondent who, assuming the character of a restaurant-keeper (though evidently himself a journalist), declares that no member of the profession whom he knows anything about makes more than one meal a day, which he obtains under false pretences, first calling for a glass of beer for the sum of five cents, and then devouring whatever he finds spread before him on the counter, without further payment. Such is the present state of the controversy, which cannot yet be said to have made either the cost of living or the habits of the journalistic class very clear, though it shows clearly how interesting controversy is when absolutely divorced from all utilitarian ends.

—Our Southern brethren make a use of the despised mule which enables them to gratify several very human instincts at once. On the 29th of last month there was a great mule race at the Fair Grounds, New Orleans, with twelve entries. The designations of the animals were extraordinary. There was the "mule Débutante, sixteen years old, out of School by Accident, dam Precocious" ; the "mule Cotton Exchange, three years old, by Perseverance out of Misfortune, dam Creditable" ; and the like. But others of the contestants could boast a distinctly political pedigree. Thus, we read of the "mule Post-trader, five years old, by Belknap out of War Department, dam Corrupt" ; of "mule Bandit, two years old, by Phil. Sheridan out of White League, dam Lyre" ; with "mule White League" itself, "two years old, by Desperation out of Stern Necessity, dam Successful." "Mule Bandit" came near turning the laugh by winning the first race, but was, however, distanced by "mule Centennial" ; and when, as we are told, "the long body of the Anniversary of the Declaration of Independence crossed the line a length in advance of the descendant of Sheridan, a wild tumult raged among the spectators." The "descendant of Sheridan," nevertheless, had one more chance in the "consolation dash of two miles" which followed, and improved it by coming in first. "The occasion," concludes the *Picayune's* reporter, "was in every respect a delightful one, and certainly no one regretted their contribution to the benefit of the Protestant Episcopal Home."

—The decision of the Centennial Commission to close the Exhibition on Sundays has called out a marked and almost unanimous expression of disapproval from the secular press, and it is greatly to be hoped that the action of the Commission will be reversed or modified. We do not complain of the question having been discussed on religious grounds only, because these are the grounds which naturally present themselves first and most directly ; but it ought to be remembered, even by religious men, that even the Protestant world is divided as to the proper mode of keeping the Sabbath, and that the views of the Evangelical Christians of this country and of England on the subject are not only not accepted by, but excite the surprise of, those of France, Germany, Sweden, Denmark, to say nothing of the Catholics. Considering, therefore, that our Exhibition is an international one, to which we have invited all the world, the duty of imposing our views of Sabbath-keeping on all our foreign guests, and on our own foreign-born population, and confining them on one day in the week to the hotels and boarding-houses of a hot city, is not fairly deducible from our own appreciation of the advantages of our American Sunday. We know all that may be said as to the possible or even probable effect of keeping the Exhibition open in diminishing the popular reverence for the day as it is now kept by American usage ; but this can hardly be as great as the effect of travel in Continental countries, to which tens of thousands of Americans resort every year, and we have never heard of an American pastor advising one of his flock not to go to Europe on this account. On the contrary, he advises him to go ; tells him that the way foreigners pass Sunday is none of his business, though it is his business to pass his own Sunday in the way his conscience approves of, wherever he may be. We think a similar rule ought to be adopted in Philadelphia. The differences of opinion and practice current in the religious world touching the proper observance of Sunday, and the international character of the show, ought to be recognized by opening it for those who think it no wrong to go there on Sunday, and those who think differently would thus be left free to stay away. We do not think either the Centennial Board or the Board of Finance exactly competent to treat any portion of the visitors, whether home or foreign, as children, or uninstructed or immoral persons, or to settle for them disputed points of Christian doctrine or practice. The fight for the Puritan Sabbath has been a long and losing one. Much of it has disappeared, but all that was really good in it remains among us. There is danger, however, that this too may be put in peril by forcing it intolerably on persons as conscientious and religious as ourselves, who do not see in it either a means of edification or enjoyment.

—Sir Robert Walpole and his time have furnished so much comfort to the corruptionists and apologists of corruption during the last few years that Bolingbroke's 'Freeholder's Catechism,' which made its appearance during the debased period of English politics that gives us so much consolation (1700–60), would just now be edifying reading. It is a parody on the Church-of-England Catechism, and a large part of it is, of course, only applicable to the peculiar kind of corruption wrought by the influence of a court. But there are some passages in it which are good reading, here and now, for Favorite Sons, Practical Men, Special Agents, Brothers-in-law, Workers, Private Secretaries, Bosses, and the rest of them :

"Q. How comes there to be a Decay of Publick Spirit when there is more than usual a Desire to serve the Publick ?

"A. If a Desire to live upon the Publick be a Publick Spirit, there is Enough of it at this Time ; when Extravagance makes people crave more, and the Administration of a Publick Revenue (perhaps treble what it was before the Revolution) enables the Crown to give more than formerly.

"Q. What dost thou fear from this ?

"A. That such as serve the Crown for Reward may in Time sacrifice the Interests of their Country to their Wants ; that Greediness of Publick Money may produce a slavish Complaisance as long as the Crown can pay, and Mutiny when it cannot ; and, in general, that Motives of Self-Interest will prove an improper and weak Foundation for our Duty to our King and Country.

"Q. What wouldst thou do for thy Country ?

"A. I would die to procure its Prosperity ; and I would rather that my Posterity should be cut off than that they should be Slaves ; but as Providence at present requires none of these Sacrifices, I content myself to discharge the ordinary Duties of my Station, and to exhort my Neighbors to do the same.

"Q. What are Duties of your Station ?

"A. To endeavor, as far as I am able, to preserve the publick Tranquillity ; and, as I am a Freeholder, to give my Vote for the Candidate whom I judge most worthy to serve his Country ; for if from any partial Motive I should give my Vote for One unworthy, I should think myself justly chargeable with his Guilt. . . .

"Q. What are the Marks of a Person worthy to serve his Country in Parliament ?

"A. The Marks of a good Ruler given in Scripture will serve for a Parliament-man : 'Such as rule over you shall be Men of Truth, hating Covetousness ; they shall not take a Gift ; they shall not be afraid of the Face of a Man' (Deut. xvi.) Therefore I conclude that the Marks of a good Parliament-man are Riches with Frugality, Integrity, Courage ; being well affected to the Constitution ; Knowledge of the State of the Country ; being prudently frugal of the Money ; careful of the Trade ; zealous for the Liberties of the People ; having stuck to the Interest of his Country in perilous Times ; and being Assiduous in Attendance.

"Q. Who is most likely to take a Bribe ?

"A. He who offereth one.

"Q. Who is likely to be frugal of the People's Money ?

"A. He who puts none of it in his own Pocket.

. . . . . .

"Q. Why is Frugality of the People's Money so necessary at this Time ?

"A. Because they have run out much, and are still much in Debt. My Father and I have paid our Share of one Hundred Millions, and I have heard there are near Fifty more to pay. I grudge not this prodigious Expense, as far as it has been the necessary Price of Liberty ; but as it would grieve me much to see this Blessing ravished from me which has cost me so dear, so, on the other hand, I think it expedient to save now the Affair is over and the Government settled.

"Q. Who are those who are so careful of the Trade of the Nation ?

"A. Such as are willing to keep it from all vexatious Interruptions by Inspections, entering into Houses, Seizures, Suits, and the Oppression of Tax-gatherers, as much as possible ; such as are willing to take off the burthensome Duties which increase the Expense of the Workman and, consequently, the Price of Manufacture."

PILGRIM MEMORIES.*

THE pilgrimage of an "infidel" to Mount Sinai and the tomb of Christ affords a suggestive theme for meditation. It is with no disparaging intent that we use the vague epithet, for Mr. Stuart-Glennie is himself most explicit in assuring us that neither with Christianity nor with what he calls "Christianism" does he acknowledge any fellowship or alliance. By Christianity he means "that great historical system which culminated in the philosophy of Scholasticism, the religion of Catholicism, and the polity of Feudalism" ; and by Christianism he means "that historical theory which represents Jesus of Nazareth as a supernatural being who came on earth for the good of mankind, was put to death, and rose again to sit on the right hand of God." The historical system Mr. Stuart-Glennie perceives to have come to an end, and the historical theory he has learned to regard as antiquated and unsound, and he therefore frankly declares himself an opponent of Christianity, and stigmatizes as dishonest all description of the Christian religion as a morality, or sentiment, or ethical impulse. With the same frankness he expresses himself about beliefs which "Christianism" has always held dear, in language, and still more in a tone, calculated to exasperate the Christian world to the last degree, so that a leading orthodox Review has been led to recognize in him the "fool" described by the Psalmist who has "said in his heart that there is no God." This is, however, inaccurate, for Mr. Stuart-Glennie is certainly no atheist. It is the very purity and sensitiveness of his theistic instinct that leads him, like Theodore Parker, to condemn as degrading much that still finds a place in popular theology. One might, indeed, even plausibly question the propriety of Mr. Stuart-Glennie classifying himself as an anti-Christian, were it not that he is so explicit in defining what he rejects as Christianity. But, in truth, such questions of nomenclature are idle, for "Christian" is a word of such wide and vague connotations that, however well adapted it may be for various religious uses, it possesses hardly more defining value than such a word as "philosophical" ; and whether a given set of opinions can be grouped under such a rubric or not has become a point hardly worth arguing.

While mainly a personal narrative, this book of 'Pilgrim Memories' keeps certain ulterior ends in view. The author has projected, and in part executed, an extensive series of works, to be entitled 'The Modern Revolution,' in which nothing less is aimed at than the establishment of a new law of history, a new speculative basis for religion, and a new point of departure for dramatic art. The new law of history, and the new speculative basis for religion, we are to seek in the conception of historic development as "a certain Change, and Process of Change, in men's notions of the Causes of Change." One object of the present volume is to show how this conception took shape in the author's mind in the course of his journeyings and discussions with Mr. Buckle. By the Gulf of Ezion-Gebir, "walking or riding along a shell- and coral-covered strand,—on our right the sea, red with the coralline forests of its depths, and with a margin so bright and clear that, as we rode, we saw all its gem-like pavement ; on our left, sandstone precipices, of the most magnificently-varied hues,"—amid this strangely beautiful scene, we enter upon quite a Platonic dialogue, in which the author seeks to expound his new conception of causation, while Mr. Buckle occasionally interposes with "I do not follow you, I confess," or "That seems philosophical enough," quite after the manner of the *φαίνεται* or *οὐκ ἔμοιγε δοκεῖ* of Socrates and his interlocutors. This long conversation, or series of conversations, is perhaps the most interesting portion of the book. Yet Mr. Buckle evidently does not get a thorough hold of what Mr. Stuart-Glennie means by defining causation as involving "not merely the conception of Uniformity of Sequence," but also that of "Mutuality of Coexistence, or Mutual Determination" ; and we must confess that to us also his meaning seems by no means distinctly set forth or adequately elucidated. It is to be hoped that in future volumes this point will be thoroughly cleared up, for we are here told that the "Change in our conceptions of the Causes of Change" which the author has discovered to be the "Ultimate Law of History" is neither more nor less than "an advance from the conception of One-sided Determination to that of Mutual Determination." That this statement is fraught with meaning for Mr. Stuart-Glennie, there can be no doubt ; he recurs to it again and again as if it were a sort of talismanic formula for the solution of all manner of problems, psychological and historical. But it is just one of those formulas, like Mr. Spencer's famous law of the change from incoherent homogeneity to coherent heterogeneity, that needs to be charged with significance by means of copious preliminary explanation in order to convey any sense at all to the mind of the reader.

To the many readers who, some twenty years since, were interested in what then bid fair to be the "biggest of big books," the most attractive pages in Mr. Stuart-Glennie's volume will be those which give us glimpses of the personal peculiarities of Mr. Buckle. The sad story of Mr. Buckle's fruitless journey in quest of health, the rapid decay of his strength, and his untimely death at Damascus, has long been generally known, but it acquires fresh interest from the fuller account now given by his fellow-pilgrim. Few would now rate the value of Mr. Buckle's work, or the loss to science from his premature end, so highly as they were commonly rated at the time. Yet, as a fresh instance of how life is short while art is long, of how the world passes away from us while yet we are stammering over the alphabet of its mysteries, there is something infinitely pathetic in the cry which went up from the exhausted and fever-stricken traveller—"My book, my book! I shall never finish my book!" The pathos is not diminished, but perhaps rather deepened, by the reflection that the book possessed no such transcendent value as its author ascribed to it, and that in all probability the strange irony of fate, had it granted to Mr. Buckle

* 'Pilgrim Memories ; or, Travel and Discussion in the Birth-Countries of Christianity with the late Henry Thomas Buckle. By John S. Stuart-Glennie, M.A.' New York : D. Appleton & Co. 1875. 8vo, pp. xviii.–514.

the long life of a Carlyle or a Humboldt, would only have permitted him to survive his own reputation as a leader in the world of thought. It is seldom that so brilliant a success as Mr. Buckle's has been even temporarily achieved by such superficial thinking and such slender scholarship. The immense array of authors cited in his book bears witness to the extent of his reading, but the loose, indiscriminate way in which they are cited shows equally how uncritical and desultory his reading was. One may ascribe this looseness to the native impatience of temperament illustrated in his disposing of Gibbon and Hallam in ten days; but certainly his solitary education and solitary habits of study could do little towards curing the fault. One reason why the scholarship of university-bred men is in the main so far superior to that of men who have been taught at home is that the former are regularly forced, by continual contact and rivalry with fellow-students, into habits of self-restraint and self-criticism in reaching conclusions which only the rarest innate virtues of intellect can enable the latter now and then, in spite of their solitude, to acquire. It is but once or twice in an age that the home-taught student can receive the stimulus to patient sagacity that was afforded in the cases of Grote and Mill. The kind of unceasing criticism which university-life affords the best means of securing, is in most cases indispensable. Less effective, because less direct and constant, but still very valuable, is the discipline that is gained by early and frequent authorship, where a writer is so constituted as to be able to profit alike by fair and unfair public criticism. That there may be men of genius with such marked native qualities of caution and vigilance as to enable them partially to dispense with such educational aids, we do not deny; but Mr. Buckle was not one of these. He began life with his full share of the "original sin" of hasty generalization; and nothing in his circumstances tended to check or control this disposition until, at an age when one's mental habits are usually pretty well engrained, he appeared before the world with the first instalment of his able and stimulating but crude and hastily-wrought book.

Not only did Mr. Buckle's impatient and uncritical habit prevent his vast reading from resulting in sound scholarship, but his lack of subtlety and precision was so marked as to stamp all his thinking with the character of shallowness. He seized readily upon the broader and vaguer distinctions among things, the force of which the ordinary reader feels most strongly and with least mental effort, and of such raw material, without further analysis, and without suspecting the need for further analysis, he constructed his historical theories. To this mode of proceeding, aided by his warmth of temperament and the lavish profusion of his illustrations, he undoubtedly owed the great though ephemeral success which his book attained. The average reader is much sooner stimulated by generalizations that are broad and indistinct than by such as are subtle and precise; and if we stop to consider why Mr. Buckle's name has been sometimes associated with those of men so far beyond his calibre as Mill and Darwin, we may see the reason in the fact that Mr. Buckle could be entirely grasped by many of those very admirers of the latter writers who least appreciate or fathom their finest and deepest mental qualities. But this essentially superficial character of Mr. Buckle's thought is shown not only in his obtuseness to subtle distinctions, but even more conspicuously in his utter failure to seize upon any deeply-significant but previously-hidden relations among facts, in the work which he put forth as the 'Novum Organum' of historical science. If we contrast his book with some of the really great books which were contemporary with it, such as Mr. Darwin's 'Origin of Species,' Mr. Spencer's 'Principles of Psychology,' or Sir Henry Maine's 'Ancient Law,' the difference is striking enough. Each of these works set forth old facts in new and hitherto unsuspected connections, and in so doing enunciated thoughts which have quite changed the aspect of the questions with which they dealt. There is not a naturalist in either continent to-day whose most specific enquiries do not bear some more or less conscious reference to what is known as "the Darwinian theory." The time-honored contest represented by Locke and Leibnitz, or by Hume and Kant, is beginning to take a new point of departure, owing to Mr. Spencer's suggestion of the acquirement of mental faculties through inheritance and slow variation; and Sir Henry Maine's lucid exposition of early ideas regarding contract, property, and family-relationship, obliges us to look at all the phenomena of society from an altered stand-point. But, in marked contrast with works of this kind, we find in Mr. Buckle's book sundry commonplace reflections of quite limited value or applicability, such as the statements that scepticism is favorable to progress, or that over-legislation is detrimental to society. No doubt such commonplaces might be so treated as to acquire the practical value of new contributions to history. But to treat them so requires subtle analysis of the facts generalized, and all that Mr. Buckle did was to collect miscellaneous evidences for the statements in their rough, ready-made form. Of generalizations that go below the surface of things, such as Comte's suggestive though indefensible "Law of the Three Stages," we find none in Mr. Buckle. The only attempt at such an analytic theory is the generalization concerning the moral and intellectual factors in social progress, wherein Mr. Buckle's looseness and futile vagueness of thought is shown perhaps more forcibly than anywhere else in his writings. It is not of such stuff as this that a science of historic phenomena can be wrought.

In Mr. Stuart-Glennie's reminiscences, which seem to be most carefully and honestly reported, these characteristics of Mr. Buckle—his warm, impatient temperament and his lack of mental subtlety or deep penetration—are continually brought to our notice; and all the more forcibly, because of the absence of any such intent on the part of the fellow-pilgrim to whom we owe these interesting notes of discussion. To examine the details of these conversations would carry us beyond our limits, and would hardly be justified by their intrinsic importance. One little point we must note as characteristic, with regard to Mr. Buckle's temperament as a historian. While Mr. Stuart-Glennie seems to have his whole soul stirred within him by the historic associations clustering about the places visited, and is moved to reflections always interesting and often suggestive, Mr. Buckle, on the other hand, though sufficiently alive to the beauties of nature, seems quite oblivious to historic memories. At the sepulchre of Christ his thoughts were mainly on political economy, "the state of society and the habits of the people." In such trivial details some light is thrown, perhaps, on that lack of intellectual sympathy with the past which was one of Mr. Buckle's most notable defects as a historian.

But with all this intellectual narrowness and looseness of texture, the narrative gives one a very pleasant impression of Mr. Buckle personally, and, furthermore, enables one to comprehend how, with such slight qualifications, he should have become so interesting to the world. One leaves Mr. Stuart-Glennie's book with the regret experienced on parting with intelligent and kindly companions. As we close it and lay it aside, we feel that yet another charming moment of our reading-life has gone to be numbered with the things of the past.

The Life of William, Earl of Shelburne. By Lord Edmond Fitzmaurice. Vol. II. (New York: Macmillan & Co.)—Lord Shelburne's character is a matter rather of psychological interest than of historical importance. It is, however, a subject which deserves some examination, since a misapprehension of his lordship's idiosyncrasies may lead others, as it has led his biographer, to misunderstand the position and underrate the services of the leading English statesmen of the last century. Shelburne cannot fairly be judged either from the virulent invective of Walpole or from the awkward apologies of Lord Fitzmaurice. He has, however, drawn in his letters, speeches, and private memoranda a picture of himself which probably gives a true portrait of the painter, since its traits account at once for the gratitude with which he was regarded by Bentham, and for the distrust which he excited in the mind of every colleague, from Bute to Burke, whom he flattered and betrayed. The *differentia* (to use a logical term) which distinguished Shelburne from his contemporaries was a singular freedom from the prejudices of his age. The best result of this independence of mind, which gives a slight flavor of originality to his otherwise unpleasing character, was seen in his genuine admiration for men such as Bentham and Price, whom he regarded as the apostles of enlightenment. To this source must also be attributed the spirit of toleration which he exhibited in private life, and attempted, in so far as was consistent with his schemes of political advancement, to foster in public life. The same independence of mind appears in minor traits of character. He speculated, though without attaining any definite result, about problems which belong rather to the present than to the last century. Thus, he was curious to ascertain what were the causes to which should be attributed the growth of feudalism. He perceived the evils which might result to the country from the principles of the poor-law, and in private, at least, he handled questions of theology with the off-hand ease of an aristocratic sceptic.

But though such virtues as Shelburne possessed resulted from the free exercise of a mind untrammelled by inherited prejudices or principles, his intellectual powers were clearly not of the highest order. Bentham's verdict is on this point decisive. "Lord Shelburne," he says, "used to catch hold of the most imperfect scrap of an idea, and filled it up in his own mind, sometimes correctly, sometimes erroneously. His manner was very imposing, very dignified, and he talked his vague generalities in the House of Lords as if something good were at the bottom, when, in fact, there was nothing at all." The justice of this criticism is amply confirmed by a

perusal of the pompous platitudes from which his lordship deduces such obvious maxims as that it is well to be "bound for no man," or that economy depends on "half-yearly receipts and weekly payments." Shelburne, in fact, was one of those men who can snatch at a principle, but cannot grasp it or follow out its consequences. This intellectual weakness marred his success. He says, for instance, vaguely that the policy adopted towards America was full of peril. But he continued a member of the Ministry which pursued the course condemned by his intellect, and sought to evade responsibility by studied absence from Cabinet councils. In such manœuvres opponents saw nothing but duplicity, but the charity of history suggests that intellectual haziness may have in part been the source of ambiguous conduct. An anecdote narrated by Bentham confirms this supposition. His lordship was accustomed to complain of a special act of treachery on the part of Pitt. But Bentham, after twice hearing the story, could never see wherein the treachery consisted. A statesman whose ill opinion of mankind constantly suggested to his mind vague suspicions of treachery, which he could not define for lack of mental lucidity, was certain to wear the appearance of dishonesty, and, unless influenced by high moral principle, to use fraud as a weapon against suspected traitors.

Of high principle Shelburne knew nothing. He considered mankind a pack of rogues governed by a gang of knaves. His whole art of managing men consisted in the use of indiscriminate flattery. If his contemporaries scarcely understood his character, he certainly thoroughly misunderstood the temper of his associates. He constantly promised more than he could perform, and attempted to avoid the risks of direct mendacity by the use of delusive ambiguities. The old lord who said boldly that the only way out of a great scrape was to tell a great lie, understood his age. He knew that men would pardon the falsehoods of a downright liar, whilst they would never forgive the equivocation of a sophist who, if he never lied, always deceived. The want of moral feeling, combined with the want of intellectual clearness, accounts for the cynical acts by which Lord Shelburne hopelessly alienated his associates. He denounced, for example, in language which now sounds impressive, the measures adopted by a set of men who enlisted under the banners of the Earl of Bute. His audience knew that Shelburne himself had been active in beating up recruits for Bute's disreputable army of worthless politicians. This speech was enough to make all statesmen shun association with Shelburne. They suspected even deeper want of principle than appeared on the surface, and modern readers know that their suspicions were not unfounded. Shelburne was the adulator of Chatham while Chatham was a power in the state. Loyalty to Chatham is his only possible excuse for serving under the Duke of Grafton long after he condemned the policy of the Duke's Cabinet. But Shelburne we now know neither trusted nor venerated Chatham. His private journal is filled with attacks on the character of the patron whom he had flattered. Nor should Shelburne's friendship for Price and Bentham count for much in the judgment of impartial posterity. Shelburne held Bentham to be the "Newton of legislation." This, no doubt, speaks well for his intellect; but Shelburne declined to devote even one of four pocket boroughs to giving the great jurist an opportunity of using his extraordinary talents in the service of his country. This fact gives the full measure of the public spirit which may be attributed to him.

Robinson Crusoe's Money. By David A. Wells. (New York: Harper & Bros. 1876.)—Mr. Wells says in his preface that the brochure before us is due to the suggestion of "certain prominent friends of hard money that he should prepare for popular reading—and possibly for political-campaign purposes—a little tract or essay in which the elementary principles underlying the important subjects of money and currency should be presented and illustrated from the simplest A B C standpoint." He accordingly resorted to the now familiar device for making plain the principles of political economy, of tracing the growth of trade among the shipwrecked inhabitants of a small island, which our readers may remember as last used by Mrs. Fawcett. Mr. Wells takes Robinson Crusoe's island, and makes Robinson himself, and his man Friday, and Friday's father, and Will Atkyns, the founders of the new state in which his various economical problems are to be worked out, and opens his tale most happily with Crusoe's examination of the contents of the ship's chest, and his philosophical address to the bags of money which he found therein. He then goes on to show how, in the gradual growth of this little community, the need of an instrument of exchange and common measure of value began to be felt, and traces the history of the various experiments and discoveries by which the people were led to the conviction that gold and silver would answer the purpose better than any other commodity. The Robinson-Crusoe feature in the story is not preserved longer than is necessary to engage thoroughly the reader's attention; in the latter half, the people of the island break through their disguise and become a large and populous state, resembling the American Union almost as closely as Mark Twain's Irish Republic, in which St. Patrick slaughtered the Congress and all the high officers of government as corrupt reptiles.

Most of the fallacies current among American "soft-money" philosophers are exposed, and many of the philosophers themselves ridiculed unsparingly under a very thin veil. But, as we have said, in the latter part of the book the parable is well-nigh forgotten, and the reader is treated to a simple explanation of the knottier problems of the currency question in Mr. Wells's best style, which in this field has hardly any equal. Some of the extracts he makes from the "soft-money" speeches actually delivered in this country, when produced in naked isolation in a foot-note, read like the emanations of a lunatic asylum. Indeed, we doubt if such contributions as have been made to the currency discussion by Messrs. Kelley, Butler, and Phillips could be matched anywhere in the civilized world since 1825, except in the parlors of the insane under the present enlightened system of treatment.

Any rational man who has a friend wallowing in the "soft-money" muddle can hardly do better than put Mr. Wells's little work into his hands. It has the immense advantage for the unlearned and unstable of treating political economy psychologically, as a series of states of mind, rather than as a series of physical phenomena, which is the only way of bringing its truths home to those unused to reflection or long trains of reasoning. The more elaborate treatises tell us what commercial facts will follow other commercial facts; Mr. Wells's story tells us how men feel when they see certain things, which is the essence of political economy. Kelley or Stephen Pearl Andrews or Phillips can manufacture a system of finance without a flaw on its surface; but Mr. Wells tells us how the minds of plain people will work when they are asked to handle the money of these "thinkers."

Orchids: A Complete Manual of Orchid Culture. By Edward Sprague Rand, jr. (New York: Hurd & Houghton. 1876. pp. 476, 12mo.)—A beautiful book, of great practical value, indispensable to all orchid-growers in this country—the number of which is not small—and not less so to the many amateur flower-cultivators who are longing to take a few orchids in hand, if only they knew or could learn how to manage them. We have cited the beginning and the end of the title; we add the rest as the shortest way of giving an idea of the scope of the volume: 'A description of the species and varieties grown at Glen Ridge, near Boston; with lists and descriptions of other desirable kinds, prefaced by chapters on the culture, propagation, collection, and hybridization of orchids; the construction and management of orchid houses; a glossary of botanical terms, and significance of their names; the whole forming a complete manual of orchid-culture,' as aforesaid. Glen Ridge is the name of Mr. Rand's residence in the vicinity of Boston. The book is beautifully planned and printed, as becomes the Riverside Press. Charming wood-cut illustrations come in at the close of most of the chapters. The earlier of these chapters, nineteen in number, forming nearly a quarter of the book, treat of the nature and habits of orchids; the rise and progress of their culture, first in Europe, then in the United States—the history of the latter beginning, of course in Boston, about the year 1838 (but the great collections are now at and between New York and Albany); the classification (which does not come down later than that of Lindley, and hardly need); collection and transportation; treatment of newly-imported orchids; construction of the orchid-house; and, in short, everything about the growth and management of these plants which the amateur could wish to know, including a chapter on the cool treatment of orchids, in which the grapery may be utilized and adorned. On all but this the author writes from the fulness of his own knowledge; here he condenses "from the latest English publications the experience of those who have put the new theory into practice." So practical is the author's vein that, in the chapter, of only four pages, on the propagation and impregnation of orchids, he resists all temptation—if any he had—to expatiate upon the now popular subject of their wonderful arrangements for fertilization by the aid of insects, merely saying that "this has within the last few years attracted much attention in Europe, and much of interest has been written on the subject, in view of which we may conclude that our knowledge of orchids and their peculiar adaptations is yet most imperfect." In view of which we should conclude rather the contrary, and that of no great order do we really know so much in this regard, though none is on the whole so wonderful.

The "descriptive list" makes up the larger part of the volume, and

includes nearly all the orchids in cultivation anywhere, with references to published figures, some words of description of many, and more detailed accounts of those most worthy of attention. Special lists follow of those grown at Glen Ridge; of thirty cheap orchids for general cultivation; of those with curious flowers or resembling insects; of the choicest species for beauty or fragrance, etc.; and finally, a list of the genera of the order arranged under the authors who named them. The glossary is mainly one of names of orchids, of species as well as genera, so far as mentioned in this volume—*i.e.*, the cultivated and mainly epiphytical species of the orchid-house. It comes at the end of the book, where we may well suppose the busy author to be sated with his task. It might have been left out, and indeed it were better so if there was not time to revise it thoroughly. For there are slips and oversights in it which will mortify the author when he comes to notice them, and which he will hasten to correct in a new edition.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Appleton (T. G.), A Nile Journal	(Roberts Bros.) 2 25
Abbott (Mrs. B. K.), Leah Mordecai: a Novel	(Baker, Pratt & Co.) 1 50

Weppner (Margaretha), North Star and the Southern Cross. 2 vols.	(Sampson Low)

READY SATURDAY.

Sir Henry Sumner Maine.

VILLAGE COMMUNITIES IN the East and West. Six Lectures delivered at Oxford; to which are added other Lectures, Addresses, and Essays. 8vo, cloth (uniform with 'Ancient Law' and 'The Early History of Institutions'), $3 50.

Prof. Francis A. Walker.

THE WAGES QUESTION. A Treatise on Wages and the Wages Class. By Francis A. Walker, M.A., Ph.D., Professor of Political Economy and History in Sheffield Scientific School of Yale College; late Chief of the U. S. Bureau of Statistics; Superintendent of the Ninth Census, author of 'The Statistical Atlas of the United States.' 8vo, cloth, $3 50.

Thomas Hardy.

THE HAND OF ETHELBERTA. 'The Hand of Ethelberta.' A new Novel. By Thomas Hardy, author of 'A Pair of Blue Eyes,' 'Far from the Madding Crowd, etc. 16mo, 'Leisure-Hour' Series, $1 25.

Theodore Winthrop.

A NEW IMPRESSION OF

CECIL DREEME. A Novel. By Theodore Winthrop. With Portrait and Memoir by George William Curtis. 16mo, 'Leisure-Hour' Series, $1 25.

*** The other works by this author will be issued in the 'Leisure Hour' Series at brief intervals.

RECENTLY PUBLISHED.

TAINE'S ANCIENT REGIME. Large 12mo, green cloth, $2 50.

BRINTON'S THE RELIGIOUS Sentiment. Large 12mo, $2 50.

BRINTON'S MYTHS OF THE New World. Large 12mo, $2 50.

DOYLE'S HISTORY OF THE United States, in Freeman's Course. With Maps by F. A. Walker. 16mo, $1 40.

PACKARD'S (PROF. A. S., Jr.) Life-Histories of Animals, including Man. $2 50.

IN THE LEISURE-HOUR SERIES.
$1 25 each.

MISS MOLLY. By Beatrice May Butt.
ERSILIA. By the author of 'My Little Lady.'
MRS. ALEXANDER'S HER DEAREST FOE.
GIFT'S PRETTY MISS BELLEW.
WALFORD'S MR. SMITH.

HENRY HOLT & CO., 25 Bond St., N.Y.

BOOKS AT LONDON PRICES. Now Ready: Catalogue No. 8 of Rare, Valuable, and Curious Books, free on application.
JOHN EVANS, Importer, 194 Fulton St., Brooklyn, N.Y.

THE ATLANTIC
FOR JUNE

PRESENTS A BRILLIANT TABLE OF CONTENTS.

MR. WHITTIER'S HYMN, written for the Opening of the International Exhibition to-day, is given, with the Original Music by JOHN K. PAINE.

MARK TWAIN'S humorous paper on "The Facts concerning the Recent Carnival of Crime in Connecticut," is one of his very best.

MR. HOWELLS describes a Shaker Village in his characteristic and delightful style.

HENRY JAMES, JR., gives the first chapters of his capital new Novel, 'The American.'

MRS. KEMBLE brings her "Gossip" to the time of her *début* upon the stage.

CHARLES FRANCIS ADAMS, Jr., contributes another valuable article on "The State and the Railroads."

T. B. ALDRICH has a pleasing poem, "Unsung."

Besides the above there are several Poems, a clever short Story, a Literary Essay, an able article by *PROF. FELIX ADLER*, of Cornell, and full reviews of RECENT LITERATURE, ART, and MUSIC.

Now ready and for sale everywhere.

Price: 35 cents a number; $4 a year; with life-size Portrait of Longfellow, $5.

H. O. HOUGHTON & CO., BOSTON;
HURD & HOUGHTON, NEW YORK.

Removal.

G. P. PUTNAM'S SONS,

PUBLISHERS, BOOKSELLERS, AND STATIONERS,

Have removed from Fourth Avenue and Twenty-third Street to

182 FIFTH AVENUE, NEAR TWENTY-THIRD STREET,

where, with a larger store and a more central location, they possess increased facilities for attending to the wants of buyers of American and Imported Books.

Messrs. Pott, Young & Co.,
COOPER UNION, NEW YORK,

Announce that, having perfected an arrangement with MR. GEO. W. FORD (for many years connected with Messrs. John Wiley & Son), they are prepared to import books to order from the Catalogues of London Publishers and Book-Dealers on the most favorable terms, and to give such information to book-buyers as may be desired. All pains taken to procure rare and "out-of-the-way" books.

SLAVE SONGS OF THE UNITED STATES.

A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an Account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

F. W. CHRISTERN,
FOREIGN BOOKSELLER AND IMPORTER,
77 UNIVERSITY PLACE, NEW YORK.

Large assortments of the publications of Charpentier, Didier, Didot, Hachette, Lévy Frères, etc., on hand; also complete lists of Tauchnitz's Collection of British Authors, and Teubner's Greek and Roman Classics. All European periodicals received weekly in parcels.

Library Corner-Stones.

Taine's English Literature. Best Edinburgh edition. 4 vols., red cloth, $10.
British Poets. Aldine edition (Bell). 52 vols., cloth, $39.
Stieler's Atlas. 90 Plates, bound, $25; with Supplement ("Alpenkarten" and "Australien"), $33.
Walker's Statistical Atlas. Bound, $18.
Lübke's History of Art. 2 vols., cloth, $17.
Ure's Dictionary of the Arts and Sciences. Sixth English edition. 3 vols., cloth, $25.
Chambers's Encyclopædia. Latest English edition. 10 vols. cloth, $30.

F. B. PATTERSON, 16 Cedar St., New York.

Rare Engravings and Etchings.

E. DEXTER, 73 NASSAU STREET.

Choice Engravings.

A select and rich collection of Rare Engravings and Etchings will be found at the rooms of

HERMANN WUNDERLICH,

3 JOHN STREET, NEW YORK.

The assortment comprises the masterpieces of Rembrandt, Dürer, Schöngauer, Lucas van Leyden, Raimondi, and others. It also contains exquisite proofs by Morghen, Toschi, Longhi, Desnoyer, Wille, Sharp, Masson, Nanteuil, Edelinck, etc.

Collectors and Amateurs will find his Portfolios well worthy of Examination.

PRICES MODERATE.

BANGS, MERWIN & CO.
656 BROADWAY,

Will Sell at Auction on THURSDAY and FRIDAY, May 11 and 12, a collection of *VALUABLE and RARE BOOKS*, in which are many popular and desirable works of the best-known authors of the present day.

SALES of BOOKS also from MONDAY to FRIDAY of the week following. MONDAY and TUESDAY May 22 and 23, sales of *COINS and MEDALS*. WEDNESDAY, THURSDAY, and FRIDAY, May 24, 25, and 26, a good assortment of Books in various departments of Literature and Science, with a collection of English and American Genealogy and Heraldry, scarce Local History, Natural History, the Drama, Pamphlets, etc.

A FULL STOCK OF
Books in Foreign Languages.

Subscriptions for Periodicals.
SCHOENHOF & MOELLER, Importers and Publishers, 40 Winter Street, Boston.

Catalogues sent on application.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 84½ Pine street, New York.

FOR any Book Desired or Information respecting Prices and Editions, address LOCKWOOD, BROOKS & CO., Boston, Mass., who will promptly reply. Books carefully forwarded, post-paid, on receipt of advertised price. Send for catalogue of our own publications.

The Nation.

NEW YORK, THURSDAY, MAY 18, 1876.

The Week.

THE opening of the Centennial on Wednesday of last week reflected credit upon the management. The speech-making was brief and to the point, and there was less buncombe and more simplicity and modesty about the proceedings than would, a few years ago, have been possible. The fair was, at the opening, according to all the accounts, further advanced than almost all, if not all, the world's fairs which have hitherto been held, and there is a good prospect that it will prove, if not a profitable enterprise, at least less a pecuniary failure than any of its predecessors. The system of paid juries, selected without regard to localities, too, and made up of foreigners and Americans, in equal parts, selected for special ability, will no doubt make the awards of more value than they have been on such occasions before. Foreign countries are better represented than could have been expected, though, as is always the case, the relative splendor of the exhibits of different countries is determined not altogether by their relative standing in the scale of civilization, but to a great extent by accident. The crowds thus far have been large, the average daily attendance being between twenty-five and forty thousand. Altogether, although it is as yet too early to form an opinion as to the fair as a whole, it is so far a success.

The Centennial Commission, as our readers may remember, though it may be a very respectable body, was not selected for its knowledge of either finance or coinage, or, indeed, of any subject. The public has therefore heard with a sense of ludicrous surprise of its proposing to sit permanently in Philadelphia to discuss the propriety of the adoption of a common monetary unit by the various nations of the civilized world. We trust nothing of the kind will be attempted, as it would throw around the Exposition an atmosphere of farce which, particularly as all has gone so well thus far, it is desirable to avoid. The adoption of a common monetary unit by the civilized world would be a very desirable thing, but a commission to discuss its feasibility would have to be a body of men selected for their familiarity with the subject.

The Conference called by Messrs. Schurz, Bryant, Woolsey, and others met in this city on Monday, and was well attended—that is to say, most of those invited from the East were present, the Westerners being kept away by distance, but writing many warm letters of adhesion. The "moral element" in the meeting—or the number of ministers, professors, and respectable persons who do not believe politics should be pursued as a trade, and who now begin to be looked on by "statesmen" very much as a judge is looked upon by a burglar; that is, as amiable, visionary persons, who set up impossible standards of conduct—was large. The speeches, which were mostly short, dwelt strongly on the condition of the civil service as the root of most of the prevailing abuses. In so far as allusions were made to possible candidates, the favorite seemed to be Mr. Bristow. The general conclusion of the Republican press about it seems to be that it was somehow wrong or foolish for so many men of good character to meet together to talk politics, and that there was not one of them who could hold a candle to Conkling or Morton, or even Mr. Cornell or Tom Murphy, as a practical manager; and that it is hard to see what good can come to anybody from their deliberations. The Democrats, on the other hand, appear to be annoyed that they should have made no nomination, but were disposed to wait and see what is done at Cincinnati. We presume the importance of the meeting will depend on what is done there. In certain contingencies, it may have a good deal of importance.

The address issued by the Conference reminds the public that "a national election is approaching under circumstances of peculiar significance"; that notwithstanding the great advances made by the country in material prosperity and the arts of life during the last hundred years, never in our history has the public mind been "so profoundly agitated by an apprehension of the dangers arising from the prevalence of corrupt tendencies and practices in our political life"; that the Centennial anniversary of the Declaration of Independence is, on account of this corruption, felt to be "not without self-reproach and humiliation"; and that the progress of the disease can only be arrested by the people. In the coming election, the address points out, great questions must be settled; "our solemn and oft-repeated pledge" to pay our national debts "must be fulfilled," not only by payment of principal and interest of the bonded debt, but by the removal, not later than the time provided by existing law, "of the curse of our redundant irredeemable paper currency"; that our most pressing duty is to "re-establish the moral character of the Government," and that this cannot be done except by putting an end to rotation in office and the spoils-system; that for this purpose what is wanted is "not mere platforms, but men," and that therefore we should resolve now to support no candidate for the Presidency who "in public position ever countenanced corrupt practices or combinations, or impeded their exposure and punishment, or opposed necessary measures of reform"; no candidate who, "while possessing official influence and power, has failed to use his opportunities in exposing and correcting abuses coming within the reach of his observation, but for personal reasons and party ends has permitted them to fester on"; no candidate, "however conspicuous his position or brilliant his ability, in whom the impulses of the party manager have shown themselves predominant over those of the reformer; for he will be inclined to continue that fundamental abuse, the employment of the Government service as a machinery for personal or party ends"; no candidate who, "however favorably judged by his nearest friends, is not publicly known to possess those qualities of mind and character which the stern task of genuine reform requires"; and, finally, no candidate who is "neither so bad as to repel good citizens nor so good as to discourage the bad ones." The address disclaims any intention of forming a new party, in the event of good nominations by those already in the field, but gives warning that independent action may be looked for if that is not the case.

Owing to the absence of Congress at the Centennial opening, little has been accomplished at Washington during the week. In the Senate, Mr. Sargent of California has offered a petition of some stockholders of the Central Pacific Railroad, alleging a great deal of mismanagement and waste, if not corruption, in the road, and praying for an investigation; and also a bill to restrict Chinese immigration. In the House, the vacancy in the Speakership caused by the absence of Mr. Kerr has been filled by the election of Mr. Cox as Speaker *pro tem.* The Committee on Printing has reported, on the charges against the Government Printer, that he has made the Executive Departments pay from 30 to 125 per cent. beyond the regular rates; that he has paid more than the market price for labor and supplies; that he has allowed middlemen profits on all purchases of supplies; that $14,000 worth of "gold-leaf" has been absorbed by the superintendent of the binding department; that the work had better be done by contract; and that the Printer had better be indicted and impeached. Great amusement has been caused in the House by the reading of a letter written by the door-keeper, Fitzhugh, to a friend in Texas, telling him that he is now a "biger man than old Grant," with plenty of patronage, which Senators and Congressmen grovel before him to get, and that he gets horses and carriages and free rides out of the Government; and advising his friend

to come on and have a "glorious time" with him. Fitzhugh, it seems, was a vagabond from Texas, who got the best possible recommendations for the place, and now turns out to have been under indictment for arson and charged with perjury. He shows no inclination to resign, and will apparently have to be turned out; his case has been referred to a committee. Mr. Payne's bill to redeem $10,000,000 legal-tenders in silver change, reissuing the legal-tenders for fractional currency only, was lost by a vote of 135 to 73, two-thirds being necessary.

The simple-minded Democrats are greatly puzzled to know what to do about their Congressional patronage. What with Hambleton and Fitzhugh, both appointed to responsible positions and both turning out to be scamps, though both were appointed in the regular way—that is, without any enquiry into their character, and on the certificate of leading Democrats that they were efficient "workers" and had "claims"—it looks as if something were wrong. There is a gleam of consolation, to be sure, in the fact, to which the Washington correspondent of one Democratic paper earnestly calls attention, that there was a Republican doorkeeper who took $15,000 of the Pacific Mail corruption fund; but there are so many exposures and counter-exposures now that it requires an experienced "arithmetic man" to keep the account properly footed up and balanced. The fact is really that the system of appointments which has prevailed for forty years in every branch of the public service has so debauched the mind of the political class that the politicians of either party have lost their sense of what character is. When a man is put forward for an office, and they ask what sort of a man he is, and are told that he is a "splendid" man, or a "fine worker," or "gallant soldier," or an "old-time Democrat," they forget all about asking whether he is honest, whether he pays his debts, whether he has ever been indicted, etc., etc.; and then, when he is exposed and they find that he is an old ticket-of-leave man, or bounty-jumper, or blackmailer, they are greatly surprised, and wonder how it could possibly have happened, and declare that it is not their fault, for the same things happen to the Republicans too. It seems now that Fitzhugh's character has been known to members of the House from the first; and Hambleton, it will be remembered, was dismissed because it was discovered that he named his child after Wilkes Booth, both parties considering this offence a good reason for removing him, though it apparently never occurred to either that his having made a living by blackmailing and perjury was a better reason for his not holding the office.

The investigation into the charges against Mr. Blaine has brought upon the stand all the persons concerned in any way in the story about the $64,000 bond transaction with the Union Pacific. Mr. Harrison retold his story, the point of which is that, when he discovered the facts in 1872, and was about to press for an investigation, Mr. Rollins begged him not to do it, as it would injure Mr. Blaine; and this testimony was substantially corroborated by Mr. Rollins himself, who admitted having said as much in 1872, though he is now totally unable to say why he thought that Mr. Blaine had anything to do with the transaction. Col. Thomas A. Scott, however, goes further than this, and swears that the bonds were taken by the road to make up to him a deficient salary. This salary was $8,000, and the Company, not liking to increase it openly, were willing to increase it in a roundabout way, by taking Fort Smith bonds at a figure far above their actual value. If this means that the Company made this queer arrangement because it thus secured the chance of a prospective rise in the value of the bonds, it was certainly an unusual display of faith in the future of the securities, while, if they really wanted to cover up an increase of salary pure and simple, there seems no reason why they should have taken any bonds at all; the usual way would have been to charge the amount to "construction" or to some other equally elastic branch of their accounts. Altogether, the transaction seems rather more mysterious now than it did before, and evidently needs some further elucidation. A good deal of evidence has been produced in the newspapers, also, with regard to the $15,000 Kansas-Pacific-bond story. Mr. Blaine seemed to have effectually disposed of this, last week, by showing that it was a transaction of his brother's, John E. Blaine. Unfortunately, in his explanation he made a slighting reference to one Knowlton (now dead, but formerly a law-student in the office of his father-in-law, A. G. Riddle), who had told of seeing Blaine "handling" some of these bonds. Mr. Riddle now comes forward to vindicate Knowlton's memory, and produces several witnesses who declare that Knowlton told them substantially the same story. It appears, however, that Knowlton, in telling the story, made the number of the bonds at one time fifteen and at another twenty-five. Now, there has been litigation in Kansas over these bonds in a suit brought by the lobbyist, J. B. Stewart, against the Kansas Pacific Company, and in the course of it it has come out that ten bonds were put down by Stewart to Thomas Ewing, jr., a cousin of Mr. Blaine's, while there is no question that fifteen of them went to somebody whose name is given by the Court records once as "James Blaine," and once as "—— Blaine."

The election of Mr. William H. Barnum as Senator from Connecticut is a rather remarkable event, considering that this is usually spoken of by the Democrats as an era of reform. Mr. Barnum is nothing more nor less than a rich and uneducated man, who has bought up the State with his money. We do not mean that he has bribed anybody, but he has, by unstinted contributions to the party expenses, "captured" the party organization; and, though the better Democrats in the Legislature would have preferred to have some other man, they were obliged to confess any attempt to elect anybody else hopeless. Barnum owns the State, and for the next three years the "people" may do what they please in the way of voting and holding meetings, so far as he is concerned. If his party comes into power at Washington, he will no doubt become a prominent figure in the Democratic Senatorial Group that will succeed Conkling, Morton, Logan, and Company.

Politics in Louisiana is a word which generally means assault and battery or murder, and it is not surprising, after hearing of an affray in which several negroes or whites, or both, have been killed, to learn that the Louisiana politicians are actively preparing for the fall campaign. The Democrats and Reformers have great hopes of carrying the election, and mean to act together in State politics without regard to the Presidential question. Whom they will put up as a candidate remains to be seen; but the best name talked of is that of General Williamson, a native Louisianian, an old rebel, but now a Republican, and United States Minister to the Central American States. He was the choice of the bar for the District-Judgeship, which was given to Billings, Durell's right-hand man. The Republicans—or, in other words, Packard, Durell, and Kellogg—are on their side working hard, and evidently do not mean to let the State go by default. They are playing, however, a losing game, and it is only a question of time how soon their reign will be over, and the Government again managed by the property-owners and respectable classes.

The anti-Chinese agitation in California has led to an investigation of the whole question by a Committee of the California Senate. The matters considered by the Committee were the influence of the Chinese upon labor, the influence of the Chinese quarter upon the health of San Francisco and upon its morals, and, finally, whether the city possesses sufficient powers to prevent their presence from doing injury. The testimony taken by the Committee confirms the prevailing impression with regard to the facts; shows that the low price of Chinese labor does seriously affect the price of labor in California; that the densely-built and dirty quarters of the Chinese are very unhealthy, and well adapted to spread contagious diseases; and that the immorality of the Chinese has a bad effect on the morality of the white population. The most remarkable part of the report, however, is that in which the Committee declares

that "all those evils which relate to the violation of sanitary laws, the suppression of vice and crime, and the terrible demoralization and destruction of our youth, can be suppressed by the proper action of the authorities" of the city. In fact, the corruption of the city government is, in the opinion of the Committee, the cause of most of the trouble. Police officers on duty in the Chinese quarter have, it seems, been in the habit of receiving bribes from the Chinese for permitting them to live in crowded tenements, to be dirty, vicious, and spread contagious diseases; and in this way the connivance of a corrupt city government has bred the burdens of which the city now complains.

The Brooklyn Scandal entered on a very amusing phase last week at the trial of the unfortunate Bowen by the Examining Committee. Bowen was on the point of being reported for expulsion for all sorts of unchristian behavior when, in his agony, he offered to tell the "bottom facts" to Mr. Beecher in the presence of the Rev. Dr. Taylor of New York—the latter to be pledged not to divulge them except in a court of justice. The Committee accepted this offer, but, on proposing to Dr. Taylor to play the part of a confidant, he not unnaturally refused. To be told the "bottom facts" would be bad enough, even if he might pass them on to everybody he met; to be told them as a final depositary, would be too much for ordinary human nature. What Mr. Bowen will now do with them it is hard to say. They have lain heavily on his soul for a long time. If he will not tell them to a newspaper reporter, we would recommend his writing them out in full and putting the paper in a hollow forest tree and trying to forget all about them. During the trial before the Committee a sharp retort of Dr. Ward, the editor of the *Independent*, who was acting as Mr. Bowen's counsel, led to his summary expulsion from the room, amid great uproar, Plymouth Church committees being excitable bodies.

The week was one of the dullest of the year in Wall Street. The decline in gold was arrested by the renewal, on a large scale, of specie shipments, the total amount of these having been $2,278,000, of which $1,800,000 was gold coin. This coin is not sent because the foreign markets require gold at present, but because there is not a sufficient supply of other articles to send. The trade imports are small, but securities continue to be returned to this country. During the month of April the foreign imports at New York were $6,233,000 less than in April, 1875, and $16,960,000 less than in April, 1874. The exports of domestic merchandise from New York, exclusive of specie, during April, were $1,344,000 less than last year. Taking the ten months of the fiscal year, from July 1 to April 30, the imports at New York were $41,223,000 less than in the corresponding time the year before, and $55,000,000 less than for the fiscal year beginning July 1, 1874. The exports, exclusive of specie, of domestic merchandise during the ten months ending April 30 last, were $2,840,000 less than in 1875, and $37,000,000 less than in 1874. These figures show that, except for the return to this country of securities, there would be much less need than in previous years to export gold. The work of getting silver change in circulation goes on slowly. Less than $5,000,000 have been issued in the past month in the whole country, and a good share of this was not exchanged for fractional notes. At the Sub-Treasury here the orders were changed several times during the week, and at last took a form which permits the issue of not more than $100,000 per day. Small change rules at a premium, and a comparative'y large amount of silver has been bought at a premium of 1 to 2 per cent. to be sent to California, where the discount on silver is much less than here. The price of silver in London is about 53½d. per ounce, making our silver tokens worth about 83¼ cents to the dollar. The value in gold of $100 greenbacks ranged during the week between $89 08 and $88 79.

It appears that the legal-tender notes which have been forwarded to Washington or deposited in Sub-Treasuries by banks relinquishing their note circulation, instead of being regarded by the Treasury as special deposits have been considered as "cash," and so used to the extent necessary or convenient to use them. We do not know that there is any law which forbids this, but the common understanding among bankers and writers on money was that these notes were absolutely held apart from the United States Treasurer's "cash," and were used only for the specific purpose for which they were given to the Treasury. There are, on one account and another, in the possession of the Treasury about $70,000,000 of legal-tender notes. Whether the Treasury regards them simply as a banker does that amount of general deposits—that is, as something he must be prepared to pay but which he is at liberty to use—or as a special deposit which cannot be used, makes a vast difference in respect of the money market, the effect of the supposed contraction which has been going on, and the value of the public-debt statements.

The Khedive has succeeded in getting his affairs arranged by the French bankers, who hold most of his floating debt. They have established a bank which funds his debt for him to the nominal amount of $450,000,000 in a seven-per-cent. bond, payable in sixty-three years, and the finances are to be superintended by a board of control composed wholly or in part of Europeans, on the plan recommended by Mr. Cave; but the British Government is not to receive, as was at first reported, any portion of the Khedive's founder's shares of the Suez Canal Company. In fact, the upshot of the whole matter is that he has got on his feet without English assistance, and without giving England any influence over Egyptian affairs which she did not possess before she bought the twenty million dollars' worth of Canal shares—which will certainly seem to the public a lame and impotent conclusion to English interference, although the holders of Egyptian bonds are probably only too glad to have the matter settled in any way. The political future of Egypt, however, can hardly be said to be assured as long as Turkey continues in her present precarious condition, and it becomes more precarious every week. The Turkish population has been thrown into great and increasing excitement by the state of affairs in Bosnia and Herzegovina, and when in this state there is, as we pointed out a fortnight ago, considerable danger of an attack on the Christians in localities in which the Mussulmans preponderate in numbers. So alarming a temper has been displayed by the Mussulmans in Constantinople that the European residents began last week to send their families away. Five hundred of the Softas, or students of theology attached to the mosques, went to the palace and, in the old-fashioned style, compelled the Sultan to dismiss the Vizier—something which has not happened since the destruction of the Janissaries—and restore Avni Pasha, who has the reputation of being a Turk of the old school.

This has had the effect of restoring quiet, but the iron-clads of all the Christian Powers are hurrying to the Turkish ports, and the redress for the Salonica outrage will necessarily have to be so severe and humiliating that it is hardly to be expected that the tranquillity will be permanent. The insurgents hold their own in Herzegovina; there has been an outbreak in Bulgaria (where the Christians are the least warlike of the rayahs), but it has by the last reports been suppressed; but Greece and Servia are both in a state of high irritation over the closeness with which their frontier has been cordoned by the Turkish forces. The three Powers have in the meantime agreed on another note to the Porte, to which France and Italy have adhered, and to which England will probably also adhere. They ask for an armistice of some weeks in Herzegovina, and for the consideration of the insurgents' demands, which go, on some points, beyond those of Count Andrássy's note, *e.g.*, the possession of the lands they cultivate at a fixed rent, and the actual supervision of the execution of the reforms by European commissioners. Indeed, it seems impossible for the Powers to avoid intervention in some form any longer, although they will doubtless try to make it as mild and as inoffensive to the Porte as possible.

THE CANDIDATES.

THERE is something very interesting and very characteristic of the times in the outside preparations for the nominating conventions which are making just now, and more particularly for the Republican Convention. The theory of the Convention, of course, is that it is a direct and fair representation of the party, and assembles to choose a candidate after due deliberation, and that the delegates do not make up their minds as to any candidate until they hear what the others say. If this theory accorded with the facts, the friends of the candidates would wait until the Convention met before urging their claims, and when it did meet would urge them publicly and in the form of open discussion. But it does not accord with the facts. The candidates do not wait for the Convention to meet before urging their claims—they begin to "work" nearly a year before the Convention meets, and two or three stages away from it, by getting "control" of the primaries, and through them of the District and State Conventions, so that if possible the State delegation, when it reaches the Convention, shall reach it pledged to choose a particular man and no other, all arguments to the contrary in any wise notwithstanding. Of course, this process is not completely successful. A certain number of delegates do enter the Convention with open minds, ready to do whatever seems fittest when the occasion comes, but it is safe to say the great majority go there intending either to vote for a particular man, or to vote in any way he may direct, as the result of a "trade" or compromise with some other candidate. The public knows this so well that it has not the least certainty or confidence as to what the Convention will do. It would be difficult, for instance, to find anybody to-day who supposes that the dominant sentiment of the voters of the Republican party will greatly influence the Cincinnati Convention. If you tell him that their choice is unmistakably A, he will shake his head and say forebodingly that this is true, but that "things have been fixed" to give it to B—meaning that the Convention, though representing the voters, will not mind what the voters think and will hardly enquire. The candidates, too, do not desist from "work" after the election of the delegates. On the contrary, they now "work" harder than ever. It is a great thing for them to know who the delegates are, because this maps out the field for them. They canvass them through their agents and henchmen, try to secure the doubtful, confirm the wavering, seduce the scrupulous, so that they may be able to count on the requisite number of votes on the first, second, or third ballot, as the case may be; and all this is done with great secresy, without, if possible, letting a word of it get into the newspapers. The virtuous, patriotic delegate who has been chosen to the Cincinnati Convention is probably just now sitting calmly in his chair, filled with high resolve, and determined to go out in a prayerful spirit and show the Favorite Sons that the era of jobbery is over and that the people are aroused. But the Favorite Sons are not sitting in their chairs. Their working parties are pushing their galleries under the Convention in every direction, or, as they call it, "developing strength," so that on the day of balloting they will be all able to combine against the Virtuous Delegate, and suddenly nominate the very candidate he most dreads; and then, when he looks indignant, they will laugh heartily and advise him to let politics alone.

It is the vague consciousness of this state of things which leads the outside world to make those attempts to influence the convention by means of meetings, "conferences," clubs, newspaper articles, and so forth, of which we are this year witnessing so many. In other words, no sooner was the Convention, which is supposed to be the product of the voters' will, elected, than the voters began to treat it as if it was a foreign or oligarchical body, which would probably disregard their opinions and feelings, and needed coercion to keep it out of mischief. Accordingly, we find the reformers all over the country addressing the party representatives in this wise: "Look here, you gentlemen whom we have just chosen to nominate a candidate for the Presidency, we beg you this year to play no more of your tricks. You must not oppress us or give us bad men to vote for. You know we are opposed to bad men, and you know you will nominate a bad man if you are not looked after. In fact, we fear you will nominate a bad man whatever we do—some jobber or Favorite Son who has already manipulated you and 'fixed' you. Don't you do it, however. Remember this is the Centennial year. Some of us think Smith, who has so successfully pursued the whiskey thieves, would be the best man for us under present circumstances, but none of us think Jones, who has been trying to conceal the thieves and going bail for them, would do. So don't nominate Jones under any circumstances."

At this point, however, Jones rises up, and all the newspapers in his pay throughout the country rise with him, and address the virtuous and patriotic citizens who distrust the Convention thus—he and all his followers having in the meantime been busy for six months doctoring the delegates, and "developing strength" among them privately: "The gentlemen who are addressing these remarks to the party Convention are doubtless worthy citizens in private, and many of them good scholars; but in view of the fact that they are little known in politics and have no experience in politics, we must say we think these attempts to dictate to the Convention very unbecoming. If they wanted to influence the Convention, why did they not go to the primary meetings? We looked for them there in vain, and were in fact waiting to turn off the gas the minute one of them showed his face in the room. That was the place for them to express their preferences, if they had any. Their talk about Smith now, and in fact all their talk about candidates, is most improper. It is neither more nor less than an attempt to get the Convention to nominate their man, without having performed any of the labor of preparation which we have gone through. All this discussion is very untimely and un-American. If these excellent gentlemen will go home to their libraries, we will provide them with a candidate in due time who will be good enough for them and for all of us. They seem to forget that we must have *a man* for President whatever we do. Angels will not accept a nomination, even in the Centennial year."

The comic side of all this is perhaps the most prominent one, but the serious side is the most important. The reformers who are attempting to intimidate the Convention are either openly favoring the nomination of Bristow, or are supposed to be doing so covertly, and it is objected that, apart from the indecency of all public discussion of the claims of candidates by respectable citizens, Mr. Bristow is not well enough known to make him eligible, and that we ought to take somebody who has had longer experience of public life and stronger claims on our confidence. We are not, however, either nominating Mr. Bristow or advocating him when we say that this is, in the mouths of those who utter it, a somewhat futile objection. To hear it, one would think long and conspicuous service had always been required by the Republican party, at least, of its Presidential candidates. It would be nearer the truth to say that it had always displayed a leaning to obscure and untried men. Its first, Frémont, was literally unknown; the only thing that could be said for him was that while in the army he had discovered a new pass over the Rocky Mountains, and time has shown that the enthusiasm expended on him was worse than wasted. Lincoln was but little known outside his own State, and there was little in his career to indicate the existence of the qualities he afterwards displayed. Indeed, the external facts of his career were all against his fitness. Of Johnson little or nothing was known in the convention which nominated him, except that he had been a successful Tennessee demagogue, who turned against the State aristocracy when the war broke out. The ignorance of the Republicans about Grant's political opinions was so notorious in 1868 as to constitute one of the standing jokes of the day, and there was nothing in his career to help one in inferring them. Bristow, in short, may not be a good man for the place—we do not say that he is; but do not let us have any cavil about his obscurity or any pretence of doubt about his antecedents. They are better antecedents for the purposes of the present hour than those of any candidate now formally in the field, and a great deal better than those of any candidate the party has ever nominated,

because they indicate force of character and strength and definiteness of conviction on leading political questions.

It is certainly deplorable, however, that in a country which has been prolific of great men the people should, at a serious crisis in their affairs, and in the hundredth year of the national existence, have even to think of, for the Presidency, a man whom hardly anybody had heard of five years ago, and that every conspicuous public man who has been long on the stage of affairs should be distasteful to reformers, either because he is accused of being a jobber himself or of being the friend and companion of jobbers. But it is the natural, obvious, and proper result of having converted the administrative machinery of the Government into "spoils," and then distributed the appointing power among the legislators. It is this which has extinguished statesmanship, by making office-jobbing the only road to political life; or, in other words, by converting politics into an art which an honorable and able man cannot pursue. It is this which has consigned nearly all the talent of the country to private life and private business, which forces us, whenever we want an honest man for a high place, to dig him out of total obscurity, and which makes a long public career a ground of suspicion or disrepute. It is this which produces the ridiculous spectacle, which we now witness so often, of a body of men with few arts or abilities but those of gamblers, racing betters, and detectives, warning away from politics, as something not in their line, the very class who, among other civilized peoples, form the national glory and defence, who are the moulders of their laws and manners, their leaders in war and their guides in peace—in other words, their men of education and high private character.

A WOMAN'S INFLUENCE ON POLITICS.

THOSE who are inclined to believe with Mr. T. W. Higginson that the present impure condition of politics is to a great extent due to the lack of the refining influence of woman, will do well to read the tale recently told to the Committee of the House on Civil-Service Reform by Miss Ada C. Sweet, United States Pension Agent at Chicago. Miss Sweet was the daughter of General Sweet, a gallant officer, a friend and companion of General Grant's, who some two years ago became an applicant for the position of pension agent. There were in her favor many considerations. Her father had been a soldier, and General Grant likes to reward the families of soldiers; he had left his family in narrow circumstances, and General Grant likes to help those in straitened circumstances; there was somebody already in the office, and General Grant dislikes that people should remain too long in office, particularly when, as the great reform Postmaster says, a change will help "some more needy family." There was against the change only the disqualification of sex, and General Grant, though he is not probably in favor of female suffrage nor familiar with the arguments which induced the late Mr. Mill to believe that women were only a smaller, weaker, and prettier kind of men, did not hesitate to determine that this obstacle should be disregarded, and that public opinion, if there was any, on the subject of women holding pension agencies, should be braved. Slow as General Grant sometimes is when making up his mind, he is always resolute when it is made up; and, having made up his mind that, regardless of what monarchists, or tories, or ex-rebels, or the Ku-klux might say as to the innovation, he would allow Miss Sweet to exert her refining influence on the Government, he appointed her without delay. The newspapers which interest themselves in the enlargement of woman's sphere applauded the act, and General Grant was congratulated as having risen superior to prejudice and caste. Miss Sweet has now been exerting her refining influence for two years, and has told the result with her own lips, and the tale is this:

Before her appointment, one Blakely was pension agent at Chicago, and through a series of accidents, the details of which are unimportant, ran behind in his accounts. With the feelings natural to any man under the circumstances, he desired to retire from the cares and responsibilities of office before he should be called upon to make good the deficiency. He was, to all intents and purposes, what is vulgarly known as a "dead-beat." He owed money which he could not pay, not merely to the Government but to one B. A. Campbell, U. S. Marshal, who held, we believe, the semi-political relation of father-in-law to the late secretary of the President, General Babcock. It therefore occurred to Blakely, as it has no doubt to many men in similar circumstances before, that if he could retire from office, and at the same time control the profits of the office, he would be able to pay his debts; and it occurred to Campbell, to whom Blakely communicated his idea, that it made little or no difference to him where the money came from provided it was paid. After careful survey of the field, it was determined by the two gentlemen that Campbell, from his close connection with the White House, could easily hold himself out as controlling the appointment of Blakely's successor, and it was agreed that whoever was appointed should pay Blakely's debts out of the profits of the agency. It will be noticed by male readers that this arrangement was what is called, in matters ecclesiastical, simony; in politics, a corrupt breach of trust; and in the simple language of everyday morals, a swindle.

It was at this stage in the proceedings that the influence of woman first began to show itself. In thinking over the plan, it struck the acute minds of Blakely and Campbell that they would have a good deal of difficulty in dealing with any man who might be an applicant for the place; that men are usually suspicious in temper, eager to take advantage of their rivals, fond of accumulating money, combative in disposition, and accustomed to deal summarily with any one who infringes upon their rights. It is obvious that what they wanted for their purpose was a person of a confiding nature, not given to suspicion, unaccustomed to business, not over-fond of money, not sensitive upon the point of honor as it is understood among men, slightly weak in understanding, but amiable, generous, and docile. No such man was to be found in Chicago. Under these circumstances, it naturally occurred to Messrs. Blakely and Campbell that it would be best to fill the place with a woman. And so Miss Sweet was approached. She was told that if she would give all the net profits, after reserving $1,500 a year as her salary, she could have the place. Miss Sweet did not express disgust, contempt, or incredulity on hearing this novel proposal, but merely a modest wish to "consult her friends," to which Blakely strongly objected, and told her that if she took the office the arrangement must be kept secret. She was also urged to accept the situation by Marshal Campbell, and was frankly told that it was for the latter's benefit the arrangement was made. Miss Sweet accepted the terms, and agreed to pay Campbell $2,100 between April, 1874, and May, 1875, and was made pension agent by General Grant, much to the delight of the soldiers and sailors, of the woman-suffragists, and of all true-hearted lovers of their country.

It is interesting to pause here and observe the composite nature of the motives which led to her appointment. General Grant appointed her, not because he knew she would perform the duties of the office well, but because he wanted to do the daughter of a deceased soldier a favor; Blakely wanted her appointed because he thought he could make her pay his debts; and Campbell wanted her appointed because he thought Blakely was right in supposing so.

It may be considered that this beginning of Miss Sweet's career was not very happy, but it was nothing to what took place when her refining influence began fairly to show itself. When two gentlemen like Campbell and Blakely get hold of a woman with money, they do not generally let her go till they have plucked her thoroughly. Miss Sweet, who faithfully paid the $2,100 in the course of her first year, was now told that she must continue to turn over the profits of the office to Campbell until the whole amount of Blakely's debt ($5,000) was paid. This alarmed her, and, as she refused to continue the payment of the tribute, Campbell declared he would have her removed. Now, it cannot be denied that the removal of Miss Sweet at any time since her appointment, provided some man could have been put in the place who would have ripped

up all these little transactions, would have been of benefit to the service, but here again the influence of Woman showed itself; and, though she put herself in communication with the President and General Logan (whose "sensitiveness," it may be recollected by those who have read the evidence in the trial of General Babcock, is a well-recognized fact in Washington), General Logan and General Grant, one of whom—it does not clearly appear which—is the final authority as to the Chicago Pension Agency, swore that she should never be removed as long as there were no charges against her; and Logan was "very indignant" and wanted to "bring it all out," but was persuaded by Miss Sweet not to say anything about it. She, in her turn, went back to Chicago, and told Marshal Campbell that he must expect no more money from her.

Campbell forthwith retreated from the field; not so, however, his brother-in-arms Blakely. It will be remembered that Blakely on retiring from office owed the Government money, to put it in the most gentle way—in ordinary language, was a defaulter. The sum for which he was in default was no less than $3,000. As he was abandoning the office, it occurred to him as a happy thought that, as Miss Sweet had assumed his debts to Campbell, she might as well assume his debts to the Government too. He therefore requested her to sign a receipt for the whole amount which by his books he ought to have been able to account for, including the $3,000 he could not account for at all. The reason why Miss Sweet did this, as given by her, is worth quoting. She says: "Blakely presented a very pitiable appearance, and at that time I supposed I was under some obligations to him. . . . I thought he had been the best friend I had; I was very sorry for him." She therefore signed the receipt making herself responsible to the Government for $3,000, taking as her security the word of a man, which she knew to be worthless, that the amount should be made good in a month, and Blakely went on his way rejoicing. Need it be said that the month passed without Blakely's return or the three thousand dollars? or that some months later, when he did appear, he brought with him Mr. J. H. Baker, the Commissioner of Pensions, and that, exhibiting the receipt, they demanded of her three thousand dollars, under pain of being reported as a defaulter? Those who will read the evidence taken before the House Committee will there find the sequel of the tale—how Miss Sweet, to make good the $3,000, borrowed $2,000 of her father's estate, endorsed Blakely's note for $1,000, and thus raised $3,000, which she paid over to the Pension Office; how the story began to leak out into the newspapers, and Blakely, out of terror, returned $2,000; how, last December, Miss Sweet went on to Washington and told the whole story to the Great Father, and he, as usual, was greatly surprised, and told her that if she paid any more money to any one he would remove her; and how he thereupon shut his eyes and turned his back upon the Chicago Pension Agency; and how the wicked Democrats got hold of the story, and investigated it, and had Miss Sweet before them; and how she revealed all. All these things may be read in the newspapers.

Now, we are far from saying that all this imposition practised on Miss Sweet might not have been practised on a man. Men might have been found weak enough to imagine that the arrangement proposed by Campbell and Blakely was a proper one, and timid enough to pay the blackmail they demanded; and so a man might be such a favorite with the President that, on the revelation of practices such as were revealed by Miss Sweet, the latter would merely give him a gentle warning against their continuance, and take no means whatever to break up the hotbed of corruption that the facts showed to exist. But what we wish to call attention to is that the chances of this kind of scandal are indefinitely increased by putting women into offices such as that held by Miss Sweet. In the present condition of politics—with offices continually put up for sale, and sold to the highest bidder; with Babcocks, Blakelys, and Campbells disposing of or "assuming to control" them, the exposure of a woman to be cajoled and swindled by them is merely an offer by the Government of a direct premium upon corruption; while the pity generally excited in men by the sight of a woman in distress is held in reserve as another premium on silence and suppression of the facts. A man might have made as bad a pension agent as Miss Sweet, but the probabilities were against it, because ninety-nine men out of a hundred would have been too selfish and clear-headed to become the victims of such an open swindle as that practised by Campbell and Blakely; and in discussing the fitness of either sex for political duties, we must remember that it is the average, not the exception, that we must look at. The women's-rights agitators have, it is true, in all their arguments on the subject of woman in politics, ignored this view of the subject. They have steadily refused to consider what the tendency of the change in general—in the mass of cases—is likely to be, and always talk as if the effect on politics was to be estimated by the achievements of the best representatives of the sex, under the most inspiring circumstances. But the Joan-of-Arc argument, if we may call it so, is a delusion. There are forty thousand Miss Sweets in the world to one Joan of Arc, and the question is, how the forty thousand are likely to be influenced, in a majority of cases, by their surroundings. If badly, then the experiment will only make politics worse than they are now. If any one really believes that women, as a class, are distinguished by courage, by a keen sense of honor, by a capacity to meet men on even terms in business transactions, by an absence of docility, trustfulness, and reliance upon the superior wisdom of man, and also that their sex, as sex, has no influence in screening them from the consequences of their mistakes, and so covering up corruption and mismanagement, he may fairly conclude that Miss Sweet's successor had better be taken from the same class from which Miss Sweet was appointed.

THE EXHIBITION.

PHILADELPHIA, May 15, 1876.

AFTER the din and turmoil of last week, things are rapidly settling down to regularity. The daily newspapers of New York, Philadelphia, and other cities have given such full accounts of all that took place immediately before and during the opening exercises of Wednesday, that it will not be worth while to recapitulate even the most prominent features. Suffer me, however, to communicate one or two facts which will enable the judicious reader to discriminate in his reading.

The opening exercises, although on a large scale, were not in strictness imposing. They were lacking in ease and precision. Outside of the grounds the order, it is true, was as good as could be expected in view of the immense throng of carriages, cars, and pedestrians that blocked up all the avenues of approach. But inside the grounds the guards seemed at times at a loss to know what to do. The platforms, being insufficient for the accommodation of the guests, were crowded, and furthermore were not constructed so as to give a really good amphitheatrical view. As to the press-platform in particular, nothing could have been more unfortunate. The reporters were huddled together in the lowest section of all, where they could see and hear literally nothing. Some of the glowing descriptions by these gentlemen were drawn, I fear, chiefly from imagination. The ground between Memorial Hall and the Main Building, where not occupied by the staging, was in anything but good condition. The contrast between Vienna and Philadelphia in this respect was greatly in favor of the former. Despite the agony, one might say, with which the preparations were urged in the twenty-four hours preceding the opening of the Vienna Exhibition, the tidiness of all the approaches to the Great Rotunda on the eventful morning was admirable. Of the speakers last Wednesday, only Bishop Simpson and Gen. Hawley were audible; but then that mattered little, since all the speeches were printed and distributed an hour before delivery. With regard to the music, a discrimination must be made. The instrumental parts rendered by string instruments were too weak for the open air. Many of the piano notes of Wagner's march in particular barely reached the speakers' platform opposite. But the vocal parts were very effective. The rendering of Lanier's cantata was exquisite, and Whitney's bass solo deserves to the full all the praise that has been heaped upon it. It was well-nigh incredible that a single human voice could make itself heard over the vast area with such distinctness. Removing myself purposely to a distance of several hundred feet during the *encore*, I lost none but a few of the very lowest notes. The general conclusion which one may draw from the exercises is this, that no open-air ceremonies can be made so impressive as those held indoors. The eye is too much distracted by distant and incongruous objects; there is a want of unity and symmetry. Certain it is that

the exercises at Vienna, although the number of guests did not exceed twenty-five thousand, left upon the mind of the observer a definite impression of well-ordered harmony, of artistic method and grouping, which one missed at Philadelphia. Much may be said about "the surging masses" under the "blue canopy of heaven," yet twenty thousand of the élite, dressed in full concert costume, and seated composedly under a vast rotunda which is itself a triumph of human ingenuity, present a far more effective tableau.

It is perhaps not too soon to attempt to give a sketch of the actual condition of the Exhibition. A good deal remains to be done, but nothing that will alter essential features. The Main Building is in very good order, although there are several ugly gaps that one might wish to see filled. Among the leading exhibitors, France and Germany seem to be the most backward. The American and English departments are quite complete. In strolling down the central aisle last Saturday morning, I was struck with the great beauty of many of the American show-cases. They are not only expensive in material and workmanship, but are in excellent taste. The most brilliant is perhaps that of the Meriden Company. For general beauty of arrangement, the stand occupied jointly by Starr & Marcus and by Tiffany is remarkable. The display by the Philadelphia manufacturers of gas-fixtures is also handsome. Comparing the present exhibition with that of Vienna, one must confess that in certain branches the English and French have not done themselves justice. For instance, the English display of porcelain, majolica, and faience is meagre. The objects are good, some few, perhaps, of the highest order, but there is nothing like the lavish profusion which took one by surprise at Vienna. There, Minton, the Royal Worcester Works, and the Wedgwood Works had each large independent exhibitions. Here, Minton and the Worcester Works are compressed—with the Coalbrookdale Works—into one comparatively small stand. Of the great French bronze manufacturers, the greatest—Barbédienne—is not even represented, and the others send only very small quantities and not their choicest and newest styles. Then, the great Christofle house is conspicuous by its absence. Elkington's display is good, but inferior in quality and quantity to that made by him three years ago. There is also a painful dearth of cloisonné, repoussé, jewelry, precious stones, and cameos. The best specimens of filigree are to be seen in the Norwegian gallery. The Italian collection is not yet in order, but it may be doubted if Italy has sent her best, or even her second-best, mosaics and carvings. Some of the English furniture is attractive, but neither it nor the French will compare with previous displays; and unless my rapid survey has been too rapid for accuracy, no one of the skilful French *décorateurs* of parlors and bedrooms is represented. The German collection is very backward, but is evidently going to be made up of articles useful rather than ornamental. Owing to the slackness of French and English competition, the Berlin porcelain, which was completely overshadowed at Vienna, assumes here a good deal of prominence. Switzerland makes a display that is well worth study. It is not striking, either for its magnitude or for its brilliancy, but is planned to give a fair idea of the industry of the country. Austria is better represented than I expected to find her, after the financial troubles of 1873. Count Harrach and Lobmeyer have very good and, under the circumstances, large displays of Bohemian glass. In uncolored glass, James Green of London takes the lead. The Austrian collection of amber, meerschaum, leather goods, etc., is fine, although, of course, not so overwhelming in quantity as it was three years ago. Turkey and Russia are still represented by vacant spaces. The Japanese have all their goods out; their collection is about as large as on any former occasion, but gives the average of their productions rather than the very choicest. One will find here very fine specimens of lacquered ware and carvings, but will look in vain for such rare bronzes and curious idols as were irretrievably lost on their way home from Vienna. China has a very large exhibition, and, in certain branches, a very fine one. The English colonies are still backward. India exhibits nothing comparable to the celebrated pavilion at Vienna. The Egyptian collection is large, but not so diversified and not so artistically arranged. Without stopping to write of our own immense collections, or of the Dutch, Danish, Swedish, and Brazilian, I may say that the general appearance of the Main Building is very pleasing. The colors of the decoration harmonize sufficiently with the motley contents, the light is strong but not excessive, and the temperature is grateful. I do not apprehend that any part of the building will be found uncomfortable even at midsummer. The solid flooring is immensely superior for locomotion to the open planks at Vienna.

In all that concerns England and America, the Machinery Hall is well in hand. Germany and France, especially the former, have still much to do. By reason of the height and breadth of the building, the clatter of the machinery is not so distracting as might be expected. The building is kept remarkably clean, and free from any unpleasant odor of oil. To give some idea of the perfection of the arrangements, I may state that the *Herald* has been printing every morning since the opening ten to fifteen thousand copies on its Bullock press. The plates are stereotyped in New York and sent to Philadelphia by the early mail-train. The great sight in the building is of course the Corliss engine. Nothing could surpass the grace with which the giant does his work. It is to me the highest embodiment of man's power, and I could stand by the hour watching it. Seldom if ever does one have the opportunity of seeing an engine of such magnitude from top to bottom. Every part of the machinery except the lower rim of the fly-wheel is exposed to view, and nothing is to be heard but the sharp click of the cut-offs and a slight concussion of air made by the beat of the spokes of the fly-wheel. By standing very close to the fly-wheel one can detect the faintest rumble, but this is not caused by the engine itself, but by the running-gear below, which is still a trifle stiff. The watch-making machinery from Waltham seems to divide popular attention with the sewing-machines, of which there seems to be no end. Some of the heavier machinery for cutting iron and for cotton and wool spinning is apparently not in running order, probably because the exhibitors have not seen fit to make their connections with the shafting. But to do justice to Machinery Hall would require a special letter written by an expert. I can only say in a general way that it contains every variety of labor-saving appliance, and is in itself an attractive building.

Horticultural Hall does not altogether meet expectations. Whether the plants have been forced too rapidly, or whether the heat has been too dry, I cannot ascertain. The plants do not look hardy, and many of them are decidedly drooping. It is evident that a great conservatory cannot be improvised in a few months. Probably, in a year from now the collection will be much finer than at present. As it is, the visitor will not find any very rare exotics, nothing beyond the better-known varieties of ferns, lemon-trees, cactuses, and palms.

In the case of every great exhibition it is instructive to observe how predictions are flatly contradicted by results. Any one who should have ventured to assert two months ago that Agricultural Hall would be an agreeable building would have been laughed at. But now that it is complete and much of its contents in order, all agree in pronouncing it one of the chief attractions of the Exhibition. To my mind, it is not to be surpassed by anything save the very choicest collections in the Main Building and by some of the picture galleries. In the first place, the site is highly picturesque and the architecture is imposing. Viewed from Horticultural Hall, the tall peaked arches are nestled very cosily among the trees. Inside, the visitor is impressed with the boldness of the design and its effectiveness, and has some difficulty in persuading himself that the arches are in truth of wood and the whole a mere shell erected in haste for a temporary purpose. The light is good, and there is the freest circulation of air. I doubt if any other building of like nature and magnitude was ever constructed at such a moderate expense and with such complete success. As for the contents themselves, they are as diversified as the building is unique. The display of wines and spirits is far below that of Vienna, but in cereals, tobacco, spices, and articles of domestic consumption it is very rich, and the quantity of agricultural machinery is lavish even to recklessness. There seems to be no limit to the ploughs, hoes, shovels, reapers and mowers, threshing-machines, and their kind. One cannot fail to be struck with the superiority of the American machines. During the hot summer months this building will be frequented, I venture to predict, by those who prefer coolness and quiet to the more showy displays in the Main Building or to the rattle of machinery.

The collections of pictures in Memorial Hall and the Art Annex I leave, with your permission, to some more competent hand. I have barely touched upon the principal buildings, and cannot enter the others. The Shoe and Leather Annex, the Government Building, and the Carriage Annex are ready, and offer a very inviting array. The same may be said of the Women's Pavilion and half-a-dozen other small buildings. The state of the grounds is at once satisfactory and unsatisfactory. The turf and the trees have profited by the recent rains and are in a thriving condition. The foliage is somewhat backward, in accordance with the general season, but promises to be most abundant next month. The view from the plateau of Horticultural Hall, both east and west, is already superb. But this cannot be said of the walks. The managers seem to have been strangely remiss in the matter. They have had a spring of unexampled mildness in which to work, yet they have done apparently little since March. In some few quarters, it is true, where the building is not yet over, the walks will have to wait. But there seems to be no excuse for the interminable trains of dirt-carts that cut up Belmont Avenue when there is

a railroad track by the side and gravel-cars to be had for the hiring. And then the state of the ground about Agricultural Hall is disgraceful. Here, at least, the work of building is over, yet there is not a single comfortable way of approach. So long as the sun shines and dry winds prevail, one can walk over the grass and earth without discomfort; but three hours' rain—and this happened on three days of last week—suffices to surround the building with a broad belt of hopeless and uncompromising mud. For this, I repeat, no excuse can be found. There are other places where the need of good walks is also felt, but not on so large a scale. By trebling the present force of workmen, it would be quite possible to put things in order in a week. There is one other serious want, namely, of covered walks. The large buildings to the north are widely apart, on the periphery of a large circle as it were. In case of a sudden shower, such as came up last Friday afternoon, one unprovided with umbrella or waterproof will scarcely be able to reach the exit gates from this quarter without a severe drenching. At Vienna, it will be remembered, there were broad lattice-ways, covered overhead, leading from the Main Building to the Southern Gate, and it was always possible to reach the Main Building in one way or another by passing through detached buildings that made an almost unbroken line.

THE EASTER EXODUS TO PARIS.

LONDON, April 28, 1876.

IT was, I think, Sir George Cornewall Lewis who is reported to have said that "life would be endurable but for its pleasures." England during the past fortnight has been undergoing the practical realization of this sentiment—she has been enduring her Easter holidays. Easter being late this year, people naturally expected that an Easter week towards the end of April would be a week of genial weather, interspersed perhaps with soft, refreshing showers, destined to bring the budding green things to perfection, but, on the whole, genial and suitable for pleasures other than those of the fireside and the arm-chair. Everybody made preparations for a rush from London during the Parliamentary recess. Some, nerved to a great effort, started for Venice and the Italian lakes; others, less adventurous, dreamed of the Lower Rhône, the cities of Avignon and Nismes, and the blossoming almond-trees that lend a rosy charm to the district of the Pont du Gard. A few spoke of the old towns of the Loire—Orléans, and Blois, and Chartres, and the rest of them, on the borders of the country of the Vaux-de-Vire—finishing with a run through Normandy and Brittany, and an angry passage across the Channel from Havre or Dieppe. Some, wise in their generation, determined not to trust themselves to the treacherous winds and waves that haunt the "silver streak," but to rest content with such change as their own country can give them among the early wild-flowers of Devonshire and Cornwall, or among the cathedral cities of the South of England. But the vast majority of Easter pleasure-seekers who had no country place to shelter them found their way this year, as they do most years, to Paris, and there, in a blighting north-east wind which cut you to the bone and dried up all the life-blood left you by the Channel, and in showers of snow and sleet, they had an opportunity, rarely allotted to man and womankind, of experiencing the grim reality of Sir George Lewis's epigram.

Paris has a strange fascination for many English people of the easy classes, and each recurring Easter an annual invasion of the well-to-do inhabitants of London takes place, with signal profit to the Parisian hotel-keepers and the shop-keepers of the Palais Royal. These are not the same people who swarm like locusts over Switzerland and the Engadine and Rhineland during the months of August and September. The latter comprise many of the shop-keeping classes in London and the provincial towns, small officials about the Houses of Parliament and the public offices, lawyer's clerks, university hangers-on, and others of the kind—excellent people in their way, but not the sort of English travellers who add lustre to the English name. The Easter tourists are different. The shop-keeper and the lawyer's clerk have their run down to Margate or to Brighton for Easter Monday, but they have to attend to their work during the remainder of the week, and cannot leave it to cross the Channel. Members of Parliament and their wives and daughters, wealthy mercantile men, barristers who want a change, officials from departments of state, and men of leisure compose the invading cohorts of the armies of the spring. These people leave London during Easter. It has become the fashion to do so, and no one likes to be out of it, and therefore many of them flock to Paris—the men to enjoy the sensation of breakfasting at noon on doubtful delicacies in the restaurants of the Boulevards, and the enticing impropriety of witnessing a steeplechase on Sunday; the women to feast their eyes upon Parisian toilettes, and furnish their wardrobes for the London season. I cannot speak as to the gratification afforded by the latter pastime, but I doubt very much if the male Briton regards with unmixed satisfaction the part in the holiday drama that he is called upon to play. Contrast the everyday existence of a middle-aged father-of-a-family at home in London with the fevered gallop after pleasure which he has been taught to undergo for ten Easter days in Paris, and it is easy to understand the feelings which actuated the home-sick Scotchman to proclaim that "Paaris is all verra well for *show*, but give me Peebles for *pleeshure*." In London the middle-aged Briton has his comfortable house, with all his British comforts supplied him after the accustomed manner. He breakfasts on tea and ham and eggs at nine o'clock, and reads the morning paper over the dining-room fire with his second cup of tea by his side, and criticises with some complacency to his wife the transactions in the House of Commons over night. He strolls down to his office through the Parks becoming green and spring-like, or takes a turn in Rotten Row upon an easy-going hack and discusses the questions of the day with Ministers of State in equestrian deshabille. He occupies himself on his official work, and transacts, it may be, much important business of an engrossing but not harassing kind. He leaves his office about six o'clock with the pleasant consciousness that he has done a good day's work, and strolls up to his club to read the evening paper and hear the latest news and the last good thing. He gets home to eight o'clock dinner at his own house or at the house of a friend, and, as Mr. Pepys says, "with his mind in pretty good quiett, to bed."

In Paris, this same comfortable, middle-aged gentleman, with his staid and perhaps formal habits, is kept in one unceasing whirl of small perplexities from early noon to midnight. He does not understand French ways, but he is assured that he must adopt the most obvious of them. He awakes in a short French bed, in a room strangely unlike his family bedroom at home. It seems made up of mirrors and mysterious doors, which are opened silently by slippered menials of either sex, and he is startled to find one of the silent menials gazing at him. It is only café-au-lait for Monsieur, and this café-au-lait has to be taken like a medical prescription before the Englishman has had his bath. He rises doubtfully, but he cannot find his clothes—they are not laid out for him as they are in England. If he rings the bell, it is answered by some one who speaks with bewildering rapidity in an unknown tongue. Dressed at last, he sallies out vaguely with his wife, and wanders without purpose up and down the Rue de la Paix or the Boulevard des Italiens, looking into shop-windows at imitation jewellery and chocolate-colored Easter eggs. About noon he feels faint, and remembers he has had no breakfast. He enters a restaurant, seats himself at the nearest table, and is presented by an accommodating waiter with a huge book, bound in calf and filled with unfamiliar names of foreign dishes and foreign wines, and asked what he will command. His head begins to whirl, he plunges wildly at his book and orders a variety of dishes in season and out of season, the names of which he recognizes through the medium of dim recollections of corporation dinners in the city he has left behind him. He munches nervously the radishes and prawns upon his table till his déjeuner arrives, and then he finds it totally unlike the thing he fancied. But he cannot expostulate, owing to an inefficiency in his French vocabulary; so he pays his heavy bill under a humiliating sense of being "done," and leaves the place. But the hours are passing slowly, and what is there to do till table-d'hôte at six? He has a carriage, and drives in the Bois de Boulogne. But it is the wrong hour. The drives are not yet watered to keep down the dust, there are no equestrians, nothing to see except another English couple and a shopkeeper and his bride taking their bridal promenade. The Bois he finds slow, and not to be compared with his familiar Park, and he orders his coachman to take him at once to Galignani's reading-room. There he will hear the language of his country and find the English papers. He dines at table-d'hôte, but it is noisy and bustling and indigestible, and he rushes from that to some theatre where he cannot breathe, where his legs are crumpled up into strange contortions, and where he cannot understand one word in ten that is spoken during the performance, and which, if he could understand, would cause him to blush for the modest matron who sits resignedly, though uncomfortably, by his side. He stolidly sits the entertainment out because he has paid for it, and drives home in a coupé for fear of catching cold after it is over. He has spent his first day in Paris, and the nine succeeding days present no great variety. There is but one half-hour in each which, if he would speak the candid truth, he has enjoyed, and that is the half-hour spent in Galignani's reading-room among the English and American newspapers.

I do not imply by the foregoing fancy picture that every Englishman who goes to Paris is beset by every one of these perplexities, but there is

no exaggeration in saying that nine Englishmen out of ten, some time in their lives, on first going abroad have experienced most of these bewildered sensations. Is it then worth a sensible man's while to go through what is practically ten days' considerable personal discomfort in a foreign capital and call it a holiday? Many Britons will not agree with me, but, on the whole, I think it is. It is good for him to be shaken up from time to time, and, even for ten days, to be emancipated from his own insular surroundings. It may be bad for his digestion to eat two dinners in the day and to drink white wine at breakfast, but it is good for his mind to know that British tea and toast are not essential to existence, and that many men and women in France, and elsewhere on the two hemispheres, come to very fair physical maturity without them. His ten days have not all been spent in unprofitable flâneur-ing (if I may coin the word) on the Boulevards and the Palais Royal. Though the typical Briton would not dream of visiting his own National Gallery, which he passes every day on the way to his office, nor the British Museum, he is certain to spend some hours in the Salon Carré of the Louvre, and some minutes before the Venus of Milo, and these hours and minutes will not be unprofitable. Nothing would induce him to inspect the state apartments at Windsor or Buckingham Palace, but he will give up a day to the weary waste of galleries at Versailles or Fontainebleau, and pick up a good deal of forgotten French history in the process. He could not imagine himself spending an hour in the gardens of Kew or Osborne, but he will be almost happy in the park at St. Germain-en-Laye or in the doll's-house grounds of the Petit Trianon. Neither will he be defrauded of the pleasures of his beloved politics. They will not present themselves in the familiar forms, and they will relate to unfamiliar incidents. But it may not be unprofitable to recognize the fact that foreign nations know and care but little for the details of English politics which are so engrossing at home, and to realize that, after all, the immediate future of France is of greater importance to humanity at large than all the domestic questions which have agitated England for many years. Even the most insular of English Easter travellers cannot fail to be struck with the practical facts which are now in course of being transacted in France, and which come before the eyes of even the most short-sighted of our countrymen, and these facts relate to the Republic. That institution is on its trial, but it is watched by lynx-eyed enemies. It has the Empire in front and the Commune in rear, and the supporters of either system are taking its measure from day to day, and it cannot disregard the one body or the other. The former are awaiting the good time, at the close of the Septennate, when their young emperor, as they say, will come to claim his own. The latter have to be bought off with bread and games. Nearly five million sterling has been voted, or is about to be voted, to carry on the elaborate schemes for the adornment of Paris which had their origin in the lavish prodigality of the Second Empire—the prodigality which was the studied method of debauching the working-classes in the country. These are facts which afford food for speculation to any politician, and to the English politician more particularly. Because, if the Republic stand the trial which is imminent, and maintain its stability for even a quarter of a century, the reflex of that political phenomenon will soon present itself on this side the Channel—with what results, if the fantastic ideas and dangerous imaginings which now direct the affairs of this country, and have to-day proclaimed an Empire, should unfortunately continue to prevail, the most clear-sighted statesman would not dare to prophesy.

Correspondence.

THE CHINESE PROBLEM.

To the Editor of The Nation:

Sir: In admitting—as you do in your issue of the 13th inst.—a chance of reason in the popular California prejudice against the Chinese, you do no more than simple justice to a feeling which is almost universal here. The whole East smiles superior when California frets over the Burlingame Treaty or shows her teeth at the Mongol. The very coarseness and unreason of our popular clamor are accountable for much of this feeling with you, and indeed it is not easy to pick out from the mass of vituperation the substantial grievances against the Chinaman. Yet it is impossible to live long upon the Pacific Coast—no matter what your original sympathies—without sharing somewhat in the universal Chinaphobia. That the Chinaman works cheaply and willingly; that he is exceedingly economical; that he sends his money home; that he does not acquire territory or become a citizen, or seek to influence politics or municipal affairs; that, living or dead, he ultimately returns to China—these things, no doubt, seem to you, if not positive merits, at least so near it as to make our complaints seem puerile, since these things form the basis of our complaints against him.

Let us admit that Chinese labor has done no damage to the Pacific Coast. The unremitting, willing work of two hundred thousand of the most industrious hands on earth must have done something to develop our productions. In fact, one of the corner-stones of California's prosperity is Chinese labor. For every dollar he sends across the Pacific, the Chinaman leaves a full equivalent; it is no valid grievance against him that he carries away his own. What he is really guilty of is being a Chinaman. He is an integral part of that enormous empire whose semi-civilization crystallized some thousands of years ago—if, indeed, it did not rather then initiate a slow and resistless retrogression towards primitive barbarism. The people of all other nations readily amalgamate with and become a part of us. The European, of whatever origin, becomes an American very soon; his children lose some of the parental traits, and begin to show the race-characteristics of Americans. Even the African adopts our language and religion; the steps of his progress are easy and sure—a savage, a slave, an intelligent contraband, a freedman, a citizen. The Chinaman never adopts an iota of our civilization, or becomes in any sense an American. Universal brotherhood does not and cannot apply to him, because he will not be a brother. His civilization *displaces* exactly so much of our own; it substitutes Mongolianism.

One-eighth part of our population is Chinese. Imagine, if you please, a proportionate number—say half a million—of barbarians in the State of New York, living under rigid customs of their own, obeying laws of their own, holding slaves, inflicting even the death-penalty (and this according to a barbarous code), paying nothing to the State. Imagine such a people, drilled by a long course of the severest struggle for existence until they have reduced the problem of subsistence to the very finest point—a diet of rice and entrails; a lodging in the rudest of bunks, one of a dozen others, built in what was once a sub-sidewalk coal-hole; clothing of the simplest pattern and cheapest materials. Imagine such a people, with no ambition for progress, no taste for education or the arts and sciences, no possibility of expansion into anything but confirmed Mongolianism. Could you blame a New York laborer—with perhaps a wife to support and children to educate and aspirations of his own to gratify—if he became a little restive when underbid by such a proletariat?

Economy is doubtless a virtue to be strongly inculcated, but when reduced to so terrible a point it is retrogression into barbarism. Such a horde as we have imagined above would necessarily push out of place an equal or greater number of your own people. The Fourth of-July orator, extending his hand to welcome the oppressed and down-trodden of all mankind, would find his hand rejected and himself pushed aside to make room for this strange new-comer. Something like this is the condition of California, with the added possibility of an indefinite expansion of this element. A quarter of the population of the globe wears the pig-tail—and it is a terrible and portentous fact to us. China can as easily send us millions as Ireland has sent us thousands. And if we make it comfortable for them here, if we open our doors as wide to them as to other people, I cannot see why she should not do so. It is plain to see that our theories must break down at this point—we cannot invite the Chinese to come here and outnumber us, bringing their tails behind them, and just as inevitably their changeless laws and customs. Yet the fundamental theory of our attitude as a nation on this immigration matter is that we open our doors and invite "all mankind." Really, we do no such thing; we issue our invitation expecting but a limited acceptance, and only by those who will submit to our ways and laws and customs. We invite them to come and join us and become Americans, not to come in exhaustless swarms and remain Asiatics. A literal acceptance on the part of "all mankind" would speedily swamp our ship of state.

In the general indictment of the Chinese as immigrants there are many counts, but they are too numerous to be catalogued here. Meanwhile, our treatment of the Chinaman, municipally and individually, is as bad as it well could be. We generally attack his positive virtues with great rancor. With our "Basket Ordinance" we fine him heavily for walking on the sidewalk with his humble and most useful load of vegetables. If he directs his efforts to the washing and ironing of our clothes, we impose upon him a grievous fine for *not* keeping a horse and wagon. Similarly fatuous is the average municipal ruler in many other points, while he is basely tolerant of petty persecutions and cruelties by graceless scamps and "*hoo-lums*." More strangely yet, he permits the Chinese themselves the broadest liberty in matters of great moment to the whole city. His quarter is crowded as never before was any quarter in any city; it is full of a strange and frigh t-

ful uncleanness that no drainage can purge. And this unsavory quarter lies close to the heart of the city, between its money centre and retail splendor and the private dwellings at its west end. There is no effort made to scatter and disperse this hemmed-in source of possible epidemics—to drive Chinatown to safer and more savory distances—for the "basket" and "laundry" ordinances seem to be the culmination of civic wisdom. These streets and alleys, too, are full of opium dens and gambling-hells and houses of prostitution and the like—so our public and uniformed police are withdrawn, and the Chinese residents allowed a corps of "specials" in their own pay, who naturally are not over-anxious to arrest their patrons.

We have no right to pass special acts or State acts to check the flow of Chinese immigration, but we have a right to be heard by the nation at large, and to have our grievance attended to seriously. The country cannot forbid our meddling in the matter on the ground that we are interfering with its especial prerogative, and then treat our outcry with neglect or derision. Yours, etc., A.

San Francisco, April 22, 1876.

Notes.

An autobiographic work by the late Secretary Seward, edited and concluded by his son, Mr. F. W. Seward, will be published in the fall by the Appletons.——Mr. Albert Mason has nearly ready a new and improved edition of Kinglake's 'Eothen.'——Henry Holt & Co. announce for republication 'Fifty Years of My Life,' by the Earl of Albemarle.——'Haydon's Life, Letters, and Table-Talk' furnishes out the first of Mr. Stoddard's Sans-Souci Series.——A volume of selections called 'Poems of Places,' edited by H. W. Longfellow, is in the press of J. R. Osgood & Co.——Mr. Horace E. Scudder has written a novel, of which the scene is laid in Boston, called 'The Dwellers in Five-Sisters Court.' Hurd & Houghton will be the publishers.——Roberts Bros. will shortly issue 'Mountains,' a selection of poems intended as a companion-volume to the well-compiled 'Sea and Shore' published a few summers ago by the same house; together with new editions of S. A. Drake's 'Old Landmarks of Boston' and 'Old Landmarks of Middlesex.'——A. Williams & Co. have reprinted from the *New England Historic-Genealogical Register* Mr. Geo. B. Chase's interesting sketch of the Lowndes Family of South Carolina, lately noticed by us. It is a highly creditable piece of work in a very difficult field (the South) for the genealogist, and is printed and bound in excellent taste. They announce 'Morning Songs of American Independence,' by Caroline F. Orne, and the 'Poetical and Prose Writings of Charles Sprague.'——A 'History of the City of Troy, N. Y.,' by A. J. Weise, will be published by Wm. H. Young of that city.——Considerable interest has been already awakened in the subject of a work in preparation by Claxton, Remsen & Haffelfinger on 'The Influence of the Blue Ray of the Sunlight and of the Blue Color of the Sky' in developing animal and vegetable life, in arresting disease and restoring health, etc., etc. It is based on and illustrated by the experiments of Gen. A. J. Pleasonton and others during the past fifteen years.——'The Prairie Province,' sketches of travel from Lake Ontario to Lake Winnipeg, by J. C. Hamilton, is announced by Belford Bros., Toronto, Canada.——Rees Welsh & Co., Philadelphia, have reprinted Chap. X., Book III., of Mill's 'Principles of Political Economy,' which treats of a double standard and subsidiary coins.——As an incentive to the cultivation of a talent too often smothered in after-life, the Harvard *Lampoon*, with its autographic illustrations by students, seems to us to fill usefully a vacant niche. A few years ago such a publication would have been impracticable. The *Lampoon*'s sketches have steadily improved, and the Doyleyne series of cartoons, the "Manners and Customs of ye Harvard Students," exhibit a more than amateur's *chic*.——The American Social Science Association will open a three days' conference in Philadelphia at the College of Physicians on May 31. The general meeting of the Association will take place at Saratoga, Sept. 4–9.——We have been reminded that the *New Century* (for Women) appropriates a name already bestowed on the monthly journal of the International Free Trade Alliance (New York: A. D. F. Randolph & Co.)——A good many Americans might be glad to help sustain a society lately formed for photographing relics of old London. Copies of all views taken are issued to subscribers at cost price. The active official of this enterprise is, as we learn from the *Athenæum*, Mr. Alfred Marks, Long Ditton, London.——Mr. Trübner has published a valuable Catalogue of Sanskrit Literature, containing all works produced in Europe, and a very large number of those produced in India, with prices; and with a catalogue of Pali books added, all in eighty-four octavo pages. Valuable, too, is his catalogue of books, new and old, embracing early voyages, travels and narratives, and historical and archæological works relating to Great Britain and Ireland, to Asia, Africa, America, etc.——A 'Bibliotheca Orientalis' of nearly 180 pages comes to us from Bernard Quaritch, 15 Piccadilly. It catalogues works relating to the history and languages of the East, including Africa and Polynesia, supplementary to those advertised in Mr. Quaritch's 'General Catalogue' for 1874.

—A correspondent writes us from Topeka: "In the *Nation* of May 4 you speak of 'the misspelling of Mr. Browne's name.' The father of the writer known as 'Artemus Ward' was named Brown. His mother was a Brown when she died. A brother of his, who was an editor in New Bedford, lived and died a Brown. Charles F. Brown did not add the *e* to his name until he went to New York and wrote for *Vanity Fair*. The change was made, as he told me, because a colored man named Charles F. Brown had an office in a lower story of the same building on Nassau Street."

—As the sale-catalogue of Mr. E. G. Squier's library is likely to be preserved for the sake of its rarer titles and for other reasons, it may be well to call attention to a mistaken extract from Field's 'Essay towards an Indian Bibliography' appended to 'O-Kee-Pa' (No. 180, p. 24). Mr. Field represented that this work of Catlin's had been published by the author in self-vindication, owing to the unwarranted connection of his name by Trübner's *Record* with a privately-printed pamphlet on the secret customs of the Mandans, "said to be indescribably lascivious." The notice of this pamphlet, according to Mr. Field, appeared in the latter part of 1866. We learn from Mr. Trübner that no such notice is to be found in the *Record* for 1866; that Mr. Catlin was a contributor to its columns under his own signature, and that the advertisement of 'O-Kee-Pa' had a conspicuous place in it, during that very period. The facts which Mr. Field evidently intended to report were these. Several years ago the religious ceremony of the Mandans was described by Mr. Catlin and presented by him in MS. to a literary friend, who thought it curious enough to issue in a very limited impression for private circulation without consulting Mr. Catlin. Mr. Trübner was the first to inform the latter of what had taken place, whereupon Mr. Catlin prepared for publication the well-known illustrated edition of 'O-Kee-Pa,' omitting, *pudoris causâ*, certain details contained in the MS., although they formed an important and symbolic part of the ceremony. Of this portion he subsequently printed a few copies for private distribution. It is needless to add that the relations between Mr. Catlin and Mr. Trübner were always of the most cordial nature.

—On Friday, May 5, the semi-annual change of weather took place. Its date has been very uniform now for several years. Some time since, we proved that there are really only two seasons in our year, their boundary line being the date just passed. The other boundary—*i.e.*, the commencement of winter—is the change that has been denominated the November atmospheric wave. Last fall this occurred on October 31. Some of the phenomena by which the change of weather in May may be recognized are these: there is a sudden increase of heat so permanent that only a long rain can mitigate it, whereas, during the winter semester, clear days were colder than rainy ones; also, summer rains begin with the wind at SW and end at NE, whereas winter rains begin at SE and end at NW, and the SE becomes now a fair-weather wind; also, on May 5 the trees suddenly open their long-waiting buds.

—The "immense ovation" with which the reappearance of Dr. S. M. Landis on the Shaksperian stage was greeted at Tammany Hall a week ago last Tuesday was, if we may infer anything from the proceedings on the succeeding night, an ovation in the sense of the word used by one of the witnesses at the Tichborne trial, who, on being asked what he understood the meaning to be, explained that by ovation he understood "hooting and shouting." We can only speak with absolute certainty of the performance of Wednesday, when the Doctor appeared, as the advertisements had announced, in his "blood-curdling recital" of *Richard the Third*, the first performance of which had so affected the feelings of a certain Dr. Mortimer that the latter appealed to Dr. Landis for heaven's sake to "get a wooden dagger," as the sight of a sharp instrument in the tragedian's hand was, as he used it, "terrible." Quite different from the feelings of Dr. Mortimer appeared to be those of the audience on Wednesday night, for the two or three hundred people who distributed themselves among the superabundant settees of Tammany, instead of showing any apprehension or nervousness at the horrible way in which the principal performer hacked and slashed at his imaginary foes, appeared to be much exhilarated by the combat, and to be filled with that genuine theatrical *gaudium certaminis* which leads the spectator to take a personal interest in the varying fortunes of the fray, to egg on the combatants with cheers

and yells, and, in fact, to make such a din as to drown the voice of Richard at his loudest, and to recall the classic days of the stage when there was still a pit. The Doctor's method of acting is different from that of the Count Joannes (who heads the only other school of Shaksperian tragedy with which his can be compared), for he does not, like the Count, call to his aid (as, we must say, seems to have been the intention of the writer of "Richard the Third" and "Hamlet") a company of actors and actresses. On the contrary, Dr. Landis asks for nothing but a costume in character (including of course a rapier in *Hamlet*, and a somewhat stouter and less fragile weapon for the hot action of Bosworth field), a sofa, two chairs, three screens, and a whistle to represent the rising of the curtain. He does, as a matter of fact, introduce two voices behind the scenes, whether belonging to human beings or not we cannot say—one a deep bass, for the male parts, and the other more or less of a soprano, for the female; but as the sounds made by them are not articulate, and are delivered with a rapidity which would make them unintelligible even if they were, it is difficult to see what substantial assistance they render the leading character, particularly as the audience, by shouting familiar quotations from the play and gratuitously furthering the efforts of Dr. Landis with advice, suggestions, criticism, and approval, made it frequently difficult to know what anybody was saying. The engagement of the Doctor at Tammany Hall is, we believe, now over, after a brief season of two nights, so it is unnecessary to canvass the question whether, as a permanent institution, his method of acting Shakspere would be a success. For a single occasion, the sport is good, though it must be confessed it is a little cruel.

—Experiments have recently been made before a board of naval officers at the Washington Navy Yard with Lay's movable torpedo, in reference to its adoption by Government. This torpedo is of boiler-plate iron, is cigar-shaped, about 20 feet long and 30 inches in diameter at the middle, and carries 500 pounds of explosive material in its front compartment. The propeller is moved by carbonic-acid gas, generated within the machine, the details of which are not made public; the rudder is controlled from the shore by fine electric wires contained in a cable which is unreeled from the boat itself; by making connections on a key-board the machine can be turned to the right or left, the engine stopped or put in motion, and the torpedo exploded; it is impossible, however, to reverse the engine or reel up the cable. The Washington experiments were very successful so far as control of the machine was concerned, and prove it to be a useful adjunct to the defence of a harbor, if operated from the shore. Its usefulness from shipboard at sea is more problematical. The defence against it would be a heavy netting surrounding the ship, and its efficacy against this can hardly be predicted. A torpedo of a similar character, although differently shaped and operated on other principles, is that invented by Ericsson. It is propelled by compressed air supplied through a rubber tube which is unreeled *on shore*, the rudder being controlled by increasing or diminishing the pressure of the air. Successful experiments were made with this torpedo at Newport last summer. A comparison of the relative merits of Lay's and Ericsson's inventions would involve too much space in this notice; they can both be seen side by side in the Government Building, Navy Section, at the Centennial Exhibition.

—The Senate which lately adjourned at Albany distinguished itself for a remarkable aversion to the confirmation of Mr. Tilden's appointments, no matter whether they were good or bad; but the dead-lock to which this aversion threatened to lead was broken in at least one case, by the appointment of Mrs. Charles Russell Lowell as a State Commissioner of Charities. It is, we believe, an innovation that a woman should be appointed to a position of this kind, and the public has reason to thank itself that the Senate did not choose on this account to suspect that the nomination was a gubernatorial and Democratic "dodge" to catch the Reform vote, or had some mysterious connection with the warfare on the Canal Ring. There is really no branch of the executive machinery of the State in which the influence of women of real intelligence and also practical experience will more certainly tell than in that which relates to charities. As it is now, women do, without salaries or profit of any kind, a great amount of the work of volunteer supervision and inspection which is the only check we have on the maladministration in the hospitals and reformatories caused by the corrupt condition of politics. Few, who have not actually seen it for themselves, can guess what nurseries of disease and crime (to say nothing of misery and filth) mismanaged public institutions become; and it is to prevent such mismanagement that State Boards of Charities exist. The appointment of Mrs. Lowell, who was an active member of the Sanitary Commission and more recently of the State Charities Aid Association, represents not a recognition of the claims of one sex against the other, or of woman's rights so-called, but the claims of experience, capacity, and zealous interest in reform, where reform is sadly needed, to a share in the responsibilities of government.

—The Surgeon-General's Office has issued a large amount of very creditable work, and is a good example of the uniform success of those branches of our Government which are in the hands of professional men and comparatively uncontrolled by politicians. The latest and perhaps the most remarkable instance of its useful literary labor is due to Assistant-Surgeon John S. Billings, whose 'Specimen Fasciculus' of a proposed catalogue of the Surgeon-General's (or, as he prefers to call it, the National Medical) Library has just been printed in seventy-two pages large octavo, running from *Aabec* to *Air*. A few copies have been issued to elicit criticism and to determine whether the whole work, which is nearly ready for the press, should be published. That it deserves to be published is certain; that it will be is more doubtful, if that depends on securing an appropriation from Congress. Legislative bodies are generally indifferent to literature and suspicious of science. The present city government of Boston, for instance, elected on a cry of economy, has done little economical except cut down the appropriation for the Public Library. Certain Congressmen are said to consider the printing of "that list of books" appended to the recent report on the cholera epidemic of 1873 a shameful waste of money. In their eyes, to publish the present catalogue would be a still greater extravagance, for it will make five volumes of a thousand pages each. The cause of this extraordinary bulk for a list of forty thousand volumes is the thoroughness of the analytical work—that is, of the references to articles contained in periodicals and in the transactions of learned societies. Dr. Billings is a physician with an unusual taste for bibliography—practical bibliography, we mean: that kind which treats books not as objects of curiosity or causes of mania, but as instruments of scientific work. Knowing that commonly the best contributions to practical medicine first appear in medical journals, and that a large amount of valuable matter appears nowhere else, he made unwearied and generally successful efforts to complete the collection in the Surgeon-General's Office. Over how wide a space he has cast his net may appear from one example: under "Acid" (Carbolic), we find titles of periodical articles in English, German, French, Italian, Spanish, Swedish, and Russian. But this mass of material would have been nearly useless without an index, and Dr. Billings has had the courage to undertake to make one, putting an amount of work into it that would be possible only in a Government office well provided with clerks.

—The result is a medical bibliography. The author, it is true, disclaims all pretensions to that title; but no medical bibliography of equal extent has ever been published. Lipenius, Kestner, Carrière, Engelmann, Young, Puchelt, Sprengel, and a score of others, do not exceed a thousand pages. Even the six volumes of Haller's 'Bibliotheca Medica' and 'Bibliotheca Chirurgica' together fill but three thousand six hundred pages, each containing about one-third of the matter of a page of the 'Fasciculus.' The voluminous works of Ploucquet and Reuss alone approach and perhaps equal the extent of the promised work. It will even be the largest of library catalogues. The Boston Public Library catalogue, with its supplement, reaches only one thousand six hundred pages, the Boston Athenæum less than three thousand five hundred, and the Advocates' Library of Edinburgh only about four thousand nine hundred. Hardly any of the space is wasted. Dr. Billings has employed most of the common methods for compressing titles and packing them closely, and, in addition, some devices of his own. But we hope that he will not print till he has made every possible effort to complete his periodicals. Even the United States cannot be expected to reprint such a huge catalogue; articles hereafter acquired must be relegated to the inevitable supplement; and it is certainly desirable that as much as possible of the older literature should be contained in the main volume. We have left ourselves no room to commend the details of the work. We will merely say that the style of printing which begins at page 51 seems to us the best of the five varieties employed in the specimen, and next in beauty and clearness is the last style used. The use of capitals for authors' names and for the first words of anonymous titles is always to be avoided, because they are hard to read; the italic capitals employed in the first pages are hideous. We may suggest to Dr. Billings one method of distinguishing words that he has not used: s p a c i n g t h e m. One further remark, by the way. The old title, "Library of the Surgeon-General's Office," may not convey an adequate notion of the size and importance of the collection; but we warn the Surgeon-General that its alteration to "National Medical Library" may lead to its transfer by politicians into other hands. On the principle of leaving well enough alone, we de-

precate any change from the efficient control that has made it one of the best working professional accumulations. If a new name must be taken, why not style it the "Medical Library of the War Department"?

—We should be sorry not to think there was some ground for the hope expressed by M. Vivien de Saint-Martin, in announcing his retirement from *L'Année Géographique*, that a successor may be found ("not more zealous, perhaps, but younger and with greater leisure") to carry on that important publication. Its cessation would be a real calamity, for it is without a rival or a parallel. The thirteen volumes, covering fourteen years, form an invaluable library of reference in regard to current travels, exploration, and all the literature of geography. The record is anything but a dry one, for it abounds in interesting *précis* and ample extracts from the leading works noticed, while of scarcely any is some characterization, however brief, omitted. The whole is classified with French system, and an index of names of travellers and authors leaves nothing to be desired. Regularly, too, a full geographical necrology, and occasionally a map, are inserted. The work appears punctually in the first quarter of the year after date, and the only interruption was caused by the siege of Paris. M. de Saint Martin's reason for withdrawing from his onerous post is the necessity he is under of completing certain works of great magnitude—his 'Dictionary of Modern Geography' and its accompanying 'Universal Atlas,' and a 'Dictionary of Historical Geography' which is immediately to follow these. He finds himself, as he says, like a laboring barque forced to throw overboard part of its freight in order to get into port.

JEBB'S ATTIC ORATORS.*

WE fear that many scholars will be disappointed when they read the full title of this work and see that it does not include the orators of the age of Demosthenes, but stops short with Isaeus, the instructor and adviser of Demosthenes. Professor Jebb's object is twofold; first, to give a history of the "oratorical branch of Attic prose" from its beginning to its maturity; secondly, to help students of the earlier orators "who have nothing but a Greek text before them." In the introduction he takes a rapid survey of rhetoric from its rise in the Sicilian democracies of the fifth century B.C. until the appearance of Antiphon, the first Attic orator developed under its influence. This is preceded by a discussion of the essential character of ancient oratory and its relation to modern eloquence. The greater part of the two volumes is occupied with Antiphon, Andocides, Lysias, Isocrates, and Isaeus. In each case we have first a life of the orator, then a chapter on his style, and in the case of Isocrates one on his theory of culture; then follows an elaborate account of his extant works, with a separate introduction to each speech or treatise, and an analysis of its contents. At the end we have a chapter on the period of "matured civil eloquence," in which Demosthenes, Aeschines, Hypereides, and Lycurgus are briefly discussed; this is followed by an account of the decline of oratory during the period between Demosthenes and Cicero, and of the revival of the study of the pure Attic oratory in Rome under Augustus, chiefly through the influence of the Greek rhetoricians, Caecilius and Dionysius.

The chapters which treat of the styles of the five orators trace the development of oratory, which is almost identical with that of Attic prose, from the point of view of the Greek rhetoric. This art had a remarkable effect on the fortunes of Greek prose. The arrival of Gorgias in 427 B.C. with a Sicilian embassy is commonly said to have first roused the rhetorical spirit in Athens. The Assembly, according to Diodorus (xii. 53), was "astounded" by this first display of scientific oratory, with its "foreign air" and its new and brilliant figures. The pyrotechnics displayed by Gorgias must have been very different from those to which the Athenians had been accustomed while Pericles "thundered and lightened and confounded Greece." This anecdote of the effect produced by Gorgias is an additional proof that the eloquence of Pericles was natural and not rhetorical, and that his power over the Assembly came from his personal influence, his persuasiveness, and, above all, his exalted dignity of character and of bearing, which made him seem like an "Olympian" among the smaller men around him. The death of Pericles must have set the new race of statesmen to devising means for gaining and keeping control of the Assembly, and the arrival of Gorgias with his new art of persuasion was just in time to help them. At about the same time Thucydides was beginning to write his history, deeply impressed with the importance of his task and anxious to make his work "a possession for all time." He also naturally felt that rhetoric could help him. Rhetoric thus became fashionable at Athens just as prose composition began to be seriously cultivated as a new branch of literature. We, who at least read our newspaper every day, can hardly conceive the position of a cultivated Athenian in the middle of the fifth century B.C., to whom the reading and the writing of simple prose were alike unfamiliar. When he read, he read poetry, and a rich literature was always open to him; if he could not write poetry, he seldom wrote at all. The idea of using the common language of every-day life in literature as an equal of verse seldom, if ever, occurred to him. No one had yet tested in literary composition the power of plain, simple language, and it required great faith to make the trial. A few such models as were afterwards seen in Lysias, in the plain style which Demosthenes could always use when it was needed, and in the simple narrative style which Thucydides himself adopted whenever he did not "try to write," would have proved a powerful antidote to the charms of the Sicilian rhetoric. As it was, it is no wonder that the early prose fell into the hands of the rhetoricians, who taught that the language of conversation was not dignified enough for literature, and that the best prose must be as elaborate in its way as poetry. "Gorgias," says Mr. Jebb, "was the first man who definitely conceived how literary prose might be artistic. That he should instinctively compare it with the only other form of literature which was already artistic—namely, poetry—was inevitable. Early prose necessarily begins by comparing itself with poetry. Gorgias was a man of glowing and eager power; he carried the assimilation to a length which seems incredibly tasteless now" (p. cxxvii.)

This tendency to make prose artificial in the attempt to make it "artistic" explains the "theatrical figures," the parallelisms and antitheses, which Dionysius censures in Thucydides. "In these," the critic says, "Gorgias, Polus, Licymnius, and many others of that time abounded." Dionysius expressly says that the style of Thucydides is best where he deviates least from ordinary language, and worst where he deviates most. Of the artificial style which he censures, he says that if people should use it to their fathers and mothers, they would need interpreters as if they spoke a foreign tongue. A striking result of this original idea, that written prose must follow to some extent in the steps of poetry, appears in the importance which seems always to have been given to the "rhythm" of prose. Even Aristotle, though a century removed from Tisias and Gorgias, tells us that oratorical language must be "rhythmical, though not metrical"; not, however, "precisely rhythmical" like poetry, but only "to a certain extent." He objects to iambic rhythms as wanting dignity, because we use them more than any others in common speech; and he commends the First Paeon (— ⏑⏑⏑) for the beginning, and the Fourth Paeon (⏑⏑⏑ —) for the end, of a sentence ('Rhet.,' i. 8).

With all its extravagances and its errors in taste, there can be no doubt of the service which the earlier rhetoric rendered, by giving men power over language and calling attention to the form of expression when this was in most danger of being neglected. The same systematic training which once made men accurate in balancing antitheses afterwards made them accurate in the use of a pure, simple diction or in rounding elegant periods. We have spoken of the early influence of the art in discouraging simplicity of style, because it illustrates the position of the early prose writers of Athens (among whom Thucydides is more interesting to us than Antiphon) in the history of literature. Indeed, so long as rhetoric was a servant to pure taste and native good sense, it was a powerful aid to both speakers and writers; when it became the master of bad taste and bad sense, it led to empty declamation and to the *verbis volucre et incitatum* style (as Cicero describes it), which probably was much in sympathy with the "spread-eagle" and "rushing" eloquence of our own day. The best Greek rhetoric did not pretend to make an orator of everybody. Isocrates himself, the greatest master and teacher of the perfected art, places nature far above the two other requisites of an orator, rhetorical training and practice. He says: "If a pupil should listen to all the discourses on the art of speaking, and should outstrip all others in accuracy of knowledge, he might perhaps become a more elegant writer of speeches than common men; but let him rise before an audience with but the single element of courage wanting, and he would be unable to utter a syllable" ('Antidos.,' § 95). At the same time, he admits that cultivated art will sometimes prove superior to neglected nature.

Our space will permit us to give only a few specimens of the distinctions introduced by the Greek rhetoricians, and these will serve to show how far their principles of criticism are likely to interest us now. Mr. Jebb gives us careful accounts of the three "harmonies," or styles of composition, described by Dionysius—the "austere," the "smooth" or "florid," and the "middle." The first is represented by Antiphon, Thucydides, Pindar, and Aeschylus; the second by Isocrates, Hesiod, Sappho, Ana-

* 'The Attic Orators from Antiphon to Isaeos. By R. C. Jebb, M.A., Fellow and late Tutor of Trinity College, Cambridge, and Public Orator in the University; Professor of Greek in the University of Glasgow.' 2 vols. London and New York: Macmillan & Co. 1875.

creon, and Euripides; the third, which combined the virtues of the two others in judicious mixture, is found in Demosthenes, Homer, Sophocles, Herodotus, Plato, and Aristotle (the Aristotle known to Roman scholars). The character of the third class is, of course, absence of the peculiarities which mark the other two. Besides these three "harmonies," the ancients described three styles of "diction" (*i.e.*, choice of words)—the "elaborate" of Thucydides, the "smooth" and "plain" of Lysias, and the "mixed" of Isocrates. We must refer to Mr. Jebb's chapters on style for the application of these distinctions. The important distinction between the "running" and the "periodic" style is found in Aristotle's Rhetoric. It is thus described by Mr. Jebb: "The 'running' style is that in which the ideas are merely strung together, like beads, in the order in which they naturally present themselves to the mind. Its characteristic is simple continuity. The characteristic of the 'periodic' style is that each sentence 'comes round' upon itself, so as to form a separate, symmetrical whole. The running style may be represented by a straight line, which may be cut short at any point or prolonged to any point; the periodic style is a system of independent circles" (vol. i., p. 33). Of the periodic style of Isocrates Mr. Jebb says: "With Antiphon, as we saw, the structure of the period was still a matter of effort—admitting, too, of little variety; in Lysias, the power of forming terse, compact periods is nearly perfect, and is combined with skill in avoiding monotony; with Isocrates, the periodic style passes into an altogether new phase. The distinctive mark of the new Isocratic period is a certain luxuriant amplitude. Instead of aiming at the vigorous compression fittest for real contests, it rejoices in rich diffuseness, it unrolls itself like a clear river, luring the hearer on from bend to bend through the soft beauties of its winding course" (vol. ii., pp. 61, 62). The last words give the image by which Dionysius describes the "meandering" period of Isocrates. In contrast with this "long, luxuriant sequence" of periods, "Demosthenes intersperses the most finished and most vigorous periods with less formally-built sentences which relieve them; Lysias binds his periods, by twos or threes at the most, into groups always moderate in size but often monotonous in form—excelling Isocrates in compactness, but yielding to Demosthenes in life" (vol. i., p. 168).

We will add a single passage in which Dionysius states the indebtedness of Demosthenes to Thucydides. He says that Demosthenes stood alone among orators in recognizing the great merits of Thucydides, and that he borrowed from the historian and adapted to his public speeches "virtues which neither Antiphon nor Lysias nor Isocrates, the first orators of their times, ever attained—viz., rapid movement, terseness, intensity, sting, astringency [what Mr. Jebb calls his 'biting flavor'], and mastery in rousing the feelings," while he avoided "the fondness for strange words, the outlandishness, and the poetic character"—faults which Dionysius had already censured in the style of Thucydides, and which were to be expected in a pioneer like the historian, whose chief authority in Attic diction was the usage of the tragic poets. The testimony of the orator to the merits of the historian is a valuable commentary on the style of both.

Cities of Northern and Central Italy. By Augustus J. C. Hare. In three volumes. (New York: George Routledge & Sons. 1876.)—Mr. Hare has already earned the gratitude of tourists by his two elaborate compilations—the 'Walks in Rome' and the 'Days Near Rome,' and the work before us will add largely to the obligations felt by that numerous class of travellers who find their Murray and their Bädeker dry and meagre, and yet have not time or means for making researches. If the 'Cities of Italy' (like its immediate predecessor) is not such entertaining reading as the 'Walks in Rome,' this is not the fault of the author, who appears to have been equally zealous and careful; it is explained simply by the fact that no place in Italy, and no combination of places, is so interesting as Rome, and that the fund of quotable matter which Mr. Hare had to draw from is in this case very much less rich. Every one who has written at all (and who at the same time has been a traveller) seemed, by the testimony of Mr. Hare's pages, to have recorded some impression or some memory of Rome, and the subject, for the moment at least, has always made the writers vivid and eloquent. It was therefore easy, comparatively speaking, to make up a book very largely of quotations. Mr. Hare still follows the same system—that of giving himself the mere facts and directions, and letting some one else speak for him in matters of opinion and description. He has had some trouble, we imagine, in drumming up his authorities in the present case, and he has admitted a few rather ragged recruits. It is rather a shock to the discriminating reader's faith in his guide to find him offering us the spurious rhapsodies of "Ouida" and the flimsy observations of Alexandre Dumas. The author might have trusted himself a little more. The 'Walks in Rome' was for all practical uses a guide-book, but it was also very possible to read it continuously at a distance from the localities. Few readers will be tempted to follow this course with the volumes before us—their guide-book quality is much less mitigated. The extracts from other books, though always sufficiently pertinent, are rarely very entertaining *per se*, and the author's own text consists mainly of enumerations and catalogues.

Mr. Hare's first volume treats of the Rivieras, Piedmont, and Lombardy; the second, of Venice, Bologna, the cities of the upper Adriatic, and those of Tuscany north of Florence; and the third, of Florence, the minor Tuscan cities, and those which lie along the road to Rome. All this is very complete and exhaustive, and the author has taken pains to acquaint himself with places that are rarely visited. We wish, indeed, that he had devoted to some of these obscurer lurking-places of the picturesque a portion of the large space he has allotted to Venice and Florence. Murray's hand-book for France contains no account of Paris, on the ground that it is so well described elsewhere; and on some such principle as this Mr. Hare might have neglected the cities we have mentioned in the interest of certain by-ways and unvisited nooks. Mr. Hare would be very sorry, however, to take example in any respect by Murray, for whom he appears to cherish a vigorous contempt. This sentiment is on some grounds well-deserved—chiefly on that of the antiquated tone and exploded instructions of the great father of guide-books; but a generous tourist, it seems to us, should remember that Murray was a precursor in days when the tourist's lot was not so easy a one as now, and that he has smoothed the path for those who, thanks in a measure to his exertions, are in a position to cavil at him. But, as we say, Mr. Hare is extremely thorough—his excursions to places so off the beaten track (and in one case indeed so inaccessible) as Bobbio and Canossa are good examples of his determination to be complete. His volumes have been to us an eloquent reminder of the inexhaustible charm and interest of Italy, and of her unequalled claims to our regard as the richest museum in the world. It may cost us some pangs to see her treated more and more as a museum simply, and overrun with troops of more or less idly-gazing foreigners—a state of things which such publications as Mr. Hare's do much to confirm and encourage; but we are obliged to make the best of what we cannot prevent, and confine ourselves to wishing that, since Italy is to be "vulgarized" beyond appeal, the thing may be done with as much good taste as possible. To this good taste Mr. Hare very successfully ministers. He has evidently a passionate affection for Italy, as regards which some of his readers will profess a strong fellow-feeling, and though he opens the gate wider still to the terrible tourist-brood, he recommends no ways of dealing with the country that are inconsistent with a delicate appreciation of it. He has in his Introduction some very good general remarks as to what the traveller is to expect, and the way in which he is to conduct himself. He says, very justly, that the great beauty of the country is beauty of detail. "Compare most of her buildings in their entirety with similar buildings in England, much more in France and Germany, and they will be found very inferior. There is no castle in Italy of the importance of Raby or Alnwick; and, with the sole exception of Caprarola, there is no private palace so fine as Hatfield, Burleigh, or Longleat. There is no ruin half so beautiful as Tintern or Rievaux. There is no cathedral so stately as Durham, Lincoln, or Salisbury," etc. (This last statement obviously requires modification.) But "in almost every alley of every quiet country town," Mr. Hare continues, "the past lives still in some lovely statuette, some exquisite wreath of sculptured foliage, or some slight but delicate fresco—a variety of beauty which no English architect or sculptor has ever dreamed of." On the other hand, we think that the author goes too far when he says that the beauty of Italy is almost exclusively the beauty of her towns—that fine scenery is rare. He enumerates a small number of "show" districts—the Rivieras, the Lakes, the line of the railroad from Florence to Rome (together with the neighborhood of the former city), and appears to think that he has exhausted the list. But the truth is that all the scenery of Italy is *fine*, in the literal sense of the word—it is all delicate and full of expression—all exquisite in quality. Even where the elements are tame, outline and color always make a picture—the eyes need never be idle. The towns in Italy certainly deserve every admiring thing that can be said about them, but the landscape in which they are set is at least worthy of them. Mr. Hare has the good taste to like the Italian character, and to deprecate the brutal manners, in- ing with it, inculcated by Murray—especially that "making your beforehand" which appears to be the sum of Murray's practical "Never make your bargain beforehand," says Mr. Hare: offensive exhibition of mistrust by which you gain noth who are peculiarly sensitive to any expression of cor

hesitate to pronounce this sound advice, and to admire, with the author, that sweetness of disposition which is proof against the irritation so plentifully provoked by the usual conduct of tourists. "The horrible ill-breeding of our countrymen never struck me more than one day at Porlezza. A clean, pleasing Italian woman had arranged a pretty little café near the landing-place. The Venetian blinds kept out the burning sun; the deal tables were laid with snowy linen; the brick floor was scoured till not a speck of dust remained. The diligences arrived, and a crowd of English and American women rushed in while waiting for the boat, thought they would have some lemonade, then thought they would not, shook out the dust from their clothes, brushed themselves with the padrona's brushes, laid down their dirty travelling-bags on all the clean table-cloths, chattered and scolded for half an hour, declaimed upon the miseries of Italian travel, ordered nothing and paid for nothing, and, when the steamers arrived, flounced out without even a syllable of thanks or recognition. No wonder that the woman said her own pigs would have behaved better." We differ, however, from Mr. Hare in the estimation in which we hold Italian unity, and the triumph of what he never alludes to but as the "Sardinian Government." He deplores the departure of the little ducal courts, thinks Italy had no need to be united, and never mentions the new order of things without a sneer. His tone strikes us as very childish. Certainly the "Sardinians" have destroyed the picturesque old walls of Florence, and increased—very heavily—the taxes, but it is a very petty view of matters that cannot perceive that these are but regrettable incidents in a great general gain. It is certainly something that Italy has been made a nation, with a voice in the affairs of Europe (to say nothing of her own, for the first time), and able to offer her admirable people (if they will choose to take it) an opportunity to practise some of those responsible civic virtues which it can do no harm even to the gifted Italians to know something about. But on this subject Mr. Hare is really rabid; in a writer who loves Italy as much as he does, his state of mind is an incongruity. It is a small defect, however, in a very useful and valuable work.

Authorized Report of the Second Church Congress of the Protestant Episcopal Church, held in Philadelphia, November 9, 10, 11, and 12, 1875. Edited by the General Secretary. (New York: T. Whittaker. 8vo, pp. 263.)—The introduction of the Church Congress into the Episcopal Church in the United States is justified on two grounds—its free discussion of present Church thought and life, and its contribution to permanent religious literature. We dwelt at the time of its session upon one of its vital topics—the relation of the Church to the masses. Some of the other subjects discussed in this volume are: Ultramontanism and Civil Authority; the Best Method of Procuring and Preparing Candidates for the Ministry; Church Music; the Nature and Extent of Episcopal Authority; the Parochial System and Free Preaching; Bible Revision; the Mutual Relations of Religious and Scientific Enquiry; the Best Methods of Promoting the Spiritual Life. The clergy and others who read papers or made addresses evidently spoke with entire freedom, sparing no words for fear of hitting or hurting anybody; the result is a better measure of the active life of the Episcopal Church than anything we have yet seen, while some of the more carefully prepared papers are valuable contributions to the current social and religious thought. Such are Bishop Huntington's essay on free preaching, Mr. Pellew's on religious work among the working-classes, Dr. Vinton's on the nature of Episcopal authority, Dr. Fulton's on its limitation, Mr. Brooks's on the spiritual life. The tone of these clergymen towards men of science is that of conciliation and sympathy. They avoid the bristling attitude sometimes shown by religious teachers, and their purpose is to accept the truth from every quarter and go down to the bottom facts, in the belief that theology and science are not required to part company. Dr. Garrison does not mince matters when he says: "What we do need is that clergymen shall learn one of two things—shall know science when they preach about it, or not preach about it at all." This is but a specimen of the plain-speaking which characterizes the entire discussion.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*
Abbott (E.), Revolutionary Times	(Roberts Bros.) $1 00

LEE & SHEPARD, PUBLISHERS, BOSTON.

Messrs. Pott, Young & Co.,

COOPER UNION, NEW YORK,

Announce that, having perfected an arrangement with MR. GEO. W. FORD (for many years connected with Messrs. John Wiley & Son), they are prepared to import books to order from the Catalogues of London Publishers and Book-Dealers on the most favorable terms, and to give such information to book-buyers as may be desired. All pains taken to procure rare and "out-of-the-way" books.

SLAVE SONGS OF THE UNITED STATES.

A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an Account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

F. W. CHRISTERN,

FOREIGN BOOKSELLER AND IMPORTER,

77 UNIVERSITY PLACE, NEW YORK.

Large assortments of the publications of Charpentier, Didier, Didot, Hachette, Lévy Frères, etc., on hand; also complete lists of Tauchnitz's Collection of British Authors, and Teubner's Greek and Roman Classics. All European periodicals received weekly in parcels.

SCIENTIFIC BOOKS.—A Descriptive Catalogue of Practical Scientific Books sent free on application.

E. & F. N. SPON, 446 Broome Street, New York.

Rare Engravings and Etchings.

E. DEXTER, 73 NASSAU STREET.

SCHOENHOF & MOELLER, Importers and Publishers, 40 Winter Street, Boston.

Catalogues sent on application.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 24½ Fine-street, New York.

BOOKS AT LONDON PRICES. Now Ready: Catalogue No. 8 of Rare, Valuable, and Curious Books, free on application. JOHN EVANS, Importer, 194 Fulton St., Brooklyn, N.Y.

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O. Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price.

The SUN for the Campaign.

The events of the Presidential campaign will be so faithfully and fully illustrated in THE NEW YORK SUN as to commend it to candid men of all parties. We will send the WEEKLY EDITION (eight pages), post-paid, from June 1 till after election for 50 cents; the SUNDAY EDITION, same size, at the same price; or the DAILY, four pages, for $3.

Address THE SUN, New York City.

The Nation.

NEW YORK, THURSDAY, MAY 25, 1876.

The Week.

MR. SIMON CAMERON'S anger over the nomination of Mr. R. H. Dana for the English Mission was freely attributed in Washington at the time to the fact that it interfered with some of his plans for the political elevation of his son, Mr. Donald Cameron. Since then the Senator's surprise and gratification over the manner in which Mr. Conkling was "developing strength" have grown steadily, and so has the confidence of Mr. Conkling's personal following in New York that his nomination at Cincinnati was a "sure thing," as all the necessary arrangements had been made for it. The recent changes in the Cabinet probably explain what these arrangements are. Mr. Edwards Pierrepont, the late Attorney-General, goes to England, which is a respectable though not brilliant appointment. Judge Taft takes his place as Attorney-General, which is an improvement, as the Judge, though a very good Secretary of War, will be a better Attorney-General. But then there can be little doubt that these moves are made simply to provide a place for Mr. Donald Cameron, an obscure man of forty, now engaged in railroad business, whose only claim to the place is that he is his father's son. What sort of claim this is is best explained by recalling the fact that his father was Lincoln's first Secretary of War, and that he was compelled to retire under the opprobrium excited by the gross corruption and jobbery in which he engaged freely at the moment when the rest of his countrymen were offering life and property in defence of the Government. To be knavish in the presence of the patriotic exaltation of 1861 was to be knavish indeed. The probable explanation of Mr. Donald Cameron's appointment is a bargain between his father and Mr. Conkling, by which Conkling gets the Pennsylvania vote in the Convention and any other influence Cameron may have, and in return Conkling supplies White House favors. We presume the honest delegates at Cincinnati will make a note of this, and remember that, though Cameron may sell delegates, he cannot sell many voters.

The "Favorite Son" business has been finished, Hayes having been "presented" in Ohio, Conkling in New York, Hartranft in Pennsylvania, Blaine in Maine, Bristow in Kentucky, and finally Parker in New Jersey, and now the real work will begin. The Kentucky resolutions are outspoken in demanding "thorough retrenchment and most rigid economy," and "such reform in the civil service as will prevent the prostitution of public station to selfish ends, and make honesty and capacity indispensable qualifications for all offices"; call for "men in office who are honest and have the courage to fight corruption"; denounce repudiation as a "national crime"; and oppose any postponement of a return to specie payments "beyond the time now fixed." The Delaware Republicans have held their Convention and declared for Blaine, while in Alabama, where a reform movement is in progress, the delegates to Cincinnati are for Bristow. The Alabama Republicans are in favor of reform, but declare that the most searching enquiries "have entirely failed to exhibit a single instance where President Grant has tarnished with his pen the splendid triumphs of his sword." The Democrats of Iowa are opposed to the Resumption Act, and demand its repeal, while at the same time they insist upon an "early return to specie payments." The Tennessee Republican delegation to Cincinnati are divided between Bristow and Morton. A letter from Parson Brownlow was read to the Convention, in which he makes to the Middle and West Tennessee Republicans this encouraging prediction: "We will roll up such a majority for the whole Republican ticket as will make the knees of this profligate and corrupt Democracy smite together as did those of Belshazzar on the night of that celebrated banquet." The New Jersey Republicans are unpledged, but are supposed to have a preference for Blaine. The National Greenback party have had their convention at Indianapolis, and nominated Peter Cooper for President, with Newton Booth of California in the second place. There were only two or three hundred delegates present, and the meeting was a failure.

The Ohio Communists have carried the Democratic State Convention, and put forward William Allen as their candidate for the Presidency on a platform made up of demands for the immediate repeal of the Resumption Act; the defeat of all resumption schemes which involve contraction, the perpetuation of the present banking system, or increase of interest on the debt; the "gradua but early" substitution of greenbacks for bank-notes; the issue by the Government alone of all currency; a "sound currency equal to the wants of trade and equalized with gold" by "appropriate legislation," making it receivable for customs, and interconvertible with 3.65 bonds; a "graduated income tax"; and a law making silver a legal-tender for all debts. The Hard-Money Party in the Convention, headed by Mr. Thurman, tried to get a platform of a different sort adopted; but, on the whole, the country is to be congratulated that they did not succeed, for even their platform demanded a repeal of the Resumption Act, and opposed any measure "which shall arbitrarily fix a day" for resumption. The success of Allen finally disposes of Thurman as a "Favorite Son," and will force the Democrats at St. Louis to say what they really mean on the currency question. The failure of Mr. Thurman is an awful warning to the politicians of both parties who set up for reformers without fully making up their minds that reform means a fight for principle, and not a sacrifice of it for votes.

J. B. Stewart has replied to Mr. Blaine's accusers at length, and declares that Mr. Blaine was never in his office at all, that he never had any transactions with him in Kansas Pacific bonds, and that if the name "James Blaine" or "—— Blaine" occurs in the records of the court in which his suit is going on, it is either the result of a forgery or a mistake. He says that John E. Blaine was the name, and that the whole story arose out of a mistake on the part of Knowlton as to the person whom he saw in his (Stewart's) office. He suggests an easy way of settling this part of the story, viz., that the bonds, which are still in existence, and can be identified, be examined, so that if the name of Knowlton appears on any as attesting witness, the history of these can be investigated, and he says that he will have this done at once.

The probabilities at this writing are said to be that the Senate will decide by a small majority that it has jurisdiction in the Belknap case, but we observe that Mr. Nordhoff says in the *Herald* that his conviction is unlikely, because those Senators who now deny the jurisdiction will believe it to be their duty to acquit him, on the ground that they have no right to try him at all, and that in this way the necessary two-thirds vote will not be forthcoming. We hope this is not an accurate description of the mental condition of the minority, because, if it were, it would show that they were fitter to be members of a Jacobin Club than of an American court. The question whether Belknap is triable by the Senate is not a moral question, "sounding," as the lawyers say, in the eternal verities, and in the solution of which a man has to explore the inmost recesses of his soul and get ready for the stake or the gibbet. It is a purely legal question, and there is no right or wrong about it, and a majority vote of the Senate settles it without appeal.

What a majority of a court of last resort decides with regard to its own procedure becomes as binding on the minority as the Ten Commandments. If the Senate says it has jurisdiction, it *therefore* has it, and the opinions of those Senators who think it has not become of no more consequence than their opinions about the weather or the Cincinnati nomination, and ought to have no more effect on their finding on the question of Belknap's guilt.

Things are going badly with General Schenck. He swore a few weeks ago before the Committee that Park had not drafted his resignation of the Emma Mine directorship for him, and that he had never seen any copy of his resignation in Park's writing. Whereupon, Mr. MacDougall cruelly forwarded by mail the document in question, with corrections in it which were plainly in Schenck's writing, and acknowledged by him to be his, but which Park, perceiving the situation to be desperate, came forward and unblushingly swore a thumping oath that he had made himself. Within the past week, too, certain telegrams from Schenck to Colonel Cheesbrough of the Legation in London having been produced, containing directions from Schenck sent from Paris for operations in the Emma Mine stock, he (Schenck) swore he had never sent them; but now comes Cheesbrough and writes that he did send them, and that it is all true. To crown all, the Committee has ascertained that, in spite of his enforced resignation, he has been holding his office as Minister and drawing his pay, which seems to confirm the suspicion entertained by many people that he was driven into resigning by the alarm caused by the Belknap exposure, but, this having blown over, was allowed to hang on. Next week we shall give a careful summary of the evidence taken before the Committee as affecting Schenck; on the following week, we shall render the same service to Park. The public does not know half the good things which were brought out in the investigation about these eminent men.

We have already twice within the last two years given in these columns the history of the Freedmen's Savings-Bank swindle and the principal details of it. It will therefore not surprise our readers to learn that the Congressional Committee of Investigation has reported unanimously that the institution was almost from the start a scheme of selfishness under the guise of philanthropy, and rapidly degenerated into a monstrous fraud; that the connection of its managers with the "District Ring" was close, five of the officers of the District Government being in the directorate, and the money being freely lent on worthless securities to Ring contractors. They recommend, accordingly, that Henry D. Cooke, Lewis Clephane, Hallet Kilbourn, and Joseph Evans should be criminally indicted, and others sued civilly for money obtained by them from the bank. But, then, the trouble is that few, if any, of them are worth suing. The case is one which eminently calls for Government interference. Congress is morally bound to pay the depositors in full.

The Committee appointed to investigate the Custom-house at New Orleans have examined one witness, who swears to several frauds committed in the importation of cigars, and gives some damaging testimony about Sypher, an ex-Congressman, who, as he says, got him to sign from forty to sixty fraudulent pay-rolls with real and fictitious names, and then got money upon them for the expenses of his election. The description given of the state of the cigar business in New Orleans is not encouraging, one dealer who paid money to the Custom-house gang being reported as saying, "Damn these fellows; they come after me before I can get the cigars out of the cases." The witness, who has lately been in the employment of the Custom-house, says that at an earlier date his occupation was that of a "political striker," and he referred to another gentleman as a "member of the Custom-house band"—a musical organization which Casey keeps in his pay to arouse the enthusiasm of voters. The Committee is now going to New Orleans to take testimony.

The testimony of Rehm and Hesing in the Chicago Whiskey Trials shows that the whiskey frauds in that city were carried on upon the same plan that worked so well in St. Louis. Rehm was a prominent politician, in the malt business, and also superintendent of police. In 1872 a distiller complained to him that some other distiller was making illicit whiskey, and begged Rehm to use his influence with the Collector to have a new gauger put into the distillery. This was done, and immediately Hesing, another influential man and proprietor of an influential newspaper, came to protest against the change, as he, Hesing, had endorsed the fraudulent distiller's note. He represented that unless the illicit manufacture was allowed to go on, the note would not be paid. In this way Rehm was let into the secret, and he in his turn approached the Collector, Irwin, who said that if he was to do anything wrong he must be paid for it, on which a satisfactory bargain was immediately concluded. Then the Supervisor and the Special Agent were taken into the ring, which consisted, when it was finally formed, of the distillers and all the officers of the revenue appointed to watch them. The money paid by the distillers was, as in St. Louis, partly kept by those who received it, and partly spent in "sustaining the party." Rehm swears that all his share went in this way, as he was "in politics all the year round," and did not want money merely when an election was coming off. The connection revealed by such testimony as this and that in St. Louis between politics and frauds on the revenue is so glaring that the Republican papers are not disposed to exult over the exposures, as they were at first, as a triumph of good government. It must be confessed that the present system of having all the Government officers in the pay of the whiskey-rings, and relying on their quarrels for evidence of this fact and for an account of the tax which ought to have been collected, is unsatisfactory as a method of collecting the revenue, however much it may show the desire for "reform within the party."

Mr. Bowen has been brutally expelled and "cast out" by Plymouth Church, in spite of a long and gallant defence. He is now a pewless man, and, if he should become embittered, might carry "the bottom facts" to the grave with him. But we do not believe he will become embittered. He has too rich and genial a nature, and is too anxious to do good. We have no doubt he will join another church, and take "the bottom facts" with him for the edification of some other religious society. We fancy, from his extreme fastidiousness about the persons he tells them to, that they are very precious to him, and probably the contemplation of them often consoles him in these sad days of dull business and fading hopes.

Silver continues to decline in London, and the lowest price ever known (52*d.* per ounce) has been reached. This makes the silver tokens now coming out of the Treasury worth 82¼ cents to the dollar, and the proposed dollar of 412½ grains worth 88 cents gold. The value in gold of a United States note (legal-tender) for one dollar ranged during the week between 88⅛ and 89 cents. Congress has done nothing during the week to increase the issue of silver tokens, which are coming out of the Sub-Treasury here at the rate of $60,000 to $75,000 per day. The silver halves are taken at 2 to 2½ per cent. premium by bullion-dealers to send to California, where they can be used at 95 to 96 gold; they are issued from the Treasury here at less than 89 gold. The premium on other small change ranges from ½ to 1½ per cent.

The Royal Titles Act, giving the Queen the title of Empress of India, has probably caused more bitterness of feeling than any measure passed in England within half a century. This bitterness was aggravated by the report, which was generally believed by the opponents of the measure, that it owed its origin to pressure brought to bear on the Ministry by the royal family, the younger members of which were said to be troubled by questions of precedence in their intercourse with their Russian and German relatives,

arising out of the fact that, while they were only "royal," their Continental connections were "imperial," and it was doubtful, therefore, whether the imperialists were not entitled to take the *pas* of them in going in and out of rooms and occupying seats. Finally, in order to settle these difficulties, the Queen was said to have urged Disraeli to make her an Empress, and his pertinacity in carrying his bill through in defiance of the best sentiment of the country was ascribed to Her Majesty's eagerness for the new dignity. Mr. Lowe, Mr. Gladstone's Chancellor of the Exchequer, seems to have got hold of this story in a shape which he deemed authentic —viz , that the Queen had not only urged Disraeli into his present course, but had tried in vain to get two former Prime Ministers to gratify her, and he (Mr. Lowe) accordingly produced it hot and strong in a speech at a public meeting. This furnished Disraeli, who owes him an old grudge, an opportunity for savage vengeance. He intervened in a discussion on the subject between Mr. Lowe and another member; denied that either he or Lord Derby had ever been applied to on the subject; quoted Mr. Gladstone's denial that he had been applied to; suggested the improbability that Lord Palmerston or Lord Russell had been; and then, as a *coup de grâce*, introduced a communication from the Queen contradicting the whole story from top to bottom. Two days later, Mr. Lowe came down and made an abject apology to the Queen, pouring ashes on his head for every reason he could think of, and leaving himself in a condition which must have satisfied even such a cruel monster as Disraeli. In all probability, this destroys Mr. Lowe's chance of ever holding office again, as no Liberal Premier would be likely to present his name to the Queen as a member of the Cabinet after what has happened.

The proclamation by which the Queen assumes the new title restricts its use to all documents intended to operate in India and the Colonies only, except military commissions; but there appears to be some difference of opinion on this point between the heralds and the lawyers, Sir Bernard Burke, the great heraldic authority, having advised the Corporation of Dublin that it would be proper to address the Prince of Wales as "Imperial Highness," while the Attorney-General says this is all wrong. But we presume the fears of the opponents of the measure are well founded, and that, gradually but surely, the vast force of flunkeyism which pervades the United Kingdom will have its way and give the Queen and the royal family the most sonorous title possible, without regard either to the Act of Parliament or the proclamation, and there will be no remedy; and the practice of the flunkeys will grow into a usage which everybody will finally follow. The quarrel seems at this distance a somewhat trivial one, but to many Englishmen the assumption of the new title marks in an unpleasantly sharp way the passage of England into the category of the new electro-plated monarchies of the last hundred and fifty years, and the consequent loss by the Crown of a portion of the dignity which a thousand years of unbroken custom gives even to a name.

England is reported as having refused to join in the note to the Porte agreed on in the recent conference of the three Powers at Berlin, on the ground that the making of an armistice with the insurgents through foreign mediation would be a recognition of them as belligerents; but, if this be the true reason, it will doubtless be got over by her addressing a separate note to Turkey herself. There does not seem to be anything left for Turkey but to yield. The murderers of the consuls at Salonica have been executed to the number of nine, amidst more or less popular excitement, but under the guns of the foreign fleets, and two more will probably follow. At Constantinople the excitement resulting from the movement of the Softas appears to have been even greater than was at first reported, and the foreign colonies at Pera and Galata were greatly alarmed for their safety, and probably will continue to be, and with reason, as long as the insurrection lasts. The lower classes of Turks, and the Ulemas, find it hard to believe that the Empire has really lost its strength, or that the growing insolence of the "infidels" is due to anything but weakness on the part of the Ministers. If Turkish rule in Europe should be overthrown, we should probably witness terrible atrocities committed by the Mussulmans before finally surrendering. The immediate cause of the present excitement is said to be the announcement by Mukthar Pasha that in his late fights to relieve Nicksics the insurgents had been aided by 7,000 Montenegrins; and what the war party at Constantinople would have liked to do was to precipitate an attack on both Servia and Montenegro. The Montenegrins are, however, making strong efforts to avoid giving any fair ground of complaint, and Servia is held firmly in check by Austria.

The new scheme for the assumption by the Empire of the ownership of the German railroads which Prince Bismarck has brought forward, and which is now the leading topic of German politics, is almost a necessary consequence of the union of the states. When we say that there are fifteen hundred and sixty-three railroad tariffs in the Empire, nearly every little state having its own, which it enforces against the through as well as the local business, so that calculations of the cost of transportation are rarely reliable in a business enterprise, and that, while some of the roads are owned by the state, others are in the hands of private corporations, it is easily seen that any reform attempted must be thorough and sweeping. The question is of course a good deal complicated by the feeling of "Particularism" which has been reviving somewhat since the war, and which finds the railroad-centralization plan a very good thing to make a stand upon. Prince Bismarck has accordingly met this difficulty by getting the Prussian Parliament to offer the railroads of that kingdom—some of which the state owns and others of which it controls—as the first sacrifice on the Federal altar, and it is expected that the other states, and particularly the larger ones, will rapidly follow. Bismarck's speech in the debate was eminently sober and cautious, and evidently intended to reassure the doubters. He does not think the Government should assume all the railroads at once, but only by degrees, and as fast as it finds itself able to manage them. He asserts that his projects, so far as they have assumed a definite shape in the Government's proposals to the Landtag, will require at least three years for their realization, so that probably all who have now in an official capacity to deal with them will have left the stage without witnessing their full development. It is admitted on all sides that no question of equal importance has been brought before the Landtag since 1866.

France has, luckily, little to trouble her beyond the question of amnestying the Communists, with which the Government seems disposed to act moderately and rationally—that is, to be willing to pardon those who acknowledge their error, and not those who still glory in their work and wish they had a chance to try again. In spite of the general prosperity of the country, there is a good deal of mourning over the steady decline of the French shipping, which is made harder to bear by the steady growth of that of Italy; and over the great falling-off during the year in the export of French commodities, which is made easier to bear by the fact that nearly all the great producing communities have the same story to tell. In fact, the civilized world seems to be economizing. M. Gambetta, who is placed at the head of the Budget Committee, is applying his active mind to questions of taxation, and has made a valuable suggestion for the revision of the official land survey and valuation, which is now thirty years old, and bears much less of the burden of direct taxation than it is able to bear. A great Exposition, which is to surpass anything yet witnessed in glory and extent, is planned for 1878, and is apparently intended to celebrate the return of France to order and prosperity, and to assure the world of the essentially peaceful and industrial character of the new Republican régime. Paris, too, is to be made ready for it by restoring all the ruined buildings, and carrying out some of the plans of improvement suspended by the war, by means of a loan of about $25,000,000.

A CENTENNIAL VIEW OF "PRACTICAL MEN."

THE comments of the press on the Fifth-Avenue Conference have brought out with increased distinctness the curious change which has taken place during the past fifty years in the meaning attached to the term "practical," as applied to persons who are either actually in public life or who interest themselves in politics. At the foundation of the Government and for a generation afterwards, a "practical man" was, in political parlance, a man who was competent to legislate or assist in legislation touching the various interests of an industrial community. He was familiar, that is to say, with the history of all that had been attempted or accomplished in the way of regulating the social activity or protecting the individual liberty of civilized societies; he had a mind well stored with the contemporaneous facts on which the policy of a legislative and administrative body should be based, and showed ability in making inductions from them for political purposes, or he had great power in the presentation of the arguments by which legislation was influenced or framed.

The men who bore the most prominent part in the formation of the Constitution—Washington, Hamilton, Madison, Jefferson, Adams, Franklin, and Jay—were in various degrees practical men; that is, men more or less familiar with the various political problems of their time, and with the facts which bore nearly or remotely on their solution; with the principles of trade and commerce and taxation; with the limits of the possible in legislation; with the history and conditions of political freedom, and with the strength and policy of foreign powers; and, as a consequence of this, they were for the most part sober-minded men, whose talk was the result of thought. Their writings, epistolary and other, are at this moment read eagerly and profitably by all political students, both for doctrine and instruction. Open a volume of their correspondence—Madison's, for instance—and see what his letters are about. On the first page of the index we find him discussing the manner of keeping the accounts of the War Department; the Achæan Confederacy; Admiralty jurisdiction; the African slave-trade; the effect of age on the judgment; agriculture; the Alien Bill and sedition laws; ambassadors; colonization; the Amphictyonic Confederacy; Anglicanism; apportionment; power of appropriations; aristocracy; Arkwright; artillery; banks; bankrupt laws; and so on—in other words, the weightiest subjects which can engage a statesman's attention; and there is hardly a word he says on them from which the reader may not get either new light or food for reflection. We might furnish a dozen more illustrations of the same kind. An index of Morton's or Conkling's letters would be amusing reading.

Now, these men, who performed what is by far the greatest political feat of modern times, perhaps the greatest feat of political construction ever performed in any age, and whose writings are still consulted as authorities on almost every subject touched by them, would be incapable of achieving any political success in our own day, and would, if they attended a political convention, be the laughing-stock of the managers, and, if they met in consultation on the affairs of the country, be sneered at as visionary and impracticable persons by most of the party newspapers. And yet the problems of government are still substantially the same that they were in their day. How to provide a good administration of justice; how to tax most lightly and yet most productively; how to provide for popular education; how to protect individual freedom; how to deal with foreign nations, and how to provide for the national defence; how to maintain the public credit and to regulate the currency—were the problems *they* had to solve; they are the problems *we* have to solve. Not a single absolutely novel question has arisen since their time except slavery, and that has been settled out of hand. Yet if these men lived in our day we should hardly be able to find a place for them in public life. Washington would probably be a Virginia farmer, writing grumpy letters on public affairs to Hamilton, a rich lawyer in New York, who passed his summers in Europe; Madison would be writing a history in fifteen volumes, and reading papers occasionally at an Historical Society; Jefferson would be a popular lecturer on Daniel O'Connell, or a Professor of the Heart in a second-rate college; Jay would be simply a trustee of Columbia College and a vestryman of Trinity Church; and John Adams would be a retired "Beacon-Street man," of frosty manners, whose nomination for high office would excite a smile in caucuses, while his "ability and patriotism" would be universally acknowledged in newspaper articles and conversation. If they were all to meet somewhere and take into consideration "the present alarming condition of public affairs," they would not fare a whit better than the less distinguished assemblage which met the other day at the Fifth-Avenue Hotel—that is, they would be advised to go back to their libraries and lecture-rooms and attend to matters they understood, because Conkling and Cornell and Bliss, they would be told, would be sure to beat them out of sight in the conventions and at the polls. "How many votes does General Hamilton command in his State?" the party organs would exultingly ask. "Why, just one. And how many Mr. Madison? Why, one also. And is it not, with all respect to these gentlemen be it said, under these circumstances, a little presumptuous for them to be giving advice to the 'brilliant' Conkling or the 'able and energetic' Morton or the 'sensitive and studious' Logan, to say nothing of the 'scrupulous and high-toned' Cameron?"

Moreover, we have reached such a pass that there is not at this moment a single man in the United States Senate whose opinion on any question of finance is received with respect by financiers, or whose opinion on a question of constitutional law is received as conclusive or even weighty by lawyers, or whose economical dicta command the attention of economists, or who has even a tolerable knowledge of the history or resources or policy or manners or languages of foreign states, or who has achieved any distinction in any department of literature or science or art, or is identified with any piece of difficult and successful legislation, or has by any conspicuous achievement reflected credit on his country or his generation. This is the first time in American history when this could be said; and yet the Senators are now confessedly our foremost politicians, and, par excellence, our "practical men." They *act*, we are told, while the professors and scholars and divines, who are mourning over the state of the country, only *talk*.

Now, what is the reason of this great decline? How is it that so few of our foremost men—of those who know how governments are successfully conducted, who can tell how laws will work, how taxes ought to be levied, how justice can be best administered, how the springs of national greatness are fed, the real "practical men," in short, of all ages and all countries—are to be found in control of the dominant political parties of the day? The explanation is not far to seek. If the Constitution had divided the appointing power among the Senators and Representatives, and made the offices party perquisites, the state of things we are now deploring would probably have been reached sixty years ago. The talent of the country would have retired into private life completely, and the authority of individual knowledge, judgment, and character have lost all weight, and an entirely new and peculiar test of practicalness have been created. In the first place, skill in the distribution of offices among the lower class of electioneering agents is hardly attainable by a man distinguished in higher and better things, even if he were willing to seek it. Consequently, the need of it stops our leading men at the very threshold of public life. They neither possess it nor are willing to make terms with those who do, and this is what renders the position of any first-class American at a political convention a little ridiculous. In the second place, even if a man really skilled in the art of government gets into public life, the distribution of patronage, and its resulting correspondence, interviews, and consideration of complicated "claims" and interests, are a work of such magnitude as to leave no time for attention to questions of either legislation or administration. It is in many of its features so repulsive that a real politician, sooner than submit to it, abandons political life altogether; and those who remain give up all serious attention to the work of government, and

pass their days either in seeing and satisfying office-seekers or writing letters to them, or in pushing such bits of legislation as their "workers" in their State or district may use as claptrap in securing a second nomination. No one who has watched Congress since the war can help perceiving the melancholy truth that it is under a kind of paralysis which makes the scientific or efficient treatment of a single leading question of the day almost hopeless, and causes the business world to watch its attempts at legislation with unconcealed terror. It cannot pacify the South; it cannot govern the Indians; it cannot regulate the tariff, or reform the currency or the civil service, or grasp any new subject like the silver question; and the defence it usually puts forward for its helplessness is thoroughly paralytic, viz., that if the bad men somewhere would only behave themselves, all would go well.

Were the pressure of the appointing power removed from the legislators, even such men as we have now in public life would do better than they are doing, though, no matter how good our legislation might be, the laws could not be "faithfully executed" without a trained and competent and permanent civil service; but if it were removed, and the work of appointment diminished by tenure during good behavior, so that the President and heads of departments could manage it with but little assistance, a different class of men would undoubtedly find their way into politics once more—men who are really interested in and skilled in the art of government, the real "practical men," in short, whom every civilized country but our own is more and more calling into its service as the first condition of national existence and prosperity. In politics in this sense our politicians have no interest. There must of course in all free countries be persons who look after the organization of parties and the machinery of elections, just as there must in every army be captains and lieutenants, sergeants and corporals. But we have committed the terrible mistake of raising them to the highest offices in our gift, and allowing them to parade their little tactical tricks and devices as feats of statesmanship. The real visionaries and theorists of politics, as of all other fields of human activity, and in this country as in all others, are the ignorant and unreflecting men. Morton and Logan and Cameron orating on finance are sentimental dreamers and romancers, in spite of the fact that they can "capture" a legislature or a convention. Thaddeus Stevens fixing the price of gold was none the less a visionary fool because he could get a majority of the House to approve of his folly. So was that other eminent man, whose name we forget, who refused to believe that a Government which had suppressed "the greatest rebellion the world ever saw" could not collect a tax of two dollars a gallon on whiskey. Ability to seize on a government by no means argues ability to carry it on. We are amused by Tweed's impudence in calling himself a "statesman," but he gave himself that name for the same reasons and with fully as much justification as Morton or Cameron can offer for calling themselves "practical men." He had got hold of the "machine" in a way which the ablest and best men in New York could not imitate, and he was rapidly persuading the public that it was through such men as he that the government of great cities on our soil was best conducted.

THE EXTRADITION TREATY.

LORD DERBY has answered Mr. Fish, and Mr. Fish is said to be replying to Lord Derby, on the Winslow case. The position which Lord Derby was said to have taken first was that he was bound to obey the British Act of 1870, which forbids the surrender of criminals under extradition treaties without some stipulation protecting them from trial for other offences than those for which they were surrendered. When this news came, we ventured to make the suggestion that this was no answer to the American demand, because, as has been said so often by the newspapers which have tackled the question on this side of the water, the United States cannot possibly admit that its rights under a Treaty can be modified by a municipal enactment of the other party. This position, too, was rendered still more untenable by the fact that the British Government has since 1870 disregarded its own law on several occasions by surrendering prisoners with regard to whom the stipulation prescribed by the Act was not required, and it has itself tried men for one offence when they had been surrendered to it by this country for another. If the British Government could, therefore, disregard the Act in other cases, they could in Winslow's also, and common decency would require that, if they set it up at all, they should not set it up without notice and against a pending demand for a criminal about the nature of whose guilt there was no doubt.

If report speaks truly, however—for the correspondence has not been published—Lord Derby does not now take this ground, but a much stronger one, to which those who have discussed the matter in our papers have given no attention—viz., that he acts in virtue of the right reserved by international law to the parties to every extradition treaty to judge whether a demand for the surrender of a criminal under the treaty is made in good faith, and to exact a pledge, if deemed necessary, that he shall not be tried for any offence not specified in the treaty. That this right exists is acknowledged by the text-books, and, what is still more to the purpose, it has been exercised both by England and America, and may be exercised again any day. The Treaty does not do away with it. It specifies certain offences for which criminals shall be surrendered, but it remains with the power on which the demand is made to decide whether the offence with which the fugitive is charged was really or only colorably one of the offences described in the Treaty. For instance, Great Britain has refused to surrender under the Treaty a slave guilty of killing his master in order to secure his freedom; and we have refused to surrender an Irish tenant guilty of killing his landlord. In both these cases, what each Government said was: "What you call murder, and believe to be covered by the Treaty, we do not consider murder in the sense in which the word is used in the Treaty. The circumstances of the case give it in our eyes a different complexion, and we are the sole judges of our duty in the premises. We have discretion, that is to say, in the construction of the Treaty, which comes to us from general principles of international law, of which the Treaty cannot deprive us. It is not enough, therefore, for you to say that this man has committed murder. We enquire into the causes which led to the offence, the social and political conditions under which it was committed, and conclude that it would be against our policy and repugnant to our public opinion to give him up."

If this is a correct statement of the position towards each other of the parties to an extradition treaty—and we have yet to see its correctness questioned—it is of course mere trifling to say that all Mr. Fish has to do is to show that Winslow had committed forgery in order to be able to accuse Lord Derby of bad faith. Great Britain still retains the right to go behind the charge and examine the circumstances under which it is made, and see whether it covers or is likely to cover any other charge not included in the Treaty. It may be inconsistent or discourteous or sharp practice for her to do so, but it is not a breach of the Treaty. For it must be remembered that the Treaty does not provide for the surrender of all criminals, but for that of criminals accused of certain offences. Other offences are excluded by implication, not inadvertently, but because the contracting parties did not deem it advisable to insert them. It does not do, therefore, to say now that it makes no difference if, having got a man surrendered for forgery, you try him for smuggling, because this really nullifies the Treaty. It uses it to secure the punishment of offences which the contracting parties did not intend it should secure, and, even if either of them has for some years allowed it to be used in this way, he is not thereby estopped from saying that the practice is pernicious and must now be abandoned. It is open to the other, as in the Winslow case, to say that it ought not to be abandoned without fair notice, or suddenly on a demand for a very great rascal, and the abandon-

ment may be made in a very exasperating way; but all this has nothing to do with the law of the matter.

To sum up, we do not think Great Britain has behaved well in the affair, but she has not transcended her strict right. If she has cited her own acts against us, she has been guilty of an impertinence and absurdity. If, on the other hand, she falls back on her legal discretion, we have no reason to complain of anything but the suddenness and discourtesy and inconsistency of her action. It would be a great pity, however, if this should prevent a national rearrangement of the Treaty, with a great extension of the list of offences. In fact, it is hard to see why any offence should be excluded from it between countries whose jurisprudence and manners are so nearly alike as those of Great Britain and the United States. The "right of asylum" would remain just where it is, and be protected as it is now by the enlightened discretion of the two Governments. Let us add that it is not the kind of treaty of which a quarrel of dignity can well be allowed to hinder the amendment. It is in reality an arrangement between the police of the two countries for mutual thief-catching, and any mounting of the high horse over it would be singularly inappropriate. Nobody will gain by any failure to agree or loss of temper but the criminal population; and the spectacle of Lord Derby and Mr. Fish pouting at each other, while the burglars and forgers of the two countries run to and fro with their plunder, and flaunt it on both sides of the Atlantic, will be both melancholy and ludicrous. The arrangement Great Britain proposes is undoubtedly a desirable one, both for her and for the United States, in their extradition dealings with all Continental powers. It is already in practice in France. The difficulties in its way here, owing to the nature of our Constitution, are not insurmountable. Even if we do not think proper to meet them in the Winslow case, there is no reason why they should not be met in preparation for other cases; and the best way of doing this, the easiest and completest, is to make a treaty including all offences not political. The line between what is criminal and what is political no doubt may sometimes be faint; but it must be left to the good sense of the government which is asked to surrender to trace it in each particular case.

DUMAS'S "ÉTRANGÈRE."

PARIS, May 5, 1876.

THE theatre of Alexandre Dumas, fils, is a curious object of study. There is so much vigor in his talent and originality in his mind that even his failures are more interesting than the successes of others. He is a little microcosm in himself: he always seems to me to personify the long and persistent struggle of humanity towards a higher ideal; but while humanity, taken as a whole, started from barbarism, from the mere play of animal instincts, Dumas started from the curious state of immorality which can only be found in an old country, an old society, an old capital. His education gave him the varnish of the most refined and corrupt civilization; it did not give him the counterpoise of family life, of religion, of established traditions of honor and self-respect. His father, with all his genius, was a mere child of nature; his mother he never knew; he was thrown on the waves of Paris like a ship without a pilot. What others learnt in the cradle, at school, in the family circle, the notions which entered their minds through the love of a mother, the grave counsels of a father, the lessons of the catechism, he had to learn through hard suffering and by personal experience. He found out at his own expense that virtue is less dangerous than vice; that every passion is like a poison which works with an irresistible force. He is a self-educated moralist, and this is what gives such a poignant energy to his analysis of human life. But his example shows, after all, that *one* man cannot do what mankind has done; his conception of right and wrong has not the solid and noble lines of the Christian or even of the philosophical ideal. His morality reminds you more of the contorted statues of modern art than of those beautiful figures of the Hellenes which give calm and nobility to every passion and even to physical pain.

Whenever I leave the theatre after witnessing a play of Dumas's, I feel discontented with man more than reconciled with truth. I have never felt this more strongly than in the case of his latest drama, the now famous "Étrangère"; I have already seen it six times, and each time this impression was intensified. I hear that the "Étrangère" will soon be adapted for the English stage; it is, therefore, likely to be soon discussed in other countries besides France. It is almost impossible, in my opinion, to give a correct account of a work made for the stage, as action is a necessary element in it. I will only analyze the "Étrangère" from a moralistic point of view. I will say first that its great defect is the total absence of any really moral character. If the "Étrangère" could be taken as a representative drama, as a résumé of a given country or a given state of society, I would only say: Fly away from such a country and from such a society! There is no train fast enough to take you far from it, no spot distant enough from a place where virtue has no better specimens to offer. For the characters of the piece which are made to defend the good cause are almost as imperfect as those which represent the evil cause. There is not one part which is completely and wholly pure, and the author seems entirely unconscious of the imperfections of those whom he has chosen as heroes and heroines.

The "Étrangère" is an American by birth, born in Louisiana, the daughter of a slave, sold at auction by her own father; she lives but for one thing—for vengeance. She cannot avenge herself on the vile master who was also her father: she must avenge herself on all men: she says, like Caligula, "I would that humanity had but one head to cut off." Her wish is to dishonor and ruin all men. She is handsome, and her beauty becomes the arm of her systematic vengeance. She begins with the sons of her father. She had met a good fellow in Boston, coming from the silver mines of Nevada, and had married him, but left him immediately with some money which he had brought from the mines. She returns to the South, and, being almost white, nobody knows that she has been a slave. She comes between the two sons, who are her brothers; they both fall desperately in love with her; one kills the other, and is himself hanged. Then she goes to Europe, to find a new field of activity. She becomes immensely rich; she plunders, ruins, all the men she knows, and she never gives anything in return but dangerous smiles and more dangerous words. She calls herself the virgin of evil. Is she really pure; and what right has she to destroy the happiness of so many?

She comes, when our play begins, between a young duchess and her husband. The duke is the worst specimen of humanity that can be found; he was ruined, nearly dishonored, and he married his wife, the daughter of a bourgeois millionaire, merely to secure ample means of continuing his disorderly life. Dumas has taken him as the personification of elegant vice; he is the "vibrio" of the social body, made for the decomposition of societies, like the microscopic animalcules that decompose the flesh and the animal tissues. Dumas treats this question of the "vibrio" as a naturalist. There are men who must act in the social blood as corruptors, as fatal agents of death; they have no conscience, no freedom; they do their dreadful work, inflicting suffering and scattering misfortune and dishonor round them, till a stronger "vibrio" comes and kills them. This would be very philosophic if the poor victim of the "vibrio," the young duchess, were herself a little interesting. But here Dumas shows the cloven foot; as soon as she understands her vile husband she has but one idea—to find the young man with whom she was in love when her vain and vulgar father forced her to wear a coronet. She throws herself completely into the arms of the young engineer who wanted to marry her when she was still a girl. It is, by the way, the fashion now to take an engineer for a hero. Mme. Sand began the apotheosis of the representative of modern industry, and Dumas is walking in her footsteps. I dare say there are some very respectable men among the numerous body of engineers; Dumas's hero is a very ordinary young man, and there is very little to say about him.

The duke is quite willing to inflict misery on his wife, but he doesn't like ridicule for himself; his particular code of honor does not allow him to be classed among the "maris trompés." He picks a quarrel with his wife's lover, and chooses for his second the husband of the "Étrangère," Mr. Clarkson, who happens to be in Paris, and who is on the eve of his departure for America. In Mr. Clarkson, Dumas has tried to typify a society quite different from ours. Clarkson is a rough, practical man; he appears in a travelling suit, keeps his hat on his head, smokes in the presence of ladies. He is occupied with speculations, and gives a long account to his wife, who is now simply his partner, of the development of a new city which he has started in the West. He becomes acquainted with our engineer, who is making plans for a new kind of machinery for the silver mines. He comes and goes through the piece, always darting like an arrow; when he is presented to the duke, he hardly looks at him, and calls him "Monsieur," or rather "M'sieur," in the most abrupt manner. He, of course, always carries a revolver in his pocket, and he has killed any number of men in the

mining districts. He is honest in his way; he never lies, he says, because he is too busy, and lies would confuse his mind. This is the type which Dumas opposes to his "vibrio" type—a rough, busy, active man, courteous only to the ladies, jolly, humorous, self-satisfied, a sort of living engine of progress. Why the duke should choose a man so different from himself as his second against the man who loves his wife, and who is loved by him, is a mystery. But "it is in the piece," as I once heard Lincoln say to his young boy, who was asking so many explanations during the representation of "King Lear."

The duke has got possession of a love-letter of his wife's, having stolen it; and he confides it to his second, as he wishes, in case he should be killed, that his wife should be disgraced—an act quite worthy of a "vibrio." While he is making his explanation to Clarkson, adding many details which show him to be a villain, Clarkson is first astonished, then becomes angry, and finally tells the duke very openly that he is a villain. The duke's amazement is very amusing; he himself becomes very angry. This scene is one of the best of the drama, for the gradations of it are very well marked; before it is over, the quarrel becomes so hot that Clarkson tells the duke that he will not be his second but his adversary. He can't let him fight with a man who is preparing such good machinery for him; they must have a duel themselves first. No witnesses are needed. They can go down in the garden and settle their little difficulty at once. The duke, who has preserved an intense pride as the only remainder of the virtue which should be attached to his rank, does not even think of refusing this offer; they go out together and disappear. The stage, of course, fills up at once with the other actors. The duchess comes, and the young lover, and Mrs. Clarkson, who is herself in love with the engineer, and who, consequently, wants the duke to live. You may imagine the chaotic state of the sentiments of all these people. Add to the number a doctor, who circulates during the whole drama as an unnecessary element; a Darwinist, a philosopher, it is he who propounds the theory of the "vibrio"; he talks like the ancient chorus, and always prophesies the calamities which are to happen. He is now quite satisfied; he knows that the young duchess will soon be a widow, that her lover will become her husband; he is infallible as science itself. The door opens, and, according to his prophecy, Clarkson comes back. Everybody understands that the duke is killed; and Clarkson says, quietly, "I have still time to go by the night train, as I am due to-morrow in Liverpool."

This is not an analysis of a piece which cannot well be analyzed; my object has only been to show that the drama, while it pretends to represent the eternal struggle of right with wrong, fails in its object, since there is no true representative in it of right, of perfect purity, of perfect virtue. All the actors finally make a sort of league against the "vibrio," and their war upon him is so unmerciful, and conducted on such principles, that the despicable, miserable "vibrio" becomes almost interesting. He is a victim not of his own bad passions, but of men and women who, if not as bad as himself, are far from being good. The morality of the drama is therefore very defective; it is more nominal than real. It may be that Dumas wanted to show that, even among the wicked, sin has no chance and must be defeated in the end; but it would have been refreshing if he had shown us at least one pure character among so many who are worldly, silly, or corrupt.

MASSACHUSETTS ART-INSTRUCTION.

To the Editor of The Nation:

Sir: Your issue of this week shows that the discussion of art-education in Massachusetts has life in it. Those who watch its course in your columns believe that a high service is doing not only for Massachusetts but for the various States in which book-agents are busily securing the adoption of the new system. It is not easy to give a satisfactory answer to a call for "a scheme without vagueness" which may be applied to the training of minds *en masse*, and which seems to be necessary in the present phase of education, but it appears to some of us that the call is well answered in your reply to "C. A. L." Hamerton, in his 'Etchers and Etchings,' touches the matter when he points out that the best and highest in art cannot be taught by any "method." It cannot be communicated, but the learner living in an atmosphere of true art may apprehend it.

While theories for the general study of art are in order, I should like to present through the *Nation* the actual working of the theory practised in Massachusetts, having obtained the knowledge as an observer of the common schools and as a student in the Normal Art-School. The system in use here was introduced first in the schools of Boston. From personal knowledge, I will say that it is a burden and disgust to the teachers. While the modern school-system is striving to do the impossible, to thrust in a new interest demanding unlimited time and nerve-force, and to press it by a special system of petty rules, creates in many teachers and pupils a waking nightmare, so much of the theory is carried out by compulsion. In the regular reports are published the names of teachers who fail to comply with these rules and prepare for special examinations in drawing. It was stated in the outset that the better method of applying the system would be by the regular instructors, but the State was soon asked to found a Normal Art-School for the training of *special* instructors. A large percentage of the first year's students were either teachers of drawing in Boston and vicinity, or former students of drawing in the Lowell Institute. A law had been passed making it obligatory on cities and towns of the commonwealth having more than 10,000 inhabitants to furnish free instruction in drawing, and most of the students were sanguine of obtaining employment at good salaries under the working of this law. In the case of very few has this hope been realized, since no method has yet been devised of compelling cities and towns to comply with the provisions of the law.

The course of study in the school was for a period of four years, that of the first year being designated "Industrial Art." For this twenty-five drawings must be presented and twenty hours of examination passed. At the close of the year only thirteen out of a hundred and thirty-three students could take the diploma. And yet each successive year the system is braced by increase of work. The motive of this I do not see, unless it be ambition to outdo everything else at home or abroad in what the director calls "tough work."

A number of trained draughtsmen, comparing notes as to the length of a day's work, agreed that it could not exceed seven hours without depleting the nerve-force and injuring the quality of the work. Ask the best and most vigorous student in the Art-School how much time must be given to the required work, and you will be told "*all* the time." Under such pressure, the morals of art suffer. Pleasure in the work there is none. There is only a dead determination to reach the end of the course—with what degree of credit, few care. The mental atmosphere of the school is one of extreme heat and fatigue. Remonstrating against this condition of things as crushing to the spirits, a student was coolly recommended by the director to take "morphine." In other schools there is an attempt at least to guard the health of the pupils against the exactions of a system or their own ambition. In this school it is nothing that the students lose health, inspiration, and courage—the system must not be "vaguely carried out." If one fails to complete a single drawing or receives forty-nine marks in an examination rather than the required number fifty, there must be another six months' waiting for the diploma. If, desperate at giving so much time to gain so little, the course is abandoned, it is done at the loss of all the completed drawings, the director declaring them forfeited, though no printed regulation acquaints the student with the condition.

Now, it will be asked, Why is not such a yoke broken? The Finance Committee of the last legislature had refused to consider a resolve appropriating $14,000 to the Art-School. They had heard that many of its graduates are unemployed, and regarded the founding of the school as premature. A member advised the preparation of a circular, in order to get light on the question when it should come before the legislature. At the proper time a copy of this circular was sent to each member of the Senate and House, but was abstracted, I will say, while in the hands of the legislative postmaster, *not* suppressed before printing, as was stated at a special meeting of students called by the managers of the school to express approbation of the system. And that is the point "*Normal* Art" has reached thus far in Massachusetts.

The chief incubus on those who oppose this sort of art is the money interest in text-books on art-education, and the great expectations of remunerative employment. At present the school is inefficient either as a training school for teachers or for designers—not, as I believe, from want of ability or earnestness in the students. The school is no longer free, there being a charge of $20 a year. A debt of $20,000 has been incurred by the managers during the past year, which is given as a reason for the change.

If in the distant future there should come a high development of art in America, its germ will not be unfolded by compulsory methods in Massachusetts schools.

Art-Student.

Boston, Mass., May 15, 1876.

THE CASTELLANI COLLECTION.

To the Editor of The Nation :

Sir : Many interesting articles have appeared in the leading English journals during the past year, calling attention to a very fine collection of antique marbles, gems, bronzes, and gold ornaments, recently deposited in the British Museum by Sig. Alessandro Castellani of Rome, and expressing the earnest desire that they should be purchased for the nation. It was in the belief that they would remain in England that Mr. Charles Newton, who has charge of the department of antiques at the Museum, had induced Sig. Castellani to bring over these treasures, and, when he did so, showed his estimation of their value by placing the marbles near those of the Parthenon, the bronzes in the room allotted to objects of their class, and the gems side by side with those of the Blacas collection. Unfortunately for England, but perhaps fortunately for America, Mr. Newton, although backed by the best English connoisseurs (and supported by the most influential journals), failed in his attempt to obtain an appropriation from the Government ; and although Sig. Castellani was urged to allow his collection to remain for another twelvemonth at the Museum, in the hope that the purchase-money would eventually be granted, he determined to transport it across the Atlantic, and thus give the Americans an opportunity of seeing, at the Centennial Exhibition, works of antique art of a class such as had never before and may never again be seen on this continent. "It becomes disagreeable to reflect," says a writer in the *Daily News* of January last, "that all these treasures may go to America. The Americans are not likely, at least they are not usually inclined, to drive a hard bargain for what they want, and it will be a pity indeed if England lets 'Dionysus' [a marble statue of the Indian Bacchus in the Castellani collection] and the rest cross the Atlantic. He would not return, as he did from India." Now that this has happened, Mr. Editor, it cannot but be the desire of all who feel that the standard of taste in this country can only be raised by the sight of objects of the highest class, that this prophecy may be fulfilled.

The collection was offered to the British Government for £40,000, and probably might have been or may be purchased for a somewhat less amount, but however this may be, there can be no question that for us to buy it at the asking price, if it cannot be bought at a lower, would be less extravagant than it would have been for the English, as they are already so rich in such precious objects, to have done so. It might, perhaps, be too much to expect that any one of our museums should purchase this collection, although by such an acquisition it would be at once placed on a footing with the museums of the Old World ; but is it unreasonable to hope that by a joint effort, made in Philadelphia, New York, Washington, and Boston, it may be secured for the museums of these cities, and divided between them ? In this case, the trustees of these institutions might agree that the portion allotted to each museum should be exhibited for a fixed period in each of the other three museums in rotation, so that eventually the entire collection would have been seen in each of the four. The Science and Art Department in this way causes works of art of very great value from the Kensington Museum to circulate about the United Kingdom for the benefit of provincial towns, whose inhabitants would otherwise be deprived of the great advantages thus offered to them.

There are many gentlemen in New York, Philadelphia, Boston, and Washington, who have shown a lively interest in the formation of museums, whose educational power is becoming more and more widely appreciated in this country. Is it not possible that they can be persuaded to take advantage of a great opportunity, the like of which may never again be offered to them ? Can they not be induced to take steps, each in their several cities, to raise a sum of from forty to fifty thousand dollars for the purpose, and together endow America with these treasures which the Centennial year has brought within her reach ? In a few weeks they will be arranged in the three rooms assigned to Sig. Castellani in the Art Memorial Building at Philadelphia, together with a collection of Italian majolica perhaps unique in its completeness and the beauty of its specimens. There they will be visited by persons who have the growth of our nascent museums at heart. Let us trust that having come, and having seen, they will determine to make every effort to save the antique collection at least from being taken back to Europe. If so, I would suggest that subscription papers be opened under the auspices of the trustees of each of the museums above-mentioned, and that both by word of mouth and by articles in the newspapers, the importance of making the intended purchase be urged upon the public ; and this not purely on artistic grounds, as calculated to foster an appreciation of the beautifu—lin itself an incalculably noble object—but also on industrial grounds, as a measure sure to lead to that improvement in taste which will more and more demand that what we use, whether to clothe ourselves, to adorn our persons and our houses, or to minister to our daily wants, shall be excellent in color, in form, and in design. Why is it that Signor Castellani's brother, the famous Roman jeweller, sells his beautiful gold ornaments to appreciative purchasers from every part of Europe ? Rome is full of shops where objects made of the same precious metal and of equal weight are to be bought for a third of the price asked at the Palazzo Poli. To this all the world knows the answer. Castellani of Rome has collected together and studied the counterparts of these exquisite antique gold ornaments from the sepulchres of Etruria, which his brother has brought to America. Who can say that, if we keep them in our museums, our goldsmiths will not so profit by the study of their technical and artistic perfection, as to be able eventually to make works of their own worthy to be classed with those now made at Rome by the first goldsmith of his time ?

It is not my intention to enter into any detailed description of the Castellani collections. I only desire, by raising a corner of the veil which still hides them from view, to give a faint idea of the treat which lovers of the beautiful in art have in store for them. The gold ornaments consist of rings, clasps, ear-rings, bracelets, necklaces, coronets, and the like, whose historical sequence increases their collective value. The oldest, found chiefly in tombs at Cervetri and Chiusi, represent an early stage of that peculiarly Etruscan granulated work which, at a later time, attained that maximum of technical delicacy and artistic elegance shown in the wonderful specimens from Metapontum and Tarentum in Magna Grecia, and from Volci in Etruria. Two necklaces, with clasps made of butterflies in particolored enamel, and a row of ear-rings with pendant enamels of birds and animals, may be cited among many examples of the use of colored enamels to enrich gold, which had previously been the goldsmith's only material ; and two vine branches with grapes formed of pearls, and a large bracelet whose clasp is shaped like a shrine with a deity seated in it, as equally typical of a later time, when that love for splendor, massiveness, and show, which came in with Alexander, marked all products of art with such sure signs of decadence. These, with Roman jewellery of Imperial times, and the Byzantine specimens which abound in the Castellani collection, enable us to trace the goldsmith's art from its rise to its decline, from the tombs of Etruria to the palaces of Byzantium.

Besides these precious objects, there are Roman rings, rings from the Ionian Islands and from Syria, as well as rings mediæval, altogether more than three hundred in number. There are also two hundred engraved gems, both cameo and intaglio, some of them of the greatest beauty, as well as Roman medallions in gold and silver of the utmost rarity. I have left myself but little space to speak even cursorily of the marbles and bronzes which Signor Castellani has brought us. Among the first are busts of Euripides, Dionysus, and Apollo ; a large statue of the Indian Dionysus, like the bearded Bacchus (called Sardanapalus) at the Vatican. But the gem among the marbles is a statue found on the Esquiline during the recent excavations, representing a boy taking a thorn from his foot. This, as all agree, is a masterpiece of art, differing from the more ideally treated bronze of the same subject in the Capitoline Museum in being singularly realistic in treatment. It is an undoubted original, and from its peculiar character may be supposed to be a product of the school of Pergamus, which flourished as late as the second century before our era.

Among the bronzes are twelve cists, probably used to contain mirrors, combs, strigils, sponges, and other articles needed at the bath. Such cylindrical caskets, chiefly found at Palestrina, are decorated with incised compositions, for the most part of Greek subjects. One of the Castellani cists, however, forms a peculiarly interesting exception to this rule, as the subjects engraved upon it are taken from that cycle of Italian legends which supplied Virgil with material for the later books of the Æneid. To Mommsen and other historians who maintain that these myths had no root in the hearts of the primitive Romans, the sight of a composition representing "Æneas pointing to the slain Turnus and claiming the hand of Lavinia from her sire," engraved by an artist who lived centuries before the days of Virgil, must be one of those stumbling-blocks which chance sometimes throws in the way of the archæologist to upset theories from which he is reluctant to part.

Want of space obliges me to speak very briefly of Castellani's collection of Italian majolica, which, with the single exception of that at South Kensington, is of all collections of its kind the richest and the most complete. Its origin is made clear by many fine examples of Hispano- and Siculo-Moresque glazed ware, the work of Arabian potters. Among these are specimens of Castel-Girone manufacture, made in Sicily by the Moors, a century before Luca della Robbia discovered his celebrated stanniferous enamel (1435). Of Italian majolica proper, the collection contains an immense number of rare

pieces from the factories of Pesaro, Faenza, Urbino, Castel Durante, Modena, and Rome, many of which give monograms and dates hitherto unknown. They thus furnish the student of majolica painting with valuable materials for its history, while from the beauty and admirable preservation of the objects which bear them, they give him fresh reason to admire this charming art. Among them are the iridescent plates of Maestro Giorgio Andreoli; the richly colored platters of Orazio Fontana and Francesco Durantino, adorned with grotesques and arabesques; and a dish with cover, in the shape of a tortoise, which is described in a record found in the Mantuan archives, dated from Pesaro in 1660, as having been purchased by the Duke of Modena, then on a visit to the Signora Contessa Violante. This is but one of many examples of majolica ware in the collection which are historically as well as artistically precious.

A few pieces are added to it of those rare objects, the first specimens of European porcelain manufactured in the small workshop established in the Boboli Gardens, at Florence, by the Grand Duke Francesco I. about 1580. One of these is described, in the introduction to Mr. Fortnum's 'Catalogue of Majolica in the South Kensington Museum,' as "exceptionally fine and interesting."

In concluding this hurried notice of the Castellani collection, I would urge all who love beautiful things to visit it, and express the hope that among the many who will do so, a large number will come away with the firm resolve to do all in their power to secure it for the museums of the United States.—Your obedient servant, C. C. PEKKINS.

BOSTON, May 12, 1876.

Notes.

HARPER & BROS. have just published the fifth volume (for the year 1875) of Prof. Spencer F. Baird's 'Annual Record of Science and Industry.' The plan of the work is unchanged, and its merits are so well understood that it is only necessary to allude to the extension given to the preliminary résumé, which here fills 272 pages against 186 last year. ——*Nature*, for April 27, continues its admirable series of scientific portrait-vignettes with a head of Sir Charles Wheatstone, which is accompanied by the usual biographical sketch. It is curious to notice that, like Herschel, he was the son of a musician, and that his optical pursuits were preceded by an apprenticeship in the manufacture of musical instruments.——The *Geographical Magazine* for May gives an account of the reception of Lieut. Cameron by the Royal Geographical Society. The explorer's journey from Lake Tanganyika to the Atlantic, which had already been mapped in the *Magazine* for March, is also delineated, on a smaller scale but more artistically, in Petermann's *Mittheilungen* for April 5. No. 61 of the Berlin Geographical Society's *Zeitschrift* gives a map of Kerguelen Island, based upon the surveys of the German frigate *Gazelle* during the Transit-of-Venus expedition. Some account of the natural history of this desolate but interesting locality, by Surgeon J. H. Kidder, U.S.N., attached to the American expedition, has been published in the *Bulletin* (Nos. 2 and 3) of the U. S. National Museum.——Three French works of considerable magnitude and importance are now in course of publication. One is a 'Dictionnaire raisonné d'Architecture et des Sciences et Arts qui s'y rattachent,' by Ernest Bosc, to be completed in four volumes 8vo, or 2,000 pages in all, and to be illustrated with 4,000 wood-cuts in the text, besides sixty engravings and forty chromo-lithographs (Firmin-Didot). Another is 'Les Travaux Publics de la France,' including roads and bridges, railroads, rivers and canals, seaports, buoys and light-houses, edited by five engineers of the Ponts-et-Chaussées, under the direction of their inspector-general. The five chapters just enumerated will each be accompanied by fifty photographs (permanent prints), and will each make a folio volume. The views are in part reproductions of those exhibited at Vienna by the Minister of Public Works (J. Rothschild). Finally, we may call attention to the 'Encyclopédie des Sciences Religieuses,' edited by Prof. Lichtenberger, with the assistance of numerous Protestant colleagues, among whom MM. Gabriel Monod and E. de Pressensé are best known in this country. It will make from ten to twelve volumes 8vo, or from 8,000 to 10,000 pp. (Sandoz & Fischbacher). Mr. F. W. Christern receives subscriptions for all the above.

—We note the publication of the first number of the *Quarterly Bulletin* of the Nuttall Ornithological Club, published by the club at Cambridge, Mass.—the first American magazine exclusively devoted to ornithology. This makes, we believe, the fourth periodical of the kind at present published, there being one in England, another in Germany, and a third in India. The appearance of the new journal is very creditable to the young club, and the articles themselves are well abreast of current literature upon the subject. It is proposed to issue sixteen to twenty-eight 8vo pages quarterly, with a colored plate to each number if possible. Contributions may be sent to H. A. Purdie, State House, Boston, and subscriptions ($1 annually) to H. B. Bailey, No. 13 Exchange Place, Boston. The *Bulletin* deserves to succeed, and we hope those interested will see that it does.

—"Prizes for Arboriculture" are offered by the trustees of the Massachusetts Society for Promoting Agriculture, a thousand dollars for the best plantation of not less than five acres of larches, or, on the coast, of Scotch or Corsican pines, on land worn-out or otherwise unfit for agriculture; also, six hundred dollars for the best similar plantation of American white ash. The gratuitously-distributed pamphlet in which these prizes are announced reprints Professor Sargent's 'Suggestions on Tree-Planting,' which we noticed a few weeks ago, and adds the needful directions for planting and managing young plantations, the want of which we had called attention to. Directions for procuring young trees are also given; and Mr. Francis Skinner, a young gentleman laudably interested in this enterprise of public utility, offers to transmit orders and see to the importing of seedling trees, in lots of 1,000 or more, for any intending planter in the State, whether or not intending to compete for these prizes. Second and third prizes are also offered.

—The Kindergarten, if not always a luxury, is on the other hand not always a convenience, while it is seldom presided over by a teacher thoroughly trained or naturally fitted for the task. Too often it is little more than a high-priced nursery. The machinery of the Kindergarten, however—the various "gifts" of Froebel—has a distinct value apart from any teaching, and we are glad to see that Mr. E. Steiger, who is a very ardent and disinterested advocate of the system, has published a series of "Kindergarten occupations for the family." They are very attractively put up in four boxes—one containing a number of assorted sticks for laying in different forms; another, a supply of mats for weaving; a third, leaves of paper ruled in small squares, with perforating needles and cushion for making symmetrical designs; and the last, a slate similarly ruled for pencillings. Diagrams accompany each box, and with their aid any child can amuse himself and exercise his imitative powers to good effect, while there is large scope for native ingenuity. Mr. Steiger is quite right in saying that these "occupations" are a proper substitute for toys, dolls, and other playthings, and will be found promotive of domestic quiet "during vacation, inclement weather, sickness, etc." And few will dispute that, even without a teacher, they are also valuable "as a first means of acquiring manual skill, artistic taste, and a love of study."

—In *Lippincott's* for June there is a slight but interesting paper on "Modern Huguenots"—in other words, the Protestant populations of the High-Alps in France as seen in a hasty tour—by James M. Bruce; and the paper "At Chickamauga," by Robert Lewis Kimberly, should also be singled out as descriptive writing excellent of its kind, in reading which, however, one cannot but feel that a sketch-map would have made the narrative both clearer and more impressive. General Rosecrans is not spared, while General Wood is vindicated, and General Hazen appears as the leader of the forlorn hope that rescued Thomas and saved the day. In *Harper's*, Mr. Holly continues his articles on "Modern Dwellings," and the second number (on color decoration) may be praised like the first, with some reserves. The medical and sanitary progress during the first century of the Republic is reviewed by Dr. Austin Flint, with ample knowledge and authority; with characteristic geniality, too, which makes him in one passage appear to uphold our existing schools of medical instruction as being quite the best in the best of worlds. He also very decidedly takes part in the ether controversy, by assigning the credit of the discovery to Horace Wells, of Hartford. While recording the fact that the leading medical text-books in this country are of American authorship, he refers to the obstacles encountered by this literature in every stage of its growth, in consequence of the absence of any international copyright. This "favored the republication of works by British in preference to those by native authors, the former having the advantage of a success already acquired, and the reprint requiring no royalty." Dr. Flint accounts for the dearth of purely scientific investigators on the ground that the exigencies of time and space and increment of population in this country have compelled the vast majority of those who pursue medical studies to "have chiefly in view the duties and responsibilities of the practitioner." The article closes with some speculations as to the next epochal discovery in medicine, which Dr. Flint is inclined to think will be the demonstration of "the nature of what are called the special or specific causes of disease"—a result foreshadowed by the tentative "germ theory." As for the coming physician, he "will

not be regarded even as much as now in the light of a mere prescriber of drugs," but rather, "in a higher point of view, as one on whose judgment people will be content to rely in the interdiction as well as in the prescribing of drugs."

—During the months of February, March, and April of last year a very systematic and thorough enquiry into the health of the public schools of Philadelphia was made by the Board of Public Education of that city, the results of which are now before us in the form of a pamphlet of 37 pages, with eight very large tables. Four hundred and twenty-three schools are represented by reports from their principals, besides which, twenty-nine have been specially visited by a volunteer corps of physicians, who have presented the facts from a medical point of view. The greatest plainness of speech has been used, both by teachers and physicians, in mentioning points of bad construction or drainage, lighting, warming, and ventilation. In glancing at the column of general remarks, we find such expressions as "intolerable," "unfit for a school-house," "air poisonous from privy smell," "several pupils became almost sick from confined air when the windows were closed a few minutes," besides severe complaints of various other evils, such as overwork, neglect of recess or gymnastics, excessive heat. Beyond doubt, the authorities have found a great many more faults to remedy than were suspected to exist. The total is even alarming in extent and variety, but we are informed that much improvement has been effected since the report was published. Such a sanitary inspection is needed by every city in the Union, by none more so than our own; and it is very greatly to the credit of the authorities of Philadelphia that they have led the way and shown how the thing should be done. Students of school-hygiene will find interesting material in the report.

—Mr. Sidney Lanier, moved by "the inexcusable disregard for the proprieties of a dignified occasion and for the laws of respectable behavior" shown by certain newspapers in their remarks on his 'Centennial Cantata,' has printed a long letter in the *Tribune* to show that his work was "at all events a faithful attempt to embody the status of poetry with regard to the most advanced musical thought of the time, made upon carefully evolved laws, and with clear artistic purposes." This statement of his object indicates the defect alike of his poem and of his letter. No one accustomed to use words with precise and definite meaning could speak of a poem as an attempt to embody the status of poetry with regard to musical thought or anything else. Mr. Lanier's poetic sensibility and serious purpose cannot make up for the lack of clear expression in his writing. This lack is the evidence not so much of want of practice in composition as of discipline in thought. His letter contains much that is interesting in regard to the extension of the capacity of the modern orchestra, to the relation of the voice as a solo instrument to the other instruments of the orchestra, and to the nature of musical interpretation. But the most important part of it is vitiated by a fallacy prevalent at the present time among loose thinkers concerning music. He affirms that the ideas in every poem intended for a musical accompaniment should belong only "to that class of intellectual conceptions which is capable of being adequately expressed by orchestral instruments." But music is not capable of adequately expressing any strictly intellectual conceptions; its function is not that of definite expression of ideas, or even of emotions. At its best, it can do nothing to express ideas; it can but arouse emotions in harmony with certain broad, intellectual conceptions. The subject is too large a one to be fully discussed in a note. Mr. Lanier has at least succeeded in showing that the difficulties of writing a good poem for musical accompaniment have been increased by the vast development of the powers of the orchestra, and that, with all his good-will, careful legality, and artistic purpose, he did not succeed in writing one that is universally approved.

—In the number dated April 29, 1876, of *Notes and Queries*, Dr. Edward F. Rimbault sheds a little light upon the history of the English national anthem, "God Save the Queen." He says that the authorship of the words is all matter of conjecture. Mr. Bartlett credits them to Henry Carey. Dr. Rimbault says that Carey "is totally out of the question," and that "all the improbable stories told of Henry Carey in connection with the national anthem were got up regardless of truth, mainly to serve poor George Saville Carey, and perhaps get him a pension; but they signally failed, as it was just they should." Henry Carey died in 1743, and the earliest trustworthy notice of the introduction of the words to the public is to be found in a letter of Benjamin Victor to David Garrick, dated October, 1745, which says they were sung to an old anthem tune. Now, in the word-book of the Academy of Ancient Music for this same year, 1745, Dr. Rimbault has found a Latin chorus, to which an English version is appended. In both structure and sentiment this chorus seems the original of "God Save the King," which could hardly have been known at that time, or it would have been appended instead of the version given. Earlier songs resembling in some sort the English anthem have from time to time been discovered, but Dr. Rimbault notes a new one, which he considers the earliest, from a rare black-letter volume printed in London, 1578, which prays for Queen Elizabeth and the confounding of her foes. That the music is older than the words, and probably of the sixteenth century, there would seem to be but little doubt.

—The blaze of semi-Oriental splendor in which Disraeli seems determined to envelop the Indian Empire will probably rather puzzle the natives than impress and overawe them. The progress through the country made by the Prince of Wales has been no doubt a fine show and pageant, but it is not by any such means that the English power in India has in time past been gained or increased. The theory of the pageant seems to be that the Indians are greatly affected by show and external display, while in reality they are accustomed to show and external display, and they are accustomed to it entirely divorced from real power. What they are unaccustomed to and afraid of is overwhelming power without external display. In the last century, when Clive and Hastings were consolidating the power of England in the East on a lasting foundation, the French tried the use of pageantry without the slightest success. "It well deserves attention," says Lord Mahon, in his 'History of England' (vol vii., p. 292), "that the greatest of the English in India—the rulers whose sway over the minds of the natives has been strongest—did not resort to or rely upon those pageantries in which the natives are supposed to take delight"; and he quotes as a witness the account given by a Frenchman, who adopted the Mussulman religion, of the futile magnificence of M. de Bussy and other French chiefs in the Deccan. Bussy, it seems, always wore a dress of rich brocade, with embroidered hat and shoes; his table, always in plate, was served with three, often with four courses; he sat upon a kind of throne, with the arms of his king in relief; and whenever he stirred from home he was mounted on an elephant, preceded by a band of musicians singing his feats of chivalry, and followed by two head-chobdars reciting his eulogium. On the other hand, "Colonel Clive always wore his regimentals in the field, was always on horseback, and never in a palanquin; he had a plentiful table, but noways delicate, and never more than two courses. He used to march mostly at the head of the column with his aides-de-camp, or was hunting at the right and left. Governor Hastings always wore a plain coat of English broadcloth, and never anything like lace or embroidery. His whole retinue a dozen of horse-guards; his throne a plain chair of mahogany, with plenty of such thrones in the hall; his table sometimes neglected; his diet sparing and always abstemious; his address and deportment very different from pride, and still more so from humility." It would probably not have occurred to the mind of any real Englishman to attempt to keep up or increase the English state in India by having the Queen called either Malikah, Malik, Sultana, Shâhin-Shah, Padisha, Mahârani, Adhirâja, Samrâj, Râjadhirâja, or Empress, or by sending the Empress's son to make a sort of progress through the country; but that it should have occurred to Disraeli to try a little brummagem Orientalism cannot be surprising to any one who is familiar with the peculiar character both of style and thought barely burlesqued by Thackeray in 'Codlingsby.'

—Mr. Howells's 'Foregone Conclusion' has just been published by August Auerbach, Stuttgart, as the first volume in his "Library of Transatlantic Fiction." Its German title is 'Voreilige Schlüsse.' The same house has also added to its volumes of Parkman, Franklin, Taylor, etc., Mr. Emerson's 'Neue Essays' ('Letters and Social Aims'). In this case the introduction has been furnished by Julian Schmidt, who takes up once more at some length the comparison between Carlyle and Emerson, between whom there is so little to compare and so much to contrast. Mr. Schmidt writes, as he could not help doing, with discrimination. Speaking for himself, he says: "Freilich, wenn ich mich über einen bestimmten Gegenstand belehren will, so ist Emerson der Letzte, den ich aufschlage"; but, on the other hand: "Wenn ich Emerson lese, so kommt es mir so vor, als ob ich mich in der besten Gesellschaft bewegen: ich fühle mich auf das lebhafteste angeregt," etc., etc. The author's note inserted in fac-simile is worth reproducing entire. It is dated at Concord, Feb. 24, 1876:

"I owe to Mr. August Auerbach, whose agreeable acquaintance I made during his visit to America, the honoring proposal of addressing my village thoughts to the most intellectual of nations. If I could repay to any German reader any part of my limited but precious debt to his countrymen, it would give me sincere satisfaction. R. Waldo Emerson."

—Under the title of 'Zeitfragen des christlichen Volkslebens' a series of pamphlets devoted to the interests of the Evangelical Church in Germany is to be published by Zimmer in Frankfort. The subjects thus far announced—"Socialism," by Dr. Geffcken of Strassburg; "The Creation of the World and the Laws of Nature," by Professor Pfaff of Erlangen; "The Beginnings of Mankind," by Dr. Ebrard—are sufficiently comprehensive and weighty, and a clue to their treatment is given in the first number, which ably and not intemperately discusses the delicate subject of "Christianity and the Press." The article, which is by Dr. Mühlhäusser, one of the editors, deplores the irreligious and anti-religious character of the German press, and the support given it by lukewarm Christians, but, as might be expected, fails of practical suggestions as to the establishment of a prosperous "Christian" press. The writer anathematizes more particularly the purely literary journals of the calibre of the *Gartenlaube*, which in Germany, more than elsewhere, form the staple of the intellectual food of the masses, and whose enormous circulation entirely overshadows that of the political papers. Thus, while but two of the latter—the *Kölnische Zeitung* and the Berlin *Volkszeitung*—reach a circulation of 30,000, the *Gartenlaube* has more than 300,000 subscribers, the *Illustrirte Familienzeitung* 200,000, the *Modenwelt* 165,000, *Über Land und Meer* 150,000, the *Bazar* 140,000, and *Kladderadatsch*, the most sensible and scholarly of humorous newspapers, 50,000. Dr. Mühlhäusser contrasts the activity of the Catholics in the field of journalism with the indifference of the Protestants. The *Germania*, the chief political organ of the Ultramontane party, has 7,000 subscribers, the *Kölnische Volkszeitung* 8,400, the *Neue Augsburger Zeitung* and the *Bayerische Courier* have each 10,000, and the *Mainzer Volksblatt*, a weekly, has 25,000.

—The sixth report of the committee having in charge the excavations at Olympia comes to us in a Berlin newspaper of May 6. We make the following extract, which is especially interesting as describing the metope, the discovery of which had been communicated by telegraph a week before, and which, it appears, was unexpectedly found in clearing the pavement of the temple:

"It is a marble tablet one metre high by one and one-half metres long. . . . On the left, in a serious attitude, stands a virgin, clad in a long robe reaching to her feet; her right arm, the fingers of the hand slightly parted, falls by her side; the head is turned toward the right; her wavy hair is covered by a hood; her left arm is raised aloft. Immediately adjoining, and with his back turned toward her, and seen wholly in profile, is an unclothed man, bearing a burden; the bearded head is bent forward, coming into view between his two arms, which are raised to steady the burden. Opposite him stands Herakles, stretching forward his right arm, with three apples (the apples of the Hesperides) in his hand. The left arm is broken, the rest of the relief in admirable preservation—*e.g.*, the head with the pointed beard; the locks of hair; the fillet surrounding the forehead. Some pieces which at first appeared to be wanting from the lower left-hand corner of the relief have since been found. This work, both as regards its subject and the style of its execution, is of peculiar value. The middle figure can be no other than Atlas, whose head it has been supposed was among the fragments found by the French in 1827, and now in the Louvre."

Private letters from the architect Adler to a friend in Berlin report that the impression made by the temple ruins, as far as disclosed, is extremely imposing, and that the sculptures are of even greater value than he had anticipated. It is also mentioned that the plain of Olympia, for so many centuries deserted, has already become once more a place of pilgrimage. Visitors, no doubt mostly Greeks from the neighboring villages, have flocked thither during the Easter season to the number of four hundred to five hundred daily. The excavations will be prosecuted until the end of May.

MACAULAY.*

I.

NOTHING is more interesting than Macaulay's own estimate of his own powers:

"My accuracy as to facts," he told his sister, "I owe to a cause which many men would not confess. It is due to my love of castle-building. The past is in my mind soon constructed into a romance. With a person of my turn, the minute touches are of as great interest, and perhaps greater, than the most important events. Spending so much time as I do in solitude, my mind would have rusted by gazing vacantly at the shop windows. As it is, I am no sooner in the streets than I am in Greece, in Rome, in the midst of the French Revolution. Precision in dates, the day or hour in which a man was born or died, becomes absolutely necessary. A slight fact, a sentence, a word, are of importance in my romance. Pepys's 'Diary' formed almost inexhaustible food for my fancy. I seem to know every inch of Whitehall. I go in at Hans Holbein's gate and come out through the matted gallery. The old parts of London, . . . those old gates and houses down by the river, have all played their part in my stories."

These words should be put side by side with his candid admission that his mind was not strong in critical analysis:

"There are," he writes to a friend, "extensive classes of subjects which I think myself able to treat as few people have treated them. . . . I tell you what I sincerely think when I say that I am not successful in analyzing the effect of works of genius. I have written several things on historical, political, and moral questions of which, on the fullest reconsideration, I am not ashamed, and by which I should be willing to be estimated; but I have never written a page of criticism on poetry or the fine arts which I would not burn if I had the power. Hazlitt used to say of himself, 'I am nothing if not critical.' The case with me is directly the reverse. I have a strong and acute enjoyment of works of the imagination, but I have never habituated myself to dissect them."

These passages should be studied by any one who wishes to understand either the nature or the limits of Macaulay's extraordinary powers. The prevailing taste of the moment inclines many so-called cultivated persons to underrate the originality of his genius. But the verdict of time will ratify the judgment of the multitude of his readers, and pronounce him the greatest historical narrator who has written in English. The first condition of his success lies in that capacity for living in the past on which Macaulay lays such emphasis. He is unlike other historians primarily in this, that he had associated, so to speak, for years with the persons of whom he writes. When he says in one of his letters, "I know no more of Scott than I know of Dryden or Addison, and not a tenth part so much as I know of Swift, Cowper, or Johnson," he touches incidentally upon this peculiarity of his mind. The men of whom he wrote—Chatham, Burke, or Hastings—were of his acquaintance. He might exaggerate their merits or their vices, but his partiality or unfairness was like the love or the hatred which most men bear only to their contemporaries. His comments on his books are very like the remarks most persons make on their friends or associates, and it is easy to believe Mr. Trevelyan's statement that his uncle "disputed" with the authors whom he read.

The immediate source of this familiarity with bygone times is, as becomes immediately apparent from Macaulay's life, his extraordinary gift of memory, and the use to which from boyhood upwards he constantly put it. Without exaggeration, it may be said of him that from early childhood—from the days when he lay on the rug reading a book and eating bread and butter—he was collecting facts for his history. After the manner of a child, he learnt the phrases of the past before he understood them. At four years of age he offered Mrs. Hannah More a "glass of old spirits, and when questioned as to what he knew about old spirits he could only say that 'Robinson Crusoe often had some.'" This capacity for seizing hold of literary expressions appears simply grotesque when it leads a young gentleman of four or five to answer a lady, who asks him whether he is much hurt by some hot coffee spilt on his legs, "Thank you, madam, the agony is abated"; but it is nearly allied to another quality absolutely essential for success in historical narration. At a time when most youths may consider that they do very well if they can express themselves in writing plainly and grammatically, Macaulay had already acquired a style of which a trained writer might be proud. His early command of language came undoubtedly in part from his early familiarity with literature, but there never was a writer whose style was more completely the natural expression of his mode of thought. Knowledge of the past and precocious literary skill might have produced a mere book-worm who could pour forth in good language the stores of his erudition. Something much more than this is needed for a great historian. The rarest and noblest feature of Macaulay's intellect was what, for want of a better word, may be termed its matchless lucidity. You cannot take up a letter or a memorandum in which this quality is not at once apparent. It is very closely connected with the decision and manliness which shine forth in every transaction of his life. His letters to his father and mother when not more than fourteen express his meaning in language as clear and as decisive as any which he has used to describe the scenes of history. In another respect, his style and mode of thought are curiously related to one another. His delight in illustrations is one of those traits which no imitator ever misses, but which it is most dangerous to imitate. Macaulay's illustrations are the overflow of a memory to which one fact always suggested, by the mere force of association, a whole series of analogies and examples. In the hands of imitators the use of illustrations is a trick of style, causing labor to the writer and disgust to the reader. In this, as in some other respects, Macaulay's own criticism on his style is emphatically true. It is a good style which has run very near being a bad style. Unbounded information, immense literary skill, perfect lucidity of intellect, made Macaulay such an

* 'Life and Letters of Lord Macaulay. By his Nephew, G. O. Trevelyan, M.P.' London: Longmans & Green; New York: Harper & Bros. 1876.

historical narrator as will not be produced again for ages. The gifts by which his works were produced are rare; nor will any candid judge doubt that the works themselves are immense achievements. A great literary performance is, like any other work of high art, its own justification. It were absurd to ask what was the good achieved by the labors of Herodotus, Thucydides, or Tacitus. To interest ages or multitudes in the past is in itself a feat which none but men of genius can achieve, and in the achievement of which genius, however high, may find full satisfaction. But even the direct effects of work like Macaulay's are not slight. National life can hardly exist without knowledge of national history. To the mass of Englishmen Macaulay revealed the great deeds of their forefathers. Every man or transaction of which he wrote is impressed on the memory of the nation. The events which he has not recorded, the statesmen or authors whose pictures he has not drawn, are all but unknown to English readers. Whoever will candidly ask himself how much he knows of Clive or Warren Hastings which he has not gathered from Macaulay's Essays will appreciate the debt due to the great historian, and feel how great the calamity that the one man who could have narrated the history of England died while his tale was not half told.

Macaulay himself was, as we have seen, aware that his forte did not lie in literary analysis. That his turn of mind was not "critical" was, however, true of him in a wider sense than that in which he used the term, and this comparative deficiency in analytical power affected both his reputation among his contemporaries and the character of his historical work. It certainly diminished his immediate influence among what are called the "cultivated" classes both at home and in this country. You cannot take up a single writer who at the present moment meets the literary taste of the day without perceiving traces of the prevailing passion for analysis of character. Novel-writers gratify this taste by subtle descriptions of the motives which are supposed to actuate their heroes and heroines. Historians are expected to meet the wishes of their readers by profuse employment of the art of sympathetic criticism. With this prevalent fashion (for it is little more than a fashion) Macaulay's whole tone of mind was thoroughly out of sympathy. He could tell the tale of English history as no one else has ever told it; but he had neither the power nor, it may be added, the wish to give hypothetical versions of the play of motive which may, for example, have led Charles I. to fancy that he was observing the law when he was breaking through every principle of the constitution, or to suggest vindications for the crimes of Strafford or for the intolerance of Laud which would have probably been incomprehensible to the Minister and to the Archbishop. This want of harmony with the tone of the day diminishes Macaulay's influence at the present moment. The partisan pamphlets which Mr. Froude has published under the name of histories have done more to mould or distort contemporary opinion than the whole mass of Macaulay's writings. It is, however, not to be regretted that Macaulay neither aimed at nor won the kind of success which rewards a pamphleteer. Nor can we profess to lament with an estimable critic that the great historian's talents did not include the possession of that "touching quality, the presentiment of the Eve—the feeling of the difficulties which will engage and distract mankind on the Morrow." Such presentiment, whatever be its worth, is incompatible with calm study of the past, and becomes utterly worthless when the "morrow" has become numbered among long-forgotten yesterdays. Whether Thucydides or Herodotus had shown a prevision of the wants of the next generation of Athenians or Spartans is a matter of no moment to generations to whom Athens and Sparta are known through the writings of Thucydides and Herodotus. That Macaulay's turn of mind lessens at the present time the weight which he exerts over opinion in England or America is a matter neither of moment nor deserving any special regret. What is of much more consequence is to note the way in which the nature of his intellect affected the character of his history. His most ardent admirers may admit that it lessened his success in dealing with topics such, for instance, as theological controversies, where what is needed is at least as much capacity for analysis as narrative power. His treatment of ecclesiastical parties has been not unfairly described by one of the acutest of modern critics. "He was fair," writes Mr. James Martineau, "to all, because in sympathy with none. Judging them simply as objective phenomena springing from past thought or passion, he looks at them not from the interior position which gives them meaning, but from the stage which exhibits their effects."

Another point to be borne in mind is that Macaulay belongs to the class of narrative rather than of critical historians. He must be compared rather with Livy than with Thucydides. Among the men who have narrated history he may claim the very highest rank; but his strength did not lie in what may be called the criticism of history. By this assertion we do not mean to imply either that he was credulous, or that he did not possess the capacity for estimating the weight of evidence. The very contrary is the case. Prejudice may occasionally have biassed his judgment, but, as a general rule, his decision as to the weight to be attached to evidence was, it may be suspected, far more sound than that of the various minute critics who, on the strength of special study of particular questions, have from time to time assailed his general conclusions grounded on immense general knowledge of his subject. What we do mean is that he considered the duty of an historian to be mainly that of a narrator, and that he did not consider the solution of the problems presented by past events to be the special task of the writer who narrated them. No man, for example, knew better than Macaulay how markedly different has been the position occupied by the English nobility from that held by the foreign *noblesse*. No author understood better the exact point of the contrast, or could, if he chose, bring it into more striking relief. If a man such as De Tocqueville had dealt with English history, he would certainly have given his whole attention to the solution of the question how it came to pass that the English nobles were not a *noblesse*. Macaulay never deals with the problem. Few questions again are more perplexing than those presented by the temporary success and the permanent failure of the Puritans. How did it happen, for example, that the party never rallied after their overthrow on the Restoration? The question, no doubt, may be answered. What is for the present purpose noteworthy is, that Macaulay never really attempts to answer it. Take any part of Macaulay's history the critic pleases, and the result, we venture to say, will be the same. Macaulay will be found to have devoted all his powers to the narrative of events, but neither to have searched for nor solved the problems which the events suggest.

To say that Macaulay belongs to that class of historians who are narrators rather than critics of past events is, it should be remembered, rather to define the limits of his genius than to detract from his reputation. The power of narrative and of analysis are rarely combined, and it is well to bear in mind that the primary and most important duty of an historian is not to propound theories, but to narrate facts. The value of the theories must almost inevitably pass away; the value of the facts remains. The speculations, for example, of Thucydides are interesting as a monument of genius; but our knowledge of politics and society and human nature is necessarily greater than his, and it may be doubted whether the naïve narrative of Herodotus is not of more worth to the world than even the most ingenious reflections of the writer whom Macaulay held, and no doubt rightly, to be the greatest of historians. Those, however, who still think that Macaulay's mode of treating history prevents him from taking rank in the very first line of historical writers will, it may be suspected, admit that his mode of treatment was the natural result of the character of his mind, and that he showed in his literary work, as in other parts of his life, the soundness of his judgment in devoting his powers exactly to the tasks which he was best qualified to perform.

TWO MILITARY MEMOIRS.*

THE 69th, 71st, 72d, and 106th Regiments of Pennsylvania Volunteers were raised principally in Philadelphia, and were formed into a brigade under Col. E. D. Baker in the fortifications of Washington in September, 1861; their terms of service expired before Petersburg in the summer of 1864, and for these three years, under different commanders but always as one organization, they shared the varying fortunes of the Army of the Potomac, on the Peninsula, at Antietam, Fredericksburg, Chancellorsville, and Gettysburg, and in Grant's campaign of 1864. It is to record their part in these campaigns that the first book named below was written.

To the survivors, and to the friends of those who perished from camp and prison diseases, and of those seven hundred whose names are recorded as killed in battle, the story will be interesting from personal associations; but to a much larger audience it is instructive, as being a vivid description of the actual life of a volunteer organization and of its daily experiences, in battle, on the march, in camp, and on the picket line. In a country whose military policy is to keep a small regular army, barely sufficient in time of actual hostilities to form the *cadres* of an immense volunteer force, a certain knowledge of military drill can be disseminated by an efficient militia organization like that of New York; but for a conception of the actual movements in war, the dangers and hardships of a soldier's life, the feelings and thoughts of the soldier himself in a campaign, we

* 'History of the Philadelphia Brigade. By Charles H. Barnes, late Brevet Lieut.-Col. and Ass't Adj't-Gen. of Volunteers.' Philadelphia: J. B. Lippincott & Co. 1876.
'The Life of Gen. Thomas J. ("Stonewall") Jackson. By Sarah Nicholas Randolph.' With illustrations. Philadelphia: J. B. Lippincott & Co. 1876.

must turn to books of this class, written by men who saw constant service in the war, and describing the particular share of the organizations with which they served in the grand military movements.

The volume before us is one of the best of its kind; it does not profess to criticise the campaigns, but gives a faithful picture of the American volunteer soldier, and of his transition from the recruit, firing at random upon his own people in his first night's march, to the cheerful and brave veteran, who still retains his supposed right of discussing his superiors while he obeys their orders; who patiently endures any hardship when he understands that it aids in the success of a movement; who assaults a position four times in an afternoon if ordered to do so, but who makes up his mind pretty clearly after the first attempt whether he will be successful or not, and accordingly fights with vigor or without it; who learns instinctively to intrench his position without orders, and submits to discipline because he appreciates the advantages of it and not because a higher authority requires it. Such a man may be a very different character from the well-drilled and even intelligent machine of the best European armies, but his character is one of the factors in the problem of any future war; and any regimental memoir which explains this character and records the deeds of a gallant body of men, makes a positive addition to the science of war as well as to the history of the Rebellion.

Thomas J. Jackson was born at Clarksburg, Virginia, on the 21st of January, 1824. His early life was one of hardship, as he was left an orphan at the age of seven, and was not very congenial to the uncles to whose care he was confided. At the age of twenty he went to West Point, where he had great difficulty with his studies, his mind not being quick and his previous education having been very limited. Each year, however, he improved in scholarship, and graduated creditably in 1846. As a lieutenant in the artillery he was at once ordered to Mexico, where his gallantry was conspicuous at Cherubusco and Chapultepec. A few years of the inaction of a garrison life after the war made him welcome with joy the offer of a professorship at Lexington, which he accepted in July, 1851. Here he passed ten eventful years, during which he was twice married, and travelled for a few months in Europe. He was methodical, zealous, and conscientious in the performance of his duties, very active at prayer-meetings, very unpopular with the cadets. On the 27th of April, 1861, he was commissioned colonel in the Virginia forces and ordered to command Harper's Ferry, and from that time his whole life changed. After occupying the attention of Patterson in the Valley, he was brought to Manassas in time to take part in the battle, where his firmness gained him the sobriquet of "Stonewall"; subsequently he was ordered back to the Valley, and with great skill he defeated or neutralized largely superior forces under Banks and Shields throughout the spring of 1862. In June, he was transferred with his command to the vicinity of Richmond, and opened the attack which resulted in the seven days' battles and forced McClellan to the James River. In August, having been sent to observe Pope, he fought the drawn battle of Cedar Mountain; and three weeks later, with half of Lee's army, made the celebrated flank march which drove Pope's army from the battle-field of Manassas to the defences of Washington. Soon afterward he captured Harper's Ferry with its entire garrison of 11,000 men, and on the following days took an active part in the battle of Antietam. At Fredericksburg he commanded the right wing and repulsed the attack upon it; and at Chancellorsville, with two-thirds of Lee's army, by making a rapid march of eighteen miles, he fell upon Hooker's right flank and rear and completely routed him. At the close of this day, May 2, 1863, he was accidentally shot in the darkness and confusion by his own men, and he died a week later—Sunday, May 10. As it was his skill which dealt the Army of the Potomac two of its most crushing defeats, so his death marks the period of the last Confederate victory.

If we turn to Mrs. Randolph's biography to find something of the hidden causes of this strange life, we shall be by turns pleased and disappointed. The domestic side of his character is brought strongly forward, and we readily see that in ordinary times he was a man to be completely misunderstood; his tenderness and kindly disposition made him beloved of his friends, but his shyness, his lack of geniality, and the almost morbid character of his religion, made him appear to strangers cold and unsympathetic. But in the times when men's souls are tried all this was as nothing; it was then that his great force of character, impelled by a single idea—God and his country, as he understood it—transformed him into one of those men whom others love to follow and obey, and in whose presence they have a feeling of protection. The more strictly military part of the book is not so successful. It shows a lack of technical knowledge which results in giving too great prominence to the minor details and not enough to the important features, and thus confusing the accounts of battles and campaigns. This is particularly noticeable in the history of the first year of the war, and it is rendered still more bewildering by the bravado and exaggeration as to the relative numbers of opposing forces, which were so common then but are out of date now. As the war runs on, and both sides settle down more steadily to work, the tone of our author's descriptions changes materially, and for the better; and, finally, the account of the battle of Chancellorsville and the wounding of Jackson (including the extracts from other biographies and the papers of the day) is wonderfully graphic and vivid.

But little is said of politics beyond applauding Virginia for her course about secession. This was, perhaps, to be expected; but it might better have been omitted, as contributing little or nothing to the fame of Mrs. Randolph's hero. It is enough to say of him that he was one of two men from Virginia who contributed more than any other two from the South to what chances of life the Confederacy ever had. These two men are still worshipped as heroes in the South; and their former enemies at the North, while holding fast to the idea that they made a great and terrible mistake, already yield them respect for their sincerity, their high personal characters, and their unselfish devotion to the cause which they supported.

A General History of Greece, from the earliest period to the death of Alexander the Great, with a sketch of its subsequent history to the present time. By George W. Cox, M.A., author of 'Tales of Ancient Greece,' 'Mythology of the Aryan Nations,' etc. (New York: D. Appleton & Co. 1876. 8vo, pp. 709.)—Mr. Cox's reputation as a scholar and as an historian made it quite certain when it was announced that he had undertaken a history of Greece that the work would be well done. In this expectation we are not disappointed. It is a pity, however, that this 'General History' of Greece is not a complete one, like Mr. Merivale's of Rome. Some disappointment was felt even that Mr. Grote did not bring his work down to a later period; and Mr. Cox stops a generation earlier than he—for the two brief chapters, twenty-three pages in all, which embrace the centuries from the death of Alexander to the present time are a mere mockery. Especially in view of Mr. Freeman's eloquent vindication of the neglected annals of the Achæan League, the book seems very incomplete. In everything else it may reasonably be expected to rank as the standard short history of Greece; for the later ages it is inferior to President Felton's edition of Smith.

Mr. Cox is best known by his studies in Comparative Mythology, and this is probably his favorite field. Nevertheless, we cannot help thinking him at his best in narrative and political history. In mythology he had a hobby, which he rode very hard, and the result was an aspect at once exaggerated and one-sided. If the present work is comparatively free from these faults, it lacks, on the other hand, unity of conception in its treatment of this subject. The chapter upon Grecian mythology, presenting in the main the same view as his earlier works, only with more soberness, is preceded by a chapter upon "The Growth of Hellenic Civilization," which appears to be based upon Coulanges's 'Cité Antique.' Now, there is no real contradiction between these two views, for both are true; but they point to two totally different origins of the Grecian religion, and it is the business of the historian to show their consistency with one another. This connection is, in fact, the most profound and important fact in the early religious history of the Greeks. Mr. Cox, in his earlier works, wholly ignored the one side; M. Coulanges almost wholly ignores the other. In the present work we have both present, each in its own chapter, but with nothing to show their relation to one another. The fundamental principle of the one chapter is the identity of "the gods whom they worshipped" with "their own ancestors." But the reader will be puzzled when he turns over the page to find a totally different theory of the religion and a totally different set of gods. M. Coulanges—incidentally and briefly, it is true—solves the problem. Mr. Cox does not.

Again, when he comes to the legislation of Solon, Mr. Cox would have done well to adopt Coulanges's view without any debate, instead of gravely discussing the question whether, at the beginning of the sixth century before Christ, there was "a class of professed money-lenders" at Athens, who took mortgages upon real estate. M. Coulanges's description of the *Seisachtheia* is one of the best single points of his book, and is the only explanation of this act consistent with the view of ancient society presented, for instance, by Mr. Maine. The fact is, Mr. Cox's interest in comparative studies has been confined to mythology, and is rather narrow at that, while of the cognate comparative study of institutions he appears to have a very inadequate notion.

The history of literature and art is scarcely touched upon. As this was evidently upon a deliberate plan, it is hardly a matter of criticism; where

they do come in, in direct connection with political events, they are very well treated. The chapter upon Socrates, for example, who was not merely a philosopher, but whose death was an event of moment in history, is a long and very good one. Demosthenes, on the other hand, has some just and forcible paragraphs devoted to him, but one cannot but feel that he deserves a fuller treatment.

There are some good maps and plans. The system of spelling proper names is on the whole as satisfactory as any that could be adopted, but why do we have, in a metaphor, "the Seiren's strain"?

Life Histories of Animals, including Man; or, Outlines of Comparative Embryology. By A. S. Packard, jr. (New York: Henry Holt & Co, 1876. 8vo, pp. 241.)—This work consists of the series of articles on embryology lately published in the *American Naturalist*, and here gathered in a convenient volume, with the addition of chapters on man and other mammals. The whole series has been carefully revised for the present purpose of affording advanced students and teachers a concise yet sufficiently comprehensive view of the development of animal forms from lowest to highest. The author's established reputation guarantees the reliability of the work, which may be used to the best advantage in connection with the ordinary text-books of comparative anatomy, since these, as a rule, contain little—at any rate, little to the point—concerning the surprising changes undergone by most animals before birth. The greater part of the treatise relates to the lower forms of life, more than two hundred pages being devoted to the various classes of evertebrates. As an example of the author's method of treatment, as well as of his advanced views, we may instance his illustration of the several types of structure which our own species successively represents during intra-uterine life: beginning with "a minute mass of protoplasm, like a moner," it passes through the stages of the egg, morula gastrula? ascidian, amphioxus, fish, reptile, mammal, and monkey. A valuable feature of the work is found in the numerous references to the literature of the subject, which point the way for further investigations. The volume is profusely illustrated with woodcuts, always clear and instructive, and often of much artistic excellence. Like the same gifted naturalist's 'Guide to the Study of Insects,' the present work cannot be too highly recommended as one deserving a place among our standard text-books.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*
Art-Journal for June	(D. Appleton & Co.)
Baird (Prof. S. F.), Annual Record of Science and Industry for 1875	(Harper & Bros.)
Bourdon (Mme.) Real Life	(Kelly, Piet & Co.) $1 50
Bancroft (G.), History of the United States. Vol. I	(Little, Brown & Co.)
Dawson (G.), Pleasures of Angling	(Sheldon & Co.)
Day (H. N.), Elements of Psychology	(G. P. Putnam's Sons) 1 50
Eliot (George), Daniel Deronda. Vol. I	(Harper & Bros.)
Forney (J. W.), Centennial Commissioner in Europe	(J. B. Lippincott & Co.)
Furtwängler (Dr. A.), Der Dornauszieher und der Knabe mit der Gans, swd	(L. W. Schmidt)
Grane (G.), Der Mangel an Theologen, swd	(L. W. Schmidt)
Hartmann (R.), Die menschenähnlichen Affen, swd	(L. W. Schmidt)
Index to Scribner's Monthly, 1870-1875	(Scribner & Co.)
Jannasch (Dr. R.), Die Volks-Bibliotheken, swd	(L. W. Schmidt)
Lamers (A.), Der Moorrauch und seine Culturmission, swd	(L. W. Schmidt)
Lipschitz (R.), Bedeutung der theoretischen Mechanik, swd	(L. W. Schmidt)
L'Art, Revue Hebdomadaire Illustrée	(J. W. Bouton)
Maine (H. S.), Village Communities and Miscellanies	(Henry Holt & Co.) 3 50
Morse (Mrs. L. L.), The Druniard's Journey, swd	(Congregational Pub. Co.) 6
Naumann (E.), Die Tonkunst in Venedig, swd	(L. W. Schmidt)
Pettenkofer (Dr. M. von), Outbreak of Cholera among Convicts, swd	(L. W. Schmidt)
Portfolio for May	(J. W. Bouton)
Peacock (T. B.), The Vendetta and Other Poems	(Topeka)
Phillips (G.), Addai, the Apostle	(Trübner & Co.)
Pulpit Gems (E. S.), Defects in House Drainage, swd	(A. Williams & Co.)
Pearson (C. H.) and Strong (H. A.), Student's Grammar	(Samuel Mullen)
Scribner's Monthly, 1875-1876	(Scribner & Co.)
Tenney (E. P.), Silent House	(Congregational Pub. Co.) 1 00
Tuttle (H.), German Political Leaders	(G. P. Putnam's Sons) 1 50
Toutain (P.), Un Français en Amérique, swd	(F. W. Christern)
Vogel (A.), Anaprüche des Landbaues auf Steuer- und Zollentlastung, swd	(L. W. Schmidt)
Walker (Prof. F. A.), Wages Question	(Henry Holt & Co.) 3 50
Withers (G.), English Language Spelled as Pronounced, swd	(Trübner & Co.)

Sir Henry Sumner Maine.

VILLAGE COMMUNITIES, AND

Lectures, Addresses, and Essays. 8vo, $3 50.

Prof. Francis A. Walker.

THE WAGES QUESTION. 8vo, $3 50.

Thomas Hardy.

THE HAND OF ETHELBERTA.

A new Novel. 16mo, 'Leisure-Hour' Series.

Theodore Winthrop.

The SUN for the Campaign.

The events of the Presidential campaign will be so faithfully and fully illustrated in THE NEW YORK SUN as to commend it to candid men of all parties. We will send the WEEKLY EDITION (eight pages), post-paid, from June 1 till after election for 50 cents; the SUNDAY EDITION, same size, at the same price; or the DAILY, four pages, for $8.

Address THE SUN, New York City.

Nelson & Phillips,

805 BROADWAY, NEW YORK,

HAVE ISSUED

THE MODERN GENESIS: Being an Enquiry into the Credibility of the Nebular Theory, of the Origin of Planetary Bodies, the Structure of the Solar System, and of General Cosmical History. By Rev. W. B. Slaughter. Large 16mo, $1.

LAWS RELATING TO RELIGIOUS Corporations. A Compilation of the Statutes of the several States of the United States in Relation to the Incorporation and Maintenance of Religious Societies, and to the Disturbance of Religious Meetings. By Rev. Sandford Hunt, D.D., author of 'Hand-Book for Trustees.' With an Address on Laws affecting Religious Corporations in the State of New York. By Hon. E. L. Fancher, LL.D. 12mo, sheep, $1 50.

A FULL STOCK OF

Books in Foreign Languages.

Subscriptions for Periodicals.

SCHOENHOF & MOELLER, Importers and Publishers, 40 Winter Street, Boston.

Catalogues sent on application.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 34½ Pine-street, New York.

BOOKS AT LONDON PRICES. Now Ready; Catalogue No. 8 of Rare, Valuable, and Curious Books, free on application.

JOHN EVANS, Importer, 194 Fulton St., Brooklyn, N.Y.

TWO AUTOGRAPH LETTERS, one of Washington, the other of Jefferson, for Sale. Address SHELLMAN, Box 72, Westminster Md.

FOR any Book Desired or Information respecting Prices and Editions, address LOCKWOOD, BROOKS & CO., Boston, Mass., who will promptly reply. Books carefully forwarded, post-paid, on receipt of advertised price. Send for catalogue of our own publications

PARK AND GARDEN DESIGNS, Plans for the Improvement of Rural Property; photo-plated copies furnished at short notice.

H. F. KRAUSE, 52 Broadway, New York.

Rare Engravings and Etchings..

E. DEXTER, 73 NASSAU STREET.

Botany of California.

The first volume of this work, forming one of the series of the publications of the State Geological Survey, under the direction of J. D. Whitney, will be ready June 10. The volume, of 650 royal 8vo pp., comprises the *Polypetalæ*, by W. H. Brewer and S. Watson, and the *Gamopetalæ*, by A. Gray. Price $6. The second volume, completing the work, is in preparation.

LITTLE, BROWN & CO.,

254 Washington Street, Boston.

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O.

Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price.

SCIENTIFIC BOOKS.—A Descriptive Catalogue of Practical Scientific Books sent free on application.

The Nation.

NEW YORK, THURSDAY, JUNE 1, 1876.

The Week.

THE Michigan and California Democrats have held their conventions, and adopted platforms strongly in favor of hard-money and civil-service reform. The delegations are for Tilden, as are almost all the delegates already chosen who are distinctly in favor of any candidate. In New York an anti-Tilden movement has developed itself lately, but on the whole cannot be said to have much strength outside the office of the *World* and the Court of Appeals. The success of his Canal campaign ought to make his party in his own State support him, if they wish to have their professions of reform taken to mean anything at all; for he has done what no man or party has before been able to do, in reducing the canal tax—which has gone as high in past years as three millions—to nothing. It looks now as if he would carry the St. Louis Convention almost on the first ballot, and we trust that the Republican reformers who are going to Cincinnati will recollect that in putting up a candidate for their own party, they must put up one who will not merely be better than Conkling or Morton, but fit to run against Mr. Tilden, who is himself a formidable candidate for any one to run against, and will have behind him what no Democrat has had for a long time, the almost solid vote of the South.

The Illinois Republican Convention distinguished itself by inserting in its platform a currency plank which declares that "the Republican party has given to the people the best system of paper currency ever devised, and would deprecate any legislation that might, by any possibility, cause a return to the system of paper currency in existence before the war." This is one of the best examples of the art of platform-making as developed in our day. It is equally false in its facts and in its suggestions; and while expressly framed to commit the party to no expression of opinion on the question of a return to specie payments, it offers a bait to the rag-money voter which may be disavowed at any time after the election. As the "best system of paper currency ever devised" goes well with the "best civil service on the planet," it is singular that the Convention did not declare for Mr. Morton but for Mr. Blaine.

We have no wish to push Mr. Blaine with charges, and have been willing to accept without question thus far all that he has said in explanation of his connection with the Arkansas & Fort Smith and the Union Pacific Railroads, while wishing most sincerely that there had been nothing to explain; but we must say his answer to the correspondence published by Mr. Aquila Adams leaves much to be desired. It appears from his own letter that after "the Jay Cooke contract had been perfected, and additional legislation had been obtained," he at the time (Nov., 1870) being Speaker of the House, "by a strange revolution of circumstances" he found himself "again able to control an interest" in the Northern Pacific Railroad, and thereupon offered it for $25,000 to certain Boston gentlemen. The offer was accepted, and the money paid, but he failed to deliver the stock, and in a year had to return the $25,000. It appears, too, that he had a year previously spoken to the same gentlemen about the same matter. In the letter he gives a glowing account of the prospects of the road, and commends the stock as extraordinarily cheap under the circumstances, and says that as he himself "can't touch it" he offers it to his friend. Now, what we should like to know, but what he does not tell us, is this: Why should the Speaker of the House occupy himself in peddling the stock of a land-grant road in "small flyers" of $2,500 each? How, if it was not proper for him to "touch it"—that is, become the purchaser of it at a fair price—could it be proper for him to "control an interest" in it? What does controlling an interest in it mean? Does it mean that he had "a call" on it at a certain price? If so, how did he acquire it? Who was the person who had it for sale, and for whom Mr. Blaine received the money "in trust"? If the transaction was a lawful one, why does not Mr. Blaine give his name? Why wait for this person "in due time to declare himself"? What, in short, is the meaning of all this mystery? It may of course prove that the transaction was a perfectly honorable one, but he ought to be frank about it, and not wait for the story to be dragged to light by investigation, and he ought not to be in pecuniary relations with anybody whose name he cannot reveal. Of the scandal of his selling stock in this way, and "controlling interests" in new railroads chartered and endowed by Congress, there can, unhappily, be no question whatever; and that Mr. Blaine should attempt to defend it is fresh illustration of the bewildering effect of the last ten years' speculation on the minds of even clear-headed and well-meaning men.

The Senate on Monday reached the conclusion that it had jurisdiction in Belknap's case, and accordingly the proceedings will be renewed to-day. The majority was of only 37 yeas to 29 nays, and might almost be called a party majority, the Republicans in opposition having the aid of but two Democrats and one Independent. Mr. Morton and Mr. Conkling were prominent in denying jurisdiction, while Mr. Cameron asserted it in the good company of Messrs. Edmunds, Morrill, and Sherman. Mr. Thurman moved the resolutions, which, with some amendments, were finally adopted. There are so many reasons why both parties are not anxious to let the impeachment proceedings run into the summer, that postponement seems more than probable. Either way, the case will serve the Democrats as a handle during the coming campaign.

Besides the Schenck report, Congress has had before it very little of general interest. Mr. Kerr has been accused of having sold a cadetship, but the proofs do not yet seem to be of a convincing kind. The House Banking and Currency Committee have agreed to recommend the passage of Mr. Randall's bill authorizing the purchase of silver bullion to the extent of $20,000,000, but the deadlock on the Appropriation Bill is already beginning to loom up as the most serious question in the immediate future. Mr. Randall, at the beginning of the session, announced his intention of cutting down the expenses of the Government $40,000,000, and in his appropriation bills he has cut down the estimates of the Departments right and left to a great extent, by a wholesale reduction of salaries. The Senate, not merely in the interest of good government, but also as being the body which fills the offices, objects to this kind of economy, and there is at present small hope of agreement between the two Houses, except after long disputes and conferences.

The Committee which has been investigating General Schenck's connection with the Emma Mine, finds that in November, 1871, he became a stockholder and director in a Company formed in the country to which he was accredited for the purchase of a mine in the country he represented; that this is the first instance in the history of the Government in which such a thing has happened; that these facts give rise to three questions: Whether such a connection is in itself proper; whether General Schenck's relations to the vendors of the Emma Mine "have been such as to cast suspicion upon his motives and subject his action to unfavorable criticism"; and whether his subsequent action in connection with the Company or its shares was compatible with his diplomatic position. In answer to these questions, the report goes on to show that the mine was floated for Park, Baxter, and Stewart, in London, by "Baron" Albert Grant, and that before he undertook it Schenck's promise to become a director had been obtained by Park, and that, in Grant's own language, he was induced to undertake the enterprise because Schenck had agreed to lend "the weight of his name, given in ad-

dition to the influence of his official position," to the Company; that, as director, he made himself responsible for all the statements of the prospectus, including that with regard to 13,250 tons of first-class ore "already developed"—an amount which, in addition to the one year's dividends actually paid, would have yielded two more years' dividends, which, for some reason or other, have disappeared; that the terms of Schenck's secret arrangement with Park were a loan by Park of $50,000 for a year, without interest, to enable Schenck to take up shares, dividends at 18 per cent. being guaranteed by Park, and Schenck having the right to "unload" his shares on Park at par within the year, and Park having the right to relieve himself of his guarantee by offering to take them back at par. "The practical result of this arrangement," the Committee say, "was to give General Schenck a bonus of 24 per cent." on his stock. Schenck also agreed to assign to Park 475 shares as collateral security, and to give him a mortgage on real estate in Washington; but this was not done.

The Committee further find that probably, though this "may have been forgotten by General Schenck," and was denied by him flatly, the note and guarantee were executed first, and the stipulation of Schenck to give security was executed afterwards—a resolution of enquiry having meantime been introduced into the Senate; that the reason why Park was willing to make such a peculiar arrangement was that he wanted to "identify" the American Minister with the sale, though there is no evidence to show that General Schenck knew or suspected any fraud; that, having thus placed himself in a false position, he made it still worse by concealing his contract with Park, though this contract contained stipulations which as vendor and as trustee he was bound to make known to the purchasers and stockholders; that his telegram to Mr. Fish, saying that he had paid "dollar for dollar" for his shares was not a correct statement of the facts; that Mr. Fish's reply, condemning the advertisement of his name as director, calling upon him to resign, but at the same time exculpating him from blame on the assumption that the advertisement of the Company was not his act, but that of the agents of the Company, without consultation with him, was in reality a sharp rebuke, inasmuch as the prospectus was, contrary to this assumption, issued and advertised with his full knowledge and consent; that Schenck's resignation was sent in on the 6th of December, but not made public till the 12th of January; that the letter of resignation first prepared was rewritten for him by Park, so as to amount to an endorsement of the high character of Park & Co., and to convey the impression that Schenck withdrew on "personal" grounds, and not because his Government had informed him, as was really the case, that his connection with the Company was "ill-advised and unfortunate," and ordered him to withdraw; and, finally, that Schenck, besides all this, speculated in the stock with Park and General Woodhull, his secretary of legation. The Committee, therefore, unanimously reported a resolution which "condemns" the action of General Schenck in becoming a director of the Emma Company, "and his operations in connection with the shares of the said Company, and the vendors thereof, as ill-advised, unfortunate, and incompatible with the duties of his official position."

This report, which, it will be seen, makes none of the inferences that might have been made as to Schenck's complicity in the frauds of Park and Stewart, is the unanimous finding of a Committee representing both political parties, and was accompanied by a stinging speech from Mr. Hewitt, who has done the real work of investigation and cross-examination, in which he reviewed in plain language the history of the fraud from the beginning, and exhibited Park, Stewart, and Grant, and the other swindlers, in their true characters. The unanimity of the report is very gratifying, as it leaves no doubt about the facts, and its calm and judicial tone spares us all unpleasant doubts as to its impartiality. There are no rhetorical passages in it, either, such as might have been feared in a report to a Democratic House, proving that the scandal was the result of "fifteen years of Republican misrule" and "radical tyranny," nor any rebutting rhetoric from the minority showing that things were worse "under the Pro-slavery régime" than they are now, and that all the corruption which has been exposed since the Rebellion was caused by "the party that brought on the war."

We can hardly find fault with the manner in which the Committee acquits General Schenck of all fraudulent intent, as this was probably necessary to secure unanimity, and as the remorseless summing up of the evidence and the report itself contain the gravest condemnation in every line. But we do not think it ought to go out to the world, without a word of comment from any quarter, as an accepted view, that a gentleman of General Schenck's age and antecedents can be as simple-minded as the Committee charitably set him down. He is sixty years old, with long experience of Washington politicians and lobbyists, and has played many a night of poker with some of the ablest gamblers in the country. That he was, therefore, taken in by Park and Stewart, and could not guess what these worthy fellows were driving at, and did not understand the exact nature of their arrangement with him, is an hypothesis of such boldness and breadth that it cannot help General Schenck's reputation, and we doubt whether on the whole he would not himself have preferred being described as a downright knave. Our object in going back to it now, however, is to warn all other diplomatists that this lenient view of the case is not likely to be taken more than once, and that representatives abroad of all ages must hereafter keep a sharp lookout for the "President of the National Bank of Vermont" and all other pious-looking lawyers with mines for sale. The plea of simplicity is exhausted.

Those who have followed the history of this scandal are aware that the fact which finally determined General Schenck to "assist," as he calls it, in the Emma Mine was the connection of the Portuguese Minister, his "esteemed friend" the Marquis de Saldanha, with the sale of a Lisbon tramway company in London, and the advertisement of the Marquis's name as a director in a prospectus offering the shares for sale. This tramway has been brought up at intervals of six months by General Schenck's defenders, for the last six years, as a conclusive proof of his innocence and the well-recognized right of Ministers to engage in the operations of "floating" stocks on the markets of the countries to which they are accredited. It never seemed to occur to them that the tramway (which was put on the market with the help of Albert Grant) might itself be open to suspicion. But it now turns out so, and Grant is being sued in London by the stockholders for fraudulent misrepresentation, concealment, and bribing the newspapers. The tramway was floated, it seems, in much the same way that the Emma Mine was floated, the contract with Grant himself being concealed, and the newspapers being liberally paid for "puffs." Grant's counsel have consented to a verdict in one case for $5,000, and there are eighty more suits pending. This unfortunate occurrence will, no doubt, open wide the flood-gates of slander, and certainly in a great measure deprives the Saldanha precedent of its moral weight.

The Senate Committee on Railroads have made a report on the relations between the Pacific Railroads and the Government which shows the principal of the bonds issued to them to amount to $64,623,512, and puts the total amount of interest which will be due from the companies, "on an average, in 1898, or at the maturity of the bonds," at $116,322,321. Against this the amount which the Committee think the Government can count upon from half the transportation money, and five per cent. of the net earning, is only $550,014 05 annually from the Union Pacific, and $320,496 21 from the Central Pacific. These sums, the report shows, are not sufficient to pay off the Government, while at the same time the Committee think that the power of Congress to provide means for payment in any new way is very doubtful. They therefore propose the passage of a bill authorizing the surrender by each of the Companies to the Government of 6,000,000 acres of their land-grants at $2 50 per acre; the ap-

plication of the $30,000,000 supposed to be represented by this transaction against the bonds; the crediting the Company with the amount now due it and withheld for Government transportation up to the 31st of December last; and the payment into this sinking fund of $375,000 semi-annually by the Union Pacific, and $425,000 by the Central. The lands to be surrendered are situated in Utah, Nevada, Nebraska, and Wyoming, and there can be little doubt that the Government will find great difficulty in selling them at either $2 50 or fifty cents an acre. In fact, the proposed bill amounts to a gift to the railroads of $30,000,000, and there are no "claimants" in the United States that are less in a position to ask favors of the Government. The roads were built really out of Government money, and the Companies have already got far more than they had any right to ask for in the relinquishment by the United States of its first mortgage lien. The construction of the roads was involved from first to last in scandals which covered the whole country with disgrace; and if the Companies cannot, after all the swindling and purchase of Congressmen that has gone on, and with their monopoly of the transcontinental traffic and eight per cent. dividends on stock issued for nothing, pay the money borrowed of the Government with anything better than worthless land, it would be at least worth while to push the matter in the courts first, and know the reason why.

Mr. William R. Taylor, the Granger Governor of Wisconsin, who, if we remember right, fired a salute of a hundred guns in honor of a decision by the State Supreme Court of the constitutionality of the Granger laws, has met with a misfortune, and, in fact, has had his pretensions as a reformer thoroughly exploded. A committee of the legislature has been investigating him, and has discovered that, on the last day of his term of office as Governor, he drew upon the State for several hundred dollars' worth of stationery, and thereupon retired to his farm carrying his plunder, in the shape of pens, pencils, ink, paper, envelopes, etc., with him. There seems to be some disposition in Wisconsin to grieve over this, as if it was another "fall"; but, in fact, Mr. Taylor fell—if, indeed, he ever occupied a position from which he could fall—when he joined the Grangers in a scheme to swindle strangers, who had honestly invested their money in enterprises protected by the laws of the State, out of their property. There is nothing unnatural or deplorable in a Granger turning from one form of swindle to another. The deplorable thing is that people should be found weak enough to trust the professions of a man who declares he is going to rob with one hand, and that he will reform and purify the Government with the other.

Among the important commercial events of the week were (1) the immense sales of dry goods by auction in this city, (2) the activity in the export of grain and provisions, and (3) the reduction of passenger fares by the trunk lines of railroads. The auction sales amounted to nearly 25,000 packages, of which the money value was from $2,500,000 to $3,000,000; the prices obtained were considerably below the cost of the goods, as these were made when cotton was three and four cents per pound higher than now. The sales were, however, regarded as encouraging, because with cotton at its present price the goods can be duplicated at a small profit, and because it was shown that there is a market at some price for an unlimited amount of goods. The low railroad freights, together with rumors of war in Europe and the consequent advance in gold to 113 @ 113¼, account for the activity in the export of breadstuffs; the shipments have been chiefly to England, although a considerable amount has been sent to the Continent, notably to France. The reduction in passenger fares by the trunk lines shows that a settlement of the railroad war is not near. Rates in the money market continue very low, and the New York banks have raised their surplus reserve by the large additions of legal-tender notes to nearly $14,500,000. The paper "dollar" has ranged, according to gold measurement, during the week between 88⅜ cents and 88⅝ cents. Silver in London has ruled at 52 @ 52¼d. per ounce. Small change is still scarce, and commands a premium of 1 @ 2½ per cent. The London and Continental markets for securities have been unsettled during the week by rumors of war. British consols declined 1¼ per cent. because, it was said, the Rothschilds, who have facilities for getting hold of state secrets, were selling. Part of this decline was recovered, but the apprehension of war remains.

The full text of the note of the three Powers to Turkey has come out, and provides a two months' armistice; the restoration of the Christian houses and churches; the maintenance of the refugees for one year and their exemption from taxation for three, the relief to be distributed by a joint Commission of Christians and Mussulmans; the withdrawal of the Turkish troops from all but the fortified towns until the country is completely pacified, the Christians not to lay down their arms until the Mussulmans have laid down theirs; and the execution of all the conditions to be superintended by the foreign consuls. The note closes with the significant threat that if at the close of the two months' armistice the programme thus traced has not been carried out, the Powers will take such steps as to them may seem necessary. To this note, which is to be presented by Russia, England refuses to adhere, though the reason has not yet been published, and the French, who are willing to agree, accordingly call on England to propose something. It is rumored in Paris that England would not refuse to enter into an international conference on the Eastern Question.

Meantime, the Softas, emboldened by their late success in deposing the Vizier, have now quietly deposed the Sultan himself, putting in his place his nephew, the heir presumptive, Murad Effendi, who is ten years younger than Abdul-Aziz, and is believed to be much more alive to the situation of his dynasty and the empire than was his uncle. The new ruler is said already to have accepted three propositions submitted to him by the revolutionary party, which look to the institution of a permanent assembly of notables, the abolition of the seraglio, and the reduction of the civil list to 5,000,000 piastres. The change of administration is regarded in Europe as favorable to a peaceful settlement of pending questions; but the mere change itself seems, under the circumstances, more likely to encourage the insurrectionists than to dispose them to accept any terms the execution of which is left to the Mussulmans. A *coup d'état* at Constantinople will naturally appear in Herzegovina as fresh evidence of the Turkish break-up. Nor do the promised reforms ensure financial salvation. The late reign was ushered in with a similar attempt to set bounds to the extravagance of an absolute despotism, and to ameliorate political and social conditions. It met with the half-success which is all that can be expected of Oriental imitations of constitutional and legal government. Moreover, the best intentions in the world, if they have not time in which to work themselves out, are good for nothing; and just now time is what it seems impossible for Turkey to be allowed to have.

The French Government has sustained a severe blow in the death of M. Ricard, the Minister of the Interior, who had just begun his official career most sensibly and auspiciously. He was one of the few moderate Conservatives who really believe in the Republican régime and are willing it should have a fair trial. He had just before his death issued an admirable circular to the prefects, giving them instructions as to their functions and their demeanor towards the councils-general, which must, to such of them as have served under the Empire, been strange reading. He had, too, removed the prohibition launched by his predecessor against book-pedlars, and had thus given the peasantry the only chance they can have at present of getting hold of cheap literature. Moreover, he relinquished on behalf of the Government the power given it by the late Assembly to appoint the mayors of villages, and left them to be chosen by the municipal councils—that is, appointed the persons the municipal councils presented; and he had a bill prepared before his death, and which is now probably before the Assembly, giving the election of all the local functionaries to the communes. Curiously enough, the principal papers of all parties unite in eulogizing him except the *Pays*, Paul de Cassagnac's paper, which rejoices that he is out of the way.

MR. BRISTOW AS A CANDIDATE.

MR. BRISTOW has now a great many active friends and partisans all over the country, and will have a powerful body of them in the Convention, and we should certainly not wish to discourage them, even if we had it in our power to do so. A great deal is said, and there is a great deal to be said, in his favor. The principal objection to him is that he has not been long or well known; but, as we endeavored to show a fortnight ago, this is rarely produced by persons who have any right to make it. It comes mostly from the supporters of candidates who have figured more prominently and for a greater number of years in Republican politics than he has; but they know very well that wide repute has never been considered an indispensable qualification for candidates for the Presidency in the Republican party. So that, although his obscurity may be a sufficient reason for not nominating Mr. Bristow, it is not a sufficient reason, under the party traditions, for preferring to him any other candidate now on the stage. As to the matter of fame, indeed, it may be said that a man of whom but little is known, and that little all good, is on the whole a safer choice than a man of whom a great deal is known, and half of it bad.

Nevertheless, it does not do to choose anybody for any office blindly, and no amount of inquisition about Mr. Bristow or his antecedents can be considered impertinent or superfluous. But we are sorry to observe that what of it there is now going on is directed exclusively or mainly to the question of his Republicanism. It seems to be supposed by many good people that if he is a good Republican, and there is no danger of his "Johnsonizing," as it is called—that is, adopting Democratic or semi-Democratic views after he gets into the Presidential chair—it is all we need to know about him. But those who talk in this way apparently forget that there is no doubt of General Grant's Republicanism, or of Mr. Morton's, or of Mr. Logan's, or of Mr. Conkling's, or of Mr. Simon Cameron's. The faith of all these gentlemen is sound. Not one of them is in the least danger of "Johnsonizing" under any circumstances. But this does not make General Grant a satisfactory President; and it does not prevent the others from being component parts of the very system against which the reformatory zeal of the country is now directed. In fact, it is safe to say, in the light of recent experience, that the sounder the Republicanism of a politician is in our time, the more apt is he to be untrustworthy in other matters. For instance, it will be found a rule which has but few exceptions, that the greater a man's horror of the Democrats, and the deeper his sense of the importance to the country of continued Republican rule, the less will be his disposition to see anything wrong in the civil service or any good in the investigation of abuses. It is well, therefore, that the candidate of the Republican party should be a good Republican, but this is not enough, and this would not necessarily indicate the possession of any other virtues—not even that of humane feeling towards the freedmen, for the swindlers of the Freedmen's Savings-Bank are all as sound in the faith as Mr. Sumner himself was, if we were to take their own word for it.

Now, while we, as our readers know, by no means undervalue Mr. Bristow's services in the Treasury as a pursuer of fraud against the Government, these services simply create a strong presumption that he is the right man for the Presidency at this juncture; they are not complete proof of his fitness. Such abuses as the whiskey frauds cannot, as we pointed out when they were first discovered, be permanently and effectually repressed by the vigilance and fidelity of any one man. It is the custom of civilized states in our time not to rely on the vigilance and fidelity of any one man for the protection of its revenues, but to provide a system of administration which shall promote vigilance and fidelity among all its servants. If Mr. Bristow had died or been dismissed from office when the whiskey thieves were being brought to justice, we should have been just where we were before the prosecutions. In Turkey and Persia, when the Vizier is a good man there is good government; when he is a bad man there is bad government. But no Christian state ought to be exposed to these vicissitudes. We are entitled to a *system* which will deliver us from dependence on any one person's zeal or courage. But whether Mr. Bristow is or is not heartily in favor of a new system or not, we are not as yet fully informed. He may be said to be in favor of "civil-service reform," and yet not satisfy the needs of the time, because the phrase civil-service reform is used in different senses by different people. As Messrs. Conkling and Morton use it—for they too use it—it means what they call "putting none but good men in office"—that is, appointing nobody who is not well recommended by Senators and Representatives friendly to the Administration. We have, however, had abundant experience of this kind of reform, and it is because the country is not satisfied with it that there is any movement in favor of Mr. Bristow at all.

We think, therefore, his friends ought to let the country know a little more clearly where he stands on this point. We feel quite sure he would, if elected to the Presidency, not tolerate fraud or corruption in any shape wherever he could see them, and would enforce a better accountability and more circumspect behavior among his immediate subordinates and friends than we have lately witnessed in Washington; but this would give us no security as to the vast field which his eye could not reach, and in which he would be dependent, as General Grant is, on the honor and honesty of others. The machinery of this Government has become much too extensive and complicated to be kept in order by the eye of an "enlightened despot" or by a Cæsar or Providential man of any kind. The test of Mr. Bristow's fitness to represent the reform sentiment of the country would seem to be his readiness to urge upon Congress such legislation as may be necessary to establish tenure of office during good behavior, and the adoption of a proper system of qualification for office and of pay and promotion. If he will bind himself to advocate these, and at the same time to resume the exercise of the appointing power as given to the President by the Constitution, and refuse to allow members of Congress to use the public service as a means of rewarding their personal adherents, he is what the country needs as a candidate, and what the reform sentiment, if there be anything substantial or practical about it, is seeking for. But if he has not nerve enough for this, and is simply another patriotic man with good intentions who will reform the civil service if the politicians will let him, but if they will not let him will manage it in their way; or if he has no general ideas at all with regard to reform, but thinks it means simply the substitution now and again of "good men" for "bad men," when things reach such a pass as to become intolerable, not only would nothing be gained by electing him but much would be lost. But upon all these points we confess we know nothing. We desire and wait for information.

It cannot be too distinctly remembered that the failure of a reform movement is a worse thing on the whole than the prolongation of bad government. As long as respectable citizens think they can mend matters if they try, this very confidence is a powerful instrument of improvement. When it has been lost, or greatly impaired by failure, changes for the better become much more difficult, because when the good become more apathetic the bad grow more confident. It is, therefore, of the last importance that popular indignation should never be aroused without the production of some positive results. If we can get this year a President with enough force of character to leave the beaten party-track, and part company with the "machine," and put himself in thorough communion with the best opinion of the country, his failure to accomplish all we now talk of or hope for will not be very regrettable. It will be enough if he shows that the conduct of a Republican Government on business principles is not a visionary or fantastic notion. If this be established by ever so small a beginning, we may trust to popular sagacity to do the rest.

THE FINANCIAL SITUATION IN ENGLAND.

THE advices of last week from England represent the depression in the money market as having increased to an extraordinary degree, so that all securities were selling on Saturday last in London extremely low, and there was a disposition to get rid of foreign

securities at almost any price. In fact, the situation was described as "little better than a panic." The origin of the trouble goes back to the outbreak of the Franco-Prussian war in 1870, which caused enormous loss, both by the actual destruction of property and by the actual suspension of productive industry in France and Germany during a whole year. This was followed by the withdrawal of French capital from nearly all foreign investments, in order to purchase the securities issued to provide the indemnity to Germany. The disturbance and loss of confidence caused by this was very great, and the sudden outburst of the speculative fever in Germany, consequent on the increase in the volume of the currency from the receipt of the indemnity, certainly did nothing to abate it. In fact, the social and industrial disorganization wrought in that country by the compensation received for the losses of the war was so serious that the speculative period was extraordinarily brief, and left behind it a profound feeling of distrust of the future, which again was aggravated by the substitution of gold for silver as a legal tender—a process which, however necessary, was unsettling in its immediate effects. Then, too, for fully three years after the war there prevailed throughout Europe a feeling of great anxiety as to the course that would be pursued by France, and the belief was very widespread that whatever government was set up would find itself driven, as a condition of its existence, into making preparations for revenge. The state of Spain, too, in which a civil war was raging with doubtful results, seemed at one time not unlikely to bring about the interference of foreign powers, and helped, if not to increase the prevailing uneasiness, to sustain it.

In 1874, the borrowing powers of various semi-civilized governments, which had for ten years been making heavy drafts on European capital for "public improvements," were exhausted, and the creditors woke up to the unpleasant truth that about $1,200,000,000 was due to them by bankrupt governments, only a small portion of which would probably ever be paid, and, if ever, at an indefinite period. It came out in the Parliamentary enquiry made in England last year that Portugal, Turkey, Tunis, San Domingo, Mexico, Honduras, Nicaragua, Costa Rica, Venezuela, Ecuador, Peru, Bolivia, Paraguay, and some of our own Southern States, to say nothing of Spain, were in default in some shape, and, what was worse, had little or nothing to show for the money they had borrowed. The Turkish repudiation followed close on this exposure, and came simultaneously with the outbreak of an insurrection which seemed, and still seems, likely to revive the dreaded "Eastern question," which has since 1815 been the blackest cloud on the European political horizon, and the one which is sure to create the most serious complications before it can be settled. Since then, too, Egyptian credit has given way, and has been patched up by an arrangement so onerous to the debtor that its permanence may well be doubted; and the money markets were in the midst of their convulsion over it when the sudden and rapid fall of silver disordered the finances of India, and unsettled the trade with that country and with China, and filled the European countries which still used silver as a legal tender with vague alarm. When we add that, when all this occurred, four of the great nations of the world, containing a population of more than 150,000,000, were using an irredeemable paper currency, and that two of them, Austria and the United States, were trying to recover from a severe commercial panic, we see plenty of reasons to account for the present severe and widespread financial depression.

We see in some quarters a disposition to believe that, as the ten years which usually intervene between English panics is now at an end, we are about to witness a crisis like that which followed on the failure of Overend, Gurney & Co. on the 11th of May, 1866. But nobody who has given much attention to the conditions of panics can well entertain any such notion. To make a panic, traders have to be engaged in heavy and widespread operations which they are carrying on on credit, and the completion or continuance of which is suddenly checked either by a war, a famine, or some disaster in the commercial world which causes a quick loss of confidence. Speculators have, in short, to be taken *en flagrant délit*. This is what happened in 1847, in 1857, and in 1866; but this is what cannot happen now. Credit has not been suddenly overthrown in England; it has for four years been slowly declining, under a series of slight shocks, none of which was severe enough to cause absolute terror, but each of which was sufficient to inspire caution and cause weak men to abandon their ventures. The result has been that for the past year money, instead of being in eager demand—as is always the case just before a great collapse—has been a drug in all the great markets. On the 9th of May, 1866, the Bank of England rate of discount was nine per cent. This year, on the same day, it was two per cent., and we believe few persons could be found to borrow it at that. On that day in 1866 the coin and bullion in the Bank amounted to £13,156,140; this year it amounted to £26,327,853. In 1866 consols were selling at 85½—a sure sign that the need of money was desperate; this year they are selling at 96⅝. In fact, the state of things in England, as well as here, has, as far as the money market is concerned, all the marks of the post-panic period, and none, or next to none—except a readiness to sell some securities low—of the ante-panic period. There is the languor, the depression, the distrust, the unwillingness to borrow money or contract new obligations of any kind, the joy at not owing anything, the lofty indignation about extravagance and luxury, and the longing for a simple and frugal life, which almost always take possession of people in the interval between a collapse of credit and the revival of industry.

If we were asked what is the principal peculiarity of the financial depression by which England as well as other countries is just now afflicted that distinguishes it from similar states through which they have passed already, we should say that the seat of the prevailing distrust and distress was now to be found rather in the investing than in the trading class; that is to say, the large body of persons who are not engaged in buying and selling, but who are trying to increase their incomes by lending their money at a good rate of interest, are just now frightened as they have never been before. The bankruptcy of "sovereign states" is a new experience to them, and so is the complicity of ambassadors in frauds—such as has been brought home to General Schenck and to Señor Gutierrez, and will probably be brought home before long to General Schenck's "much-esteemed friend," the Duke de Saldanha. The investments of this class in foreign securities have enormously increased during the last ten years, under the influence of improvement in means of communication and of increased knowledge of foreign countries, and of the increased use of banks of deposit. The great state loans, and the guaranteed bonds, and so forth were never held as widely and by so many small holders as they are now, and to frighten them seriously checks consumption and causes a withdrawal of active capital to a degree which financiers even twenty years ago could hardly have dreamed. The situation also suggests an interesting question, which it is impossible to discuss fully at the close of an article, and that is, whether the prodigious addition made by steam and machinery to the productive power of the race has not caused production in large classes of commodities, at all events, to run ahead of the tastes and habits of the masses of the people in every country. In England, for instance, it is well ascertained that the most marked effect of an increase of wages is, in the existing state of popular culture, not to cause an increased demand for shirts, and broadcloth, and furniture, and books, but for strong drink; and one cannot help asking what would be the use of being able to provide seven shirts for the present price of one, as long as a shirt a week was as much as the average man cared to wear, or three loaves for the present cost of one, if he preferred one loaf and gin? It is very possible that this points to one cause of the existing check on production.

MR. T. W. PARK'S CASE.

THE report of the House Foreign Affairs Committee on Gen. Schenck's connection with the Emma Mine is so thorough and overwhelming an exposure that little can be added to it by further analysis or discussion, ex-

cept, possibly, a doubt whether so old a poker-player can really be of so confiding a disposition as not to have guessed the cause of Park's affection for him; but there is another branch of the subject, not actually referred to the Committee for investigation, which is of sufficient public interest to justify an examination of the evidence taken by them. We refer to the part taken in the sale and development of the Emma Mine by Mr. T. W. Park. Mr. Park, though a few years ago an obscure man, is now as great a public character as General Schenck himself. He is not merely the possessor of steamships and railroads in both low and high latitudes, but he is the possessor of a character so valuable that even in these days of commercial depression he values it at a quarter of a million, and a person so precious that in some quarters of the globe he could not show himself in the streets without rendering himself liable to legal capture by his old friends and associates. Wherever the English language is spoken, the name of Park is known. But, as with many other great men, his reputation has outrun the knowledge of the facts on which it is based. This is particularly the case with regard to the Emma Mine. We shall, therefore, endeavor to lay before our readers a brief summary of the evidence taken, doing this, as far as is possible, in the spirit not merely of impartiality but of decorous sobriety, though we must confess at the outset that some of the passages in the history of Park's connection with the mine are such as to make this task difficult.

Park and Baxter bought the mine—or, rather, began to buy the mine, for the purchase was protracted—in April, 1871, and the first question which the evidence taken by the Committee opens is, what did they pay for it, and what was the actual value of the mine at the time? Fortunately, on these points the evidence taken by the Committee is very clear. The testimony of Lyon, who claimed at the time of the sale a third interest in the property; of Stewart, his attorney; of Park himself; and of all the experts who have examined the mine (with the exception of Professor Silliman), points to the conclusion that the mine was actually worth not more than $1,500,000. This was the price at which Mr. Irwin Davis offered the mine to Park in March, 1871. This was the price, too, at which Lyon estimated the mine, as appears from the fact that he agreed to part with his third interest for the sum of $500,000. In April, Park purchased half the mine for $375,000, and in July again a further interest, at the rate of $1,500,000 for the whole mine. Park's purchase included all the ore taken out and all the plant. As corroborative evidence, the value of the ore taken out while Park owned the mine, between the time of the purchase and the sale in London, was $895,000, as given by himself, and a considerable amount of ore had been taken out before Park's purchase. On August 5, 1871, Stewart, then Lyon's attorney, wrote to Lyon advising him to agree to the surrender of his third interest for $500,000, on the ground that he would not then be "fighting for a worked-out mine"—an expression which is easily understood if the mine was worth $1,500,000, while the ore (as was in fact the case, according to Park's own testimony) was being extracted as fast as possible. The dividends actually paid to the English stockholders point in the same direction. They were in round numbers $1,000,000, and after they had been paid the mine gave out.

The evidence of all the disinterested experts goes to show that the mine is now exhausted, and was worth in 1871 exactly what Park paid for it. Mr. R. W. Raymond, who saw the mine in July, 1871, estimated its value (without taking the ore already extracted into account) at $1,000,000; and Mr. Clarence King, who examined the mine two years later, after the dividends had ceased, reported 300 or 350 tons at the outside (worth at the outside $50,000) as all "that is left of the famous Emma reserves." The opinion of Mr. W. P. Blake, another mining expert, as given by the prospectus of the Company, was that the mine compared with "the most brilliant and magnificent developments in the silver regions of Mexico and South America"; but as it appeared in a private letter written to Park and Baxter at the same time, July 27, 1871, it was, that "at the present rate of extraction the mine will soon be stripped, and for the present practically exhausted, at least for some time or until another body of ore can be found." This is all the positive disinterested evidence that we have as to the value of the mine; and we are now in a position to form an opinion of the character of Professor Silliman's report, made in 1871, on which the prospectus was based and the sale effected, and his supplementary report in 1872. According to the first, the property acquired by the Company included, in cash and ore on hand, £180,300 (which, at the rate of 18 per cent a year on £1,000,000, would have given exactly one year's dividends). Dividends were paid for thirteen months, so that, without taking into account other expenses, this money is accounted for. But Professor Silliman's first report also showed, as it was given in the prospectus, 13,250 tons of "first-class ore," and in April, 1872, he reported 8,000 additional tons discovered. This made in all more than 21,000 tons which have absolutely disappeared, and no trace of which any scientific or disinterested expert except Mr. Silliman has ever been able since to find. At $150 a ton (the rate usually referred to as probable), they would have been worth $3,150,000. These so-called "reserves," after a temporary obscuration, reappear in Mr. Clarence King's report as 350 tons.

All this evidence seems to show that Park, who is himself familiar with mining properties, must have known at the time of the sale in London what was the value of the mine, and that it was, with Lyon's share and expenses taken out, worth about $1,000,000, or, in round numbers, precisely the amount which he got out of the mine and paid in dividends to the shareholders.

We now pass to the sale in London. Park, in the course of his evidence, gave the following description of the transaction: "There never was a fairer contract for the sale of a farm or a horse, or anything else between two gentlemen, than the sale of that mine; and it was made solely on the report of Professor Silliman, who had a high reputation in England as well as here, and on facts that were known in England as well as here, on information that they had later than I had; and I believe to-day," summing up in a sentence, "that the mine was worth all it was sold for." This report of Professor Silliman's, he elsewhere repeatedly declares, was made not to himself as vendor, but to the purchasers of the mine, represented by Messrs. Coates & Hankey. We have just seen what reason Park had for believing that the mine was worth $5,000,000; how much truth there is in the rest of the statement may be inferred from the following facts:

In the first place, instead of Mr. Silliman's being the only name mentioned in the Company's prospectus as having knowledge of the mine, we find Mr. T. W. Park referred to as having consented to become one of the directors to afford the Company the benefit of his "large experience in mining generally, but especially with the working of this mine"; besides which, it appears from his own testimony that he made a thorough examination of the mine before he sold it, gave to Coates & Hankey a statement of the property before Silliman's report arrived, and considered this statement so far binding upon him that he made good with his own check a misstatement in it with regard to the extent of ore on hand. Park's statement that the mine was sold on Silliman's report is not true, and his assertion that the report was made to the purchasers is open to the serious objection that Silliman was paid for it by the vendors, that his payment was so arranged as to be a strong temptation to a favorable report, and, finally, that there were no purchasers or "vendees" in existence at the time of the report. The history of Mr. Silliman's employment was this: Park telegraphed to his partner, General Baxter, to employ him; General Baxter got one James H. Selover to attend to the details; and Selover took the Professor to Utah. Silliman was paid $5,000 down, and was promised a further indefinite sum, contingent upon the value of his services—not to the vendees, but to the vendors. He examined not merely the Emma but other mines, which work, Selover says, was done for himself, and finally Selover received $50,000 from Park and Baxter, and gave Silliman $20,000, making the latter's receipts $25,000 in all. Why Selover should have been paid any money at all, or why Silliman should have received $20,000 from Park and Baxter for examining Selover's mines, are questions on which we can throw no light; but the facts which we have given make it sufficiently clear that Silliman's report was made to and paid for by the vendors. The negotiations with Coates & Hankey fell through, and Park then was brought into communication with Albert Grant, who undertook to put the mine on the market for $500,000. Professor Silliman's report was no doubt perfectly satisfactory to Albert Grant, but Grant was not in any sense of the word a purchaser of the mine. He was really employed by Park to induce the public to take shares at a fictitious value; and to get him to do it, Park paid him half the actual value of the property. Ostensibly, therefore, Grant was a purchaser, and ostensibly Silliman was the employé of the purchasers. Really, Grant, Park, and Silliman were all agents in the sale, and this fact was concealed from the public, who were the real purchasers.

The contract between Park and Stewart as vendors and Grant & Co., dated November 2, 1871, makes this clear. According to this agreement, the mine was sold to "a joint-stock company" not in existence, but "to be formed by Messrs. Grant & Company for the purchase of the property," and for this sale at $5,000,000 Grant was to receive 20 per cent. of the capital, half the purchase-money was to be liquidated by the retention in the vendors' hands of half the capital stock (25,000 shares), and these shares, as well as all of the other 25,000 shares which should not be

taken by the public, were to be locked up in the hands of Mr. J. H. Puleston, of the firm of Jay Cooke, McCulloch & Co., for six months. During these six months Grant was to have the right to take any of the 25,000 shares not taken by the public at a discount of 20 per cent. from their par value, while the vendors were to have the right, if Grant did not do this, to take up these shares themselves on paying Grant 20 per cent. Grant also had the right to take further shares (out of those retained by the vendors) to the extent of $1,250,000 at par, and in this case he was to receive one-half the net profits on the sale of the shares. Besides this, among Grant's services, that of "sustaining the market" by the purchase of shares is mentioned, while the vendors were to have "one-sixth of the net profits realized by Messrs. Grant & Company." In this contract no vendees appear at all except a future non-existent company, while Grant was plainly the agent or partner of Park and Stewart in making the sale. That this was the view taken by Grant of the transaction is evident from the fact that after the mine was floated Grant never took any interest in the affairs of the vendees, and never, according to his own account, went to any meetings of the directors but once, when he went out of curiosity. This was not the conduct of a vendee, and, as we say, there were at the time of the agreement, and of Mr. Silliman's report, no vendees in existence.

The statement that the sale was made "on facts that were known in England as well as here" is therefore false. The public, as we have pointed out, were the real vendees, and there were many facts which were not merely unknown to them but were carefully concealed from them. The first fact concealed from them was that there were 25,000 shares locked up with the vendors—the prospectus was issued on the 13th of November, and omitted to mention this. In the second place, the name of Grant was kept back, and the bargain with him concealed—in the prospectus two firms of brokers are mentioned, one of them being Coates & Hankey, who had brought Grant into their plans, and yet nothing is said of Grant at all. But this is only a small part of the concealment. The prospectus contained the names of five English and four American directors. Of these latter three were vendors, the fourth was General Schenck, who, by a recent contract with Park, highly unprofitable to the Company, had sold his name to the concern, and of the remaining five all but one had received qualifying shares as a gift from Grant. The trustees for the shareholders were the chairman of the Company, General Schenck, and Mr. J. H. Puleston. General Schenck had sold his name to Park. Puleston received of Park and Grant $100,000. Lewis & Son, metal brokers, who sold the ore in the London market, received from Park $25,000 in paid-up shares. Messrs. Coates & Hankey, for no services (except refusing to take the mine), $50,000, and the accountants, solicitors, and brokers $20,000 more. In fact, if the stockholders had wanted at any time to get any information about the mine from sources independent of Park they could not have done it, for the agents, trustees, and servants of the vendees were all, directly or indirectly, in the pay of Park himself, the vendor.

With regard to the yield of the mine, Park is still more directly responsible for any misrepresentations that were made. According to his own evidence, on the purchase of the mine he gave orders that extraordinary efforts should be made to make the mine produce as large an amount of ore as possible. When pressed for an explanation of these orders, he told the Committee that he had at the time a favorable contract with the Union Pacific Railroad and wished to take advantage of it. But his partner Stewart, in the confidential letter to Lyon already quoted, gives a very different reason. He says: "They have worked the mine up to 80 in England by the ore they have sent, and the manner of sending it, so that I have no doubt of a sale from five to eight millions. . . . The Emma party have been working all the time to put up the reputation of the mine." It was also testified by Park that one reason why he was able to purchase half the mine for $375,000 was that he made the owners believe that by a high sale in England he would make their remaining interest very valuable. It seems evident from this that the reason why Park extracted as much ore as possible between May and September, 1871, was that he wanted to make the sale easier. Turning now to his representations on the subject, we find in his statement to Coates & Hankey the following item: "Profit on 5,636 tons produced by present owners (who purchased April 25, 1871) up to September 1, 1871, £158,268," or at the rate of £450,200 per annum. In the prospectus, however, the figures are altered. "Net amount produced: Total estimated net yield of mine from 1st May to 1st September, equal to four months' working, £231,058, or at the rate of nearly £700,000 per annum." It is unnecessary to say that the mine never produced anything like this before or since. Park admits this. The statement of the "rate" of production was, therefore, a complete misrepresentation.

Knowing now all these facts, which were carefully concealed from or misrepresented to the real vendees—*i.e.*, the purchasing public—at the time, we are prepared to put ourselves in their position, and ask this question: If in 1871 they had known all the facts with regard to the price given for the mine in America; had seen Stewart's letter to Lyon; had read the contract for the release of Lyon's third interest; had known the exact nature of the arrangement with Silliman; had seen the contract with Grant and Company; had known that the man who floated the mine, the expert who reported on it, the brokers who were most concerned in the sale, and, finally, a majority of the directors, were all in the pay of Park who sold it to them, what would they have given for the mine? The answer we take to be this—exactly what Park had given for it. The value of the knowledge which Park concealed and the misrepresentations he made, made just the difference between the price of the mine in London and the price of it in Utah.

The facts with regard to Park's dealing with Silliman cannot be properly understood without reference to his dealings with other "experts." Towards the spring of 1872 doubts began to be thrown upon the value of the property, and the shares to have a tendency to decline. Park accordingly determined to get another report, and joined to Silliman Mr. Brydges-Willyams. We have already seen what ties bound Mr. Silliman and Mr. Park together, and now we find that Mr. Willyams was enlisted in the same way. He was paid £5,000 for his report, and given in addition a "call" on 2,000 shares at par—*i.e.*, he was to have the right to demand the transfer of that number of shares to him at par, no matter what the price in the market might be. He had only to make a favorable report to make his remuneration for it what he pleased. The report sent by these two experts actually put the shares up from par or 20 (the quotation of March 16) to 31 on April 20.

Mr. Willyams, desiring society, determined to take with him another expert, and so he went to Park and asked to be allowed to make use of the services of Mr. Lawrence, whose qualifications as a mining expert consisted in his having written 'Guy Livingstone,' and for this valuable assistance Mr. Willyams said he would himself pay "if the report was favorable, because he could make it out of the mine." Mr. Lawrence accordingly went, and from the testimony of Mr. Selover it may be learnt what he did when he reached Utah. Mr. Selover, being asked by one of the Committee whether he (Selover) had anything to do with the preparation of Willyams's report at that time, replied: "No, sir, not the slightest. Mr. Lawrence and I were engaged playing cards most of the time while Mr. Willyams was examining the mine."

Park has declined to produce his accounts, so that, in estimating the chances of the swindled shareholders recovering from him, we have not the advantage of knowing what his profits were. Neither have we availed ourselves in this summary of the very important evidence of Lyon, who swears positively that Park and Stewart admitted to him on repeated occasions that the whole sale was a swindle, and who has, at every important collateral point, been corroborated in his statements by other witnesses. We have preferred to give only undisputed evidence. On this the Committee appear to incline to the opinion that Park cannot be made to disgorge his plunder. But we doubt if most lawyers familiar with the law of corporations and trusts will agree with them. We doubt very much whether any court of equity would hesitate an instant over the questions presented by these facts. Fortunately for Mr. Park, criminal breaches of trust in this country, though they may be the foundation for civil suits, are not punishable by fine and imprisonment.

THE INTERNATIONAL EXHIBITION.—II.

BRITISH PAINTINGS.

PHILADELPHIA, May 29.

GREAT BRITAIN has sent the most adequate and the best arranged and catalogued of the foreign exhibits. The admirable order of the hanging, the importance of the specimens, and the easy reference, added to the rarity of British pictures in America, make this department the most really interesting, as it is so far the most popular, in the whole display. There are over two hundred and fifty works exhibited in oil and water-color, and the selection is a real effort to show British art to America in a national, and not a commercial, spirit. It is probable that this strong patriotic movement, resulting in an impressive demonstration, and foiled by the mean and shoppy look of several of the Continental exhibits, will open a market for British art in this country, now practically closed to the dear and peculiar-looking products of the English school. The loan of ancient pictures illustrating the rise of English painting at a date little if any earlier than that of our own, and developing parallel with ours for a considerable

period under artists borrowed, like Copley or West, from the American colonies, engages our sympathy at once. The pictures spared from the historical period of British art are works of consequence, and it is impossible not to feel the generosity of the contribution. Nothing could possibly replace the superb portrait of himself by Reynolds, if an accident were to happen it in this country or on the sea; it is large, grand, imposing, a lesson in portraiture; the Royal Academy is poorer while it is away, and could not by any means be consoled for its destruction. Equally irreplaceable is Gainsborough's fine three-quarters portrait of the Duchess of Richmond, lent from the collection of Baron Lionel Rothschild: a noble pose, the grand air of a more mannered society than ours, rich and varied colors slightly gilded with the modifying action of time, and the naïve lassitude of a brush more engaged with impression and type than with draughtsmanship, render this work a fairly delicious revelation of past tastes and modes, while its superb state makes it startlingly real to the eye, like a social resurrection.

The specimens of Constable and Turner are, unfortunately, diploma pictures, and not quite representative. Neither is large; that of Turner, "Dolbadden Castle in North Wales," is conscientious, labored, and without grace or inspiration—a scene owing more of its pensive charm to the shadowing Rembrandtism of time than to the painter's development in poetry at the period when it was wrought. The Constable, also small, and representing a "Lock" in the artist's native Suffolk, is a fair example, but not important enough to construct a reputation upon; it simply represents the landscapist's love of constantly-soaked leafage, heavy with superabundant sap, dark with too much chlorophyl, and varnished with rain, and the tumbling of clouds over one another in a health-giving atmosphere. Wilson is represented only by a portrait. West, who is exhibited—like Boughton—both as an English and an American painter, shines by the innovation he made in painting modern clothes in an historical picture—"The Death of Wolfe"—here present, and wearisome enough now that the innovation it created has become an expected custom. Then there is Barry, whose "Adam and Eve" appears a little better than anything we know of West's; Fuseli, with a "Thor" so deadly brown as to confirm the legend that he painted with his own snuff; nothing of Haydon's; Zoffany's spirited and neat group of Academicians posing a model; and an Etty, naked, raw, and beefy, showing how easy it is for a painter with an unchastened addiction to colors to get a literary reputation as colorist. These examples, spared from the Academy or from the Royal collection, show the brush writing its own history in rubric, and replace with great vividness the best possible descriptions in Walpole or Cunningham. They are often early pictures, the beginning of a style; but it is impossible to deny that they are characteristic, and the favor of seeing them is so gratuitous that it is impossible to be otherwise than grateful. They form a little National Gallery on the shores of America which partly takes away the necessity of travel. The record starts from the end of the eighteenth century, when the condition of art throughout Europe was miserably low, and when the portraiture of Reynolds and Gainsborough was about the best thing going; and the rise of Constable and Turner soon afterwards came to turn a jet of genuine romance and nature-study into the epic landscape of Claude and Poussin. The privilege of referring to the embodied illustrations of this history is a very real one, and the true way to meet the action of the British Commission is not to complain of the want of a Hogarth or the inadequacy of a Turner, but to bless our stars that anything at all of the national treasure has been spared, and to set the palette of our mind forthwith with the colors of Gainsborough and Etty for comparison with those of our own Stuart and Allston.

The exhibit of pictures early in our own generation, apart from Pre-Raphaelite examples, is discouraging indeed. Nothing can strike a falser note than Maclise's elaborate machines, with their strained drama, their unpronounceable horrors in color, their contented opacity and obtuseness of shadow. "Macbeth's Banquet" is illustrated by this trivial anecdotist with the confidence, the swing of an inferior ballad. What the tormenting seesaw of a good loud Macaulay ballad or a vociferous Whittier anti-slavery ballad is to the mystery of a night-scene in "Macbeth," so is Maclise's tableau group to an interpretation by a real painter. The Scottish lords are dressed and varied with the proud, exhibitor's air of a costumer or a Madame Tussaud. A trivial effect of magic-lantern shadow stands for the dead Banquo; Lady Macbeth is a Mrs. Crummles; Macbeth himself is conceived with desperate ingenuity, but altogether in the lay-figure style; a flood of spilt wine in the foreground challenges with its study of still-life the admiration surfeited with mechanical inventiveness in the human figures; and a black system of color that time is turning to plumbago, and not to gold, completes the suffocating effect of the whole picture upon the eye. The figure of the "Wood Ranger," Maclise's diploma canvas as Academician, disarms criticism by its youthfulness and braggadocio innocence. It shows a portentously strong fellow, built as no human being ever was built, with oval bulges to his calves, a slim waist, an attitude of high-strung alertness, and a rustic mirthfulness learnt by rote. The complete, deep-seated unreality of these and all other Maclises gives one a pitying feeling for the nation whose historical painting he long represented almost alone. An art-civilization that is chromo-civilization, and looks at itself with delight for a quarter of a century, is in the most urgent need of Perugino and a muse with "Anglo-Saxon attitudes." A similar sort of commiseration overtakes him who glances at the dreadful work that Mr. Frith has made of the "Prince of Wales's Marriage." Here, among scores of portraits, there is not a countenance that represents in the most distant degree the color of flesh, and the faces in the extreme distance, though made smaller to represent the perspective, are in exactly the same focus as the nearer ones, and shine upon the eye with the same horrible, horny distinctness; meantime the Queen, halfway up the wall of Saint George's Chapel, clings to the architecture like a swallow, with a face and figure more determinedly focussed in the centre of vision than any of the others. His "Railway Station" is an instructive thing to see, after the engraver's proofs that stare at one from every print-seller's window. The burin has been its success; it is fair, good, *bourgeois*, modern Hogarth; but Hogarth divested of every painting quality. The artist of "Marriage à la Mode" and the "March to Finchley" was a Venetian, a Titian, a Rubens, compared with this chalked and floured apparition of him. The cheap superficiality of works like these, and like some others that abound in the exhibition, explains as we never had it explained before the reaction into mysticism and realism that came up in the movement of '49.

E. S.

THE LAST OF THE ROYAL TITLES ACT.

London, May 13, 1876.

WE have come at last, I hope, to the end of the discussion as to whether or not the Queen of England is to be henceforth an Empress; and now that we have decided the question in the affirmative, and that the whole thing is finished, it may not be uninteresting to go over the proceedings and state the result of the turmoil. The discussions have cleared up some points which were obscure. We know more about the origin and reasons for the change in the royal style and titles than we did, but we cannot feel assured that we have got to the bottom of the whole matter. I do not suppose that the present generation ever will know the whole truth. A Stockmar, or a Greville, or a Pepys may be about the court, and may be in the seats of the highest functionaries, and when his correspondence or his private journals come to be made public property, after the fashion of the times, our sons and grandsons may learn the "great reasons of high policy" which made this unfortunate move necessary, and of which we have heard so much and seen so little. As things are, we can only reason in the dark from such undoubted facts as are matters of history, and from the statements of the Prime Minister, which, for the sake of argument, we must make believe are facts. Taking, therefore, the facts of history and the Prime Minister's facts, what do we find? It is clear that after the Indian mutiny, when the Indian dependencies were transferred from the old trading company to the Crown, the question was mooted as to whether any, and if so what, addition should be made to the royal style as a recognition of the transfer. It is equally clear that it was deemed inopportune to make any addition at that time, but the question was kept open, and it was not unreasonable that advantage should be taken of the first fitting occasion to make the addition. Nothing special has occurred with regard to India since 1857 until now, when a great piece of work has been made about the Prince of Wales's visit to the East. The return, therefore, of the Prince has been deemed a fitting occasion for opening the question and settling it. Most people are of opinion that there is no harm in this. Something was wanted to weld the Indian dependencies into one Government, under one formal, recognized head; an opportunity presented itself for carrying out the process of welding, and that opportunity was seized. So far, there is no complaint. If the Queen of Great Britain and Ireland had been made Queen of the British Isles and India, and if the matter had been proceeded with in an ordinary way, we should have been spared all the trouble and irritation and humiliation of the last three months. What the ordinary way was can easily be shown. During the present reign there have been three precedents of the ordinary and two of the extraordinary way of handling questions affecting the Crown. The three first have either succeeded or have been dropped without controversy, and the two last have failed. The three first precedents were the questions of the Regency in 1840 before the birth of the Princess Royal, the question of the assumption

of the title of King Consort by Prince Albert in 1841, and the assumption of the title of Prince Consort in 1857. On all these occasions the leaders of the Opposition were taken into the confidence of the Ministry. On two of them the desired result was attained without one unpleasant word. On the third the proposal was not approved. It was never mooted in public, and no one, except those who had been consulted confidentially, knew anything about it for more than thirty years. The two last precedents were the questions of Prince Albert's annuity and his precedency in 1840. There was no communication on either of these occasions between the heads of the two parties, and the result was a Ministerial defeat on both occasions. In the first the annuity was reduced from £50,000 a year to £30,000 a year; in the second, the principal clause in the Government Bill—that, namely, which dealt with the precedency—was thrown out.

Mr. Disraeli having these apt precedents before him would, if he had been a wise man, have followed them, and taken the leaders of the Opposition into his councils. There is nothing in his relations with the present leaders to prevent his meeting with them on a matter of business. Lord Granville and Lord Huntington might, perhaps, not be especially desirous of encouraging a social intimacy with Mr. Disraeli, but no one can doubt that they would receive any overtures from him in his public capacity with frankness. His position as the recognized political leader of the Tory aristocracy would be a sufficient warrant to enable them to enter on business relations with him. He must have known this well enough, and therefore the cause of his reluctance to consult them must be looked for elsewhere. If he had sought for nothing but to further the best interests of the country and the crown, he would undoubtedly have communicated his intentions to Lord Granville and asked him his opinion. What that opinion would have been is plain so that he who runs may read. Lord Granville would have approved the proposal to add India to the royal style or title, but he would have disapproved the suggested addition of Empress. This would not have suited Mr. Disraeli. In one of his early novels, 'Tancred,' he had, through the lips of the Emir Fakredeen, started the theory that England was exhausted, and that the only chance for future greatness was the erection of a real Indian Empire, under a real Empress of India, with Delhi instead of London for the capital. "We will acknowledge the Empress of India as our suzerain," says the Emir ". . . Your Queen is young; she has an *avenir*. Aberdeen and Sir Peel will never give her this advice; their habits are formed—they are too old, too *rusés*. But you see! the greatest Empire that ever existed: besides which, she gets rid of the embarrassment of her Chambers! and quite practicable; for the only difficult part, the conquest of India, which baffled Alexander, is all done." In these sentences, it is not unfair to conjecture, is the true key to their author's reluctance to follow the ordinary course in this matter, and to the consequent embarrassment of the Chambers which we have been contemplating for the last three months. Mr. Disraeli knew the English character well enough to be aware that he was embarking on a perilous voyage when he determined to convert his fiction into fact and give the Queen a title which the public could not esteem, and to which they would be certain to attach not respect but ridicule. He knew that if he took the leaders of the Opposition into his councils his conceit would come to naught, whereas, if he got the measure fairly launched, and the Tory party committed to it blindly, he was safe to see his dream of creating an Empress of India realized in fact. He was not "old" or "*rusé*," like Sir Peel or Aberdeen. He would "give her this advice," and by the help of his mechanical majority of unreflecting Tories he would carry it out successfully—or at least the portion that was dearest to him, the splendor of the title Empress of India. He was too wary to let the whole cat out of the bag at once. It would have terrified his supporters, and therefore he brought it out piecemeal. There was first the visit of the Prince to India, and the moderate proposal of the Ministry to limit his expenditure to £60,000. Then came the suitableness of this occasion for recognizing the dependencies, then the announcement in the Queen's Speech of a contemplated addition to the style and title. What that addition was to be was too high and holy a conception for him; it was matter of prerogative. But when the Tory party were educated to the point of agreeing to the principle of the Bill, out jumped the whole brindled animal with a rush. "The title will run thus: Victoria, by the Grace of God Queen of Great Britain and Ireland, Defender of the Faith, and Empress of India." But the announcement was soon found to be precipitate. The country was aroused, and some even of the most docile followers of the Tory party were alarmed; and so the cat was partly put back into the bag. The title was to be localized in India, kept for external application only, and never to be assumed by any of the royal children.

On this distinct understanding, given by the Prime Minister and also by the Lord Chancellor, on whose word we have been more accustomed to rely, the bill was allowed to become law, and the proclamation following on the Act was framed, and has been issued. The Queen, too, has been proclaimed "Indiæ Imperatrix" with all the formalities of mediæval times, and we have now got time to study the proclamation, and see what has become of the distinct understanding of localizing the title. The understanding has turned out to be what many thought it would be—not worth the paper on which it was printed in the *Times'* Parliamentary report. It has been torn to pieces and thrown to the winds. It does, indeed, localize something; it localizes the title of Queen to the locality of the British Isles, and universalizes (to borrow a new word from Sir William Harcourt's vocabulary) the title of Empress to the rest of the Eastern and Western hemispheres. The whole cat is out of its bag now, and never will be put back again. Emir Fakredeen has had his way, and taken one decisive step towards the realization of his visionary projects, and the country is powerless to move hand or foot against these innovations. Protests against this breach of faith—or breach of contract, as it has more delicately been designated—have been made both in the House of Lords and in the House of Commons. In the House of Lords, the motion was not pushed to a division. In the House of Commons, a division was taken yesterday morning, after a lifeless discussion of nine hours and a half, and the hapless Opposition was beaten by the largest majority ever ranged against them. The argument was all one way, and entirely in favor of the Opposition, but the voting was all the other way. The Ministry did not attempt a serious answer. They were not to be bound by words or understandings. They never intended anything different from what they did, and by their intentions, not their acts, they were to be judged. The House got into a listless state, from which nothing but personalities could rouse it. Well-reasoned speeches against the Ministry received no attention, as the division was a foregone conclusion. But the heavy Dundrearyisms of Sir Robert Peel—a very different stamp of politician from his father, the great Sir Robert Peel—and the snarling malignity of Dr. Kenealy were cheered to the echo by the united lung-power of 334 of the Tory representatives of England.

This, then, is the final tableau in the drama of the Royal Titles Act, and a most appropriate conclusion it is. The curtain falls upon the new Imperialist party, who used to be the old aristocratic party in the country, carrying Mr. Disraeli in triumph on their shoulders and welcoming Dr. Kenealy to their bosom! I said some weeks ago that the Prime Minister had degraded the Tory aristocracy and was now trying to degrade the Crown. But I hardly thought it could have come so soon to this. There are not wanting indications that the democratic party in the state has not been slow to see the advantage which this false move has given them. I told you how petitions were being extensively signed by the republicans in London directed against the throne. Mr. Arch, the champion of the distressed agriculturists, has been explaining to eager audiences that if our Prime Minister, by a stroke of his pen, can make an Empress, another can make a President; and men of position and education in my own hearing have given expression to opinions antagonistic to the throne and the principle of monarchy with a frankness and openness that would have been almost inconceivable six months ago. Many thoughtful people, content to acquiesce in existing arrangements as inevitable and as working pretty well upon the whole, have been brought face to face with the question of the throne and the utility of such a form of government at the present day, and perhaps for the first time in their lives they have considered it in the concrete. It is perilous to apply the utilitarian argument to what, disguise it as you will, is in reality a sham—an important and a useful sham, and one that, on the whole, we are for the time better with than without, but one that is not indispensable to the well-being of a great modern nation. Reflections of this sort constitute all the good or bad which the nation has gathered from the addition to the royal style and title. The Liberal party have gained nothing but numerical defeats and moral victories; the Tory party, numerical victories and the adhesion of Dr. Kenealy; and Mr. Disraeli, the gratification of making history out of his own burlesques.

Correspondence.

THE LAND-GRANTS OF THE PACIFIC RAILROADS.

To the Editor of The Nation:

Sir: The proposition, embodied in a bill introduced in Congress recently by Senator Edmunds, for the United States to receive back the land-grant of the Central Pacific Railroad at $2 50 an acre, is a step long

since foreseen by those observing the relations of that company to the Government, and knowing the character of its lands, as the policy of all the Pacific land-grant roads. The lack of comment upon this proposition augurs its possible success. Already has the public press been summoned in its aid, and the literary campaign commenced with the view, by the use of magazine sophistry, to prepare the public mind for this barefaced scheme —a plan for a time so successfully practised by the editorial department of the Northern Pacific. The *International Review* for May leads off in an article entitled "The United States Land-Grant Policy," by R. T. Colburn, which has only to be carefully read to have its inspiration and purpose at once understood. Without attempting any general review of the article, I will merely give a few extracts, italicizing those parts which are the most flagrant in deception and the fullest of untruth.

Of the Northern Pacific grant the writer says: "This was an empire in extent, and if this naked land, *good land for the most part*, could have been held till the road was built, it would have enriched the possessors beyond the dreams of avarice." As to the quality of this land, nothing could be more untrue. A gentleman who has recently seen much of it writes me: "Having a deep pecuniary interest in the matter, I visited, with a friend, the whole country along the line of the road [Northern Pacific] to its terminus on the Missouri River. Knowing what I do of the country, its soil, lack of water and timber, its long and severe winters, with the resulting shortness of summer, I can conscientiously say, and have said to a great number of interested people, that no sane man could or would settle in that country after seeing it." The fact is, there is not a farm, excepting the few experimental ones about Bismarck, between the Red River Valley and the Rocky Mountains.

The *Review* article further says:

"If the Government were to invite proposals for the surrender of unsold lands, of which the title has been earned by the construction of the roads, at rates not exceeding the minimum now established by law, $2 50 an acre, and at commuted rates for grants wherever the roads have not been constructed, we have no doubt but a hundred million acres of land could be regained for a hundred million dollars. This would be a good stroke of business for the Government, inasmuch as these same lands *will, within fifty years, be sold for at least two hundred and fifty million dollars.* . . . At any rate, whether it would be wise to take back all the lands that may be offered at low rates, and issue bonds for them, and hold them as an inheritance on like terms for future settlers, *there can be no question about the wisdom* of applying the lands of the companies, which are already indebted to the Government, to the extinction of their debts." "It is not improbable that in many cases where the lands have been mortgaged for a dollar or two an acre, or less, the land could be had by paying off the mortgage claims upon it."

Words are inadequate to express the true character of the deception the foregoing extracts have a tendency to convey, and it would be unfair to regard them as written in ignorance. These lands are not suitable for settlement in the American sense, nor suitable for the payment of any just debt. To permit the scheme to pass would be, in effect, to give without recompense a clear title of these roads to the companies after building them, and cancelling all claims the Government may have upon the companies, presuming the lands ample at $2 50 an acre for this purpose; for I am positive in the assertion that as a basis for honest credit, ninety-nine-hundredths of the land-grants of all the Pacific Roads between the 100° meridian and the Sierra Nevada Mountains have no available value, and that neither the United States nor any private party could in fifty years sell them honestly for ten cents an acre, which would not pay ten per cent. of the cost of surveying. I make this assertion knowing fully its purport, after years of observation of the country and conscientiously studying the whole subject, and after fully recognizing the great aggregate value of the grazing and mining interests of the West, and the occasional facilities for profitable agriculture by the aid of irrigation.

There can be little doubt, nor has there been from the first, to those who cared to investigate the matter, that the Government will, in a commercial sense, be a loser to the entire amount of the aid it has rendered or may in future render the Pacific Roads, both principal and interest (the first mortgagees eventually possessing the roads), except for services rendered, every cent of which ought to pass to its credit. There seems no good reason for giving up this also, which would be practically done by receiving back those worthless lands at $2 50 per acre. The painful result of the ignorant and dishonest representations about the Black Hills, including an Indian war upon our hands, adds another reason for more accurate and general information respecting this great region of country.

W. B. Hazen.

Cincinnati, May 17, 1876.

Notes.

Robert Carter & Bro. have nearly ready 'Forty Years' Mission Work in New Guinea and Polynesia,' by the Rev. A. W. Murray.——'Men and Manners One Hundred Years Ago,' edited by Horace E. Scudder for the Sans-Souci Series; and 'The Fall of the Stuarts, and Western Europe from 1678–1697,' by the Rev. E. Hale (Epoch Series), are announced by Scribner, Armstrong & Co.——Harper & Bros. publish immediately a work on 'Early Man in Europe,' by Dr. Charles Rau; Dr. Draper's 'Intellectual Development of Europe,' in two volumes; and Gladstone's 'Homeric Synchronisms.'——J. B. Lippincott & Co. announce Mrs. Lynn Linton's 'Atonement of Leam Dundas,' which has been running through their magazine.——A special American library journal is shortly to be issued from the office of the *Publishers' Weekly;* and we learn from the same source that steps are being taken to bring about a congress of librarians at Philadelphia during the present year. Their last conference was held in 1853—a date whose remoteness is not expressed by a quarter of a century.——The President has by special proclamation called attention to the joint resolution of the Senate and House of Representatives, approved March 13, recommending the public recital on the Fourth of July next, in each county or town, of a sketch of its history from its formation. Wherever this reminder is necessary, the time allowed for the task will not seem excessive.——To inform those interested, a *Quarterly Record of the Tauchnitz Editions* began to be issued at Leipzig March 31. It includes the current additions not only to the British authors, but also to the German authors whose works have been translated into English. The titles are accompanied by notices of the press.——An International Archæological Convention is appointed to be held at the Ohio Building, Centennial grounds, September 4th prox. In the exhibitions of the Smithsonian Institution and of the State of Ohio itself, which has an admirable collection of relics of the Mound Builders, the Convention will find abundant material for study and comparison. It is also announced that a sub-section of Anthropology will be formed at the Buffalo meeting of the American Association for the Advancement of Science, to be held Aug. 23. In regard to the Convention, further information may be obtained of the Rev. S. D. Peet, Ashtabula, O.; in regard to the Buffalo meeting, of Mr. F. W. Putnam, Salem, Mass.

—The *Publishers' Weekly* for May 20 tabulates the answers received to its prize question—"Which are the (fifty) most salable novels?" Bulwer, Dickens, Scott, Thackeray, and George Eliot were expressly excluded from the terms of this enquiry. What follows is full of surprises. We give the first twelve titles adjudged most salable: 'John Halifax,' 'Jane Eyre,' 'The Wooing O't,' 'St. Elmo,' 'One Summer,' 'Scarlet Letter,' 'Uncle Tom's Cabin,' 'My Wife and I,' 'Princess of Thule,' 'Infelice,' 'Barriers Burned Away,' 'Opening of a Chestnut Burr.' In this list is exhibited the enduring popularity of good books as well as the fashion of the hour. If we ask ourselves why Miss Mulock stands first, and why Mrs. Southworth (for instance) is not found either among the first twelve, or the first fifty, or indeed the first hundred and fifty, we may discover the difference between the statistics of the trade and those of the circulating and public libraries. The distinction is one which it is well to make, for it would be comforting to think that when the irresponsible readers of free literature, whose calls for fiction form three-quarters of the entire demand for works of all kinds, turn buyers, they select novels of admitted worth or of wide reputation, perhaps from a really improved taste, perhaps to ensure getting their money's worth, or with the motive of collectors who wish to own what "no gentleman's library should be without." It may further appear probable on reflection that the demand for fiction like Mrs. Southworth's proceeds to such an extent from minors and persons of immature minds that it might safely be disregarded; and then the duty of excluding works of this class from our libraries would be clearer than it is now. The popularity of 'John Halifax' and 'Jane Eyre' and of the 'Scarlet Letter' is easily understood; that of 'Uncle Tom's Cabin,' at this distance from the political and social conditions which inspired it, must be regarded as phenomenal. Among the fifty "immortals" Miss Mulock figures but once, and the same is true and noticeable of Charlotte Brontë, Mrs. Alexander, and William Black. Mrs. Stowe, on the other hand, counts three works, Miss Evans four, Hawthorne two (the second being the 'Marble Faun'), Rev. E. P. Roe three, J. G. Holland two, Mrs. M. J. Holmes three, the Misses Warner two ('Wide, Wide World' and 'Queechy'), Howells one ('Chance Acquaintance'), Cooper one ('Last of the Mohicans'). 'The Scottish Chiefs' and 'Children of the Abbey' still hold their own;

so do the 'Initials,' and the 'Count of Monte Cristo,' and 'Charles O'Malley,' and the 'Wandering Jew,' and 'Les Misérables'; but no other works of their prolific authors occur among the salable fifty. If George MacDonald appears but once ('Robert Falconer'), so also does Wilkie Collins ('Woman in White'), and "Ouida" ('Under Two Flags'). Charles Reade, though he ranks pretty well down in the list, gets in three of his works ('Griffith Gaunt,' 'Very Hard Cash,' and 'Put Yourself in his Place'). Of the German novelists, E. Marlitt has three entries, Auerbach one ('On the Heights'). On the whole, the list makes a creditable showing for our novel-buyers. It would be most instructive to compare it five years hence with one similarly compiled. One might confidently indicate now a good part of what by that time will have become forgotten, and what is sure to remain.

—From the sixth annual report of the Trustees of the Metropolitan Museum of Art, it appears that the institution has been nearly relieved of its indebtedness during the past year by subscriptions to the amount of $26,500. And if so much could be accomplished at a time of the greatest financial depression, we do not doubt that by next year the sum still needed to extinguish the debt (about $9,000) will be forthcoming. It will be a pity if the additions made to his collection by General di Cesnola, which, for want of room to display them, remain unopened, fail to be secured as a permanent possession instead of a temporary deposit. So long a period in the history of Cypriote art as these discoveries illustrate, demands, to be fully known and studied, the largest possible number of articles and inscriptions; and it would be very unfortunate if these were scattered among many museums and countries instead of being concentrated in one. The number of visitors to the Museum during the year has been 66,663, of whom only 9,836 were non-members, attending on close days, and paying for admission—a daily average of 53; the average for the free days being 577. There has been, the Trustees state, a noticeable attendance of artisans.

—There will be some difficulty at first in appreciating the value of the Castellani collection, of which Mr. Perkins gave so interesting an account in the last number of the *Nation*, from the almost total absence in this country of anything to furnish a standard, and because most of the objects belong to a class calling for a special education of the eye and mind. The majolicas are presumed to be a collection of about two hundred plates made several years since by M. Alessandro Castellani, which it was understood he would only dispose of as a whole, and for which he could hardly expect any purchaser but a government or great museum. It has been said that he valued it at twenty thousand pounds. Whether this be an approximation to the price asked or not, it will give some idea of its importance. The peculiar value of the old majolica consists in the fact that it was the product of a period when pictorial art had reached the highest point it has ever attained, and when its spirit penetrated all branches of art-manufacture. The best majolica painters were artists of a high order, who in a cheap material and with a limited range of pigments succeeded in giving an unique expression of this great art. They are masterpieces that can never be repeated, and their number is limited. Their collection was made by perhaps the best qualified expert in Europe with ample means and an enthusiastic love of the subject. So completely are the best specimens of majolica absorbed in national museums and in the hands of a few rich collectors that probably not even M. Castellani himself could make such another collection. They are not only works of high art, but imperishable historical documents of the best period of modern art. No other branch of ceramic art has produced works comparable to them in this sense. Their effect, as compared with the delicate and brilliant colors of Oriental or European porcelain, is of course disappointing. The coloring, owing to the materials at command, is necessarily conventional, the tints often crude; but such consummate judgment is shown in their disposition and use that an effect of power and harmony is often produced that outweighs, in an artistic sense, any mere effect of delicacy or brilliancy in porcelain specimens. The collection is, or was, very rich in Gubbio or lustred ware—examples of that lost art of which no modern imitations give any idea. In regard to the other works composing the collection, it need not be doubted that anything Signor Castellani sends will be of a combined artistic and historic value of which few examples have yet reached us.

—Still another measure has been adopted for extending the privileges of instruction at Harvard College. On and after September 28 the elective courses of study will be open to persons not less than twenty-one years of age (we presume men only), "who shall satisfy the Faculty of their fitness to pursue the particular courses they elect, although they have not passed the usual examination for admission to college and do not propose to be candidates for the degree of Bachelor of Arts." A certificate of proficiency will be given at the end of each year if warranted by faithful attendance and ability to pass creditably the mid-year and June examinations. Particulars as to fees, etc., may be obtained by addressing the Registrar, Prof. C. J. White, Cambridge, Mass. We do not know what expectations may have been formed as to the success of this measure, which every one must approve. The lecture system which a few years ago was arranged with a view to outside support, proved, we believe, a failure—a chief reason being, as we imagine, the difficulty of reaching Cambridge from Boston and the neighboring parts without an excessive loss of time. In a pecuniary point of view, the success or failure of the new scheme is almost a matter of indifference to the College; but as Boston must principally be relied on for the students whom it seeks to attract, and as many of these may be persons obliged to earn their living between recitations, the need of rapid transit becomes apparent.

—In the interest of good and sound teeth, whether artificial or one's own, it is pleasant to hear of the prosperity of the Dental School connected with Harvard University. The standard of the school since 1868–9, the first year of its successful operation, has advanced, and the conditions of a degree now read very much like the conditions required in the Medical School. The candidate must give evidence of having studied medicine in the one case, and medicine or dentistry in the other, three full years; have spent one continuous year in the school, medical or dental, from which he graduates; have presented a satisfactory thesis, and passed all the required examinations. The school as a charity, also, deserves a recognition which, according to the Dean's report, has not yet been given it. At the infirmary of the school in the Massachusetts General Hospital there were performed in 1874–5, on more than 8,000 patients, over 9,000 operations, mostly, we suppose, by the forty-one students connected with the school, after instruction and under the supervision of the professors. The quality of the work is probably attested by the fact that patients offer themselves in increasing numbers who are able to make some payment for operations performed upon them, although it is the policy of the dental professors to discourage applicants of this kind. The services of the professors up to 1873–4 were wholly gratuitous. Beginning with that year, some disbursement has been made them by the Corporation, though as yet nothing that can be called a compensation. The criticism that might have been made upon the University for establishing this institution, that it is a sort of *lucus a non* for a university to confer a degree for work which does not demand a university training, is weakened by this advance towards a union of medicine and dentistry; and the charitable work of the school recommends it to popular favor, though, of course, the latter consideration alone would not have justified the University in attempting to elevate the dentist's profession, or to arouse the public to a proper regard for their teeth.

—Mr. Charles G. Leland contributes to *Macmillan's Magazine* for May "one piecee pidgin-English sing-song," which is among the best of his performances in this line. It is the story of one China-man Wang-ti," who "wantchee be one Man-da'in," but, being a very indifferent scholar, "no pass" in spite of all his exertion, and "no can catch degʻee." One night, however, while out walking, he has the good luck to rescue a "a flower-flag nation man" from the attack of a robber, and to play the part of the good Samaritan towards him:

> "He Melican he soon get well an' walk topside he tracks,
> An' muchee much chin-chin Wang-ti for allo he good acts.
> They gottee f'in—so muchee f'in he each belongey half,
> That Yankee name he Doo-little—he makee photog'af."

In one of his early confidences to his new friend, Wang-ti pours out the tale of his baffled ambition, and says that all would go well with him at the examinations if he could do as was the fashion "in olo tim" when

> "Man p'int some littee book,
> They hide-um in he pig-tail—or someside, hookey-clook,
> That book he blongey classics—but Goverument he pat
> An' talk he killee p'inter-man who makee book like t'hat."

Mr. Doolittle proves equal to the emergency, on learning that scholars are allowed the use of spectacles. Wang-ti has only to get himself "a pair of magnifyin' glass"—

> "And if the thing will help you—if nothin' else availa,
> I'll photograph the classics upon your finger-nails.
> I see you wear 'em awful long—(for gougin', I suppose!)
> I'd put the Astor Library upon such nails as those."
>
> . . . . . .
>
> "They catchee book, t'hey makee work, t'hey keepee awful mum,
> The books of olo Kung-fu-tsze were all on Wang-ti's t'humb.
> He blessee good Amelican t'he day he makee f'ins,
> When allo larnin' t'hat he want was at he finga-ins."

The trick succeeds to a charm—

> "Wang-ti he gallanti man,
> He go topside all nother in allo hiya-lan';
> But allo tim no man can tell or savvy what it meant
> How Doolitt' catchee cont'acts f'om he China government."

It has often been conjectured that a Chinese-American would do more

business at the Patent-Office than all the rest of mankind ; and Mr. Doolittle and his friend may serve to prove the advantages of a like international partnership in rascality :

"Chinee an' Yankee in one firm could squeezee all worl' d/y,
Dis my g/ate mo/al-pidgin of he sto/y of Wang-ti"

Mr. Leland's "moral-pidgin" appears to be as sound as any in Æsop.

—Among a people as theatrical as the French, it was inevitable that the death of Lemaître and of Déjazet should be at once followed by the writing of their biographies. It is to be hoped that they have left memoirs or reminiscences of some sort, as during their long lives they were brought in contact with many authors and artists of whom we would gladly learn more. Neither of M. Georges Duval's volumes—'Virginie Déjazet, 1797–1875' (pp. 221) and 'Frédéric-Lemaître et son temps, 1800–1876' (pp. 266. Paris : Tresse ; New York : F. W. Christern. 1876)—can be called a good biography. His method has been to embroider on the account given in the biographical dictionaries the many anecdotes, more or less apocryphal, with which the newspapers abound immediately after the death of an actor, supplementing these heterogeneous materials with the result of such hasty researches as the speed at which the book was rushed through the press might permit. His two volumes, therefore, are of little value. Their bulk is increased by obvious padding, *e.g.*, copious extracts from plays ; in the 'Déjazet' a history of the *chanson*, and in the 'Lemaître' an account of the French romantic drama. To the 'Déjazet' are appended the obituary notices of the *Débats*, *Moniteur*, and *National*, and these are by far the best things in it. To each volume is prefixed an etched portrait by M. Gonzagne-Privat ; to neither is there affixed what is as necessary to a theatrical biography as an index to any book—*i.e.*, a carefully-compiled chronological list of all the parts played by the actor who is the subject of the work.

—Early last year appeared the first number of *Die Zeitgeschichte*, a monthly chronicle of contemporary politics. It was published in Berlin, edited by a Dr. Martin Waldeck, and evidently intended to reach a wide circle of readers, subsequent numbers bearing the names of the Vienna, Paris, London, and St. Petersburg agents of the publication. American subscribers to the *Zeitgeschichte*, won by the promises of its title-page and a liberal flourish of favorable press opinions, have to this day received, at fitful intervals, but nine numbers, concluding with that for September, and the fate of the enterprise seems wrapped in mystery. We understand, however, that it has not been abandoned, and it will, therefore, not be amiss to cast a critical glance at the numbers before us. The *Zeitgeschichte* covers a sufficiently wide field, although German matters are treated of most fully. It chronicles, however, not only events, but the comments of newspapers thereon, their speculations as to possible contingencies, and even vague rumors long since set at rest. Thus, the comforting assurance of the *Agence Havas*, chronicled under September 5, that the insurrection in Herzegovina has been almost completely suppressed, hardly deserves a place among "events" ; and the report, under "Servia," of the killing of two Servian officers appears, together with the denial of its truth, under "Turkey." Greater carelessness, however, is revealed by the statement, under "Russia," that the 4th regiment was ordered to the Dalmatian frontier, this being a repetition of a statement to the same effect properly given under "Austria"—the resemblance between Peterwardein (in Slavonia) and St. Petersburg probably having misled the compiler. In spite of the amplitude of newspaper extracts—sometimes filling entire pages—a general wastefulness of space, and the needlessly large type of the headings, the editor has seen fit to make use of numerous abbreviations, whose meaning is not always easily guessed at. Thus, we find G.-E. for Gesetzentwurf, K. for Kommission, and similar abbreviations, which, combined with the ungrammatical omission of the definite article, result in sentences like the following : "Minister des Innern legt G.-E. E. betr. Erweiterung der Pressfreiheit und Abänderung G. über die Autonomie der Gemeinden vor." The natural abbreviation of Gouv. for Gouverneur does not suggest itself to the editor, and Präsident alternates with Präs., Regierung with Reg., just as San Francisco and San Francisko, Giczy and Ghyczy, Krajujewatz, Kragujewaz, and Krajugewatz, succeed each other. In the long list of errata—Pensilvania, Dunidee, Sassy for Jassy, Förster for Forster, etc.—America is fairly represented. A mayor "Ewarts" is assigned to the city of New York, a Mr. "Godlive" is appointed minister to Austria, and the State of Maine is reported as having elected, on September 14, a Republican governor by a majority of 5,000, and a Republican President (!) by a majority of 6,000. Finally, we notice a novel attempt to introduce patriotism into orthography—"Der Deutsche Konsul" being always distinguished by a capital D, in contrast with his colleagues, Der österreichische, italienische, französische, englische und russische Konsul.

MACAULAY.*

II.

WERE it possible (which it never is) to sum up in one word the noblest trait of a great man's character, the expression by which we should define the most noteworthy moral quality of Macaulay's nature would be—loyalty. That he possessed the strength and clearness of purpose without which no man can be loyal either to others or to himself, might be assumed by those who had studied his works or were acquainted with the outline of his life. Mr. Trevelyan's biography tells the world what, before it was published, could be known only to a circle of friends, that in his uncle was found not only the strength but also the passionate feeling which can hardly be wanting in a man whom one emphatically calls loyal. A careless reader may indeed fail to discern the passion which glowed beneath the strength of Macaulay's character. This arises in part from the main defect of Mr. Trevelyan's work. All that the book contains is full of interest, but it does not contain many of the exquisite personal touches which give an undying charm to the life of Johnson, and, in a less degree, to the life of Scott. The correspondence with Ellis is not only a delightful supplement to the 'Critical and Historical Essays,' but is also a noble record of friendship ; yet we would gladly exchange some of the remarks on literature and politics with which the letters to Ellis are filled, for fuller accounts of Macaulay as he appeared to the nephews and nieces who adored him, for details of the serious talks he held, "in a quiet way" and "without the forms of a lecture," with the lads in whom he was specially interested, or for any of those petty anecdotes which, though prigs may scorn them as gossip, really embody the character of an eminent man.

Another cause of a more general nature may hide from the unintelligent the vividness of Macaulay's feelings. He shared to the full that intense interest in public affairs which was the finest trait of the Whigs. Modern critics, inspired by the misplaced contempt for the mechanical arrangements of politics, are apt to think that a man fully engrossed by the party contests of his day shows an incapacity for the finer sentiments and higher interests of life. No idea can be more unjust either to Macaulay or to his associates. Even if it be granted (what is very doubtful) that they overrated the importance of political mechanism, they did honestly hold that the highest interests of the public were involved in the political conflicts of the time. They may possibly have been in error ; but their intellectual mistake, if mistake it were, does not detract from the moral greatness which is shown by men who sink private feelings in their zeal for the public good. Persons of culture should make sure before they criticise the political interests of the last generation that they have not fallen below, instead of rising above, the moral standard of their fathers. Certainly, if politics are to be the pursuit of good men or of great men, political contests must be carried on with that loyalty to principle which Macaulay exhibited in his canvass at Leeds. What, however, is for our present purpose of consequence, is to point out that in the very midst of a hot party struggle Macaulay's mind was torn by the strongest, and one might fairly say most passionate, personal feeling. His success at Leeds exactly coincided with the news of the marriage of his favorite sister. It coincided, as appears even from the necessarily scanty details given in the biography, with the first blow to the happiness of his life. His affections were centred in two of his sisters, Margaret and Hannah. The following sentences are part of a passage in which he refers to his feelings on Margaret's marriage :

"I have still one more stake to lose. There remains an event for which, when it arrives, I shall, I hope, be prepared. From that moment, with a heart formed, if ever man's heart was formed, for domestic happiness, I shall have nothing left in this world but ambition. There is no wound, however, which time and necessity will not render endurable ; and, after all, what am I more than my fathers—than the millions and tens of millions who have been weak enough to pay double price for some favorite number in the lottery of life, and who have suffered double disappointment when their ticket came up a blank ?"

The anticipated event—Hannah's marriage—soon followed. It took place under circumstances which, in some respects, made the blow to Macaulay specially hard to bear, and there are few writings more full of manly pathos than the letter to Margaret in which he describes his own feelings at a marriage which, though in every other respect satisfactory, might by an unsympathetic critic be described (as far as Macaulay was concerned), in his own ironical words, as "a tragical dénouement of an absurd plot." But no one who can enter into the sufferings which distract

* 'Life and Letters of Lord Macaulay. By his Nephew, G. O. Trevelyan, M.P.' London : Longmans & Green ; New York : Harper & Bros. 1876.

human hearts can doubt that the "tragedy" was only too real. An additional intensity was added by the sudden death of Margaret. After twenty-two years of a happy life, we find Macaulay still in mourning over her death :

"I passed the day in burning and arranging papers. Some things that met my eyes overcame me for a time. Margaret—alas! alas! And yet she might have changed to me. But no, that could never have been! To think that she has been near twenty-two years dead, and I am crying for her as if it were yesterday!"

This note, from a private journal, written for no eye but Macaulay's own, makes it easy to believe the assertion in a letter to Ellis that after the news of his sister's death the great historian was driven to work, lest grief should affect his reason.

Of the warmth of affection almost essential to loyalty there certainly, therefore, was no lack in Macaulay's character. The greatest proof that strong feeling was with him combined in perfection with manly self-control is found in his course of conduct after suffering keen personal disappointment. He did not, as he seems to have feared he might, turn cynic. He indulged in no weak repining; he turned to the sources of affection still left open to him; and, with rare wisdom and generosity, cherished and kept alive all the ardor of his love for those who could not, from the nature of things, make a full return for it. Above all, he did not allow private griefs or personal disappointments to jaundice his view of life. Nothing is more noticeable in Macaulay than his happy view of existence and of human progress. It is easy to censure this disposition towards exaggerated optimism; it is far better to note how much strength of character is needed to enable a man to see that the universe is very good even when he himself suffers disappointment, or to recall in the very midst of his pain that he is no "better than his fathers," and that "tens of millions" have, like himself, drawn blanks in the lottery of life. It is, after all, no credit to a philosopher that the details of his own life should affect his whole view of society and of the world. There have been men—and they men of considerable power—who would, in Macaulay's position, have unconsciously suffered their whole view of politics to be warped by disappointment at political failure, or would have constructed strange theories as to the relation between father and child under the bias given to their sentiments by the peculiarities of Zachary Macaulay's most respectable but most unpleasing character. In nothing, on the other hand, do Macaulay's strong affection and manly good-sense appear to more advantage than in his relation to his father.

Zachary Macaulay was, to judge from Mr. Trevelyan's picture of him, a man whom it was easy to respect, not easy to love, and very hard indeed to withstand. Most sons would have found him difficult to deal with. The difficulty was greatly increased in Macaulay's case by the extraordinary difference in disposition and genius between father and child. There was a temptation to the son to grow, at any rate, cold towards a father of uncongenial tastes, who did not know how to show the affection he felt, and while undemonstrative was also in some respects exacting. There was an even greater temptation, in youth at least, to yield up to the father that moral independence which every man ought to cherish. Macaulay, even as a boy, when the temptation to undue concession was extremely great, took the tone which the highest sense of loyalty dictated. A letter written by him when he is fourteen in palliation of the accusation (doubtless well founded) of speaking too loud, is striking as an example of juvenile command of style. It is still more impressive as an example of the tone of affectionate yet manly independence which Macaulay early adopted and never gave up in communicating with his parents. The tone of this letter foreshadows the position he took up in regard to his father throughout the whole of his career. To his father's wishes and interests he was prepared to make the greatest sacrifices. At a critical moment, Macaulay resolved to surrender office and blight his political prospects rather than support a measure of which his father, as an abolitionist, disapproved. To discharge debts for which his father was responsible Macaulay went to India, and thereby sacrificed his well-grounded hopes of high success in the career of statesmanship. But though ready to make the greatest sacrifices of interest for the sake of his father, he never compromised his moral and intellectual independence. He differed in nature and convictions from his father. The difference must have been apparent to both of them. Macaulay had the strength to follow the impulses of his own genius. No one could ever say of him, as was said of J. S. Mill in his youth, that he was a "made" man. No one could fancy of him, as one certainly might fancy even of a man as independent as the author of the 'Essay on Liberty,' that he was intellectually cowed by the force of his father's character. Macaulay's loyal fidelity to his parents, to his friends, and to his party was, indeed, made possible by his perfect loyalty to himself.

From his earliest youth Macaulay's mind had been filled with a passion for literature, and to literature he devoted the whole of his powers. Of the merit of the poem written by him on his losing his seat at Edinburgh critics may form different estimates; but no one who studies Macaulay's life will doubt that the verses in which he describes his consecration from youth to literature have the rare merit of expressing the true intellectual passion of his life. To the pursuit of literary greatness he felt himself called, and this pursuit he never really forsook. In this enthusiasm for letters, as in many other respects, Macaulay shared the sentiments of the eighteenth rather than of the nineteenth century. It is a sentiment which would have been perfectly intelligible to the contemporaries of Johnson or Gibbon, but which is scarcely understood by admirers of Mill or of Froude. Yet critics who do not enter into this feeling cannot appreciate either Macaulay's work or Macaulay's career. To the production of his history he devoted his life because the production of a great literary work seemed to him, as it has seemed to all to whom letters have been a passion, an object well worth living for. It is this devotion to an end, in his judgment well deserving all the labor and sacrifices required for its attainment, which gives Macaulay's career what we may venture to call its singular roundness and completeness. Of no great man whose life has been laid open to the public does one feel more sure that on the whole he acted as far as any man can up to his own ideal of duty. There is nothing in his life of the futile aspiration, the disappointed effort, the inconsistent conduct, the weakness and the struggle, which mar the career of so many writers and teachers. Here again he belongs in character to a past generation. Jeffrey, Sydney Smith, Sir Walter Scott, and, indeed, most of the celebrated men who made the glory of Edinburgh at the beginning of the century, have, with all their differences, this trait in common, that they are in full harmony with their work. No doubt this very "completeness" seems to modern critics inconsistent with what is now thought a high ideal of life, and the very qualities which made the class of men to whom Macaulay in feeling belongs so happy, and also, let it be added, so useful, in their generation, has rendered them somewhat uninteresting to the class of readers who think more of high aspirations than of successful attainment of a possibly somewhat lower ideal standard. There is no doubt that Macaulay also will, under the prevailing state of sentiment, fail to excite as much interest in the minds of many of those who read his life as has been kindled by the biographies of persons possessed of not half his gifts or of a tithe of his moral worth. It is, however, worth considering whether the time has not come for revising our own standards of moral criticism. A high ideal is a legitimate object of admiration, but weakness of purpose and uncertainty of aim can never of themselves deserve anything but condemnation. Some of the admiration lavished on persons who, if they aim high, admittedly do not hit their mark, may well be diverted to a man whose loyal performance of the duties before him lent to his life a completeness and happiness rarely exhibited in the career of modern writers or teachers.

A FLOCK OF SONGSTERS.*

ONE of the chief delights of the returning spring is the early morning chorus of the birds, vocal once more after their winter silence. The air is no longer mute. The intermission of the song gives the charm of freshness to its renewal, and even notes as little musical as those of the blackbird and the woodpecker are welcome and pleasant to the ear weary of the stillness of the brown fields and bare woods. It would be well if there were a like alternation of season of silence and of utterance for the little poets who have been so often likened to singing birds. If they had but an annual spring in which their notes were heard, it might be that they too would be more welcome to the world than they find themselves now as they appear chirping or singing without cessation through the year. The pretty green, or brown, or gray and gold, or purple, or crimson bodies of their volumes might seem all the prettier if they came in flocks, instead of one by one, from week to week, or morning to morning, and in chorus their voices might sound sweeter than when the weakness of each is noticeable in its separate, solitary performance.

It is for their sakes, then, that through the winter we have let them straggle in upon us unnoticed, and now, in this more genial time of year, give ourselves up to listen to their concert.

First, the course of time has brought us another Pollock. He was born in Philadelphia in 1823; he never had a day's schooling; he began to write for the local press at the age of eighteen; he went to California in 1852, and died there in 1858. That his memory is cherished is shown by the publication of this volume so long after his death. We are told in the

* 'Poems. By Edward Pollock.' Philadelphia: J. B. Lippincott & Co. 1876. 12mo, pp. 242.

preface that "what he produced was but as the flutterings of the falcon ere he strikes for the higher air, and the object afar"; and further, that, "full of lofty ambition that aspired to a grand niche in the temple, gathering the materials for the flight, like Columbus struggling against all obstacles, just as the sails were ready to be spread, the ship went down at her moorings, and only the few floating fragments given in this volume remain of all the brilliant promises and golden anticipations our argosy contained." Mr. Pollock's poems are free from such mingling of metaphors as appears in this prose, but they are, as is indicated here, poems of promise rather than of fulfilled achievement. They do not bear the stamp of strong individuality of power or gift, but they show a nature susceptible to impressions from without, and capable of rendering such impressions with a certain facility and skill. The influence of Poe, of Coleridge, of Byron, and other famous poets, is obvious in Mr. Pollock's work, and, while the talent shown in his verse may well make it interesting to his friends, it will scarcely secure for him very wide or permanent reputation.

Mr. Charles Siegel, the author of 'A Hundred Years Ago, and other Poems,' is a student in the Reformed Theological Seminary in Lancaster, Pennsylvania, and his verse is altogether creditable to his piety, his patriotism, and his affections, but it is of a sort to be more prized by those connected with its writer by personal or local association than by the world at large. To all the acquaintances of Mr. Siegel the volume may be unqualifiedly commended as a sincere expression of his character. We suspect it will be a long time before our theological seminaries become so reformed as not to be the nurseries of a good deal of such respectable verse.

"G. E. O." displays in 'The River of Dreams, and other Poems' a considerable readiness of fluent versification, a sense of the picturesque aspects of nature, and a more than common delicacy of sentiment. But there is a want of vigorous fibre both in the conception and execution of this writer's work, so that, for the most part, it makes but a faint impression. The longest and the most ambitious poem in the little volume, "The River of Dreams," is a mystic allegory, of which the intention is somewhat vague, and which does not justify its obscurity by beauties which powerfully allure, even while they baffle and perplex the curious intelligence. We should quote, were it not too long for our columns, a poem called "Fortune's Favorite" as a specimen of the pleasing turn of the author's fancy and the ease of his diction.

Mr. Alger is a versifier as literal as "G. E. O." is unsubstantial. He writes in an unpretending style of "Grand'ther Baldwin's Thanksgiving," of "Phoebe's Wooing," and matters of this order. His poems "In Time of War" are simple and direct in sentiment and expression, and may well have gained some popularity. His volume, altogether, is one which many people will like to read, though it will not secure him a high place on the roll of poets.

Mr. Charles Edgar Spencer gives us in 'Rue, Thyme, and Myrtle' a collection of poems, all composed at the age of eighteen or under. They are creditable to him as being free from any marks of unusual precocity; yet, while they are respectable, or even more than respectable, in point of talent, they do not give evidence of such gifts as make it certain that Mr. Spencer has a distinguished career as a poet before him.

'The Poetical Works of Ray Palmer' is the name of a very handsome volume that contains the productions in verse of the Rev. Dr. Palmer of New York. In his own denomination Dr. Palmer has been known as a writer of what may be called without offence popular hymns. One of his compositions of this sort, known by its first line, "My faith looks up to Thee," has had so remarkable an acceptance that Dr. Palmer gives its history in an appendix of considerable length. It is, indeed, something that an author may feel with pleasurable pride, to have succeeded in expressing a sentiment common to a vast number of men and women in a form of words that shall be acceptable to them, and adopted by them as their own. This is what Dr. Palmer has done in this instance. But neither this hymn, nor any other of the pieces in his somewhat voluminous collection that we have read, authorizes him to assume the name of poet, except so far as it is synonymous with versifier. Dr. Palmer has the faculty in a high degree of putting the religious sentiment and doctrine and the corresponding moral notions into verse of correct measure, and occasionally of melodious construction. But, so far as we have seen, there is very little vigor of thought, still less of imagination, in his verses. These qualities, however, may be dispensed with by the writer of hymns. His readers come to his work with such associations with the matter of his verse already established in their feelings as would make any special originality of treatment appear impertinent and incongruous. The type on which the hymn is written is fixed; and even the Wesleys, with their fervor and with their power of vision, were unable to make all their hymns poetical. It is only by a liberal interpretation that most hymns in English, including Dr. Palmer's, can be classed among poems. Dr. Palmer's volume is one to meet with a cordial reception by every student or lover of what Lord Selborne calls hymnology.

In his 'Legend of the Roses: a Poem; and Ravlan: a Drama,' Mr. Watson has shown an ambitious purpose, and his work indicates that he has pursued his object with a patience, zeal, and sincerity which deserve commendation even if the result be not altogether in accordance with his desire. Here and there in his pages are lines and even passages of some length that exhibit something more than mere conscientious workmanship —lines, for instance, like the following:

> "Before me stretched a sea of golden grain
> Which rocked and rose in many a sunny wave,
> Each billow like the bounteous breast of Ceres";

or these:

> "——the future is
> A thing of dreams and fancies; a poor salve
> Which unquiet men keep ready for their hearts
> Which their own acts have wounded."

Mr. Watson has been a student of good models in dramatic literature, but he has yet to study life in others, and in himself to harvest a larger store of experience and knowledge of human nature, before he can write a play or even a poem of an undramatic kind that shall compel the attention of the busy world or attract that of the leisurely lover of good letters.

Mr. Gilbert, a volume of whose plays has lately been reprinted in this country, is a poet and playwright of very different order. Some of his dramas have had a moderate success upon the stage, but that they should have met with anything that can be called success is indication that the average theatrical audience is far from exacting. There is a vulgar smartness about Mr. Gilbert's work which may make it attractive to vulgar minds, and there is a knowledge of stage-effects which may give his plays a sort of liveliness upon the boards; but as literary compositions, whether in prose or poetry, or as studies of character, their value is very small. If read at all, they will be forgotten as soon as read.

The name of George D. Prentice, the founder in 1830 of the Louisville *Journal*, and for more than thirty years its editor, was widely known during the last generation. In a period and region of low culture, he passed for a wit and a poet, and was passable in both capacities. Mr. John James Piatt has now edited his poems, with a eulogistic biographical sketch of their author, in the pious hope of keeping alive a reputation in its nature ephemeral. A statue of Mr. Prentice, above life-size, is about to be erected, so Mr. Piatt tells us, "in Carrara marble, supported by granite pillars, at an elevation of nearly forty feet, in front of the new *Courier-Journal* building" in Louisville; but Mr. Piatt cherishes the belief that "there is something in this volume of his poems which will survive the marble effigy in the memory of men." Most of Mr. Prentice's poems are of the reflective and sentimental order. His heart seems to have been susceptible to the impressions of female loveliness. He was constantly paying his addresses in verse to one charmer after another. There are "Lines to a Lady," and again "To a Lady," "To a Young Beauty," "To Mary," "To Rosa," "To Miss Sallie M. Bryan," "To Fannie," "To Young Adelaide," "To Lucy Merrill," "To Alice Griffin," etc., etc. There are Memories, a Wish, a Parting, a Farewell, and many others of the same sort. There are lines "sent with a rose," a "Bouquet's Compliment"; there are more roses and violets, and all, alas! a little faded now. They were fragrant and pretty enough, doubtless, in their time; but their time was long ago. It is plain that Mr. Prentice was a genial, ready writer of occasional verse. He had little gall in his nature. He begins a poem to a political opponent:

> "I send thee, Greeley, words of cheer,
> Thou bravest, truest, best of men."

It is not strange that the verses of such a man should be collected and cherished by his friends, but their interest is personal rather than poetical.

Professor Blackie, of the University of Edinburgh, whose 'Songs of

'Songs of Religion and Life. By John Stuart Blackie, Professor of Greek in the University of Edinburgh.' New York: Scribner, Armstrong & Co. 1876. 12mo, pp. 242.

Religion and Life' have lately been reprinted, is, to use a phrase from one of his own verses, "a fluent preacher in rhyme." His motto seems to be, as he writes,

> "Wear your heart not on your sleeve,
> But on just occasion
> Let men know what you believe,
> With breezy ventilation,"

and his poems afford him just the occasion for the breezy ventilation of his speculations and beliefs (perhaps also his prejudices) concerning religion, philosophy, morals, and the conduct of life. He has a cheerful confidence in himself and his opinions, and a hearty conceit of his country. The composition of his poems has been, he tells us, "a source of intellectual enlargement and of moral elevation" to himself, and it is possible that the reading of them may be a source of similar advantage to some other persons.

The most interesting part of the Rev. Mr. Call's volume of 'Reverberations' is the autobiographical sketch that precedes the poems. It is a striking and sincere narrative of the mental experience of a religiously-minded man, a clergyman of the Church of England, in the course of which his faith in the traditional doctrines in which he had been nurtured gave way, and he was finally brought to hold such opinions as led him, at great personal sacrifice, to give up his position in the Church and withdraw from its communion. The narrative is of value as illustrating the difficulties in which many men in circumstances similar to those of Mr. Call are at present involved, and it touches the feelings of the reader with a pathetic sympathy for the struggles necessary for extrication from a position whose maintenance is likely to involve a silencing of the reason and a blunting of the conscience, while to desert it is likely to be attended with heavy social penalties, and not infrequently with material loss. We can well believe Mr. Call's words when he speaks of the "varied experiences of pain and sorrow" brought to all who belonged to him, as well as to himself, by his abandonment of the popular creed. There is, however, nothing of bitterness or of a controversial spirit in his writing. His poems are those of a man of culture of an enthusiastic nature, and of keen social sympathies. One of them, "The People's Petition," written in 1840, is an appeal, powerful through its simplicity, of the great mass of the ill-fed laborers for daily bread; and there are others of the same sort, written under that stress of feeling which might well affect a clergyman in a rural district in the West of England at a time when, as he says, "seven or eight shillings a week was the usual remuneration received by a laboring man." We cite some stanzas as a close from a piece called "Nemesis":

> "We know not clearly what is good,
> We dare not see Truth's dazzling face,
> But yet our heart has understood,
> Has felt her royal grace.
>
> "Who loves divines the Eternal Plan,
> Who dwells with Beauty dwells with truth;
> Still the old thoughts return to man,
> The soul is still a youth.
>
> "The sun still lights the fourfold year,
> The moon still lifts the wave on nigh,
> Man still is man: then wherefore fear?
> Believe, live, love, and die."

A Handbook of Architectural Styles. Translated from the German of A. Rosengarten by W. Collett-Sandars. With 639 Illustrations. (New York: D. Appleton & Co. 1876.)—Almost every desirable quality is to be found in the translation of this well-known hand-book, just reprinted from the London edition. It is at once concise and comprehensive. Every important style, from China to Spain, and from Norway to Egypt, is sufficiently described, and in a way that shows both intelligence and erudition. What is not made clear in the text is abundantly set forth in the illustrations. These are very numerous—six hundred and forty in five hundred pages—and they are many of them so large (nearly a hundred occupying a whole page, and as many more half a page each) that not much more than half the book is given to the text. The subjects of these illustrations are remarkably well selected, a noticeably large proportion being unfamiliar in works of this class. Altogether, although not so complete, of course, as Mr. Fergusson's more elaborate history, it is for that very reason better suited to the wants of young students and of the general public. In fact, it goes far to supply the gap left by Mr. Fergusson's earlier publication, the 'Handbook of Architecture,' now unhappily out of print—a work of more moderate compass than the 'History' that has taken its place, and one in which the space given to outlandish art, unrelated to our modern civilization, was less disproportionate than in the larger work. Herr Rosengarten has observed a juster measure, giving only a dozen pages to India and China, while his account of German art, being somewhat fuller than one meets in English and French works, adds an element of interest and comparative novelty.

With all this in its favor, the book lacks the prime merit of a book: it has no style. That a new book on this topic, and that book a German one, should have the animation and personal charm of Mr. Fergusson's writings, would have been too much to look for. But the art of writing readable English is not a rare accomplishment in England, and one might have hoped that the translator would have proved strong where his original was weakest. The vague semi-philosophical generalizations that disfigure the book owe much of their bathos to the ineptitude of the English in which they are served up. This, for instance, is the way in which Mr. Collett-Sandars conveys his author's views of the Greeks and their civilization:

> "Their poets had a great influence in the formation of their religious economy, which, though based on tradition, was susceptible of many deviations. It adapted and gave a free poetic meaning to the saga of other nations, which contained natural perceptions veiled in a mythic guise. A main element of the Grecian character was moderation, and, at the same time, a bold love of freedom, in conjunction with an instinctive dread of everything impure and unholy, and a childlike reverence for the godlike, the holy, and the lawful. . . . Whilst, therefore, the nations amongst whom religion was in every respect the immediate teacher retained a trace of the incubus in all their intellectual transactions, the Grecian race moved onwards in natural, easy grace."

Of the Corinthian order we find it said that "without being an actual imitation of nature, still the designs of nature are therein artistically conceived and made use of"; and of the German ambition to create a new style, that "all considerations in this direction must necessarily treat of the impracticability of such a scheme (for no different result is possible) rather than of its realization." We think we perceive our author's thought, and are disposed to agree with him, but such language as this seems expressly chosen to conceal it.

If publishers would employ competent persons to rewrite, so far as necessary, the translations it is thought worth while to reprint, they would double the obligations under which they lay the public. As they get the rough draft gratis, so to speak, they could well afford the expense of such revision. A hundred dollars spent in this way upon the work in hand would make a second edition worth just twice as much as the present one.

Shakespeare and the Bible. By James Rees. (Philadelphia: Claxton, Remsen & Haffelfinger. 1876.)—The purpose of this volume, the author tells us, is to show "how much Shakspere was indebted to the Bible for many of his most beautiful passages, and how beneath his hand the gems of old were set anew, and to what extent he made use of his knowledge to aid him in the production of plays." The purpose is a commendable one, and if performed with due care and judgment would doubtless result in a work that would be useful both to the literary and the Biblical student. Mr. Rees labors, too, at his task with good meaning enough, and with considerable minuteness of detail. But, unfortunately, if his purpose be good, his execution is bad; and, in a case like this, goodness of motive is no sufficient atonement for badness of workmanship. The book has altogether too many inaccuracies—inaccuracies both of statement and of quotation. Thus, in reference to the well-known matter about Sir Thomas Lucy, the author says "the poet revenged himself by sticking satirical verses on the knight's park." Of course the allusion is to the ribald lampoon beginning, "A parliament member, a justice of peace," etc. Again, he says that King James, "with his own hand, wrote a letter to Shakspere in return for the compliment paid him in his tragedy of 'Macbeth.'" Now, both of these are mere unauthenticated and unsupported traditions, and as such have been discredited long since by all biographers of the poet. But Mr. Rees puts them down as authentic verities. He also tells us "it is pretty certain that he [Shakspere] visited Venice, Verona, and Florence." This is an odd sort of "certainty." When or how was it ever certified? The most we can say is that there is something between a possibility and a probability that Shakspere travelled in Italy. But probabilities are not certainties; and he who states such things as facts will naturally be distrusted when he states facts that are such indeed. We add a few errors of quotation: Thus, from "King Lear," ii. 4, "All the stored *vengeance* of heaven fall on her *ungrateful* top." The words underscored should be *vengeances* and *ingrateful*. Also, from "All's Well," ii. 1, "So holy writ in *babies* hath judgment shown, when judges have been *babies*." Here, in both places, *babes* is the right word. Also, from "Hamlet," v. 2, "There's a divinity that shapes our ends, rough-hew them *as you* will." The true reading is "rough-hew them *how we* will." Again, Mr. Rees quotes us from "Antony and Cleopatra" the following:

'Reverberations. Revised, with a chapter from my Autobiography. By W. M. W. Call, A.M., Cambridge.' London: Trübner & Co. 1875. 16mo, pp. 199.

"Show you sweet Cæsar's wounds, poor, poor dumb mouths"; also, "And put a tongue in every wound of Cæsar's." Both passages are of course in "Julius Cæsar," iii. 2. Once more, from "King Henry VIII.," ii. 1: "Where you are liberal of your loves and counsels, be sure you *do* not *lose*." It should be, "be sure you *be* not *loose*" We could easily cite a large number of like inaccuracies. Some of them, to be sure, may be printer's errors, but for most of them the author is evidently responsible. Nor is such inexactness by any means a slight matter. We must add one error of a different sort, which shows that the author is not well booked in Shakspere's use of language. He quotes from "Macbeth," iv. 3: "The powers above put on their instruments," and then tells us the meaning is, "gird on their swords." Not so. Here, as commonly in Shakspere, *put on* is *set on*—that is, *instigate* or *incite*; and *instruments* refers to the men who are roused to arms against the tyrant. As for the rest, some parts of the book are not undeserving of commendation; especially, the author displays throughout a praiseworthy reverence for sacred things and sacred names, though he sometimes draw his rules to a degree of stringency that would have sadly cramped Shakspere's powers as a dramatist.

The Antiquities of Israel. By Heinrich Ewald. Translated from the German by Henry Shaen Solly. (Boston: Lockwood, Brooks & Co. 1876.)—Professor Ewald was beyond question one of the greatest Biblical scholars of our age. With him began a new era in the science of Hebrew, and for a thorough understanding of the grammatical character and construction of the language, and of its organic growth, his linguistic writings are almost indispensable. In his commentaries to the prophetical and poetical books of the Old Testament he not only succeeded in elucidating the literal meaning of the ancient Scriptures, but deeply penetrated into their spirit. In his 'History of the People of Israel' he both narrated the events in the life of the Israelitish nation, as they appear upon the surface, and with true ingenuity and a profound and comprehensive learning examined the Biblical documents as to their authenticity, their origin, their chronological order, and so forth; and, descending to the very lowest springs of the national life, he laid bare, or tried to lay bare, the invisible spiritual forces, and their workings, of which the outward events were but the visible consequences. On the other hand, in his 'Antiquities' he drew a living picture of the peculiar civilization and of the permanent institutions and stationary conditions of the Jewish people as they existed, in his view, at the time of the transition from the theocracy to the monarchy and for centuries afterwards. Unlike many other archæologists before him, the Göttingen professor did not divide Hebrew antiquities into a sacred and a secular part, but preferred to conceive of and to treat Israel's life in its entirety, as one outgrowth of the fundamental religious ideas which tinctured everything, whether belonging to the political, the juridical, the domestic, or to any other side of the national existence. As David ben Simra, a Rabbi of the sixteenth century, in taking his stand against Maimonides, Kreskas, Albo, and others, insisted that no attempt ought to be made to lay down certain doctrines of Judaism as fundamental, because in Judaism, as he said, everything is fundamental, so Ewald maintained that *all* the facts in the life of Israel should be considered as sacred and as organically connected together by the God-idea of the people and by their idea of righteousness. The first edition of the German original of the 'Antiquities' appeared as early as 1848; yet the book has not become antiquated, but repeated editions have had to be issued. Mr. Solly deserves thanks for reproducing the work in an English garb.

The Doctrine of Addai, the Apostle. Now first edited in a complete form in the original Syriac, with an English translation and notes. By George Phillips, D.D. (London: Trübner & Co. 1876. English part: pp. xvi. and 52; Syriac text: pp. 53.)—According to a statement in the New Testament (Luke x. 1) Christ chose, besides the twelve apostles, seventy esoteric disciples, and ordained them to the office of the ministry. Addai is said to have been one of them. He came to Edessa, as it is reported in the document before us, upon the request of King Abgar, and miraculously cured the king of a disease from which he had been suffering for a long time. This miracle of Addai, together with other great deeds, and the success of his labors as an evangelist, are recorded in this book. At the conclusion of it we find it stated that Labubna, the king's scribe, "wrote these things of Addai, the apostle," and that the account was placed among the records and deposited in the archives of Edessa. Mr. Phillips, the editor, inclines to the opinion that in the main 'The Doctrine of Addai' is genuine, that its origin dates back to the first century, and that it is older than many parts of the New Testament. Whether this view is correct or not cannot be examined in these columns. It must, however, be admitted that the document is one of the earliest productions of the Syrian Church. For, aside from all internal evidence, Eusebius, who wrote in the third century, devoted a chapter of his Ecclesiastical History to Abgar and to the planting of the church at Edessa by Addai, and it is more than probable that he had this writing before him when he wrote the thirteenth chapter of the first book of his history. The great antiquity of this document, which is now published for the first time in its entirety, after a manuscript belonging to the Imperial Library of St. Petersburg (the edition by the late Dr. Cureton was based upon a very imperfect manuscript preserved in the British Museum), invests it with considerable interest for the theologian as well as for the historian and the linguist.

The Nation.

NEW YORK, THURSDAY, JUNE 8, 1876.

The Week.

THE enquiry into Mr. Blaine's transactions in the Northern Pacific and Little Rock and Fort Smith stocks and bonds took a singular turn last week, in the appearance on the scene of a witness from Boston named Mulligan, who had, through his connection with Mr. Fisher, one of Mr. Blaine's friends in that city, become cognizant of these transactions, or some of them. The witness's testimony was not important on the first day; but on the second he appeared before the Committee and said Mr. Blaine had obtained from him a packet of fifteen of his (Blaine's) letters, which contained important corroborative evidence, on a promise to return them, which promise he had, after vain pleadings with the witness not to produce them, broken, and retained the letters. Mulligan even alleged that Blaine had said that the production of the letters would ruin him and his wife and children, and threatened to commit suicide if they were produced before the Committee, and offered to get the witness a consulship. The ruin and suicide part of the story Blaine denied, but admitted the consulship part, as jocose, however; he declared the letters were strictly private, but perfectly innocent and creditable, and had nothing to do with the matter under investigation, yet refused to produce them, though he agreed to let the Committee read them under pledge of secresy. The Committee declined to examine them in this way, and Mr. Blaine then submitted them to two "eminent counsel," Messrs. Jeremiah Black and Matthew Carpenter, who, after deeply scrutinizing them, advised Blaine not to give them up.

On this, Mr. Blaine, seeing that the letters must sooner or later come out, and knowing Mulligan had made a memorandum of their contents, produced the letters in the House, and had them read by the clerk, making a running explanation of their contents, declaring that he had been treated with gross unfairness by the Investigating Committee, that the chairman had suppressed a despatch from Josiah Caldwell exonerating him from all share in the $64,000 transaction with the Union Pacific, and making what he called an appeal from the Committee to 44,000,000 American people. This bold move took the Democrats completely by surprise, and they failed to take any notice of the fact that Mr. Blaine was not entitled to the floor at all, or that the motion he made to have the Judiciary Committee report the facts about the telegram was entirely out of order. Mr. Knott, the chairman, was obliged to admit that he had received a despatch from Caldwell, and the Democrats only recovered their senses in time to prevent a vote on Mr. Blaine's resolution and to refer it to the Committee which it was intended to censure. The apparent success, however, which Mr. Blaine won is, unless we are greatly mistaken, more than spoiled by the character of the letters he produced. Some of these relate to business affairs not having anything to do with the present investigation, but all of them show that as Speaker of the House he was deeply involved in railroads always in need of legislation, while one or two look more like direct corruption than anything else. It appears from one of the two letters dated October 4, 1869, that in the March session of that year (Mr. Blaine's first term as Speaker) a bill renewing the land-grant to the State of Arkansas for the Little Rock road came up, and an attempt was made to saddle the bill with a fatal amendment not germane to its purpose. According to Mr. Blaine's letter, "Root and the other members from Arkansas, who were doing their best for their own bill, were in despair," and quite naturally, for, says Mr. Blaine, "it was well known," if the attempt had succeeded, "the whole thing would have gone on the table (in the Senate) and slept the sleep of death." Root came to Blaine and asked what he could do, and Blaine got him out of the scrape by sending his own page to General Logan, and telling the latter to make the point that the amendment was not germane. This was done, the point was sustained by Mr. Blaine, and the bill at once passed. In this way the land-grant, which was the basis for the subsequent speculation, was secured. Almost immediately afterward (June 29), we find Mr. Blaine writing to Warren Fisher, "Your offer to admit me to a participation in the new railroad enterprise is in every respect as generous as I could expect or desire," and suggesting that, if Caldwell desires to dispose of an interest in it, he should "make the proposition definite"; and making the following offer of services, the nature of which may be inferred: "I do not feel that I shall prove a deadhead in the enterprise, if I once embark in it. I see various channels in which I know I can be useful." The negotiations with the Little Rock road now began, and it is evident that Caldwell did not do all that Blaine expected, for on October 4 he writes the letter to Warren Fisher, giving the history of the passage of the land-grant act by his assistance, and suggesting to Fisher to tell the story to Caldwell, and point out to him that he (Blaine) had, without knowing it at the time, done him "a great favor." Not satisfied with this, he writes another letter on the same subject on the same day, in which he refers to Fisher's advice to him "to make as much as I [Mr. Blaine] fairly can" out of the "arrangement," and replies that it would be only "natural" for him to do his "utmost to this end." As these letters contain the real history of the transaction, it is interesting to turn to Mr. Blaine's explanation on the floor of the House a month ago, and see how far the two agree. He there represented that the Little Rock "Company derived its life, franchise, and value wholly from the State of Arkansas." It now appears that in 1869 he represented to the projectors of the road that the land-grant was due to the Congressional act of that year and to his own exertions in their behalf. It appears also that he was "let into" the road immediately after these exertions, so that his first statement, that he invested in the securities as he might in any others, is completely exploded. In fact, the letters are a very damaging exposure.

Under these circumstances, the shouting of his friends over his "pluck" and his chastisement of the Democrats is amazing. His newspaper defenders talk as if he were a criminal on trial, who is perfectly justified in any audacious move by which he can escape the penitentiary—the fact being that he is a candidate for the Presidency of the United States, who has been working hard for the nomination, and whose integrity has never been impeached until now, and that what the public want to know is not whether he ought to be in the penitentiary, but whether he is, as he ought to be, a person so stainless and so far above reproach that the chief-magistracy of this great nation, with its vast powers, may, in a time of great corruption and disorder, be safely committed to his hands. From this point of view, his deep sense of the privacy of private letters, and his unwillingness to let the world read a harmless and honorable business correspondence, and his eager committal of his honor to the custody of Messrs. Black and Carpenter, followed by his cool production, as proofs of his innocence, of evidence directly to the contrary, wear the appearance of sorry farce. There appears to be no question that he sold Little Rock and Fort Smith bonds on commission, and this suggests the enquiry whether he was not selling the Northern Pacific "interest" on commission too.

The Reform Club of this city, which comprises all the best Republicans in it, has held a meeting and appointed a very strong

delegation to go to Cincinnati and present an address to the Convention, and to work for the nomination of Bristow. The address sets forth that this State is the real "battle-ground of the canvass"; that the people want the Republican party to remain in power only on condition that the promises of specie payment and civil-service reform made in 1872 shall be fulfilled; that the first has only resulted in a further pledge to resume in 1879, and that the other promise, "after some beneficent experiments," has been "openly, wilfully, and totally broken by Congress and the President"; that the long delay in resuming specie payments keeps the business of the country depressed; and that the neglect to reform the civil service exposes the country to a greater peril, and has, in this State, resulted in the formation of an "odious and intolerant oligarchy" of office-holders which "menaces the very system of our Government." The address declares the belief of the Club that a great majority of the people distrust the Democrats, but, at the same time, predicts that if the Convention neglects to prove by its platform and nominations that the "flagrant decay of official faith and integrity which has occurred during the present Federal Administration is not the fault of the Republican party itself, but of unfaithful servants," the Democrats will carry the election; demands the nomination of candidates "whose lives afford a more trustworthy pledge than the resolutions of any convention" that they will be real reformers; insists that the "sacred pledge" of resumption in 1879 shall be carried out; that the appointing power shall be taken from Congress and restored to the Executive, and terms of office made dependent upon honesty and capacity.

An enormous quantity of evidence has been taken as to Secretary Robeson by the Naval Investigating Committee, the sum and substance of which is as follows: When Mr. Robeson entered public life in 1869, he was a poor man, not having $20,000 in the world, and no means of support except a small country practice as a lawyer. At about the same time he entered into relations of a confidential character with the firm of A. G. Cattell & Co., engaged in the "grain and flour commission" business, with a capital of about $30,000, no profits, and having no connection with the navy. It appears from the evidence of the Cattells themselves that their commission business, since Mr. Robeson came into office, has consisted almost entirely of levying heavy percentages on all the contracts with the Navy Department, the contractors paying the money because of the Cattells' supposed influence with the Secretary. It also appears that there have been large money transactions between them and the Secretary, whose bank deposits have swollen from almost nothing when he went into the Treasury to the sum of $319,000 deposited with three separate banking-houses between April 4, 1872, and April 4, 1876; that Mr. Robeson's property at Long Branch was paid for by E. G. Cattell; that he gave Mr. Robeson $3,000, which is entered under the mysterious head of "gratuity account"; that Mrs. Robeson made private purchases of one of the contractors whom the Cattells bled, the contractors taking off a certain percentage from the face of the bills paid by Robeson; that the book-keeping of the firm is so confused as to be unintelligible, and papers of importance have been destroyed, while sums as large as $180,000 are entered in a lump, without reference to the items composing them. The Cattells, of course, deny that Robeson was in any way privy to their "commission business," but this is almost incredible.

The dead-lock on the appropriations between the two Houses of Congress still looks threatening, and there are only three weeks left before the beginning of a new fiscal year in which to remove the difficulty. This really arises not from the necessity of the case, because the Republicans in the Senate are willing enough to make reasonable reductions in the estimates, but from the anxiety of the Democrats that the reductions shall appear to have been caused by a burning Democratic thirst for reform and a truly anti-Republican zeal for economy. Mr. Randall, who at the beginning of the session announced that the expenses were to be cut down $40,000,000, has lately been giving out that a terrible discrepancy is going to show itself at the end of the current year between last year's estimates of receipts and the actual income of the Treasury. But the best authorities make this deficiency only five or six millions. The Senate has voted to keep the President's salary at $50,000 a year, and has also passed a bill for the return of the Japanese indemnity, providing, curiously enough, that the principal of the fund shall be returned, but the accumulations of interest retained by the United States. On what principle this is done it is hard to say, and will probably be still harder to explain to the Japanese, inasmuch as our returning the principal is a distinct recognition of our liability for the accumulations of the fund, as Mr. Edmunds insisted during the debate. The House has passed the Army Reduction Bill, and a new attempt to repeal the Resumption Act has failed, owing to an adverse opinion of the chair on a point of order, the ruling being sustained by the House. On Tuesday, however, by a vote of 115 to 97, the House amended its rules in favor of the Committee on Banking and Currency, empowering it to report any bill relating to the currency at any time. This measure was adopted in the Democratic caucus, and it means that the soft-money men will make a successful attempt to repeal the Resumption Act, so far as the House can do it, before the meeting of the St. Louis Convention.

The minority report of the Senate Committee on the Pacific Railroads brings out the imbecility and impotence of the Government in its dealings with them more clearly than the report of the majority. The sum and substance of the minority's argument is that the Government has no security for its loan, that principles of common honesty and respect for vested rights forbid it to alter its agreement with the roads contained in the original statutes, and, therefore, it will do well to make the best arrangement with the Companies it can. There is no single point in the history of the contest between the Government and the roads in which the former has not been ignominiously defeated, no act passed by Congress which has not thoroughly undermined the public interests, and no lawsuit arisen in which the terms of the contract have not turned out to be so favorable to the Companies that it might as well have been enacted by them instead of by their Congressional tools. Nominally, the security of the United States for the $64,000,000 advanced to the lines was, first, a mortgage of the property, second, a lien of 5 per cent. of the net earnings, and, third, half the Government transportation money. Actually, the mortgage turns out to be a second mortgage, and the interest on it, instead of being payable, as all other mortgage interest is, semi-annually, is payable (this has been decided by the Supreme Court) on the maturity of the bonds, when the Companies conclusively prove they shall not have the money to pay it with; and this leaves the 5 per cent. of earnings and half the transportation money as the totally inadequate sources for the accumulation of a fund which in twenty or thirty years ought to amount to $150,000,000. There has not been the slightest pretence of any attempt on the part of the Companies to accumulate a fund for the payment of the money advanced by the Government, and everybody knows that a great part of the money so advanced was, at least in the case of the Union Pacific road, not used in building the line, but corruptly distributed as "dividends" among the stockholders of a parasitic corporation, composed of the proprietors of the road and a number of Congressmen, who pocketed the money as their wages for conniving at the swindle.

Captain J. B. Eads, who is building the jetties at the mouth of the Mississippi, has become involved in an unfortunate and unnecessary dispute with Major Howell, of the United States Engineers, who was, with General Humphreys, one of the advocates of the Fort St. Philip Canal. The grant obtained by Captain Eads from the Government (one of the least objectionable that ever passed through Congress) stipulates that nothing is to be paid him unless he succeeds in securing twenty feet of water through the South Pass to the Gulf within the specified time. Now, Captain Eads declares that the work is going on in the most encouraging manner, that he has already got sixteen feet, so that the

largest coasting steamers have been sent to sea over the bar, "on which scarcely eight feet of water could be found last year." Major Howell, on the other hand, declares in a published letter that there are only twelve feet of water at the South Pass, that the "nucleus of a new bar" exists in front of the jetties, that a shoal is making out to this nucleus, and that in short the jetties are doing no good. Against all this Captain Eads brings certificates from his engineers that Major Howell's statements are unfounded, and he protests against his enterprise being embarrassed by officers having no immediate connection with the work, and has written a letter to the Secretary of War, begging that any further interference on the part of such officers be prevented, and that instructions be issued to the inspecting officer authorized by the Jetty Act to furnish him directly with any information as to the result of the work he may need, and that he be ordered to report to the Secretary of War instead of to the Chief of Engineers. Whether this is desirable or not we do not know; but it is certainly a great mistake to allow engineer officers in the employment of General Humphreys, who is known to have no faith in the jetty system, to write letters to the newspapers ridiculing the experiment when the department of the service to which they belong stands in a judicial attitude to the undertaking. This, at any rate, ought to be stopped.

The Committee appointed by the Bar Association to investigate the charges against Mr. Charles O'Conor—if there can be said to be charges where the only person interested declines to make any, and expresses a feeling of profound gratitude to the person accused—has made a report completely exonerating Mr. O'Conor; declaring him to have acted throughout the Forrest case with a delicate sense of professional honor, to have taken no improper or excessive fees—in fact, to have taken very moderate fees—and to have never given anybody any right to suppose that he intended acting gratuitously.

Money continues to pile up in the New York banks, and they now hold a surplus reserve of $16,500,000, which is about $500,000 less than the surplus reserve held a year ago, and about $5,000,000 less than that held at the beginning of June, 1874. The only anxiety which money-lenders have, as to the next ninety days, is how to employ their money without risk at 3 to 4 per cent. At the Stock Exchange the week has witnessed an advance in securities, bonds, and stocks, and this while there have been further reductions in the rates of the trunk-line railroads and the telegraph companies. The railroads which mine as well as carry coal have, in order to sustain their securities, agreed to diminish production for sixty days—a step which evokes hostility from every branch of industry that uses coal, as well as from the great body of small consumers. Owing to the gravity of the political complications in Europe the foreign markets for securities have drooped, with the result of stiffening the price of gold here. The range of our paper "dollar," measured by the gold standard, was, during the week, from .8898 to .8869.

Abdul Aziz has been kind enough to his nephew and successor to take himself off by opening his veins with a pair of scissors—a fact to which nineteen physicians, of different nationalities, have testified in writing, but which, we presume, many people, remembering the old Turkish customs, will hesitate about believing. At all events, the way is thus made somewhat plainer for Murad, who has not yet been recognized by the Great Powers, but probably will be now without delay. Abdul Aziz appears to have been hoarding great sums of money, besides his frightful outlay on his harem and palaces. These leaks will now be stopped, the civil list probably fixed at a moderate sum, and the harem abolished—a reform which the reformers ought, above all things, to insist upon. In fact, it would not be unreasonable for the Great Powers to refuse to recognize a polygamous monarch as their equal. We have endeavored elsewhere to give some reasons for believing that Murad will turn out no better than his uncle, and that the Ottoman Empire is in its last days. What most excites public curiosity at this moment is the part England is going to play in the mêlée. The general belief is that she will resist any attempt at aggrandizement on the part of Russia; that Germany will probably not be sorry to have her take this position; and that somehow the imbroglio will end to the advantage of Austria.

Lord Stratford de Redcliffe, who was for so many years English Minister at Constantinople, and for the greater part of his stay exercised paramount influence in the counsels of the Sultan, and has been celebrated by Kinglake in the History of the Crimean War as "the Great Eltchi," has sent a plan of Turkish salvation to the London *Times*, in which, after tracing the decline of Turkey since the abortive attack of Solyman on Vienna, he proposes equality before the law; the admission of all, both Christians and Turks, into the army; the admission of the members of the two creeds, in equal numbers, to the Council of State and all other secular councils; the general recognition of religious freedom; the infliction of punishment or forfeiture by due process of law only; the establishment of a board of trade containing a fair proportion of foreigners; and the embodiment of all these reforms in a convention between the Sultan and the Western Powers, the execution of them to be superintended by a mixed responsible Commission. There is nothing very new in this scheme; what is remarkable about it is that it emanates from perhaps the most hopeful and powerful friend the Turks have ever had, and one who knows the secret of their strength and weakness better than perhaps any other living statesman. That such a man should propose that the Western Powers should assume part of the task of governing Turkey, is a sure sign that things are in a bad way.

The Khedive has issued a decree in support of his credit providing for the organization of a Supreme Council of the Treasury, containing ten members—five foreigners and five natives. The first section, which will be composed of three foreigners, will have the inspection of the central treasury and the supervision of its accounts, and the whole Council have apparently unlimited powers of enquiry into the finances of the state, and the right to examine and amend the budget submitted to it by the Minister of Finance at the close of every financial year. The task of organizing the Council is committed to Signor Scialoja, a member of the Italian Senate, and an able financier. There can be no doubt of the value of this arrangement as a means of restoring Egyptian credit, but it furnishes another curious illustration of the way in which the semi-barbarous states are passing, through their economical necessities, under the control of the great commercial Powers.

In Spain the question of religious toleration seems in a fair way of being settled, the Cortes having, as we said some weeks ago, adopted Article 11 of the Constitution, and the Papal Legate, Mgr. Simeoni, having taken his departure in disgust. The question of the Biscayan and Navarrese *fueros* is more difficult to manage. The delegates who went down to Madrid to negotiate with Señor Canovas were inexorable in their refusal to come under the common law, but he would hear of no compromise, and probably by this time the duties in those provinces have been raised from 6 per cent. to 27 per cent. as in the rest of Spain, the free trade in tobacco is gone, and they will have to supply conscripts to the army. The question whether they will submit without resistance has been causing much anxiety, but the probability is that their exhaustion in the service of Don Carlos will leave them no alternative. The discussion of the budget has brought out charges of gross corruption in the management of the Treasury since 1869, and a commission of enquiry consisting of twenty-one members has been appointed. We have little doubt the disorders of the last seven years have given plenty of occasion for peculation and fraud, and that our own corruptionists will be in a few months telling us joyously, "Why, these things occur everywhere, only in monarchical countries they are covered up. Look at England in the days of Walpole, look at the Duke de Saldanha, and look at Spain. The fact is that our press, etc., etc."

MR. BLAINE'S APOLOGISTS.

THE fact that Mr. Blaine is a candidate for the Presidency is leading some respectable newspapers into defences of him which are likely to do a good deal of mischief with regard to things much more important than his or any man's reputation. One does not need to form any opinion about the guilt or innocence of his dealings in stocks and bonds in order to be fully satisfied that he was at least very imprudent, and has placed himself in positions which lay him open to grave suspicion—and this, in a public man of his pretensions, is a very serious matter, and is not to be met or disposed of by denunciations of "scandal-mongers" and wild asseverations that he has done nothing wrong, or nothing more than "every citizen has a right to do." Some of those who are indulging in this sort of talk on Mr. Blaine's behalf only indulge in it because his reputation is part of the party capital, but then it helps to blunt the moral sense of the community and to make bad and dangerous precedents. We must at this crisis keep up our standards of official propriety, no matter who suffers by it. The rules which govern the conduct of men in public life are of enormous importance; the number of candidates we have for the Presidency is of very little. We may add, too, that this is not the time for wholesale abuse of "tale-bearers" and "slanderers," or for holy indignation over these assaults on the characters of our public men. We know of nothing, we repeat, and nothing has come to light during the past year, to relieve our politicians from the necessity of answering charges. Several of them have been successfully accused of corruption in one form or another, and we all perceive that there is so much corruption abroad that nobody is now above suspicion, and it is a necessary condition of reform that no accusation should be treated as too improbable for examination. Each case has, in the present condition of affairs, to be examined on its merits, without any preliminary rolling of eyes or holding up of the hands over the prevailing love of defamation. The crisis is too serious for cant of any kind. When we consider that the present Chairman of the Senate Committee on Foreign Affairs has once been proved guilty of corruption, and had to leave the Cabinet on account of it; that the late Secretary and Assistant-Secretary of the Treasury have had to retire from public life for corruption, or connivance at corrupt practices, and the late Secretary of the Interior shared the same fate; that the President's Private Secretary has had to resign his office for a similar reason; that a late Vice-President retired under suspicion of taking money, and lying about it; that the late Secretary of War is under indictment for corruption; that the President's brother has confessed to trading in offices given him by the President; that $25,000 of a railroad corruption fund was traced to the pockets of the International Commissioner sent to Europe by the Centennial Commission; and that the late Minister to England has been convicted of lending his name to fraudulent speculators—we cannot help feeling amazed at the uproar which some people are making about the widespread readiness to believe evil about public men. There is nothing wonderful about it. It is natural, and it may be made useful. It is not an outbreak of envy, hatred, or malice. It is the wholesome vigilance of a master who has found that his servants have been robbing him; and it ought to last until every one against whom aught can be said has proved himself above reproach. It assails nobody who is not in office or seeking office; any man who chooses can avoid these investigations by retiring into private life and staying there. Moreover, it is usually ascribed to an "unscrupulous" or "unbridled" press. But why so? Most of the "statesmen" who have been recently brought to grief by exposure were not first assailed by the press or hunted down by it. Cameron fell before Congressional investigation; so did Richardson; so did Sawyer; so did Belknap; so did Colfax. Delano was slain by a college professor; Orville Grant criminated himself; Babcock was laid low by the Grand Jury and the District Attorney. The *Nation* has pursued Schenck since 1872, but he was finally brought to justice by a Congressional enquiry. In fact, it is difficult to say who the innocent victims of newspaper assaults are. We have asked repeatedly to have one of them named, but have never succeeded in getting any reply. There have been charges made against many persons by newspapers, it is true, but who is the upright man who has suffered by them? Mr. E. P. Smith, of the Indian Commission, figured in this rôle for a while, until he fell into Professor Marsh's hands, who remorselessly tore off the disguise. There is no clean-handed person in public life who cannot defy the press or disregard it. It may, if he is sensitive, destroy his comfort for a day or two, but this is the worst he has to fear from it. His character and, let us add, his reputation are beyond its power.

Mr. Blaine, therefore, is entitled to no privileges or consideration as a martyr. He is undergoing no examination that is not legitimate and reasonable. His accusers have given no sign of special malevolence towards him, and the public is not unduly inquisitive about his affairs. The American people have a right to know for certain whether a man who, at this great crisis in the history of the Government, offers himself for the highest office in the state, has prostituted any office he has filled, or betrayed any public trust reposed in him, or has been mixed up in any of the corrupt dealings between speculators and politicians which have been so prominent a feature in our domestic affairs during the last ten years. The process of finding this out may not be pleasant or savory either for the individual or the public, but we are sure it is wholesome; and we must protest, therefore, against the newspapers helping any candidate to escape enquiry under cover of irrelevant denunciation of all accusations whatever.

It ought not to be forgotten, and we see that Mr. Blaine himself has not forgotten it, that the position of a legislator towards persons who are calling, or are likely to call, for the exercise of his powers for their private benefit, is essentially a judicial position. He has to decide between them and the public. His first duty is, therefore, not to accept favors from them, or put himself under any obligations to them, or become interested in the success of their enterprises. If it be said that this rule would cut a member of Congress off from a great many good and innocent investments, we answer that it would no doubt, but that this is one of the inconveniences of public life which men who like public life ought to be prepared to face, and which nobody who cares more for money than for legislation is compelled to undergo. In other words, a member of Congress, or a foreign minister, or a judge, or the President, has not "the same right as any other citizen to invest his money where he pleases." He may invest it in ways that would bring his public duty into conflict with his private interest; and even if he was sure that his conscience would triumph over his interest, he has no right to shake the confidence of the people in their government by laying himself open to reasonable, natural, and almost unavoidable suspicion.

Applying all this to Mr. Blaine's lately published letter to Mr. Fisher in connection with his subsequent explanation of it—we shall not now touch on the parole evidence in the enquiry pending at Washington—we find that he, in the first place, acknowledges himself to be engaged in inducing his personal friends to purchase an interest in a land-grant road, which interest, he declares, he "cannot touch" (that is, become possessed of) himself because of his position as a legislator. But, then, the reasons which prevented his becoming a proprietor himself obviously forbade his selling to others. The value of the interest in the Northern Pacific Railroad was in 1870 altogether prospective. When Mr. Blaine, therefore, induced his friends to purchase it on his solicitation and recommendation, he thereby created a strong reason for his desiring that it should prove profitable, and a reason which might fairly be thought likely to affect his integrity as Speaker of the House should the Company come before Congress for further aid. The impropriety of this preliminary step in the transaction is, therefore, as plain as possible, although we are assuming that he received for his sales of bonds no commission from the vendor of the "interest." That Mr.

Blaine himself should not see it, and that papers like the New York *Tribune* and the Boston *Advertiser* should not be able to point it out to him, is little short of alarming. But, then, he adds that "a strange revolution of circumstances" had for a second time given him the "control of an interest." This, again, is calculated to give rise to suspicion. There are only two ways in which the Speaker of the House could "control" an interest in a railroad, by purchase or by gift. Purchase, Mr. Blaine acknowledges, would have been improper, and a gift from the promoters of the road would have been a bribe. What conclusion, then, are we to hold about the "strange revolution of circumstances"? Moreover, the connection of the Speaker of the House with a land-grant road ought not to need secresy. If it is legitimate, it may be made public. Why, therefore, is Mr. Blaine not at liberty to tell from whom he obtained the interest which he proposed to sell to his Boston friends, and why did he request these friends, when "conferring about the matter," to "keep his name quiet"? The *Tribune* tries to dispose of all this on Mr. Blaine's behalf by saying that all that Mr. Blaine did in this whole transaction was to "advise a personal friend to 'go in on the ground floor' and tell him of a chance to do it." But, in point of fact, he offered to show him the door, and open it for him, and pay over the money for him; and, in advising him to "go in on the ground floor," he tacitly bound himself, if the opportunity offered, to make "the ground floor" a pleasant place for his friend to be. The "ground floor" is the slang term in which railroad operators describe the first division of the stock among the projectors and their friends, which is usually made at a very low or nominal rate, the money to build the road being usually provided by the sale of bonds. We do not know of any solid objection that can be made to the transaction where the building of the road is an ordinary commercial undertaking, in which individuals stake their money or credit, and get what profit they can. But in the case of roads like the Pacific lines, built mainly by Government aid, "the ground floor" was not a reputable place. On the contrary, it has been during the last ten years a haunt of gamblers, jobbers, and "confidence men," full of dead men's bones and all uncleanness, to which an upright and public-spirited citizen would be loth either to go himself or advise his friends to go. We are sorry to think that the Speaker of the House should have been there, or have been running about trying to get his friends to enter it, but we are sorrier still to find newspapers on which the public must at this juncture look for light and guidance in the formation of its judgments, trying to get people to believe that there was nothing wrong about it. Mr. Blaine's course is not half as mischievous as that of his apologists.

THE TURKISH REVOLUTION.

THERE is not much probability that the change of Sultans at Constantinople will work any essential change in the situation, though courtesy requires the Great Powers to wait and see before insisting on the acceptance of the Gortchakoff Note, of the contents of which we gave a summary last week. It will probably bring some slight relief to the treasury by furnishing money from the hoards of Abdul Aziz to pay the salaries of the Government employés at the capital, and perhaps to supply something also for the troops; but it is very improbable that it will bring about any serious or permanent reform. This would be true even if the evils from which Turkey is suffering were political merely, and not also social and religious. A fruitful revolution of any sort would hardly be possible with civil war raging in the provinces and the Government bankrupt, and foreign powers more than half ready for a partition of the empire—no matter what the character of the governing class. With the governing class what it is in Turkey, such a revolution may be pronounced wholly out of the question. The hopes which are now cherished about Murad were cherished also about Abdul Aziz, and the first year or two of his reign seemed to justify them, but they are just as sure to be disappointed in the former case as in the latter. The education both of the boys of the imperial family in Turkey and of those of the high officials is utterly destructive of all energy or persistence, and is devoid of all elevating traditions and of all discipline. If men capable of such tasks as the restoration of the Turkish Empire could be bred in the harem, it would make one doubtful whether Western civilization was not in great part based on a delusion. The son of a sultan or of a wealthy pasha is brought up among a crowd of ignorant women, of whom his mother is one, and who, he finds out at a very early age, have been collected by his father for purposes of sensual gratification, and are guarded like cattle. The very first lesson of life which he learns is that the chief advantage of power and riches lies in the opportunity they afford for sloth and licentiousness, and the earliest present he receives from his parents as he approaches manhood is apt to be a female slave, who is euphemistically called "a wife." Of late years, efforts have been made to give to youths bred in a nursery of this sort a French or English education; but we believe we are within the mark when we say that in not one case out of a hundred have they succeeded. The young Turk who is sent abroad, or supplied with French or English tutors, acquires one or two foreign languages, a smattering perhaps of some science and of military tactics—not strategy—and at the same time loses his confidence in his own creed and race. But we doubt if it has been found possible to implant in any of those on whom the experiment has been tried the seeds of high ambition or of great aims, or to create in them any capacity for manly self-denial, or a willingness to submit to any sort of physical or moral discipline. The process of deterioration in the imperial family has been retarded partly by the practice of marrying Circassian women, and partly by the strong fire of religious fanaticism and race-pride which, down almost to our own time, has burnt around the throne, and has been fed by the manly but ferocious simplicity of the Mussulman populace and peasantry. But, within the last forty years, the poison of the harem education has worked with almost unobstructed force. Abdul Medjid was a worn-out young man when he ascended the throne, and dragged out the remainder of his days in a condition of feeble submission to exceptionally able ministers. Abdul Aziz had apparently a stronger constitution, and had a greater appearance of vigor at his accession, but the unsoundness and immaturity of his mental and moral nature showed themselves rapidly when he found himself in possession of power and money. There is no good reason for thinking that Murad will do any better. His antecedents are exactly the same as those of his father and uncle. He has none of the only sure foundation of character, which comes of being bred in an atmosphere of decency and self-restraint. A brave, martial, fanatical, and conquering race, such as the Turks once were, might make such rulers serve their purpose; but a race which repeated defeat and a growing sense of inferiority in war have cowed and made self-distrustful, cannot be saved by substituting one harem-taught youth for another.

The intervention of the Softas—who are a large body of hangers-on of the mosques, nominally students of theology, and candidates for the official positions of a theological character, and are supported in a meagre way out of the ecclesiastical endowments, their name being a corruption of the Greek—has on the surface an appearance of the growth among the Mussulmans of a healthy view of the condition of the empire, inasmuch as they call for a National Council to take part in the government, and for the limitation of the Sultan's civil list and the removal of the treasury from his control. But a council which would satisfy the Mussulmans would never satisfy the Christians; and, indeed, it is difficult to conceive of delegates from two races whose moral and political outlook is so widely different meeting in rational consultation on any political question. But, at all events, whatever value the scheme might have had in more peaceful times, or before Turkey began to borrow money, it is too late now to construct any political machine of the slightest complexity, and no limitation of the Sultan's authority as regards the finances will be effective as long as there is no legislative assembly possessing complete freedom of speech and supported by public opinion. Without these guarantees of economy and accountability, monarchical budgets are apt to be mere farces. Even

in a country as highly civilized as France, the subserviency of the Corps Législatif and the Senate to the Emperor left the executive the practical control of the treasury, and enabled it to treat the appropriations made by the legislature as forms only, to be followed if convenient, but not otherwise. No national council that could be summoned by the Turkish Government at this crisis would have anybody but the Mussulman population behind it, and it is not Mussulman discontent now which is formidable, nor is it Mussulman support which is needed to sustain the Government. Indeed, the Mussulman population, so far from being capable of becoming an instrument of reform, is itself "part of the thing to be reformed," as has been well said of some would-be reformers among ourselves. There is every sign, too, that, in spite of the polite delay for the purpose of seeing what the new Sultan will do, the Western Powers all begin to recognize that the Turkish problem is on the eve of a violent solution of some kind; and there is, since the murder of the consuls in Salonica and the recent alarms at Constantinople, more or less anxious discussion in the European press as to what the Turkish population will do when it finds that it is actually going to lose its political supremacy and sink into equality with, or perhaps inferiority to, the Christians. Some incline to the belief that it will give expression to its despair in the way in which it has so often given vent to its discontent—by massacres of Christians—and that the final overthrow of the Sultan's authority will be marked by frightful atrocities, which will put the lives of Christians in danger all over the empire, even in those places in which they are in a majority, owing to their long habit of submission, their want of familiarity with the use of arms, and their traditional dread of Turkish ferocity. Others, again, believe that the Turkish fanaticism has so far declined that it now would only show itself in resignation, and that it would not excite any resistance to irresistible force, and that the expulsion of the Caliphs from Europe would probably prove a tame and commonplace affair, totally unworthy, as far as picturesqueness goes, of the strange historical episode of which it would form the close. This view is supported by the readiness with which the Mussulmans have submitted to English rule in India and to French rule in Algeria, and are submitting to Russian rule in Central Asia, and with which the Mussulman population has retired from the lost provinces in Europe. But it is, on the other hand, opened to question by the fact that heretofore the losses of Islam have been on its frontiers. It has receded from many countries it once held, and here and there large bodies of Mussulmans have had to make their submission to Christian rulers, but never until now has the Caliph been ousted or compelled to change his capital by infidel arms. It is in this that the bitterness of an abandonment of Constantinople would lie. The Koran and the sword are so intimately connected in the minds of devout Mohammedans—the public Friday prayer is offered by the khatib in all cities which have been acquired by capture with his hand resting on the hilt of a sabre—that they cannot console themselves, as the Christian nations can, for temporal losses by considering them quite consistent with vast spiritual gain. The fall of Constantinople, or the retirement from it of the Sultan, would therefore probably produce throughout the Mussulman world, from Cape Verde to the coast of New Guinea, and from Mozambique to Lithuania, a sensation almost as profound as that which Christendom felt when the news spread that the Eastern Empire had gone down before Mahomet the Second. For all trustworthy observers agree in the opinion that the religious zeal has of late years been growing among Mussulmans everywhere, in spite of their steady loss of political power. With the English masters of India, the Russians of Central Asia, and the French of Algeria, and with Persia, Egypt, and Morocco reduced to the rank of British dependencies, and the Sultan relegated to a remnant of dominion in Asia Minor for the duration of which he would be largely dependent on whatever power held Constantinople, the creed of the Prophet would enter on a new and very interesting phase in its history, and one in which its vitality would be subjected to the severest of all tests.

The latest news at this writing seems to indicate that the situation has really passed beyond the control of the diplomatists, and that the open participation of Servia and Montenegro, and perhaps Greece and Wallachia, in the fray will precipitate the crisis. Of course there will then be nothing left for the three Powers but prompt action. If they suppressed the insurrection, they would be bound to govern in some fashion the revolted provinces. They could not hand them over to Turkey without exercising such supervision of their affairs as would be tantamount to actual administration, and of course any interference at all may cause a burst of despairing fanaticism on the part of the Turks. Then, too, the intentions of England are veiled in mystery. She has refused to join in the Gortchakoff Note, and is making naval preparations in the Mediterranean, which may mean either that she intends to prevent, if she can, the Allies from forcing Turkey's hand, or, what is more probable—for even Disraeli can hardly mean to engage Austria, Germany, and Russia single-handed—to take care that the Suez Canal is not meddled with. In fact, the state of affairs is so complicated that almost any prediction seems plausible.

THE INTERNATIONAL EXHIBITION.—III.

BRITISH PAINTINGS.—II.

PHILADELPHIA, June 5, 1876.

CONTEMPORARY British art is less known to the people of this country than old Egyptian, or Etruscan, or, we might say, Cypriote and Mexican. The English engravers are popular, but the sculptors and painters are more strange to us than those of China and Japan. In the years just preceding the war, Mr. Gambart several times sent over his agents, Mr. Frodsham and Mr. Crofts, with invoices of British pictures for sale; they did not sell, and are now forgotten, while Mr. Gambart has not resumed the attempt, and the exhibition-pictures in Philadelphia strike with all the rudeness of novelty. This, of course, as regards those art-amateurs who are not travellers. The surprise is, it must be owned, a shock. A whole system of color is suddenly revealed which, to the eye trained in Continental methods and the long tradition of the schools, is exceedingly crude and aggressive; the arts by which texture and surface may be given are so generally ignored that no sort of effort seems to be made to translate quality. "Purist" painters go on turning out landscape after landscape and still-life after still-life, each of which is mere enumeration, apparently perfectly secure in self-respect so long as enumeration is made faithfully and statistically; they will paint, evidently from nature, sky after sky and foreground after foreground, without ever seeming to have observed that the peculiarity of the light in the sky is its vibrating effect on the eye, or that foreground objects are massed and subordinated when the vision is directed to the natural point of sight. These singularities, defined in a word, impart, when extended to a whole school of painting, a minute and variegated trouble. Hardly a picture is exhibited which, to the eye habituated to explore in painting its master-charm—quality and tone—does not impart a wound. Among these works which distress so much while they so strongly interest, are seen those paintings of tone-masters which have been acclimated in England, and whose authors have been made at home there with true and generous hospitality—Dutchmen like Alma Tadema, or Americans like Boughton or Whistler. Mr. Tadema's pictures are now criticised with very high appreciation in the London journals, though it was not observed that they met with quite such distinguished approval during the long years when their author exhibited in Paris. They are, to leave their archæological qualities aside for a moment, usually masterpieces of quality; their research of textures often reaches the verge of trickiness. They hang among the native English pictures like exponents of an undreamed-of culture, smiting right and left with the most humiliating force of contrast. Even the works of Mr. Boughton, a man of more limited range than some Englishmen, shine delightfully among the British canvases, because he expresses quality and has acquired style; his "God Speed" and "Going to Seek his Fortune" (the latter strayed among the American pictures, as the great "Gilbert Stuart" has strayed among the English) would not be so conspicuous for merit among a culled American series of pictures as they are here; his skies are not overpoweringly luminous beside Mr. McEntee's skies, his figures are not more distinguished than some of Mr. Hunt's or some of Mr. Johnson's; but in an English exhibition Mr. Boughton's works certainly do glow with a noticeable light

among their neighbors. It is because Mr. Boughton attacks his subjects as problems in the art of painting; the peculiarities of this art are what he grapples with and tries to conquer; he never uses a canvas without making it a field for the exercise of the craft and mystery of painting. This habit, which would seem obviously proper, and which fortunately is not so very rare in our own school as it is in England, would really seem to be the last thing that a British oil-color artist takes account of. In scores of canvases here we find a decent attention paid to design, or the qualities that shine in an engraving or a photograph; we find a respectable attention paid to the sculptural qualities of form, posture, and anatomy; we find a warm, sympathetic attention paid to the quality of drama, the way in which an anecdote is put; but to oil-painting, the special effects within its competency, and the triumphs which it has wrested from its sister arts, we see the most amazing indifference. This gives us the most peculiar feelings in encountering the subjects made familiar to everybody by engravings. In the case of these we are confounded to find that, as between the artist and his engraver, the engraver has positively said everything for him that he had to say at all; there is nothing in color, nothing in brushing, nothing in quality, nothing in his vehicles, values, and tones, that the painter had a mission for, or about which he had a message to deliver. The work seems to have been conceived in his mind as a monochrome—that is, an engraving; the qualities beside that make it an oil-picture seem to have been thrown in with fatigue, and weigh down the work with deformity. These works, it is to be noted, are the works of men of consideration, artists of great inventive and constructive power, whose fame, as extended by the arts of engraving and printing, is justly great. It is amazing beyond expression to see men of this importance deliberately addicting themselves for whole lifetimes to an art in which they are evident failures or abortions—an art which does not come into true being until it receives its complement in the engraver's burin—like those gases which cannot be made luminous until common air is mixed with them, or, in a stricter comparison, like a gas which only becomes visible when some of its components are extracted, leaving its *chiaroscuro* qualities to act alone. One would say: Why not be logical, and cling to work in light and shade, rather than waste existence in the path of oil-painting, which national temperament has strewn with so many griefs for them?

The British exposition, then—certainly an assemblage of the national élite, and numbering almost twice as many as the British section at Paris, and almost thrice as many as with the same nationality at Vienna—shows a strange, wilful attention to only two or three out of the many qualities comprised in what Herr Klesmer has taught us to call *plastik* (though we must own, by the bye, that when we find Herr Klesmer pronouncing with the same orotund confidence opinions on *plastik*, in which his nation are the blindworms of Europe, and opinions on music, in which they are the leaders, we falter in faith towards Herr Klesmer). The interest we feel in the British show of paintings, so large, rich, and adequate as it is, is found to be entangled by almost every excellence but *painting* excellence; and this is proved not only gradually, by comparison with other painting sections, but instantly, by means of the pictures by men elsewhere educated imprisoned there by accident.

Of those artists who are considered always to have *painted up* to the complementary art of engraving, Landseer is the best known; yet here, strange to say, Sir Edwin shines not as a mere feeder to the burin, but as a true painter. The exhibition of his works is far finer than was made for Paris, where only the picture of the modern Amazon sitting on her overthrown horse was displayed—one of the weakest of his works, beyond redemption even by the engraver. In the present exhibition the famous animal-painter really shines at his very best. "The Sick Monkey" is a singularly beautiful work, good in tone, agreeable in color, and as if painted in another world from the unfortunate "*Jument Domptée*," which slew the artist so effectually at Paris; the power of bringing out noble expression by the bare, stark force of truthfulness in a type of face usually abandoned to burlesque is here a real and great power; the introduction of a selfish and greedy, grasping monkey to contrast the abnegation of the mother-ape is perhaps a little too Landseerish, but the figure builds up the composition. The hide-texture is felicitous, without being an instance of that over-felicity of Landseer's which often made him express mere hair-oil and combed silk. The other pictures include a portrait of Lord Ashburton, two life-sized sketches of lions in action, and a concession to Landseer's bad angel in a group of apes dressed or acting as men. This last is an agreeable folly enough, only objectionable as a finger-post to the artist's downward road, on which he wasted so much good art and overstrained invention; it contains a background group of a dowager-ape warning her heiress-ape against the charms of the travelled mounseer-monkey, which it is impossible to look at without losing gravity.

It is not necessary to make a catalogue of the pictures obviously painted to be mended out by the art of the engraver, and looking red and naked without that assistance. They stare from every part of every wall. It is a more gracious task to signalize some of the many works of high artistic interest. Noble conception is the unfailing sign of the progressing labors of Mr. Leighton. This artist exhibited at Paris in 1867 an unfortunate study called "Heures Précieuses," recognized by everybody as a simple portrait of Angélo, the model who poses for "têtes d'expression"; he was bending over a spinnet, and was painted rather vacuously and sentimentally, in a style similar to M. Merle's or M. Bouguereau's style, or a little inferior. The author now comes forward with three pictures, the "Eastern Slinger," "Summer Moon," and "Jew's House in Damascus." The painting, as pure painting, is still a little lower than that of MM. Merle and Bouguereau, but the conceptions have that unmistakable something that indicates the man of wide culture, genuine poesy, and penetrating strength. The "Jew's House" is particularly original, and tender and sweet in color; it is populated by figures of women, each figure an exquisite statuette; one, of a ripe Jewess holding a flower-pot, is a lovely invention. In this picture there is little or no composition; the human beings are studded around in a tableau showing just about as much arrangement and grouping as were characteristic probably of the stage in Shakspere's day. Singularly enough, this awkwardness or hardiness pleases in the case of Mr. Leighton, who is addicted to over-posturing and arrangement. His "Summer Moon" reminds one of the Parthenon Fates, and seems to promise more intensity and depth of sentiment than it is found to contain; it is a statuesque pair of poses, and nothing more; and it contains a purple patch of drapery which, if Mr. Leighton was in bondage to a dealer, as Bouguereau and Merle are to Goupil, instead of at the head of a genre in a wealthy land, would have made him go back to his studies like a chidden schoolboy, for repentance and alteration. The "Slinger," like the last-named picture, suggests a statue, this time Michael Angelo's David. One is rather puzzled at all this pomp of attitude and relief, preparing the mind for an intensely solemn Biblical subject, expended on a mere study of ethnology; in the same way that the figures of the "Summer Moon" cast themselves down upon their marble couch with a deeply tragical or epical air, preparing us for the most solemn situations of the Greek drama, whereas they have not even names, and are meant to be idyllic. To reserve his power in exact accord with the situation will be a last grace for Mr. Leighton's stately pencil to learn. Mr. Armitage is represented by his picture of "Chicago," in the lap of Britannia and America, and by his "Julian the Apostate at a Conference of Sectarians." Here is a painter who, like his instructor Delaroche, may well give half his honorarium to the engraver, for the engraver confers upon his compositions all the life they have. The ripe scorn of a cultured sceptic like Julian, brought to contrast with the narrow bigotry of schoolmen, would be a fine subject for a great artist, but it finds in him an inferior and illustrative artist, unable to give a higher expression to his philosopher than Thackeray gave to his Lord Steyne between the Anglican and Catholic priests. The color in both subjects has the national opacity and want of color; but, indeed, Delaroche was but a poor instructor in this respect. The almost universal hardness, however—the leading the eye to a dead wall every moment, and bringing it up there with a quick check and without escape—is what we must get used to betimes in the British section, for to let it pain us too much is to lose the pleasure of some very genuine qualities. We may pause a moment, though, before the "Morning among the Granite Boulders" of Mr. John Brett, excited to unusual discomfort by a pale stone sky of that inexorable and impenetrable quality Mlle. Bonheur so often afflicts us with; and remembering that this artist's remark, that "vulgarity is one of the forms of death," sank deeply once into the being of Mr. Ruskin, we may fairly ask Mr. Brett to apply his consciousness to the dead pencilling of this pale and ponderous welkin, and ask himself if lifelessness is not one of the forms of vulgarity. Mr. Brett seeks new methods and surprising procedures; he has been known to paint a landscape diagonally from corner to corner, finishing as he went along; in this picture he gives us some well-moulded pebbles, with water-wear and blue reflection upon them; but a marine in which we cannot breathe is not agreeable, unless to the fishes.

E. S.

CORONERS AND PUBLIC PROSECUTORS.

LONDON, May 23, 1876.

PUBLIC interest at the present time is divided pretty equally between the return of the Prince of Wales from India and the mysterious death of the late Mr. Bravo, a rising young barrister in the prime of a vigorous

life, who died in his own house in the neighborhood of London about a month ago under suspicious circumstances. Both these subjects of interest may be productive of results in the immediate future. The return of the Prince has already had a stimulating effect upon the depressed industries of London, and fashionable shopkeepers and tradesmen in the metropolis who were in despair over the badness of the times, have begun to raise their drooping heads under the active presence of royalty, just as the cowslips and the lilacs which were shrivelled up under seven consecutive weeks of a blighting east wind have begun to show symptoms of vitality under the soothing influence of the southwest wind and the active, not to say impetuous, torrents of rain which fell here yesterday. The results, therefore, to be expected from the first subject of public interest have already begun to show themselves, but the utmost that can be looked for from it is the temporary improvement in the material welfare of perhaps a hundred thousand inhabitants of this large metropolitan society—an important matter in its way, but hardly worth all the bustle that they are making over it. The results which may spring from the death of Mr. Bravo are of wider application, because out of the proceedings in connection with it we shall probably have a modification in the office of Coroner, and the organization of a much-needed and often-promised reform in the institution for the whole country of a Public Prosecutor. It is therefore to the latter rather than the former incident that I propose to call your attention. The Prince of Wales we have always with us, but it is of rare occurrence that people whom you meet every day are so deeply engrossed by a suspicious death as they are at present in such of the circumstances as have transpired regarding the death of this young man.

"Mr. Bravo, a barrister of about thirty years of age, married last December the wealthy widow of a Captain Ricardo, a young officer in the Guards, who died abroad, a short time after his marriage, somewhat suddenly. Mrs. Ricardo (*née* Campbell) was by birth and extraction a native of Australia. Mr. and Mrs. Bravo lived together in a large country-house called the Priory, and belonging to Mrs. Bravo, some little way out of London. They were rich, and their lives were ordered very much as rich people's lives generally are ordered in this country. Mr. Bravo carried on his profession, and was popular and well thought of on the Home Circuit which he attended. He was a happy, healthy man, with everything around him to make life pleasant, and he was recently married to a lady to whom he is believed to have been attached. His lot was one which many men might, and some men probably did, envy. Along with Mr. and Mrs. Bravo a widow lady, called Mrs. Cox, resided. She came originally from Jamaica, and occupied, and had occupied for four years previous to Mr. Bravo's marriage, the position of half housekeeper, half companion to Mrs. Ricardo. Arrangements, however, had been made for her return to Jamaica when Mr. Bravo's death occurred. These three people with the usual establishment of servants lived together at the Priory, a castellated mansion standing in its own grounds, which you pass on the way from the West End of London to the Crystal Palace at Sydenham. On Tuesday, the 18th of April, they dined together at the Priory on Mr. Bravo's return from his afternoon's ride. The dinner consisted of soup and fish, which Mr. Bravo did not eat, a leg of lamb of which he did eat, eggs and spinach and anchovy toast, which he did not eat, and a bottle of Burgundy, half of which he drank, and which neither of the ladies tasted. For some time recently, but since his marriage, he had had occasional attacks of sickness from some unexplained cause, and these attacks may explain the moderate amount of dinner which he took. After dinner Mr. Bravo and the ladies went to their rooms, and immediately afterwards Mr. Bravo opened his bedroom door, called his wife by name, and asked for hot water. Mrs. Bravo does not appear to have responded, but Mrs. Cox at once came to him and ordered hot water and mustard, which he drank. Doctors were sent for, and although they at first treated him for syncope, they soon ascertained that he had taken poison, and subsequent analysis has proved beyond all doubt that he was poisoned by antimony—a considerable quantity of antimony having been found in several organs of his body, indicating that the process of antimonial poisoning had been gradual. He recovered consciousness before his death, which occurred upon Friday, the 21st, the third day after his seizure, and although he was able to speak to the doctors and even to make his will, which he did in favor of his wife, he gave no explanation of the cause of his death, and no explanation has yet been discovered. It does not appear from the evidence which has up to this time been laid before the public that Mrs. Bravo visited her husband from the time of his seizure till his death ; but since the inquest her solicitors in her name have widely advertised the offer of £500 reward to any one who will throw light upon the manner in which the antimony was procured.

In almost any other civilized country in the world, when such a train of circumstances occurred, it is reasonable to suppose that some enquiry would have taken place, conducted by officials appointed by and responsible to the Crown, and trained to investigate and weigh evidence. I am not sufficiently familiar with the criminal procedure in America to say what steps you would have taken, but I am certain that a judicial enquiry of some sort would have been held by competent and responsible officials. In Germany, in France, in Holland, in Belgium, and even across the border in Scotland, the whole organization at the disposal of the Public Prosecutor would at once have been put in motion. But what takes place in England ? There is no Public Prosecutor and no organization for the judicial discovery of crime. The Attorney-General occasionally acts as Public Prosecutor, and through the Home Office he can set the detective force of the police in operation. But the Attorney-General's action in such matters is optional and intermittent, the rule being that the individual who has been criminally wronged, and not the state, must prosecute, and that the prosecution must be conducted, not as it is in France and Scotland, after the manner of an inquisition, but of a litigation. Supplementary to this haphazard arrangement, or want of arrangement, there is in every county or district of a county an official called a coroner. The office of coroner has the recommendation of antiquity in its favor, and nothing else. It is of Saxon origin, and there is authentic mention of the institution in an original charter of King Athelstan in 905 A.D. The coroner is elected for life by the ratepayers of his district, and he is paid a good salary out of the county rates. In most cases he is a medical man who has studied the arts of popularity with more success than those of medicine, or he is a small country attorney who has failed in the higher paths of his profession. He is irremovable except in flagrant cases of misbehavior or incapacity, when the Lord Chancellor may intervene, and he is irresponsible. This is the official in England who is charged with the investigation of crime, and he can act only in cases of violent or sudden death, and even then in such cases only in which the body has been found. If he cannot act, there is no authority who can examine witnesses until a suspected person has been actually arrested and brought before a magistrate. When a sudden death has occurred, it is notified to the coroner, and he summons a jury of twelve men, whose verdict must be unanimous, and holds an inquest. This inquest must be held by the coroner of the district in which the body shall be "lying dead," and it generally takes place at a public-house or some place of public resort, to avoid the imputation of secresy.

In the present case, the latter precaution was overlooked. The coroner of the district in which Mr. Bravo died received an unsigned letter, to the effect that Mrs. Bravo desired that the inquest might be held in the Priory. In accordance with this letter, by whom written it does not appear, Mr. Carter, the coroner, summoned a jury which consisted of a butcher, a builder, a corn-dealer, a saddler, a rate-collector, a brewer, a furniture-dealer, a plumber, a bricklayer, and three gardeners, and he and this jury met together in Mrs. Bravo's house and there held their inquest. It was of the most perfunctory character. Two, at least, of the medical men who attended Mr. Bravo were not called ; Mrs. Bravo was not called ; contradictory evidence on vital points was given, and no attempt was made to explain or reconcile the contradictions ; the provision of the law which enacts that the statements of witnesses must be read over to and signed by them was disregarded ; and although the verdict of the jury was to the precise effect that Mr. Bravo had died "from the effects of a poison—antimony," no effort was made to discover how or by whom the antimony was procured, and how, or by whom, or where it was administered Even the obvious enquiry as to what had become of the remains of the bottle of Burgundy of which Mr. Bravo had partaken was not pressed, and from that day to this nothing has been ascertained regarding it. There were no reporters present at the inquest, and the whole business was so huddled away in a corner that if it had not been for a chance notice of it getting into one of the metropolitan papers, and for the fact that the deceased had a couple of barrister friends who suspected foul play and determined to have it sifted, the public would have heard nothing of it, and a case that almost recalls the horrors of the Borgias would have escaped without investigation.

Attention has, however, been directed to it, and it has seized upon the imagination of the well-to-do classes resident in London. Everything that can now lead to the discovery of the crime, because crime it undoubtedly is, will be done. The matter has been mentioned in the House of Commons, and the Home Secretary has announced that it has been placed in the hands of the law-officers of the Crown, who are investigating it. But it is too late. More than a month has elapsed since Mr. Bravo's death, and his murderer or murderers, whoever they may be, have had ample time to destroy every trace of the instruments by which they murdered him. All

sorts of rumors are abroad and every conceivable suspicion is mooted, and a great deal of curious information as to the antecedents of the suspected persons has been got together. But it seems highly improbable that the crime will be brought home to any one.

If this should be so, a serious miscarriage of justice will have occurred—and that miscarriage is directly due to the absurdity of the institution of coroner. Last year the institution was held up to ridicule and to public execration, owing to the excessive zeal of one of the coroners of Middlesex. When Sir Charles Lyell, the eminent geologist, died, his death was certified by one of the leading physicians of the day to have been caused by heart disease. There was no suspicion or suggestion that he had died from any but natural causes, and the case so certified was one in which the coroner was not called upon to interfere. The official, however, was new to his duties, and perversely obstinate. He insisted, against the remonstrances of the physician and the family of the deceased, on holding an inquest, and actually caused the coffin to be broken open in order that the jury, in fulfilment of the letter of the law, might see the body. For this he was rebuked by the Home Secretary and the Lord Chancellor and condemned by the public. The present case is of a different character. In Sir Charles Lyell's case the coroner seems to have considered it his duty to distrust the facts certified and to disregard the feelings of the family of the deceased. In Mr. Bravo's case the coroner seems to have acted on the opposite principle. His object seems to have been to make things comfortable all round for the family of the deceased, and to have regarded the interests of justice as subordinate to his own convenience. If nothing else was before us than these two cases, where two coroners acted on diametrically opposite principles, there would be enough to condemn the institution of coroner. But almost every day, from all parts of England, tales come up of the inadequacy and absurdity of the institution. Notice has been given to-day in the House of Commons, by an independent member on the Ministerial side, that he will call attention to the office of coroner on an early day. The debate cannot but be productive of good; and if the failure of justice in the present case should have the effect of stimulating the Ministry to remedy a crying abuse and carry out a much-needed reform, the humiliating experiences of the past four weeks will not have been undergone in vain.

Notes.

HENRY HOLT & CO. are about to issue a series of 'Condensed Classics,' beginning with 'Ivanhoe,' 'Our Mutual Friend,' and the 'Last Days of Pompeii.' Instead of letting the reader skip for himself in the unabridged work, the skipping will be done for him by Mr. Rossiter Johnson, whose task is to be regarded not as a literary improvement of the originals, but "as a species of dramatization" of them.——A hitherto unpublished article by the late Chauncey Wright, giving a popular explanation (for those who understand botany) of the mathematical nature of phyllotaxis, is printed in the *American Naturalist* for June.——Mr. Sabin has received copies of a 'Catalogue des Livres rares et précieux composant le cabinet de M. . . .,' to be sold in Paris on the 17th inst. The anonymous owner of this collection is, we believe, a well-known New Yorker, but he has undoubtedly chosen the best market for his wares, which embrace many first editions of the French classics, Aldines and Elzevirs, manuscripts adorned with miniatures, works on vellum, etc., etc.——The latest numbers of 'Die Gesetzgebung des deutschen Reiches' relate to the constitution of the German mint and the penal provisions of the postal-service law (New York: E. Steiger).——An interesting contribution to the geology of the Rocky Mountains is presented by the reports of Messrs. G. K. Gilbert, E. E. Howell, and A. R. Marvine, on districts in Utah and Arizona examined by them when attached to U. S. Engineer explorations under Lieut. Wheeler in 1871–2–3. Although their authors state that they have been somewhat hurriedly made, they are much more systematized, and the information contained in them is better digested and more available, than the majority of the so-called geological reports which have been distributed by the Government during late years. Mr. Gilbert's article on the region of the Great Salt Lake will be found of interest even to the untechnical reader.

—J. H. Coates & Co., Philadelphia, have been made the American agents of the Rev. Alexander B. Grosart, who is preparing to print privately, for subscribers only, new editions of the complete works of the poets Edmund Spenser and Samuel Daniel, and heretofore wholly unpublished portions of the Towneley MSS. illustrating Lancashire and Yorkshire family history. In editing Spenser and Daniel, Mr. Grosart will have the more or less intimate co-operation of a number of eminent scholars and critics, such as W. Aldis Wright, E. W. Gosse, F. T. Palgrave, Prof. Edward Dowden, Prof. Henry Morley, Prof. Ward of Owens College, Aubrey de Vere, Prof. Child of Harvard, etc., etc. For his text of Spenser he will take the last published in the poet's lifetime, noting the variations of the earlier issues. A new life of Spenser, and a glossarial index, will still further enrich the edition, and the large-paper copies will contain steel portraits of Spenser, Sir Philip Sidney, and Sir Walter Raleigh—the last from an original never before engraved. The whole work will fill eight volumes, in three sizes—two octavo and one quarto. Daniel's works, also in prose and verse, will fill four volumes, uniform with the preceding, the text being his brother's 'Whole Workes of Samvel Daniel, Esquire, in Poetrie' (4to 1623). The Towneley MSS. selected are 'The Spending of the Money of Robert Nowell,' of Reade Hall, Lancashire, brother of Dean Nowell, being a book kept for, and with corrections and insertions by, the latter (1561–1580); and a collection of English Jacobite songs and ballads. The Nowell volume is full of American family names, including Washington; some of them to be found at the present day in this country only. Part of the "Spending" was given to "poore scholeres," among whom at Oxford Richard Hooker, and at Cambridge Edmund Spenser, are found. But it is for the curious and valuable light which the "Spending" throws on the domestic usages of the time that this publication especially commends itself. All of Mr. Grosart's works, it is needless to say, will be elegantly printed, and of the two first mentioned there will in all probability be no rival edition for many years to come. American subscriptions must be received by Messrs. Coates not later than July 1 to ensure being accepted.

—A typographical error in our article last week on T. W. Park needs to be pointed out for the sake of verbal accuracy. On page 347, line 22 from the bottom of the first column, Stewart is represented as writing Lyon that "they have worked the mined up *to* 80 in England by the ore they have sent, and the manner of sending it, so that I have no doubt of a sale from five to eight millions." This should have read: "they have worked the mine up so in England, etc., that I have no doubt, etc."

—Nothing marks so obviously the sure grasp which the Massachusetts Board of Health has upon the State as the increasing fulness and costliness of its annual Reports. The seventh is before us—a thick blue-book of nearly 600 pages, literally stuffed with maps, diagrams, and other illustrations, several of the maps being of large size and folded. That which faces the title-page is an index to the river basins of Massachusetts, showing which of them have been and which remain to be studied by the Board's experts, with a view to solving the problems of sewerage and water-supply now pressing upon every large town along these water-courses. The Report, accordingly, mainly consists of a special report on the pollution of rivers; the water-supply, drainage, and sewerage of the State from the sanitary point of view; and the disposal of sewage. The cost of making this, including a trip of the Board's Secretary to Europe, exceeded $8,000, and was met by a special appropriation. To say that the result is worth the outlay is to give but a faint idea of the value of it. Besides the local description of the several basins, there is an account, by Dr. Folsom, of foreign systems of utilizing sewage which may stand as a complete summary of theory and actual experience on the subject, and should make this Report as eagerly sought after outside of Massachusetts as it is by those to whom it is directly addressed. Other valuable papers having a general applicability are Dr. Bowditch's "Sanitary Hints"; Mr. Philbrick's "Defects in House Drainage, and their Remedies"; one on an epidemic disorder caused by the use of impure ice; and, above all, the report on the "registration of prevalent diseases" attempted by the Board last year. This experiment was unique in the history of preventive medicine, and is said to have "surpassed the expectations of many who were interested in its trial." One hundred and ninety-four physicians voluntarily forwarded each week to the Board's registrar a postal-card with a printed form on the back, recording the prevalence and intensity of some fifteen specified diseases. These returns were classified and computed according to the districts from which they came, and every week the data thus derived were published in the Boston papers, the bulletins reading very much like the signal-service weather reports. In fact, the Board estimates that if large areas were included in the field of observation, there might be bulletins issued by a central authority giving "timely warning of the rise and spread of zymotic affections. . . . . Indeed, it is not too much to predict that 'probabilities' may yet be cast with some degree of precision, as we advance in our knowledge concerning epidemics." On the whole, we regard the initiation of this system as perhaps the greatest service which the Board has yet ren-

dered Massachusetts or the country. Yet the roll of its beneficent achievements is already long, as any one may learn from the 'Summary' of its Reports just compiled by Dr. W. L. Richardson. Several of the papers in the seventh Report have been printed separately; for instance, Mr Philbrick's, and Dr. Nichols's on the contamination of drinking-water by means of impure ice.

—The *Atlantic* for June contains an instalment of Mrs. Kemble's Gossip more than usually entertaining, and an article by Mr. Howells, describing a summer among the Shakers, written in a more sympathetic vein than the criticism of the world's people commonly runs in. Mr. T. B. Aldrich contributes the most noticeable verses, in an attempt (as near successful as any attempt of the kind could be) to express the feeling which everybody who has even the germ of an imagination must be familiar with—that of waking from sleep with a poem on the end of the tongue which yet eludes every effort of the memory to recall it. The phenomenon probably takes different forms in different people, and at different times in the same person; the poetry in some cases vanishing entirely, in others leaving behind it little but a recollection of the rhythm, or again of the closing syllable of a line or two, which are sadly apt to prove, when repeated in the garish light of day, and critically considered, little more or less than arrant nonsense. With persons of a strongly poetical temperament, perhaps poetry dreamt in this way remains true poetry, fit for the publishers. There are certainly recorded instances—though how well vouched for they may be is another thing—of important mental operations being performed in sleep, but these have generally been operations of a non-imaginative sort. The treasures, however, which people bring back with them from dreamland are in most cases of the sort which Mr. Aldrich describes in the lines he calls "Unsung," which we quote as they stand, the three verses being inseparable, though we think they would have been improved by the suppression of the rather forced comparisons in the first verse:

> "As sweet as the breath that goes
> From the lips of the white rose,
> As weird as the elfin lights
> That glimmer of frosty nights,
> As wild as the winds that tear
> The curled red leaf in the air,
> Is the song I have never sung.
>
> "In slumber, a hundred times
> I've said the enchanted rhymes,
> But ere I open my eyes
> This ghost of a poem flies;
> Of the interfluent strains
> Not even a note remains;
> I know by my pulses' beat
> It was something wild and sweet,
> And my heart is strangely stirred
> By an unremembered word!
>
> "I strive but I strive in vain,
> To recall the lost refrain.
> On some miraculous day
> Perhaps it will come and stay;
> In some unimagined Spring
> I may find my voice, and sing
> The song I have never sung."

—In the course of an article on Charlotte Cushman in *Scribner's*, Mr. J. D. Stockton discusses a subject which is oftener written than thought about—the "Decline of the Drama." According to Mr. Stockton, the drama is no longer "the great intellectual force it was"; "its decline is proved by the dearth of great modern plays"; notwithstanding many attempts at revival, made by "some of the greatest minds of the last hundred years," they have all ended in failure; the cause of the decline is not in men, but in the "progress of man." Three hundred years ago learning was rare, the press was unborn, and the drama, more than any other form of expression, "answered the wants and uttered the aspirations of humanity." "Philosophy was for philosophers, but the stage was for the living, active, busy world." Now, journalism and the novel have both invaded the arena once exclusively occupied by the stage, and painters of character like Scott, Fielding, Smollett, Dickens, and Thackeray, write novels instead of dramas from the necessities of the times in which they live, while newspapers have brought within the reach of all, as a substitute for the play, the daily exciting drama of contemporaneous history. Besides this, books, schools, and newspapers have destroyed the illusions of the stage. This is a favorite theory, and it certainly has the merit of explaining, at least in part, the facts. But it is open to a great many objections, the first of which is that it is grounded only upon the experience of a single people, and that during a very brief space of time; and even this small episode in the history of the drama is incorrectly stated. The English drama has not been running down hill ever since Shakspere's time, but had a flourishing renovation of vigor as late as Sheridan's. Undoubtedly, there has been a lamentable falling-off since then in England, but the continued vitality of the drama in such countries as France and Germany certainly might incline us to doubt whether so old an art was going to disappear altogether before modern improvement. The novel and the newspaper, too, do not take the place of the drama, in any proper sense of the word. The pleasure derived from a literary characterization and from literary dialogue, no matter how well done, is wholly different in kind from the pleasure derived from seeing characters bodily assumed and parts acted, and it is difficult to see how one can ever take the place of the other, any more than literature could supply the place of painting. One great difficulty with the drama in the last hundred years is, we believe, more the result of the great social changes which have been introduced into life by the democratic movement than anything else. Everybody knows that the first requisite for the stage is strongly-marked types, which can be easily recognized. The soldier, the judge, the gentleman, the nobleman, the courtier, and the king and queen must all have well-defined characteristics which enable the spectator (not the reader) to recognize them at once. Any influence which tends to wipe out the visible distinctions between such classes, and to make one man like another, is bad for the stage, just as distinctly as all progress towards uniformity of costume is bad for painting. The democratic movement during the last hundred years in England and in this country has been constantly tending to produce this result, and to make all classes and conditions of men more and more alike in manner, in dress, in intelligence, and in their code of morality. All this may be very good for the people, but it is very bad for the stage; and in this country it has reached such a point that outside of low comedy and burlesque, in which such characters as the Hon. Bardwell Slote and Col. Mulberry Sellers are still possible, it is not easy to say where to look for types at all. The process has not gone so far in other countries as in this; but in every country it has had its effect on the drama.

—The writer of the "Nebulæ" in the *Galaxy* discusses this month the appearance of the new silver coin, and confesses that it is "not as handsome as it ought to be, as it might be, or even as it once was."

"It does us no credit as an exhibition of our skill in designing, in die-sinking, or coining. Why is it that we have the ugliest money of all civilized nations? . . . . Our silver coins do not even look like money. They have rather the appearance of tokens or mean medals. One reason of this is that the design is so inartistic and so insignificant. That young woman sitting on nothing in particular, wearing nothing to speak of, looking over her shoulder at nothing imaginable, and bearing in her left hand something that looks like a broomstick with a woollen night-cap on it—what is she doing there? what is the meaning of her? She is Liberty, we are told, and there is a label to that effect across a shield at her right, her need of which is not in any way manifest. But she might as well be anything else as Liberty; and at the first glance she looks much more like a spinster in her smock, with a distaff in her hand. Such a figure has no proper place upon a coin. On the reverse, the eagle has the contrary fault of being too natural, too much like a real eagle. In numismatic art animals have conventional forms, which are far more pleasing and effective than the most careful and exact imitation of nature can be. Compare one of our silver coins with those of Great Britain, France, or Germany, and see how mean, slight, flimsy, inartistic, and unmoney-like it looks. Our coins of forty or fifty years ago were much better in every respect, and looked much more like money, the reason being that they bore a head of Liberty which was bold, clear, and well-defined in comparison with the weak thing that the mint has given us for the last thirty years or so. The eagle, too, although erring on the side of naturalness, was more suited in design to coinage. But still better were the coins struck at the end of the last century and the beginning of this one. The eagle was a real heraldic eagle, the head of Liberty had more character, and the whole work was bolder and better in every way."

The *Galaxy* then goes on to ask whether we could, in this hundredth year of our national existence, do a better thing to mark the time than give real character and significance to our coinage; and suggests that the eagle and Liberty of the present system be replaced by two heads, "the appropriateness of which upon our coins—and, indeed, almost their right to be there—would be felt by every American, and not only so, but recognized by the whole world"—the heads of Washington and Franklin. The article finally commends the subject to the attention of Congress, and expresses the hope that some member may be found who will take it up and "bring it before the people." Popular agitation is not, however, likely to be the means of bringing about reforms of this kind, which depend primarily upon the willingness of the administrative branch of the Government to use the highest skill and best taste in matters which relate to art. That our coinage is not the brightest feather in our national cap is not to be denied; but the causes which make our coins ugly are closely related to those which make our postage-stamps (although these have heads on them) also ugly, and to those which, working on a larger scale, lately produced Mr. Mullett's National School of Architecture.

—The April number of the *American Law Review* contains an article by O. W. Holmes, jr., entitled "Primitive Notions in Modern Law," which appears to be well worthy of the attention of the philosophical student. There are many cases, as all lawyers know, where one is held legally liable to answer in damages for accidents causing harm to others, although no foresight on his part could have foreseen or have prevented them. For instance, a man builds a house upon his own land, which falls and does damage to his neighbor; one has a vicious animal, which escapes and does like damage; one's servant, while driving his carriage carelessly, runs over a foot-passenger. In all these cases the man is liable. It is usually said that he is liable for his negligence; for negligently building his house; for negligently keeping the animal; for negligence in employing an unskilful driver. But when he answers, "I am not a carpenter; I know nothing about building houses; I must have a shelter from the weather or die; if I had built the house myself it would not have stood an hour; I therefore made the most diligent enquiry possible, and employed the carpenter recommended to me as the fittest by those upon whose opinion I had every reason to rely," the answer is ready: "A ruinous house is a nuisance, and you are liable for a nuisance absolutely and in all events." When he says, "A bull is a necessary thing; without bulls there could be neither beef nor milk; my bull, terrified by a clap of thunder, broke a plough-chain and two barn-doors and gored his attendant before he let him escape," the answer is: "He who keeps a bull keeps him at his peril." When he says, "But my driver is not an unskilful or careless driver; he can drive a circus band-wagon, and never in his life before did a careless act," the answer is: "A master is always liable for the negligence of his servant." Bentham, who has done more for the philosophy of the law than all other English writers combined, puts the liability in these cases wholly upon the ground of expediency. By the law of England, any animal or inanimate object causing the death of a man was forfeited as a deodand. If a horse kicked a man, and death resulted, the horse was forfeited. There is a case in the Year Books where a vessel was forfeited because a person fell from it and was drowned. The weapon with which a murder was committed was forfeited. These forfeitures were a part of the king's revenue, which he was accustomed to grant as franchises to the lords of manors. They were therefore exacted with the utmost rigor. In maritime law, in many cases, a vessel is bound to the extent of her value to make good damage caused by her, although her owners are wholly free from fault, and although the law puts no personal liability upon them. For an intelligent understanding of the maritime law of the present day, even, it is necessary to regard the vessel as a living person having rights and duties of her own.

—The justification of such rules of law is that they work well in practice. From the time of the earliest maritime codes, the commerce of all maritime countries has been carried on under them. Mr. Holmes attempts to show historically that these presumptions of negligence and these considerations of policy upon which the liability in all the cases mentioned above is at the present day placed, are not the considerations in which that liability originated, but that the liability "sprang from the much more primitive notion that liability attached directly to the thing doing the damage." Savage races and children have a belief in the animation of all nature, and among grown civilized people, to quote Mr. Grote, "the force of momentary passion will often suffice to supersede the acquired habit, and even an intelligent man may be impelled, in a moment of agonizing pain, to kick or beat the lifeless object from which he has suffered." At first, in the case of damage done, the offending thing was delivered up to be destroyed; later, it was awarded to the injured party as damages, which was the extent of the liability; and afterwards the liability was extended to the owner of the thing. While the law was in the transitive period, a servant was a slave and a slave was a chattel; the slave was surrendered to be the slave of the injured person. Mr. Holmes supports his position, which he puts forth very modestly more as a conjecture than as a fact, by references to the early Athenian, Roman, Jewish, and to the Salic law, and also to the old English Ordinances. We think his position is correct; the proofs, a few of which only he was enabled to glance at in a magazine article, might be easily accumulated, now that he has shown what is to be sought for, so as to swell a volume. How but by Mr. Holmes's idea can we explain the trial by judicial process and the criminal punishment of animals, which was frequent in France until within a period of two hundred and fifty years?

—The *American Architect* for May 27 prints a not very lucid translation from a German writer, J. Langl, who discusses the well-worn question of the motive of the curvatures in the horizontal parts of the Greek temples, notably in the stylobate and entablature of the Parthenon. Assuming, as if it were not the very thing in dispute, that the curves were designed by the Greeks as "optical corrections," Herr Langl contents himself with attempting to analyze the nature and source of the optical illusions which they sought to overcome. He argues, if we understand him, that experience teaches us to apply a constant correction to the presentation by the retina of parallel straight lines as converging curves; that with these curves coincide those due to perspective, by which parallel straight lines "appear, in their prolongation towards the infinite, as curved lines concave towards the horizon"; that from force of habit the latter are absorbed in the former, and hence the illusion. "The lines no longer appear straight, but seem curved in the opposite direction. Nothing, then, but a swelling of the lines in the direction of the perspective curve—thus, as it were, aiding, intensifying the perspective—can neutralize the illusion by another illusion." What is noticeable about this explanation is the way in which it reinforces one suggested some years ago by Mr. Stillman, whose photographs of the Parthenon clearly exhibit the convexities under consideration. He conjectured that the Greek architects were more intent on *creating* than correcting optical illusions: that they found the natural curve of perspective inadequate to produce the desired effect of size in their buildings, and that accordingly they exaggerated it by making an artificial curve. Herr Langl observes that "the nearer we approach the eye towards the plane in which parallel straight lines lie, the more steeply will they fall off towards their vanishing-points." The converse of this would be that the more steeply the lines fall off, the nearer we seem to be to the plane in which they lie—*e.g.*, the façade of a temple—and consequently the larger the building appears. Mr. Stillman justified this view of the motive of the convexity by connecting it with another exaggeration of perspective seen in the narrowing of the intercolumnar spaces at both ends of a portico, with the undeniable effect of increasing its apparent length to the eye.

—The Government Archæological Office at Athens, in a bulletin of March 22 (April 3, N. S.), reports the following summary of discoveries at Olympia: Statues and sculptures, 15 large and more than 100 small; inscriptions, 30; bronzes, 540; coins, 136; articles of iron and lead, 130; of pottery, 215; of other materials, as bone and glass, 55. A very old inscription has been found, the elegiac couplet given by Pausanias, 5, 24, 3, as attached to a statue of Zeus, said to have been erected by the Lacedæmonians at the termination of the second Messenian war. The first two words from Pausanias cannot be distinguished on the marble; the remainder appears with two variations, but we are not told what they are. There has been found also the missing portion of the decision of the Milesians on the land in dispute between the Messenians and Lacedæmonians, so that the three documents are complete, the decision, the letter of the Milesians to the authorities of Elis, and their order for the recording of the decision. According to the *Ἀθήναιον*, the report of the Greek Archæological Society, presented Jan. 25, shows that it has expended during the previous eighteen months more than 65,000 drachmas ($11,000), and in the past fifteen years more than 300,000. Excavations have been continued in Athens at the Dipylon and at the Stoa of Attalos, in the interior of Attica, and at Tanagra, Thebes, Thisbe, Taxiarchæ, Dendra, Sparta, Corone, and Corinth. There is published also an inscription in 188 lines found last August in Lebadeia, relating to a proposed completion of the temple of Zeus the King, mentioned by Pausanias, 9, 39, 4, as still half-finished. The inscription is of Roman times, apparently B.C., and is remarkable for having more than thirty words which are not in the lexicons, mostly easy compounds. The December number of the same magazine publishes some Greek documents of the twelfth and thirteenth centuries, now preserved in the library of the monastery at Patmos: one relates to Eustratios of Nicæ, calling in certain condemned treatises of his; another is a register of ecclesiastical lands in Patmos, signed and sealed by "the servant of our mighty and holy sovereign and king, registrar of Rhodes and the surrounding islands and of the Cyclades, Leon Euskammarios." A facsimile of his signature is given which wonderfully resembles Arabic writing.

BAIN AND RENOUVIER.*

PHILOSOPHY and psychology are such difficult studies that most of us may be said to read *in* the works of philosophers rather than to read them. We like, as it were, physically to rub our minds against the abstract problems in their pages; we enjoy the glimpses we get of their solution; but we *grasp* nothing but the concrete illustrations by the way and the explanations of details the author may give us. Accordingly, the more

* 'The Emotions and the Will. By Alexander Bain, LL.D.' Third edition [largely altered]. New York: D. Appleton & Co. 1876.
'Essais de Critique générale par Charles Renouvier.' Second édition, revue et considérablement augmentée. Premier Essai: Logique générale et formelle. 3 vols. 12mo. Deuxième Essai: Psychologie rationelle. 3 vols. 18mo. Paris: Aux Bureaux de la *Critique Philosophique*. 1875.

fertile a philosopher is in these, the more popular he will become. The two philosophers of indubitably the widest influence in England and America since Mill's death are Messrs. Bain and Spencer, who have little in common except the tendency to explain things by physical reasons as much as possible, and this abundance of illustrative fact; whilst Mr. Hodgson, a writer in our opinion vastly more thorough and original than either, is unread and unknown because in his books the concatenation of the thoughts is everything, and the illustrative instances subordinate. The thoroughness of the descriptive part of Bain's treatises, and the truly admirable sagacity of many of the psychological analyses and reductions they contain, has made them deservedly classical. It seems hardly worth while to devote our space to giving an account of the third edition of one of them, for every one interested in psychology must read the originals themselves. We propose, therefore, merely to use Mr. Bain for the purpose of giving greater relief to the merits of a French philosopher, Renouvier, who seems as yet unknown to English readers, but who has given to the philosophy which Bain represents a form in our opinion far more clear, perfect, and consistent than has been attained by any English writer.

For Bain is not only a psychologist proper, does not merely describe mental facts as items in the inventory of nature, but also speculates about nature as a whole. The fault we find in him in this capacity is his fragmentariness and consequent inconsistency. Fragmentariness—the willingness to settle only so much of a subject at a time as is practically needful—has become such a tradition in the history of the British mind, that philosophers who, like Spencer, are thoroughly systematic and constructive in their form, are viewed with suspicion and dislike on that very account by many minds of Anglo-Saxon type. This is surely a vicious extreme, for the very impulse to which philosophies owe their being is the craving for a consistent completeness; and every powerful attempt to rear a thorough system of thought has an intellectual *style* about it which is, æsthetically considered, to say the least, far nobler than the slouchy dumping of materials to which Mr. Bain treats us.

The most important of these fragmentary British contributions to philosophy are the criticisms and negations called nominalism and nihilism. Together they form the positivism, empiricism, or phenomenalism which within a certain sphere are so congenial to the Anglo-Saxon mind. They assert that nothing has reality except actual particular facts. Such noumenal substances as matter, nature, power, are admitted alike by metaphysics and by popular philosophy or common sense; but criticism scrutinizes them only to proclaim that they are absolutely void of meaning except as names descriptive of particular phenomena. Describe *these* completely, and you have named all there is. If the particulars will happen just so each time, the assumption of a "substance" to produce them is mere image-worship—a fifth wheel to a coach. Accordingly, the school of Mill and Bain regard the world as a mere sum of separate phenomena or representations which habitually group themselves into certain orders, with which we grow more or less familiar, and which consequently seem more or less rational and necessary. To account for the particular habits of grouping, or "laws" of nature and of mind, is on this theory the next problem. The English school has always tried more or less to evade this part of the subject, and, reducing the principles of grouping to as small a number as possible (*e.g.*, space and causality to time), it has treated what remained in a hazy sort of manner, as not worthy of much attention anyhow. M. Renouvier's polemic against the metaphysical notions of Substance, of Infinite in existence, and of abstract ideas seems to us more powerful than anything which has been written in English; but he differs from his English allies in giving as great an emphasis to the laws of grouping as to the phenomena grouped. The laws are for him equally with the phenomena absolute and distinct. In fact, a "phenomenon" apart from its group, law, or function is an inconceivable nonentity.

But his great point of divergence from Bain and Mill lies in his treatment of the problem of Freedom, and here, it seems to us, is shown the advantage of a systematically-thought philosophy over one fragmentarily fed from heterogeneous sources. We have no space to discuss the sources of the English prejudice in favor of psychical determinism. Every reader of Mill's 'Autobiography' will remember the striking passage in which he narrates the hypochondria which this doctrine produced in his youthful mind. It is the strongest proof of the essentially pious character of that mind that this inherited belief was clung to in spite of its not being logically called for by the rest of Mill's philosophic creed. For if any man may believe in free-will it is surely one who repudiates the notion of an infinite pre-existing substance from which "the remediless flux of existence" proceeds, and who denies that there is any real coerciveness in the relation of cause to effect. Both these denials were Mill's. M. Renouvier most justly insists that the only logical enemy of free-will is the doctrine of Substance or Pantheism. Spencer, for example, with his 'Unknowable,' is bound in honor to oppose it; but the opposition of Bain, who seems to hold to the ultimate distinctness of each phenomenon, and the ultimate inexplicability of their order of succession, can only be regarded as a caprice.

Renouvier at a stroke clears the question of a cloud of quibbles by stating it in simple phenomenal terms. For him it is merely a question as to the ambiguity of certain futures, those human acts, namely, which are preceded by *deliberation*. What are the phenomena here? A representation arises in a mind, but ere it can discharge itself into a train of action, it is inhibited by another which confronts it. This, on the point of discharging itself, is again checked by the first, which returns with a reinforced intensity, and so for a time the pendulum swings to and fro, till finally one or the other representation recurs with such a degree of reinforcement that the tumult ceases, and an act, a decision for the future, or the arrest of a passionate impulse takes place. This stable survival of one representation is called a volition. The whole question of its predetermination relates to the intensity of the degree of reinforcement with which the triumphant representation recurs. As a matter of fact, in critical cases (which are the only cases bearing on the question) this intensity is utterly unknown beforehand. Is it potentially and essentially a knowable quantity? If *not*, our acts are in certain cases original commencements of series of phenomena, whose realization excludes other series which were previously possible. If *so*, they form part of an adamantine and eternal uniformity. But who shall decide? The argumentation of Bain that as a matter of fact men always do expect each other to act with predictable uniformity is—*sat venia verbo*—rubbish. It could never be urged by one who was not already on other grounds prejudiced in favor of determinism. In one of his earliest works, Helmholtz, who as well as any living man may claim to give voice to the scientific spirit, says that when the proximate causes of phenomena are alterable themselves, we must seek further for a cause of their alteration, and so on till we reach an unalterable principle.

"Now, whether [he continues], in reality, all events are to be carried back to such causes, whether nature be fully explicable, or whether changes occur in it which do not fall under the law of necessary causality, and *do* consequently belong to the realm of freedom or spontaneity, cannot now be decided. It is, at all events, clear that a science whose object it is to understand nature must start with the assumption of her intelligibility, and conclude and enquire according to this assumption until it at last is forced by irrefutable facts to the admission of its own limitations."

The "assumption" of a fixed law in natural science is thus, according to this authority, an intellectual *postulate*, just as the assumption of an ultimate law of indetermination might be a moral postulate in treating of certain human deliberations. Is each assumption true in its sphere, or is determinism universal? Since no man can decide empirically, must one remain for ever uncertain, or shall one anticipate evidence and boldly choose one's side? Apart from the fact that doubt is practically impossible in certain cases which touch the conduct of life, doubt itself is an active state, one of voluntary inhibition or suspense. So that whichever plan one adopts, one's state is the result of other factors than pure receptivity of intelligence. The entire nature of the man, intellectual, affective, and volitional, is (whether avowedly or not) exhibited in the theoretic attitude he takes in such a question as this. And this leads M. Renouvier to a most vigorous and original discussion of the ultimate grounds of certitude, of belief *in general*, from which he returns to make his decision about this particular point. All yard-stick criteria of certitude have failed. Mr. Spencer's "inconceivability of the opposite" breaks down from the practical impossibility of unanimity in any given case. When the Philosopher of Evolution says we *ought* to find the opposite of his First Principles inconceivable and dubs us "*pseudo*" thinkers if we do not, he simply begs the question and appeals to the authority of his personal insight as against ours. Now, says Renouvier, such an appeal is at bottom inevitable so soon as we leave the narrow standing-point of the present moment in consciousness (pyrrhonism). This latter alone is the *aliquid inconcussum* philosophers have sought; but it is barren. Beyond it everywhere is doubt.

"The radical sign of will, the essential mark of that achieved development which makes man capable of speculating on all things and raises him to his dignity of an independent and autonomous being, is the possibility of doubt. . . . The ignorant man doubts little, the fool still less, the madman not at all. . . . Certitude is not and cannot be an absolute condition. It is, what is too often forgotten, a state and an act of man . . . a state in which he posits his consciousness, such as it is, and stands by it. Properly speaking, there is no certitude; all there is is men who are certain. . . . Certitude is thus nothing but belief . . . a moral attitude."

Thus in every wide theoretical conclusion we must seem more or less arbitrarily to *choose* our side. Of course the choice may at bottom be

predetermined in each case, but also it may not. This brings us back to our theoretical dilemma about freedom, concerning which we must now bow to the necessity of making a choice; for suspense itself would be a choice, and a most practical one, since by it we should forfeit the possible benefits of boldly espousing a possible truth. If this *be* a moral world, there are cases in which any indecision about its being so must be death to the soul. Now, if our choice is predetermined, there is an end of the matter; whether predetermined to the truth of fatality or the delusion of liberty, is all one for us. But if our choice is truly free, then the only possible way of getting at that truth is by the exercise of the freedom which it implies. Here the act of belief and the object of belief coalesce, and the very essential logic of the situation demands that we wait not for any outward sign, but, with the possibility of doubting open to us, voluntarily take the alternative of faith. Renouvier boldly avows the full conditions under which alone we can be right if freedom is true, and says: "Let our liberty pronounce on its own real existence." It and necessity being alike indemonstrable by any quasi-material process, must be *postulated* if taken at all.

"I prefer to affirm my liberty and to affirm it by means of my liberty. . . . My moral and practical certitude begins *logically* by the certitude of my freedom, just as *practically* my freedom has always had to intervene in the constitution of my speculative certitude."

Others need not decide in the same way, but let them confess, if their way is determinism, that unless they deduce it *à priori* from the existence of a metaphysical substance, they *choose* it just as our author chooses his way, because on the whole they prefer it. This fact is usually unconsciously smuggled out of sight; but, concealed or expressed, it debars either side from protesting on grounds of logical method, or form of procedure, against the other. The protest must come from extra-logical considerations; and the ultimate decision of which side is right and which wrong shall only be reached *ambulando* or at the final integration of things, if at all. Of course, freedom thus carried into the very heart of our theoretic activity becomes the corner-stone of our author's philosophy, and by its use he thinks "the minimum of faith produces the maximum of result."

RECENT NOVELS.*

THERE is a certain smartness about 'Achsah: A New England Life-Study' which may make it popular in those rustic communities where living examples of the models portrayed in its pages are to be found. The author, whose *nom de plume* is Rev. Peter Pennot, is possibly not so much a clergyman himself as an admirer of those clergymen who are not averse to the national exercise of driving fast trotters, and who also leaven the rigid routine of orthodoxy by seasonable worldly jesting; as an inhabitant of Boston, he is not impossibly one of the congregation which forms the Sunday audience at the Boston Theatre, listening to a prominent preacher who is at present without a church of his own. These conjectures are perhaps allowable, in view of the warm praise given a clergyman of that sort, who, however, is not so lucky in charming one person of the book as he is in addressing a large multitude. This person, the heroine, Achsah, is a country girl, the daughter of Deacon Sterne. These are her early impressions of her father:

"Mrs. Sterne had full control of Achsah's education. She had first taught her to look upon her father with reverence. She came into his presence with awe, and left it with a sense of relief. As a child, she often kissed her father, but with much the same feeling as she would have kissed a bronze statue. She sat on his knee with much the same sense of comfort that she would have sat upon a tombstone. She thought of him always as of a tall man in sombre-hued clothes, whom she, in common with the world, knew as Deacon Sterne. She never thought of him as 'my father.'"

This deacon is the best-drawn character of the book; his cunning, hypocrisy, and meanness make him just such an amusing caricature of certain Yankee faults as would seem the unvarnished truth say to Mr. Robert Toombs or Mr. Jefferson Davis. He bears the mark of being drawn from life by a very bitter enemy, who does not always hold his hand when he is expressing his scorn. The hero, Owen Rood, who accumulates money by writing magazine articles—one of them on Luther!—is a creature of the imagination rather than of flesh and blood. His troubles are of a familiar sort, and are easily cleared away as we approach the end of the story. What is good in all this is the account of the unadulterated New England people; less good is the romantic part, and the plot is too light to bear the superstructure.

'A New Godiva' shows considerable ingenuity in its construction; it has a plot of such complexity that it might well have fitted out a dozen ordinary novels; but the author's weakness is his indistinct drawing of his people. Sir Arthur Deverell signs deeds without reading them, consequently he is more surprised than the reader of average intelligence can be when he hears he has become a pauper. He immediately drops out of the ken of all his former friends, takes another name, and comes as near dying from starvation and insufficient care as is possible. Meanwhile, his wife saves him from perishing by earning some money in a way of which he does not approve when he comes to hear of it later, and there is still much misery; but finally peace shines on a reunited household. The book is full of incident, and we have found it readable in spite of the inconsistency of some of the characters, who find it hard to live up to the plot that encompasses them.

Quite as intricate is the story of 'A Family Secret,' which has, moreover, the merit of giving good pictures of Southern life at just about the end of the war. It does not open very well, as it seems to promise a greater display of local pride and local sentimentality than would be considered admirable in other parts of the world. A number of haughty Virginians and other adherents of the Lost Cause come on the stage, and are set in brilliant contrast with the characteristic Yankee, Æneas Tadpole, who is almost as life-like as his name, and who has already frequently appeared in fiction, his earliest avatar being in the name of Uriah Heep. This degenerate Æneas is afraid of horses, he is inattentive to personal cleanliness, he pronounces "half" "harf," he is a blackmailer—in short, he justifies his surname rather than that given him in baptism; and, finally, after being discovered in his nefarious practices, he is last heard of as "the popular pastor of one of the largest and most influential churches of Boston." But even he is a shadowy villain by the side of Julian Harfleur, who, in his way, is a domestic Nero; he stops at no crime. It would require a long paragraph to summarize the various misdeeds of these two villains; what is better is the way in which Southern life is portrayed, with admiration tempered by the perception of what is ridiculous. For instance, when the knights at a "tournament" were choosing names before the tilt, "'The Black Prince' was objected to at first by our worthy major, on the ground that it would be derogatory to the dignity of the occasion, and likely to propagate incendiary ideas, for any one to appear in the character of a 'nigger'; but when the matter was explained to him he withdrew his objections, merely insisting that the hero of Crecy and Poitiers should be announced as the 'Prince in Black.'" Jesting of this sort, and on such a subject, is something new in novels written south of Mason and Dixon's line.

Mr. Thomas Hardy calls his last novel, 'The Hand of Ethelberta,' "a comedy in chapters," and this sub-title defines the book well, and indicates what constitutes its merit, namely, that it is amusing throughout, while it reveals its main fault, the feeling of unreality which it leaves behind. The heroine, whose hand is sought by many men, is the daughter of a butler. She had been educated for a governess, had been married by a young man of good family who very soon afterwards died, leaving her a young widow in good society, which is ignorant of the secret of her birth. She is far from ignoring her humble relations, although she is careful not to thrust any superfluous information about herself and her belongings upon the great world. This, it will be seen, is a condition of things that gives the writer an excellent chance to introduce a variety of amusing scenes, and it is a chance he by no means neglects. Ethelberta is a charming creature who bears a strong likeness to Bathsheba in 'Far from the Madding Crowd,' and to her whose pranks are narrated in 'Under the Greenwood Tree,' which still remains, in our opinion, Mr. Hardy's best novel. She presents a singular combination of good and bad qualities, but what is represented as one of her main virtues—her desire to make a good marriage in order to aid her family—leaves the romantic reader cold, and when at the end of the book she accomplishes this, one turns from the book with something like disgust. Up to that point, however, one is constantly interested; the double part Ethelberta has to play keeps the reader in a constant twitter of anxiety, and the talk of all the characters is very entertaining. One of Mr. Hardy's most admirable qualities, and one that sets him very high among writers of novels, is his boundless invention; he never simply says a thing happened and trusts to that to make a satisfactory impression on the reader; he represents the thing happening, he brings in a scene showing us in what manner it happened, what A, B, and C did, and what they all said. Hence, almost as vividly as on the stage, we see Ethelberta coquetting with her admirers, struggling with difficult questions of domestic economy, and forming plans for the future, and her lovers talking about her in despair,

'The Hand of Ethelberta. By Thomas Hardy, author of 'Far from the Madding Crowd,' etc.' Leisure Hour Series. New York: Henry Holt & Co. 1876.

trying to win her good graces, etc., etc.—the list is endless. Take, for example, the last chapter, in which the interest of the reader is concentrated about Knollsea—how well the different emotions of those who are all hastening there are represented, how diverting is the account of their talk and actions! Except for the conclusion, we should have little to criticise in this production of Mr. Hardy's; and, as it is, his admirers will still be glad to hear—whenever they do hear—that he is writing a new story.

The appearance at this time of a new novel by the author of 'The Wide, Wide World' could not possibly create as much excitement as it would have done twenty years ago, and certainly at no period in the world's history could 'Wych Hazel' have been so much admired as its famous predecessor. When a German or Frenchman says anything about American fiction, it is pretty apt to be the case that his reading has been confined to 'The Wide, Wide World'; but if he undertakes to fill out his knowledge by adding this last novel to his list, he will find one great difficulty in his way, and that is the extraordinary style in which the book is written. The pert, epigrammatic speeches of the characters are almost unintelligible; they are like the sentences of people who try to condense a great deal into the ten words of a telegraphic message. Here, for instance, is the heroine's conversation with her guardian in a stage-coach. He had supposed her guilty of purloining a kitten from the house where she had been dining—

"But presently, lifting one corner of her basket-lid, Wych Hazel drew forth a radiant spray of roses, and laid them penitently upon the averted line of her guardian's coat-sleeve.

"'Where did you get that?' he said. 'You had better put it in the basket, my dear; it will stand a better chance to keep fresh.'

"'Do you prefer pinks, sir?—or here are bachelor's buttons—'

"'They seem rather common things to me,' said Mr. Falkirk, slowly, yet with a somewhat pacified brow. There was no kitten in the basket!

"'I hadn't the heart to bring puss, as we were going to Catskill,' whispered Miss Hazel.

"'We!' ejaculated Mr. Falkirk.

"'Nominative case, first person plural, sir!'

"'And what's the definition of an adverb?'

"'Something which qualifies your suffering—*n'est-ce pas*, Mr. Falkirk?'

"'Certainly, by its primary action upon your doing, Miss Hazel. We are going to Chickaree.'"

The whole novel is written in this vein of condensed sprightliness, which at times is as hard reading as a book of Latin inscriptions. There is a love-story told in the same way, and interspersed with occasional flings at the follies of society, which generally come from the lips of the hero, a young man of twenty-five, who objects to dancing the German.

Meanwhile, what does Mrs. Bloomfield Moore in her novel, 'On Dangerous Ground,' make of American society? "It had been the desire of the life" of her heroine, Agatha Lee, "to have a Platonic friendship." It had been, apparently, the desire of all the other women's lives to have warmer feelings, Aristotelian possibly, for a great many men. Mrs. Grey goes out on the cliffs at Newport and lets Frank Mortimer kiss her hair—her hair which, it is insinuated, is as false as her heart. The next morning Mortimer asks Agatha to marry him, but she had been watching him the night before, and for that reason and others she refuses his offer. Mrs. Tracey, who had already been in love with her sister-in-law's husband, and had married Mr. Tracey out of pique, is caught by her husband being violently kissed by Paul Howard, so that Mr. Tracey, who has himself fallen in love with Agatha, gets a divorce, for of course no picture of American life could be complete without a divorce. When free, Mrs. Tracey marries Frank Mortimer. Howard consoles himself with flirting so violently with a Mrs. Matthews that her husband has to interfere, and finally to shoot Howard in a duel. Miss Penn marries Mr. Atherton, and runs away with Mr. Jenkins to live in a hut near Naples. Mortimer, after his wife's death, marries Mrs. Grey; in fact, all these people tie themselves, snake fashion, into inextricably confusing knots. It is hardly necessary to add that Agatha, after a long correspondence with Mr. Tracey, in which he at once ignobly shirks his part by making his letter consist of nothing but a familiar quotation, finally marries him. Fortunately, the novel stops here, and we have no further information given us about her probable elopements, separations, etc. Newport, Philadelphia, and various cities of Europe are the scenes of these unamusing frivolities; but Philadelphia is the favorite spot, for "one may travel over the world and return without finding another town or city where the suppers can vie with those given at Philadelphia balls; and though one should pursue researches for more charming women or for girls with more beauty equally far, they will return to give the palm to the Quaker City." The design which has inspired the heaping together of these unsavory incidents is the reformation of society, to show "the folly and the danger of 'platonic attachments'" and "the wickedness of flirting"; but, with all respect for the excellence of the author's intentions, it may well be doubted whether she furthers their accomplishment by the means she has chosen, for certainly the impression the reader is likely to receive is that of the glaring vulgarity of all these people rather than that of Spartan virtue. Still, whether bad or good in its tendencies, the novel is too unimportant to need much discussion.

'Wych Hazel. By Susan and Anna Warner, authors of 'Wide, Wide World,' 'Queechy,' etc., etc.' New York: G. P. Putnam's Sons. 1876.

'On Dangerous Ground; or, Agatha's Friendship: A Romance of American Society. By Mrs. Bloomfield H. Moore.' International Series. Philadelphia: Porter & Coates. 1876.

A Paragraph History of the United States, etc. With brief Notes on Contemporaneous Events. Chronologically arranged.—*A Paragraph History of the American Revolution.—Revolutionary Times.* Sketches of our Country, its People, and their Ways one hundred years ago. By Edward Abbott. (Boston: Roberts Bros. 1875-76.)—These three pocket volumes will rank with the most useful as well as most handy of Centennial publications. The first two are alike in plan, but the 'History of the Revolution' is skilfully illustrated with cuts of Revolutionary antiquities, and with campaign sketch-maps which more pretentious histories often lack. The notes on contemporaneous events are in Italic type, room being made for them at one side within the body of each paragraph. They take a liberal range, and, if not always what one might have expected, they are never trivial. We incline to think the mode of their insertion distracting, as the mind is taxed to associate a consecutive series of events, having for the most part a causal connection, with isolated facts taken almost at random from other series. As an instance of this we may cite the paragraph for 1681, the date of William Penn's grant, the contemporaneous event being "First penny-post set up in London and its suburbs." One might associate these unrelated facts by means of the (unintentional) pun, but otherwise it were difficult. It would seem preferable to have grouped the synchronisms in periods, and to have ranged them either at the beginning of a chapter or at the bottom of the page.

Where there is so much condensation, and where recognized authorities are confessedly followed without any attempt at independent criticism, fault-finding of course becomes easy. We venture upon a few criticisms with a view to perfecting that which is already so good. And first we note, without censure, in the 'United States,' that the voyage of Verrazzani is admitted without hesitation, and that there is no hint that the legend of Goffe at Hadley has been called in question. What is not quite excusable is the statement on p. 32 that Washington's father "traced his English ancestry back to the twelfth century." It ought to be notorious by this time that Washington's pedigree cannot be traced (nor did he himself pretend that it could) beyond his great-grandfather, the emigrant. Mr. Abbott's 'Revolution' is noticeably moderate in tone, and fair to all the colonies in representing their several parts in the great movement. Nevertheless, Rhode Island might complain that such important events as the occupation of Newport by the British and its evacuation have neither a paragraph nor so much as a line devoted to them, in spite of the connection of our French allies with the latter incident. Newport, as it happens, is again slighted in 'Revolutionary Times.' On page 14 Mr. Abbott is naming, after some old map, the chief cities in the order of their importance (in 1776). Providence ranks fifth, while Newport is not mentioned at all. On p. 41 he says: "Newport had been eclipsed by Providence, whose population was now about 5,000." By the Rhode Island census of 1774, however, Providence reckoned but 655 families (4,321 inhabitants), while Newport had 1,590 families (9,208 inhabitants). Before the British occupation, therefore (December, 1776), Providence had probably less than half the population of its sister capital; but in the next three years the commercial prospects of Newport were ruined, and it was half deserted. Its princely Jews never returned. 'Revolutionary Times,' though well put together and extremely interesting, has more the air of a made book than has either of its predecessors. A sign of this is the appearance in the closing chapter of the slang refrain of "Punch in the presence of the passenjare," which it had been better taste to relegate to the limbo of other passing fashions. Still another mark of haste is the imperfect entries in a select list of books to consult, which is given at the end of the volume. Thus we find: "Old New England Traits. *Lunt.* Boston: —" when it could scarcely have required a half-hour's search to verify the imprint as follows: "New York: Hurd & Houghton. 1873." As Mr. Abbott warns his readers that many of the books he names are excessively rare, they might easily be misled by such a blank as this. So, too, in the case of Schroeder's 'Life and Times of Washington' there is no uncertainty about the date either on account of age or

rarity; and in place of a double blank, "New York, 1857-61" should be inserted in another edition.

But if we were to say more we should give the impression that this little series is not (what it is) a very welcome and even charming addition to our literature, individual in character, and in general entirely trustworthy.

SENSATION AND INTUITION.

By JAMES SULLY.

DEMY OCTAVO, CLOTH, PRICE 10*s.* 6*d.*

CONTENTS:

Essay I. The Relation of the Evolution Hypothesis to Human Psychology.
II. New Theories of Emotional Expression.
III. Recent German Experiments with Sensation.
IV. Belief; its Varieties and its Conditions.
V. The Genesis of the Free-will Doctrine.
VI. On some Elements of Moral Self-Culture.
Essay VII. The Basis of Musical Sensation.
VIII. Aspects of Beauty in Musical Form.
IX. On the Nature and Limits of Musical Expression.
X. The Æsthetic Aspects of Character.
XI. The Representation of Character in Art.
XII. Lessing's Hamburg Dramaturgy.
XIII. On the Possibility of a Science of Æsthetics.

"Several of these studies are very remarkable. The three which deal with music would make an excellent treatise on musical æsthetics; we know nothing more complete on this subject."—*Revue Scientifique.*

"The author, who is well acquainted with the results of German research, distinguishes himself by a happy analytic skill, by the combination of psychological and physiological treatment, by moderation, and, even where he only criticises, by independence of judgment."—*Literarisches Centralblatt.*

"Mr. Sully surveys in a very able manner the most interesting phenomena of belief; and, in particular, his illustration of the influence of the feelings on belief may be recommended as thorough-going and comprehensive. The writer of such an essay must be ranked as a psychologist of no common order."—*Fortnightly Review.*

"The materials furnished by a quick and lively natural sense are happily ordered by a mind trained in scientific method. This merit is especially conspicuous in those parts of the book where, with abundant ingenuity and no mean success, Mr. Sully endeavors to throw some light of cosmic order into the chaos of æsthetics. 'The Basis of Musical Sensation' and 'Aspects of Beauty in Musical Form' are full of interest even for readers who have no technical knowledge of music."—*Saturday Review.*

"'The Basis of Musical Sensation,' the 'Varieties of Beauty in Musical Form,' and the 'Nature and Limits of Musical Expression' form a group by themselves, in which the psychological relations of this department of fine art are discussed with a depth of fulness never previously attempted, so far as we know, and certainly never before attained in our literature."—*Nonconformist.*

HAVE JUST PUBLISHED:

I.

Draper's Intellectual Development of Europe.

History of the Intellectual Development of Europe. By JOHN WILLIAM DRAPER, M.D., LL.D., Professor of Chemistry in the University of New York, author of a 'Treatise on Human Physiology,' 'Civil Policy of America,' 'History of the American Civil War,' etc. Revised Edition, in Two Volumes. 12mo, cloth, $3; half-calf, $6 50.

This edition of the 'History of the Intellectual Development of Europe' has been prepared expressly to supply a popular demand for a cheap and convenient edition of a work which has been translated into every important modern language of Europe, and has received the commendation of the greatest thinkers of America and other countries.

"It is one of the not least remarkable achievements in the progress of the positive philosophy that have yet been made in the English tongue. A noble and even magnificent attempt to frame an induction from all the recorded phenomena of European, Asiatic, and North African history. The strongly human sympathy and solicitude pervading this book is one of its most entrancing charms. Unaccustomed though a reader might be to scientific habits of thought, or uninterested in the gradual elaboration of eternal rules and principles, here he can at least disport himself amidst noble galleries of historical paintings, and thrill again at the vision of the touching epochs that go to form the drama of the mighty European past. This is no dry enumeration of names and dates, no mere catalogue of isolated events and detached pieces of heartless mechanism. Rather does this work come to us as a mystic harmony, blending into one the treasured records of unnumbered histories and biographies, the accumulated stores of sciences the most opposed, and erudition the most incongruous, now descending into slow and solemn depths of tone, as sin, cruelty, intolerance, form the theme, now again lost in unapproachable raptures of sound, as true greatness, endurance, self-control, are reflected in the grand turning-points of European story. . . .

". . . . It is eminently encyclopædic. It ransacks every accredited science, all the most recent discoveries, and every independent source of historical information.

"What Comte showed might and ought to be done for the whole world of Man, what Mr. Buckle commenced for England, Scotland, France, and Spain, Dr. Draper has effected for the whole of Europe. The gigantic vastness of the task is almost paralyzing, contained as is the result in a very moderate space, but it is done none the less carefully and thoroughly.

"All the latest researches in history, all the most recent discoveries in the realms of geology, mechanical science, natural science, and language, every minute particular that can explain or illustrate the general progress of all the European races from the most primitive ages, are accurately and copiously detailed in their several relations. Nor is the author without such an art of representation as can render a book not only such as we ought to read, but also such as we like to read."—*Westminster Review.*

II.

Gladstone's Homer in History.

Homeric Synchronism: an Enquiry into the Time and Place of Homer. By the Right Hon. W. E. GLADSTONE, M.P., author of 'Juventus Mundi,' 'Rome and the Newest Fashions in Religion,' etc. Post 8vo, cloth, uncut edges and gilt tops, $2.

"This work is grounded on the discoveries which seem to have been most recently made in two very distinct quarters, both of which may be found to reflect some interesting light on the date of the Trojan war, the one directly, the other indirectly indeed, but hardly less instructively. The one is the presumed identification of certain remains long hidden deep below the soil at Hissarlik in the Troad, the other the fragmentary record of events connecting at a very primitive era the history of the Greeks and Trojans with that of Egypt. . . . Understanding 'Homer' in the sense which Mr. Gladstone attaches to the name, as the master who composed, not substantially only, but in almost every detail, the Iliad and Odyssey as we now possess them. Such is the contention of Mr Gladstone, which he has enforced with vast learning and ingenuity."—*Saturday Review, London.*

"Mr. Gladstone is a very fascinating companion."—*Examiner, London.*

"Mr. Gladstone shows, in this book, a mastery of detail and a persuasive power that are characteristic of him. . . . Whatever it may have been or may yet be his fate to disestablish, he will have done much to establish the reality of Homer and the *Trojanus labor* of which Homer sung."—*Spectator, London.*

"Mr. Gladstone's self-imposed task is no light one. The general result of his enquiries has convinced him, first, that the Siege of Troy is historical, and that it occurred some time between the commencement of the fourteenth and the close of the third quarter of the thirteenth century B.C.—the date satisfying the Egyptian records most fully, being the period B.C. 1316–1307; second, that Homer lived, and that the Iliad was composed, 'not, indeed, of necessity, at or very near the exact time of the siege, but within the general limits of the age to which the event belonged,' and not centuries after; third, that Homer was an Achaian, and not an Asiatic Greek of the period subsequent to the Dorian conquest."—*Pall Mall Gazette, London.*

"Another work by Mr. Gladstone on the poems of Homer will be eagerly read and eagerly criticised, not by scholars only, but by all who have a care and interest for literature. Both subject and author alike claim a wider circle of readers than falls to the lot of the ordinary student. To say that Mr. Gladstone displays his usual powers of persuasiveness and flowing eloquence in the volume before us would be needless; nor can we fail to derive new suggestions and new insight into the old Epic of Greece from one who knows and loves it so well."—*Academy, London.*

III.

Orton's Comparative Zoology.

Comparative Zoology, Structural and Systematic. For Use in Schools and Colleges. By JAMES ORTON, A.M., Professor of Natural History in Vassar College; Corresponding Member of the Academy of Natural Sciences, Philadelphia, and of the Lyceum of Natural History, New York; author of 'The Andes and the Amazon,' etc. With 350 Illustrations. Crown 8vo, cloth, $3.

"A very thorough and comprehensive treatise, presenting the latest views on the science of zoölogy, without theoretical discussion or abstruse reasoning, intended for a general text-book on the subject, and admirably adapted for popular consultation and reading. It treats the science from a synthetic point of view, proceeding from broad and general statements to the explanation of details, omitting nothing which is demanded by the complete elucidation of the subject. The style is terse and animated. The whole treatment is of a popular character, without being superficial or incomplete."

IV.

Early Man in Europe.

Early Man in Europe. By CHARLES RAU. Illustrated. 8vo, cloth, $2 50.

"Professor Rau has invested with almost romantic interest this record of prehistoric man in Europe during the Stone Age. The subject was first presented by the author in a series of contributions to *Harper's Magazine*. The whole series has been revised by him, and such additions and alterations have been made as were demanded by the recent progress of scientific investigation in this field. The results of the investigations of the last thirty-five years have been remarkable, beginning with Dr. Perthe's memorable discoveries in the gravel-beds of the Somme, in 1841, and culminating in 1857 in the discovery of the Neanderthal skull. Professor Rau has gathered together the human relics of the Drift period, and the remains of coexistent lower animals, and has reproduced for us the life of the Cave Dwellers and of the primitive inhabitants of the Lake Settlements. His account is profusely illustrated with representations of the implements, artistic products, and other interesting memorials of prehistoric men."

V.

Cicero's Select Orations.

M. Tullii Ciceronis Orationes Selectæ XIV. Recognovit REINHOLDUS KLOTZ. Editio Altera Emendatior. 16mo, paper, 50 cents; cloth, 75 cents. (Uniform with *Harper's Greek and Latin Texts.* Cæsar.—Vergilius.—Horatius.—Cicero de Senectute et de Amicitia.—Ciceronis Orationes Selectæ XIV.—Sallust.—Lucretius.—Æschylus.—Sophocles.—Euripides. 3 vols.—Herodotus. 2 vols.—Thucydides. 2 vols.—Xenophon. 16mo, paper, 50 cents a vol.; cloth, 75 cents a vol.)

☞ HARPER & BROTHERS *will send any of the above books by express or mail, freight or postage prepaid, to any part of the United States or Canada, on receipt of the price.*

☞ HARPER'S NEW AND ENLARGED CATALOGUE, 300 *pp.* 8*vo, being a descriptive list of about* 3,000 *volumes, with a* COMPLETE ANALYTICAL INDEX, *sent by mail on receipt of Ten Cents.*

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1876.

The Week.

As the nomination of the Republican Convention will probably have been made before this paper reaches the great body of our readers, ordinary prudence, if nothing else, forbids our uttering any predictions or engaging in any calculation of chances. To record the way the candidates have "developed strength" or "weakened" during the week, or the signs of new combinations or alliances that have shown themselves, or to describe clubs of solid, substantial citizens and of mere "shouters" who have gone out to promote the fortunes of their favorites, or the extraordinary displays of devotion which have been called forth by the discovery of something disreputable about a candidate, would for the same reason be a waste of labor. The Convention excites great interest, such as has not been witnessed in the case of any similar body since 1860, and the result will probably have in various ways an influence on the future of the Government second only in importance to that of the Convention which nominated Mr. Lincoln.

The process of "vindicating" Mr. Blaine has been continued by himself and one or two friendly newspapers through the week. He made a savage attack in the House on the Judiciary Committee for not having produced a telegraphic despatch sent to them from "London" by Caldwell exonerating him (Blaine) in the matter of the $64,000 Little Rock and Fort Smith bonds, and made a great uproar about it. His obvious aim was to produce the impression that the Committee was violently prejudiced against him, and that if the Caldwell despatch had been published it would have set him all right with the country. But the Committee had as yet said nothing about him. They had not reported on him, or done anything except listen to evidence against him furnished by his own friends and associates, and it was this evidence which was damaging him if anything was. No proof of the state of mind of the Committee was therefore relevant. It made no difference how they felt. Moreover, the Caldwell despatch, if published, could have done him no good; its retention, therefore, even if malicious, did him no harm. Caldwell is a disreputable person, one of the small army of jobbers and speculators who have during the past fifteen years been corrupting our politics and ruining our credit. There is little doubt that he is now keeping out of the country to avoid examination in the pending investigations. It was, therefore, not unnatural to pocket a despatch from him until enquiries had been made about the worthy man's whereabouts, and certainly excusable to treat it as having no importance as evidence. The point about the presence of "two rebel generals" on the Sub-Committee had just as little bearing on the matter in dispute. It might do in the Court of General Sessions, but we must again remind Mr. Blaine that he is not a criminal on trial; he is a gentleman in high public station who is trying to convince the American people that while in office he did nothing either dishonorable or suspicious. We may add also, that the fact of Mr. Tarbox's having on one occasion got a copy of Mr. Blaine's financial speech before it was delivered, hardly touches the issue.

The course of the newspapers friendly to Mr. Blaine has been sufficiently absurd and extravagant to recall the old days of the impeachment of Andrew Johnson. They talked as if his ability to assail and overwhelm the Committee, bully the House and Speaker, settled the whole matter, and that he need say no more about his operations in stocks and bonds, and as if the applause of the crowd in the galleries expressed the verdict of the country. The fact is that Mr. Blaine's victory over the Committee, such as it was, settled nothing whatever, and the report of it and of his wrangles with the Speaker has been read by sober-minded men with pain and regret. It was an unseemly exhibition, in which Butler ought to have figured. The reporters, however, seem to have been thrown into ecstasies by it, and in one or two cases became so besotted as to announce that Blaine was all right now, and that all that the American people sought in a Presidential candidate was that he should be "plucky" and "audacious," and a good "fighting man," and should be able to "muzzle" or "overwhelm" Proctor Knott. The general and correct impression is, however, that what the American people seeks now in a candidate above all things is that he should be honorable, disinterested, above reproach; that he should keep good company, and have always kept it; and that if a wealthy man, he should have acquired his fortune in some open way, or way that will bear minute and public description. As to the "pluck" and "audacity," "smartness" and "fighting qualities," they are not, apart from other things, particularly attractive. They can be found in great abundance among the faro-bankers in this city, and Ben Butler has them in even a higher degree than Mr. Blaine.

A peculiar disease, which affects moral perception somewhat as strabismus is supposed to affect ordinary vision, appears to have broken out among some of our public educators. Not long ago, President White, of Cornell, happened to look in the direction of Conkling and beheld a saint and a hero; and now Professor Townsend, of the Boston University, exhibits an analogous moral distortion. In an address before the graduating class of the theological school of the University last Wednesday, he took for his subject the heroic element in Christian character as illustrated in the life of John the Baptist, and in the course of his remarks, according to newspaper report, "while citing examples of heroism, he referred to the coolness with which Mr. Blaine had faced and routed for the second time the riff-raff of secession on the floor of Congress"—an allusion which, we are further informed, was "warmly applauded," showing that the speaker probably exhibited considerable warmth of manner while making the reference. We can readily understand that the active politicians who are Mr. Blaine's supporters may admire his pluck or his "cheek" or his shrewdness; that his recent performance may be to them a glowing illustration of political ingenuity and daring; but that a prominent divine, in an address before a collection of young ministers, should refer to a man who is evidently doing all that he can to divert attention from the fact that he has been engaged in discreditable stock-jobbing operations, as an illustration of Christian heroism, we should once have thought impossible. Ordinary strabismus is a matter of little importance, and can be cured usually by a slight and comparatively painless operation; but this moral infirmity, especially in the case of some of those who have recently manifested symptoms of it, is a terribly serious affair. It showed itself among the ministers about Boston once before in the case of Butler, and it starts a good many plain people on lines of thought, which are not always profitable, touching the connection between theology and morals—a subject which now comes up with painful frequency.

At a time when unblemished reputations are getting to be so scarce in public life, it is cause for general rejoicing that the House Committee on Expenditures has made a unanimous report completely exonerating Speaker Kerr in the matter of the charge, brought against him by one Harney, of having sold a commission in the army to a man named Green. Mr. Kerr's character has always stood so high that people were naturally shocked to hear him accused of having sold his good name for so small an amount, even in these days, when politics have become so largely a branch of speculative business. When he came to answer, his

very probity and disinterestedness stood in his way, for it was naturally asked, why did he go out of his own district to nominate Green for the commission if his motives were not corrupt? It turned out, however, that Harney was a scamp, and that Mr. Kerr went out of his district because no one in it applied for or seemed to wish for the appointment, and because Green, who did apply, was well recommended. The charge, however, paltry as it was, seems to have had the effect of aggravating Mr. Kerr's malady, and he has had to leave Washington in a condition which makes his resumption of his duties in the House very unlikely. Mr. Blaine also has had an attack of illness which spread consternation among his supporters, and was doubtless due to the strain on his nerves caused by his late troubles, but which, happily, has proved not to be serious, though attended with five hours of unconsciousness.

The House, by permitting the Committee on Banking and Currency to report a Currency Bill at any time it pleases, has made it certain that a bill repealing the Resumption Act will be shortly passed by the House. Two agencies operate to produce this result: One is the belief of the Democratic inflationists, which is shared to some extent by the Republican semi-inflationists, that it is the fear that resumption is coming which now depresses business or prevents its revival. The other is the dislike of the same parties to the national banks, and their desire to have all the bank circulation withdrawn and greenbacks substituted for it, instead of the process which is now going on of the substitution of greenbacks for bank-bills. The weak point about the Resumption Bill is that it does not secure contraction on so large a scale as to render resumption easy when the time comes. Since its passage in January, 1875, the volume of the greenbacks has only been reduced by about $12,000,000, that of the banks by only about $17,000,000. At the rate of say $8,000,000 a year of reduction, the outstanding greenback circulation in 1879 would be still $350,000,000, which in addition to the bank circulation is a large amount to undertake to deal with as provided by the Act—that is to say, by the use of surplus revenue not otherwise appropriated and by the sale of bonds.

There is a Committee of Congress, we believe, sitting at this moment to discuss a plan for providing a permanent tribunal of international arbitration. There is at the same time a bill before the House, reported by the majority of the Judiciary Committee, providing for the all but complete disregard of the terms of the award made by the Geneva Tribunal, and the distribution of the balance of the indemnity on new rules, originally suggested, we believe, by Butler. We have recently tried to characterize this scheme in the way it deserves. We hardly expect that anybody's opinion will produce much effect on the transaction, but we cannot avoid saying a word of discouragement to the Committee which is considering the question of international arbitration. What we have to say on that matter is this—that, in the opinion of the honest portion of the civilized world, the proposal by Congress of any such plan will, in the presence of the bill of the Judiciary Committee, be considered a huge joke, and in some respects an insulting one; that the principle of arbitration has received a blow from the conduct of the United States in the *Alabama* matter which it will probably not get over in fifty years or one hundred years; and that the old-fashioned plan of settling disputes by armed force has, for the same reason, secured a greatly increased hold on the minds of statesmen and of the people of Christendom, which, of course, makes the maintenance of vast armaments easier. We hope, therefore, that for decency's sake the Committee will be discharged at once from the further consideration of the matter. It is impossible not to see in the whole affair an illustration of the fact that a considerable number of men get into every Congress whose morality seems conterminous with positive law, and who, therefore, have no scruple in perpetrating any fraud for which they cannot suffer legal punishment. Legislation affords them in certain fields abundant opportunities for the gratification of their dishonest propensities, and they are constantly on the lookout for some swindle which they can carry through neatly and expeditiously. Butler is the head of this school of politicians, but he has many disciples who are in all respects worthy of him, who, when they find themselves in a place where they can cheat somebody, or pass bad money on somebody without fear of the police, fairly jump with joy. They remind one of the Irishman who, on hearing a Universalist's account of his religious belief, exclaimed: "Well, if I believed that, divil another day's work I'd ivir do; I'd just stale an' rob, an' rob an' stale."

The "American Alliance" has issued a call for a "National Conference" at Philadelphia on the 4th of July, "for the purpose of acting upon nominations for President and Vice-President of the United States, upon the principles advocated by the American Alliance," and to recommend the substitution of a popular vote for President for the present Electoral College. The Alliance is in favor of such legislation as may be necessary for "putting a check upon the wholesale manufacture of citizenship from the foreign material that flocks to our land"; declares that the ignorance and rawness of the foreign voter make him an easy prey to scheming politicians; that by his aid "the halls of Congress and State legislatures have been disgraced," and seats secured by unfit persons, whose proper place would often have been "entirely different institutions." The Alliance recommends that only Americans born be elected to official positions of high trust and responsibility, favors the Bible in the public schools, and declares that the time has come for an "American balance of power" in this country. This call has, like all the other attempts to rouse a native-American and anti-Catholic furor, fallen flat, the reason being, as we take it, that the public sees very clearly through the pretence that the disorder and corruption against which we are now struggling come from the foreign population or the Pope. The most imposing rascals the country has produced, men like Tweed, Fisk, Gould, or Ben. Butler, who have done more to corrupt the politics of the country than all the Popes put together, are not foreigners, but native-American citizens, and some of the worst of them come from parts of the country where American traditions and blood have been least mixed with any foreign strain. If a list were made of the names of persons whose success in politics has been followed by most distress, humiliation, and shame on the part of the public, and by most loss of the country's good name, the greater part of it would be found to be made up of native Americans, who began their career under the influence of the "Bible in the Schools," and whose supporters in all their wickedness have been zealous Protestants and stern denouncers of the baleful influence of the foreign vote. If we must choose between the Boss and the Pope, let us by all means have the Pope.

The conviction of George Lord, one of the leading members of the Canal Ring, will be another feather in Mr. Tilden's cap, and a very showy one. When he began the crusade against the Ring, and obtained an elaborate exposure of their frauds, some of the Republican papers who could not bear the sight of a Democratic Reformer cried out: "This is all very fine, but does Mr. Tilden offer any plan for the management of the canals hereafter? No; not one word does he say on this subject. Then, brethren, we leave you, in view of this fact, to draw your own conclusions as to what all this reforming fuss amounts to." As time went on, and the exposures continued, and it became necessary to say something else, they exclaimed: "Sammy is very active and glib in exposing frauds; but, brethren, has he yet brought one criminal to justice? Now that he has caught the thieves, why does he not try them? We venture to predict he will do nothing of the kind, and that no fraudulent Canal men will ever be punished as long as it depends on this cunning and hardened politician." Now that the work of punishing them has fairly begun, that the very chief of the Ring, the wealthiest, most respectable, and most pious and

charitable, has been found guilty and will probably go to the penitentiary for a term of years, we presume we shall be told that Tilden is shocked, and that his subordinates have been too zealous; but there can be no doubt about the effect on public opinion. In these days, a man who sends corruptionists to jail counts inevitably for more than men who have to explain that their own connection with corruptionists was harmless.

The price of silver in London has fallen to 51¼d. per ounce, the lowest price on record. This makes the gold value of the silver dollar which Mr. Sherman proposes to re-establish, and which is to contain 412.8 grains, less than 87¼ cents (.8720). The United States note for one dollar has ranged during the week between 88⅛ cents (.8849) and 88⅞ cents (.8889). Congress has done nothing during the week respecting the silver dollar, but Mr. Sherman has succeeded in having a day set apart later in the month for the consideration of the bill relating to it. The House has passed two bills, the first directing the issue of $10,000,000 of the subsidiary silver coin now in the Treasury for United States legal-tender notes, the latter to be held for the redemption of fractional notes as they come in. This bill is simply to relieve the stringency of the small-change market; and, now that we are in for the silver experiment, is a good measure. The second is known as the Randall Bill, and authorizes the Treasury to buy $20,000,000 more silver bullion, in lots of $1,000,000, and to coin the same and pay it out in ordinary Treasury disbursements. The part of the bill which provided for the exchange of this additional $20,000,000 subsidiary silver for United States notes was stricken out; so that the bill adds $20,000,000 to the currency furnished by the Treasury—in other words, inflates the currency by so much.

A telegraphic summary of the correspondence between Mr. Fish and Lord Derby, as published by the British Foreign Office, has reached this country, from which it appears that Lord Derby was led to suppose from a remark of Mr. Hoffman, the American chargé d'affaires, that the present deadlock could be got over by the negotiation of an additional article to the existing Treaty, providing against the trial of persons for other offences than those for which they are surrendered. He accordingly telegraphed to Sir Edward Thornton authorizing him to sign such an article, but was speedily informed by Mr. Fish that this was all a mistake—that the United States would not agree to any such article, though willing to make a new and enlarged treaty. Whereupon Lord Derby expressed his regret, and said that there was no prospect of England's agreeing to any treaty which should disregard the Act of 1870, though she was willing to meet Mr. Fish's wishes by abandoning the proposal that the police magistrate should decide whether the offence for which a prisoner was claimed was political or only criminal. At present, it must be admitted the prospects of extradition look rather gloomy, for Mr. Fish has no power to make such a treaty as the British Act of 1870 requires, and in the excitement of a Presidential canvass Congress is hardly likely to give it him. The robbers and forgers will doubtless govern themselves accordingly. Mr. Fish's despatches are generally treated by the English press as demolishing Lord Derby's position, and adding one more to the list of the Tory blunders.

The details of the proceedings taken by the stockholders of the Lisbon Tramway Co. against Albert Grant and others, for fraud in putting that concern on the market, in which the defendants have allowed judgment to go against them by default, have come out by the last mails, and show that the operation was in all its main features exactly like the Emma Mine. A firm of contractors, named Clark & Punchard, in return for his getting them the contract, agreed to pay Grant out of the money received on it $300,000 to start with, and $290,000 more in cash or paid-up shares of the company, and were to accept a "put" of 4,200 shares at par at Grant's discretion. Besides this they were to pay the Duke de Saldanha $30,000 in cash and $80,000 in paid-up shares for getting the charter of the road. The directors of the Company were then "qualified" in the usual manner by the promoters by gifts of shares or money from the contractors, and they at once entered into a contract with Clark & Punchard for the construction of the road for the enormous sum of $1,540,000. In fact, Grant keeps in his books a "D. Q. account" (directors' qualifications). Clark & Punchard and Grant then drew the prospectus, and Grant began "floating" the shares in the way Trenor W. Park knows about, and bought "favorable notices" in nearly all the leading papers by small payments to the money writers; and when a considerable quantity of shares had been taken by the public somebody went or was sent out to Lisbon, and found that the proposed line could not be constructed, owing to "the steepness of the gradients and the narrowness of the roadway." There was much quarrelling and uproar after this, naturally enough, and after a futile attempt to find another route for the track the swindled shareholders went into court, and Grant will probably have to pay up. The dear Duke de Saldanha, being an ambassador and having the approval of his own conscience, will probably keep what he has got, but will have to go home.

The Budget Committee of the present French Assembly, from which some novelties were expected owing to M. Gambetta's being placed at its head, has, after careful deliberation, come to the conclusion that it can make no change of the slightest importance in the expenditure. The net revenue amounts to, in round numbers, $480,000,000. Out of this has to be taken inevitably $275,000,000 for the army and navy and the interest on the public debt, leaving only $205,000,000 for all the other expenses of the state, including education, and the Committee have concluded that these cannot be cut down. Twenty thousand dollars has been granted to send artisans and agriculturists to the Philadelphia Exposition, and five thousand dollars for sending schoolmasters. M. Marcère, who was M. Ricard's assistant, and has succeeded him in the Ministry of the Interior, is winning golden opinions, and gave the Assembly recently an account of the mode in which the Government was dealing with the question of the appointment of the mayors, of which we spoke a fortnight ago. All mayors appointed by the late Government from among persons not members of the municipal councils have been requested to resign, and those who have not resigned have been suspended, and the election of their successors will now be left to the municipal councils. M. Marcère explained that the Government, unlike its predecessor, sought in the mayors neither friends nor enemies, but good citizens, able to unite under the Republic; and the Republic it sought "to make wise, not violent, beloved by all and accessible to all"—sentiments which drew forth hearty applause even from the Left.

The news from Turkey is important. The new Sultan and his advisers have agreed of their own accord to grant the armistice to the insurgents demanded by the Gortchakoff Note, and probably the other concessions also. The Note has accordingly not been presented, and probably will not be for the present. Whether the insurgents will accept the armistice, or whether peace can grow out of it as long as Turkey makes no provision for the superintendence of any reforms she may grant by the representatives of the Christian Powers, is doubtful. The three Powers, at all events, are disposed to give her a chance, and the Servians, who were all ready to cross the frontier with an army of about 100,000 men, under the command of a Russian general, have got a hint from St. Petersburg that they must keep quiet, and Turkey is to ask them courteously, not menacingly, and probably with a view to a correspondence, what is the meaning of their armaments. That this disposition to let things lie for the present is somewhat due to England's refusal to adhere to the Note, there is little question. The specific ground of her objection has been made known, and was that the close of the Note clearly pointed to armed intervention in case its proposals were refused, and for this she was not prepared as long as the objects and mode of intervention were not distinctly defined.

CIVIL-SERVICE DIFFICULTIES.

THE debate in the Senate on the civil service on Monday week was a performance which is well worthy of the careful attention of the public. People will find by perusing the speeches that, as might have been expected, the members of that body, with one or two exceptions, either do not perceive that the civil service needs reformation, or, if they perceive it, are not willing to say in what the reformation should consist—which is, of course, an excellent way of preventing any change whatever from taking place. The evils of the present system have been so much discussed and are so well known that we do not propose to enter into them in detail. We presume there is hardly a voter in the country who is not familiar with some of them. But the question whether we shall have any change is a vital one, of hardly less interest and importance to the American people than that which was occupying their fathers one hundred years ago. The future of the Government is likely to be fully as much affected by our manner of dealing with this as it was by the manner of the men of 1776 in dealing with the question of independence. And what puzzled people now, as what puzzled them then, is not what ought to be done, but how to do it. The obstacles in the way of doing anything are few in number, but it must be admitted that they are formidable.

The first one is somewhat similar to the leading obstacle in the way of a return to specie payments—viz., the loss by people of all recollection, or even tradition, of any better state of things, and a consequent difficulty on their part in conceiving of any better state of things as attainable. In 1776, every country in Europe had just such a civil service as we have now—that is, one in which the appointments were used principally to reward the favorites and followers of leading politicians, and only subordinately to secure the administration of the laws; and if it had been suggested to an English or French or Italian statesman that this was all wrong, and that the government employés should be selected and managed solely with reference to the public interest, he would have replied very much as Mr. Logan or Mr. Conkling would now reply. In England, the offices were used to secure votes precisely as they are now used here; that is to say, the Minister gave the control of the places to members of Parliament in order to secure their votes, and the member of Parliament gave them to his "workers" and constituents in order to secure his re-election. One of the novelties—indeed, the greatest novelty—which the American Revolution introduced into the modern world was a government conducted on business principles—that is, a government whose officers were selected without reference to anything but their fitness, paid the market price for their labor, and retained as long as they were useful. Until the accession of Bonaparte to the supreme power in France (that is, until about twenty years after our Revolution) ours was the only government in the Western world which was managed in this way—that is, as a merchant manages his counting-house; and this was due to the fact that the people had no recollection or experience of a government managed in any other way. They got their ideas of political business from their private business. The affairs of the town and county were, from the necessities of the case, carried on much in the same way as the citizens carried on the affairs of their farms and stores, with the same attention to character and to accountability and efficiency, and the same consideration of the wants and weaknesses of human nature. The attempts of the British Government to create and fill offices for other purposes than the public service were resented as acts of tyranny, and were mentioned in the Declaration of Independence as one of the causes of the Revolution.

How this tradition of the similarity of political business to private business, of the business character of the relation between the officer and the State which hires him, died out among us; and how the reorganization of the civil service on business principles in Europe has been one of the great features of the work of political reform which has been going on there ever since the close of the Napoleonic wars in 1815, are things with which most students of recent history are familiar. The fact is, however, that a very large proportion of our public has actually forgotten that the United States once occupied the position on this question which England and France occupy to-day, and that we have, after one hundred years of management of our own affairs, provided ourselves with administrative machinery in nearly every respect closely resembling that with which Lord North carried on the British Government and before which Turgot succumbed. In fact, there is hardly an abuse of that time in both those countries which we have not reproduced except the granting of pensions to ministerial and court favorites. Consequently, in arguing for civil-service reform before this generation, one has the air of recommending something far-off, odd, difficult, visionary, and impracticable, like a return to the simplicity of the Spartans or the public spirit of the early Romans. To great numbers of our people, Senator Morton's way of carrying on the Government appears the only practical way. They have no knowledge or remembrance of anything else. They know of no large republic which has carried it on differently.

We must add to this popular difficulty in conceiving of things never seen or known, the growth and complexity of party organizations. These now play a part in the Government of exceeding power and importance. They form the only channels through which public opinion can act effectively on legislation and administration. The management of them, with our present enormous population and vast and spreading inhabited area, is a work of great magnitude, and one of which the office-holders, as the persons most interested, have not unnaturally taken hold; and the present genération is so familiar with *their* management of them that it is hard for it to fancy them being managed by anybody else. It seems to the average citizen of our day that if there were no offices to distribute after election, nobody would "control the primaries," or get up the mass-meetings, or print the ballots, or procure the stump-speakers, or collect money for the campaign expenses. In fact, he can hardly get over the feeling that, excellent a thing as a reformed civil service would doubtless be, in the present state of human nature it would cause the machinery of politics to stand still. It might, he thinks, perhaps establish the kingdom of heaven among us, but it would paralyze earthly government. What is doubt in him is, in the politician proper, sheer disgust. Proposing to "work" at elections without any hope of office sounds very much to him as proposing to play euchre as a mere pastime, with ivory counters, would sound to a professional gambler—that is, harmless but silly.

In considering the difficulties with which the question meets in Congress itself, we have to remember, too, first of all, that even if the members were in any sense the élite of the nation, their action would be seriously trammelled by the fact that they mostly owe their appearance in political life to the civil service as it is, and they can hardly conceive of their getting into political life if it were as we would have it. Their position is very much, to recur to our former parallel, like that of the British members from the rotten boroughs under Lord North in 1776, who could not readily picture to themselves their return by a free popular constituency, and were not disposed to think very badly of a Parliament elected in large part by the nomination of peers or by the votes of thieving municipal corporations, when they themselves were in it. The attempts of our Congressmen to find reasons for not reforming the civil service, such as Mr. Boutwell's plea that, as it is now, it gives young men the means of getting their education as doctors or ministers; or Mr. Sargent's, that it furnishes relief for the deserving poor; or Mr. Morton's, that it brings the talent of the nation into the service of the Government, are probably not based on any serious belief. All of these gentlemen who laugh at all, laugh over this kind of talk in private, and only produce it publicly in a sort of decent eagerness for something that will look like principle and bear the weight of an argument. But it must be said, and ought to be remembered, that no change is to be looked for at the hands of members of Congress which is not forced on them by public opinion. To them the whole agitation is as foolish and chimerical as the desire of the Austrians for a parliament

used to be to Prince Metternich. We shall have the reform when the public really desires and shows plainly that it must have it. But it is not to be denied or overlooked, as we have already said, that, as in the case of specie payments, the public has difficulty in realizing how much it suffers from the existing system, owing to its want of knowledge of any other. There are certain outworks of the abuse, which the abuse itself has created, that must be carried before we can reach the citadel itself—such as the notion that the business of a nation is something different and distinct from that of an individual, and may or ought to be carried on in ways that would ruin an individual; the notion that, if office-holders were not forthcoming to conduct the canvass, elections would be neglected, parties go to pieces, and public opinion be left without adequate means of expression; the notion that, after having collected the taxes for certain business purposes specified by law, the magnitude of the aggregate amount makes it proper to use it indirectly for charitable purposes, by employing helpless or disabled or incompetent persons to do Government work; and, lastly, the notion that a force of permanent Government employés, whose small pay is dependent on annual votes of the legislature, would become a privileged class, feeling contempt for public opinion—a contingency which some people dread as much as if they were not already familiar with it in the persons of the present office-holders, who in every State, headed by the United States senators, form one of the most solid and insolent oligarchies now surviving.

These difficulties are so serious, and will take so much time for their removal, that we cannot help asking the friends of civil-service reform whether they do not think that the time for desultory attacks on the existing system through occasional articles and speeches has gone by, and that it must be assailed by some organization created for the purpose, with its treasury, and its writers and speakers, and all the other machinery of persistent and trained agitation, devoted day by day to the exposure of abuses and the education of the popular mind as to the remedy. The unnoticed scandals of our civil service, as now constituted, are numberless; the arts by which those who profit by them defend themselves against reform are too varied and powerful for any one man or newspaper to be able to make much impression on them; and the question will always be successfully shirked at elections until it is by some means raised to the rank of a "main question." This, we cannot help feeling, in the case of an abuse which has become rooted in our political traditions and habits, and to some extent in our manners and legislation, can only be done by an organization like a party, and, pending the formation of a party or preparatory to it, by an association.

THE RESUMPTION ACT.

THE only great thought in the direction of reform which seems to be agitating the mind of the Democratic party at this moment is the repeal of the Resumption Act of January, 1875. After looking around carefully for two or three years to see what they could do to regenerate the Government, and after one year's enjoyment of the leading share in legislation, they have come to the conclusion, apparently, that the highest service they can render the nation is to provide that it shall not attempt to redeem its notes in January, 1879, as promised last year. They have made it almost certain that they will shortly pass a bill to this effect in the House, and there is a widespread expectation that they will call for the same thing in their platform at St. Louis. It is but charitable to believe, however, that they forget that the Resumption Act is not simply a measure for the regulation of the finances of the Government in a manner to suit its own convenience or discretion. It is, on the contrary, a pledge of the same force and of the same nature as the promise to pay the Government debt in coin, or, indeed, to pay the Government debt in anything; and its repeal will be not a permissible change of plan in a matter of purely domestic interest, such as a determination to stop refunding at a lower rate of interest or to make alterations in the tariff would be, but an act of repudiation of the simplest and clearest description. There ought to be no vagueness or misapprehension in the public mind on this point, for it is a very important one.

The legal-tender notes of the Government were issued under Acts of Congress "on the credit of the United States," and have been held by the Supreme Court to be payable, whenever paid, in gold of a certain weight and fineness. They were, in other words, promises to pay certain sums in coin, though at no fixed date, but it was the accepted understanding that they would be paid as soon as the exigencies of the Government permitted. This absence of any stipulation as to the date of payment has always been a serious injury to the public credit. The want ought to have been supplied at the close of the war. It was the thing to which Mr. Boutwell ought to have first given his attention when General Grant came into office. At that time the country was of one mind about the matter. Democrats as well as Republicans—Democrats much more strongly than Republicans—were of opinion that the greenbacks were ordinary promissory notes, issued in a time of great difficulty, which ought to be redeemed as soon as possible. If the Government, therefore, as soon as the fighting was over and the country settled, had resolutely fixed a day, however remote, at which the legal-tender notes would be taken up in coin, not only would it have infused steadiness and sobriety into the business of the country and cleared the future both for lenders and borrowers, but it would have done something which all parties would have recognized as just and proper. It was, indeed, acknowledged on every side that the persistent refusal of the Government either to pay its notes or say when it would pay them, was a sort of violation of its engagements, or at all events an imperfect fulfilment of them. There were many possible excuses for not paying or beginning to pay immediately after the war; there were none for refusing to fix some date at which payment would eventually begin. The problem was no more difficult with regard to the non-interest-bearing than with regard to the interest-bearing debts. There was no reason why the bonds any more than the greenbacks should be "five-twenties" or "ten-forties." It was perfectly easy to say, in 1865 or in 1868, that in 1876 we would take up twenty or fifty or one hundred millions of our non-interest-bearing notes, and so on at subsequent intervals, until all were redeemed. The failure to do so was a great national scandal even then; it has since become a great national misfortune; and it is one of the many misfortunes which flow from putting feeble and ignorant men in high places.

The mistake was, however, partially rectified by the Act of January, 1875, which directed the Secretary of the Treasury to redeem, on and after the 1st of January, 1879, all United States legal-tender notes then outstanding, in sums of not less than fifty dollars. To provide the means of doing so, he was authorized to use any surplus revenue which might be from time to time lying in the Treasury, and "not otherwise appropriated" (a source from which plainly there is little to be expected), and also to issue and sell, at not less than par in coin, as many of either the five per cent. or the four and a half per cent. bonds authorized by the Refunding Act of July, 1870, as might be necessary for the purpose. This latter provision, we need hardly say, is amply sufficient for the object in view. The Resumption Act, therefore, completes the national pledge to pay the public debt. It names the day when the Treasury will begin to take up the overdue notes, and provides the source from which the means to do so are to be drawn. It is just as solemn and binding a promise as any other that has ever been made with regard to any pecuniary obligation of the Government. It was made by an Act of Congress duly passed and approved by the President, and there is no doubt of its constitutionality. It is not a law imposing duties on citizens of the United States. It is not mandatory as regards anybody except the Secretary of the Treasury. It is a simple undertaking on the part of the American people, made by their lawful representatives, to pay on a day certain a debt long past due; and as such is a contract with every person, native or foreign, who may, in January, 1879, be the holder of a United States note. To carry it out will not impose any immediate hardship on the community. The very

worst it can do in that direction will be to add say $200,000,000 to the public debt, and $10,000,000 or $9,000,000 to the annual charge, which, as the country is now, and with the present rate of reduction of the public debt, would hardly be felt. So that, if we fail to keep our engagement, we shall hardly have the excuse of inconvenience, much less of inability. It will, therefore, be repudiation in a peculiarly gross and repulsive shape, and it will be the first act of the kind committed by the United States, and will, at the opening of the second century of the national existence, put us on a par with Mexico or Guatemala.

There is another point of view in which the matter looks also very serious. A repudiation by one Congress or party of a pledge made to the public creditor by another when in lawful possession of the Government, would of course place the Treasury in a very peculiar position in all its future dealings with the civilized world. One of the marks of the success and stability of a constitutional government carried on by parties, and, indeed, the mark which as much as anything else distinguishes our Government from that of the South-American republics, and distinguishes all highly-civilized from barbarous governments, is the ready recognition by each party as it comes into power of all pledges of the national credit made by its predecessors. No country in Europe has gone through so many revolutions within the present century as France, but the national self-respect and the confidence of the financial world have been preserved through them all, by the fidelity with which each faction has respected the claims of the public creditor arising out of promises of a *de facto* government. Indeed, when once a people descends to the trick of treating the obligations assumed by a party on behalf of the state as only binding as long as that party holds the power, the period of political dissolution and frequent pronunciamientos is not far off, and politician and highway robber soon become convertible terms. Time was when the Democratic party would have thought it foul scorn to give the slightest countenance to such a theory, and there is no American schoolboy who to-day would not smile over it if presented to him in its nakedness. But, somehow, financial questions seem to have the power of befogging even respectable and intelligent men who approach them with little training or reflection, as to the plainest principles of political and even of private morality. The use of the irredeemable paper for so many years as money, though a phenomenon which seems simple enough and easily explicable, has blunted the perceptions and perverted the understanding of hundreds of thousands among us as to whole fields of duty with which public finance has no immediate connection. It has roused among us a prodigious body of latent rascality, and filled numberless ingenious and active minds with schemes for the evasion of plain obligations and for giving an air of right to ancient and undoubted wrong, and making easy and agreeable what the moral constitution of the world has from the beginning made hard and odious. In fact, the moral mischief it has wrought, though less palpable, is deeper and more widespread than the financial, and there could hardly be a better illustration of it than this proposed contribution of the Democrats to the work of "reform."

THE INTERNATIONAL EXHIBITION.—IV.

BRITISH PAINTINGS—THE REALISTS.—III.

PHILADELPHIA, June 10, 1876.

MR. MILLAIS'S "Early Days" is a life-size study of a blonde maid of six years sitting against the garden-wall and nursing her kitten, pale-looking and aristocratic. In such a picture the artist has every chance, for the sympathy of the spectator is sure to meet the work half-way. It is almost impossible to paint a child nursing a kitten without attracting the plaudits of a majority of passers-by. Blest in his subject, one of the most popular in the line of portraiture, the likeness-taker dresses it up in the mob-cap and black-lace mittens which recall at once Reynolds's child-subjects, with their inexhaustible charm. Determining that his little sitter shall make on the mind a like impression with "Penelope Boothby" or "Innocence," the artist rigs her out with the Georgian properties, and exults in the quaint, old-fashioned look she has. There is something almost cruel in victimizing a child to gratify the modern fancy for Eastlake furniture or Hanoverian costume. The cap, which in this case is the merest bric-à-brac, is as merciless an infliction as it would be to decorate a nursery with untouchable Venice glass, and for a certainty no little patrician of this day, however pale and phenomenal, will voluntarily nurse a kitten in mittens. Let us make curiosity-shops of our houses till we are as uncomfortable as modern taste demands, but to dress little helpless children in curios is tyranny. Apart from all this, is the picture one which, from its painting-quality, would attract a beholder who knew nothing about the Millais *cultus* in England? So rapidly does time pass that the rise of this peculiar faith, for a long time the newest thing in art-ritualism, is now looked back to as a historical rather than watched as a contemporaneous event. More than a quarter of a century has elapsed since Millais began to exhibit pictures, with thoughts in them, in the full footlight glare of Maclise's Porte St. Martin pieces. The "Huguenots" and "Ophelia" came out twenty-four years since, and the "Proscribed Royalist" a year later, in 1853. In 1867 the honest Parisians beheld with affright the green Madeleine of "The Eve of St. Agnes" standing by the painted window, as if illuminated by the colored jars of the chemist's shop. Those pictures had all some startling invention or other, while "Early Days," unable to startle, simply keeps even with the tone of good society by means of bric-à-brac. The real trouble is, not that it is shocking, but that it is inoffensive. The little travestied sitter is neither green, nor green-sick, nor crazy, but she is colorless. The kitten, by the bye, is black, and quietly attempts the diabolical; but the artist has forgotten to put any drawing into the figure of this familiar, which is as thin as a piece of smoked glass; so that while the child is ineffective, the grimalkin is flat. The contribution by Mr. Millais, in short, is gentlemanly but not striking. It has long been a question whether the enormous vogue of this artist was based upon an intelligent and healthy dissemination of art-knowledge among the public. It will be hard to take the affirmative until more solid work is produced than "Early Days."

Another purist, Mr. Holman Hunt, contributes a life-sized portrait of himself, painted in oil and exposed under glass. From the large scale, this work is to be compared with model-studies by the artist of natural size, such as "The Afterglow in Egypt," rather than with smaller pieces, such as "Christ in the Temple" or "The Pot of Basil." As in the "Afterglow," the patient covering of a large face and body with miniature-touch is very singular. Here is an artist wreaking on his own plain face and working-clothes the inexorable judgment of his pencil, and dwelling sternly upon the furrow of a wrinkle or a first gray hair. We recollect that, five years ago, the well-known jewel-painter, Desgoffe, being shut out from the Bibliothèque of the Louvre by the siege, imprisoned himself with a looking-glass and painted his own countenance just as if it had been an agate jewel. The result was very similar to Mr. Hunt's self-portrait. Of course, artists of the particularizing habit of eye never succeed in seeing a composition as a whole. The Rabbis in the "Temple" picture contributed their heads to the corners of the composition, like apples to a plate, each face breathing a separate air: so in the present painting, though there is but a single figure, the painter contrives to make every part seem individual and independent. In nature, a figure always connects itself together as a whole, either relieved against or imbedded in a background. Mr. Hunt has indeed imbedded himself in a background, but his limbs and extremities are separate studies, and do not succeed in coming in for the general circulation. The head stares phantom-like as Adamastor over the blue smock-frock, which has an impersonal and solemn breadth, like distant mountains. In the foreground a most carefully painted hand forces itself on the attention, being finished to the very pores, and having an individuality of its own, like a mediæval ivory-carving on a table; yet, patient and Chinese as it is in finish, this vaunted hand is badly painted. The reason is that it is all of one degree of solidity, the laps of skin between the fingers being just as hard as the knuckles. Now, a hand in nature is partly padded and partly hard, and the difference is not only evident to the touch but to the sight, and, therefore, quite within the province of painting to indicate. The hastiest sketch of Raphael's gives perfectly the difference between a joint's firmness and the fluent yieldingness of flesh, and expresses more truth in a minute of labor than Mr. Hunt has done in what has evidently occupied him for months. It would be idle to go into these details, but Mr. Hunt's picture, like all his work, is nothing but details. When he sends us an *ensemble*, the *ensemble* shall be criticised.

Mr. H. Wallis contributes "Across the Common" and the celebrated "Stone-Breaker," which is lent from the collection of Temple Soanes, Esq. It would be curious to point out the difference between the

"Stone-Breaker" and a picture of an old road-mender by Courbet, or his "Interment at Ornans." Both artists are realists of the most determined sincerity, yet the results are as different as day from night. M. Courbet, keen, true, and unconventional as is his eyesight, never forgets that nature cannot compose without making a unity. His figures belong to the air, and the day, and the scene. The English realist, on the other hand, is led quite astray by his habit of penetration. The important statement he has to make is, that freshly-broken stone displays many colors of considerable freshness. He forgets the other fact, that in nature a heap of stone has a dominant color of its own. Dwelling on the colors that may be extracted from stone-fracture, and forgetting everything else, his sight of course becomes morbid, and he forces the hues until they are prismatic; triumphant now, he adds to his broken baubles the figure of the stone-breaker, asleep or dead, and looking like Alnaschar above the shattered glass. The bank on which he leans is patched with bluish-green, like a majolica jar, and a diseased iridescence of yellow breaks over the composition as a sub-tone, while at the base the fragments of variegated rock glint and gleam in a furtive, disturbing manner.

On the whole, the pictures by the *préci ux* Englishmen will be to most spectators a revelation. They are not abundant, being crowded down by the mass of anecdote-pictures; but, so far as they go, they are characteristic. For an eye satiated with official art and regulation melodrama they come in as something noble and refreshing, they are so sincere in attempting to grow straight from the conscience; but their studiousness, however refreshing after the regular drama, has characteristics of awkwardness and self-assertion that are bad for the nerves, and strike like the efforts of the young man at the neighboring window to learn the German flute.

E. S.

A FRENCH DIPLOMAT.

PARIS, May 19, 1876.

THE Marquis of Eyragues was one of the most useful members of the diplomatic body of France under the Restoration and the reign of Louis Philippe. I have been favored with a copy of his personal memoirs, which have not been printed for public circulation, and are only given by the sons of M. d'Eyragues to a small number of friends. I have not often read a more interesting book. I believe that the recollections and impressions of any man, if they are sincere and well expressed, have much interest; but the interest must increase, of course, if that man has always been in contact with important personages and concerned with the most important affairs of Europe. Diplomacy has always in France been a career, like any other; we have always had professional diplomatists, who have been promoted in virtue of fixed rules, though the highest posts have at all times been given irregularly to men of distinction, who occupied them as long as it suited the interests of the country. These heaven-born ambassadors play the part of comets among the ordinary planets and satellites of the diplomatic staff. The Marquis d'Eyragues may be considered as a type of the diplomatic satellite, and, merely as such, it would be rather interesting to study all his movements.

The Marquis d'Eyragues was born on the 1st of January, 1805, at New Orleans. His grandfather had been an *émigré*, who left France with a son fourteen years old. This young man became a cadet in the army of Condé; father and son fought together in the ranks of the Royalists. Madame d'Eyragues belonged to a family who owned an estate in San Domingo. In 1804, the father of M. d'Eyragues, having just been married, went to San Domingo, hoping to realize this estate. The story of the adventures of the young couple in San Domingo would be very long. It is enough to say that they stayed for a time in New Orleans, where our Marquis was born. His father went back to France, entered the army, rose rapidly to be an officer, and took part in all the wars of the Empire. He was attached to Berthier, Prince of Neuchâtel, at the battle of the Moskva, and saw the burning of Moscow; he crossed the Berezina, but was made a prisoner at a short distance from Thorn, whither he was carrying despatches. He only returned to France in 1814, and found his son in a college at Versailles. The boy, born at New Orleans, was then ten years old; he was of delicate health, a good scholar, and of course he did as all the other boys of that time did, prepared himself to enter the army. He was received at Saint-Cyr, but fell so dangerously ill that he was sent for a year to his grandmother, who lived in the warm climate of Provence.

The military career was abandoned. The father of our young man was killed in Spain, when a French army crossed the Pyrenees and marched to Madrid. M. de Damas, who had commanded a division in the Army of Occupation, became Minister of War. He attached young d'Eyragues to his cabinet, and as he was soon afterwards named Minister of Foreign Affairs, d'Eyragues followed him and became an *attaché* at the age of nineteen. He was fortunately a young man of high principles, discreet, well bred; he was admitted to the constant familiarity of the Minister, who allowed him to open all his letters and despatches, as well as those of the Director of the Political Division, who is in our Foreign Office the most important personage after the Minister. His first journey was to Lisbon, where he was merely sent with some decorations for King John VI. and the principal Ministers. He gives a very vivid description of the Queen, who passed at the time for a heroine. This is what M. d'Eyragues says of her: "I was presented to a little woman, very fat, ugly, attired in a ridiculous manner, with a horrible voice, disordered gestures, and an incredible manner of speaking French. She had over her gown two pouches, out of which her hands constantly drew handkerchiefs, snuff-boxes, scissors, *chapelets*, and sugar-plums." Speaking of the King, she repeated several times: "Le Roi est bête." She sometimes asked a chamberlain for words, but the chamberlain was perfectly mute, and only bowed.

The second diplomatic journey of M. d'Eyragues was much more interesting: he was sent to Vienna and overland to Constantinople. In those times such a journey was extremely hard. He crossed the Banat of Temesvar, Transylvania and the mountains which separate Transylvania from Wallachia, in small vehicles dragged by four horses, holding only one person, who sits on straw. He stopped at Bucharest; Wallachia and Moldavia were then a desert. The Turks kept these fine provinces in a state of abject misery, in order that the Russians might not feed their armies off them. "These tactics, though barbarous, were efficacious, as in 1827, two years afterwards, the Russians found they could not cross the Balkan, simply because they could find no provisions. Soon afterwards, in 1828, Marshal Dibitch succeeded in crossing the Balkan in a bold march, but his army was much weakened, and found itself in a most critical position; and if Turkey, under the impulse of a mad terror—and, it must be added, at the instance of the diplomatic corps in Constantinople—had not consented to make peace, if she had simply temporized, the army of Dibitch would probably have been destroyed." The journey over the Balkan and to Constantinople was made on horseback, under the guidance of a Tartar, with a pointed cap of red color and two feet high. The small caravan was composed of four persons and five horses. Six days after leaving Bucharest, "we found ourselves on the shore of the Sea of Marmora; we went up a little hill, and at the distance of six leagues I discovered a confused mass of trees and buildings surmounted by a few minarets; the Tartar looked round to me, and said, 'Stamboul da'—'This is Stamboul.'" M. d'Eyragues saw the old uncivilized Stamboul; he was insulted on his way to the French Embassy by women and children, and annoyed by the wild dogs, who hated an European dress; he saw on the walls of the Seraglio long files of heads of revolted Greeks; he met the *ortas* of the Janissaries; he saw the Sultan go on Friday to the Mosque with an escort of Janissaries, of Bostandjis, of Kaludjis, of black and white Eunuchs, of Pashas, all with Oriental costumes. Nine years afterwards, the Janissaries were gone, and the horrible fez had replaced the turban; the Pashas wore ugly uniforms made in Paris. The return journey was like the first; and M. d'Eyragues was so active that he went in sixteen days from Constantinople to Paris.

M. d'Eyragues was sent afterwards to St. Petersburg, where M. de La Ferronays was then ambassador. He arrived at a most critical period in the Russian capital. The Emperor died on the 30th November, 1825, and the question of the succession kept all minds in suspense. The oldest Grand-Duke, Constantine, had renounced the crown when he married Grudzinska, the daughter of a Polish nobleman, and he was living in Warsaw. Nicholas, the second Grand-Duke, did not wish, moved as he was by a generous spirit, to take advantage of this renunciation, which in his opinion had not been quite free, and he asked the senate and the troops to recognize Constantine as emperor. Constantine, on his side, as soon as he heard of his father's death, sent an aide-de-camp to Nicholas, to congratulate him on his accession to the throne.

Wild rumors were spread in the army, and some regiments rebelled, with cries of "Vive Constantine." Nicholas, who was then receiving the homage of his court, at once asked for his horse, and presented himself alone in front of the revolted troops. His presence produced no effect. The Emperor was then joined by his own regiment of the Guards, and by a battery of artillery. The revolted soldiers were defeated. While this scene was being enacted, the Empress and all the princesses were waiting in court-dress. Nicholas came back, after the short and bloody struggle, un-

hurt, and almost unmoved. It will be easily understood that after such incidents the ceremony of Nicholas's coronation must have presented an exceptional interest. France sent an ambassador extraordinary, in the person of the Duc de Ragusa :

"We started from the Embassy at six o'clock in the morning to go to the Kremlin, in full uniform, and in two magnificent carriages. The first had six horses, attired in French style, with four footmen, in grand livery, at the head of the four horses, and three lackeys behind, and was preceded by a *piqueur* on horseback. In it were the Ambassador, alone on the back seat, and before him the first and second secretaries. Madame de La Ferronays, her daughter Pauline, and myself followed in a second carriage, with four horses. Our cortége crossed the whole city of Moscow, and we were one hour and a half going from the Embassy to the Kremlin. On his side, the Duc de Ragusa, accompanied by his numerous *attachés*, had gone to the Kremlin in two magnificent carriages, with six horses. We found him there, as well as the Duke of Devonshire, who had brought all his carriages from London."

The Church of the Assumption, where the Emperors are crowned, is so small that, besides the princes and the diplomatic body, few people could be allowed to enter it ; but outside of the church, at the foot of its staircase, made famous by the massacre of the Strelitzes, a large amphitheatre had been constructed for the nobility of St. Petersburg and of Moscow. I come at once to the dramatic incident of the coronation :

"Grand-Duke Constantine had arrived unexpectedly the day before from Warsaw, without warning the Emperor. . . . M. de La Ferronays, who knew him well, had been called to him ; as soon as he saw him the Grand-Duke shook hands with him and said, 'Well, you did not expect me. When I heard that, notwithstanding all I had said, it was still rumored, not only among the revolutionists but in higher places, that I had been deprived of the throne, that Nicholas was an usurper, I resolved to come and give, by my presence, a definitive denial to these rumors.'"

He added that Nicholas would make a better Emperor than himself ; he for his part liked the Poles, and was contented with his Polish army—"the finest in Europe." The ceremony was most interesting. At one moment Nicholas took off his sword and confided it to his brother Constantine. The Emperor received the homage of his mother, of his wife.

"Then came the Grand-Duke Constantine, who advanced with a firm pace towards the throne, threw an assured glance over the diplomatic body, as if he wished to provoke its attention, and, kneeling before his brother, paid him his faith and homage. The Emperor made him rise, took him between his arms, and pressed him long to his heart. Tears were flowing on both their faces, and the emotion of the Assembly before this extraordinary scene became almost too painful."

I cannot follow M. d'Eyragues in his various missions. He became secretary at Copenhagen ; he was only twenty-two years old ; his chief was often absent, and left him the difficult task of representing the Government of France. He was experienced beyond his years, and never committed a blunder. The Revolution of 1830 did not interrupt his career ; he was sent to the Hague, and witnessed the efforts of the King of Holland against the diplomacy of all Europe. His despatches became really important, for the Belgian question occupied the world till the end of the London Conference. Prince Talleyrand was so much struck by these despatches that, while he was in London, he asked M. d'Eyragues to correspond directly with him. From that moment he was classed among the professional diplomatists who can do the work, and not serve merely for show. He spent three years in Constantinople, sometimes as chargé d'affaires, and was appointed minister to Carlsruhe, and afterwards to Dresden.

The Revolution of 1848 put an end to his career. As soon as he heard of it he resigned, and went with his family to the little town of Falaise, the birthplace of William the Conqueror. It was in this quiet retreat that he spent the twenty-six last years of his life, looking on events with the eye of a philosopher. Napoleon III. offered him the Senate and a high post in diplomacy. He refused these offers, and always remained faithful to the cause which he had served in his youth and during his manhood. He was ambitious, he was honest ; and his memoirs, written for his family, show that he had not even the desire to attract the attention of the great public after his death. He belonged to a class of diplomats which must become more and more scarce now that the higher posts of the career have ceased to be the rewards of long professional services and have merely become the prizes of political strife.

Correspondence.

MONTENEGRO'S IMPORTANCE TO INSURRECTION IN TURKEY.

TO THE EDITOR OF THE NATION :

SIR : In a leading article on "The Prospect of a General War in Europe," in No. 566 of the *Nation*, while you appreciate the grand questions at issue most justly, you have, if I may be allowed to say so, not clearly estimated the mechanism of the movement or the relative value of the various appliances which are being brought to bear in this struggle, which now bids fair (and let us hope not falsely) to be the last appearance of the Grand Turk on the European stage.

That the general peace will be kept we have been assured from Berlin, but under circumstances which imply that the Porte and its dominions are not included in the negotiations. It seems most probable that no European power will now be obliged to take part, but between this and abstract peace in the East the difference will, I apprehend, be found to be immense. The rayah will not be prevented from doing his best to throw off the old yoke, and the critical question now is when the Principalities will be free to intervene. In all Russian diplomatic procedure, the whole of Turkey is included in the Asiatic department, and the preservation of European peace only means that neither Austria nor any other European Government shall be permitted to intervene, while the Principalities shall be free to act as their own interest and inclination lead them.

The only question of vital importance which the late Conference at Berlin could settle was simply this of the freedom of action of the Principalities, the assurance of which will, I feel certain, turn the scale so decisively against Turkey that the struggle cannot even be a long one But in your estimate of such an intervention you put Montenegro out of the question, while all is made to depend on Servia and Roumania. But from Roumania nothing except perhaps pecuniary assistance is expected, its army being notoriously ineffective, and the conquest of Servia alone would probably be no great work for the Turkish army, while Montenegro is really the main hope of the insurrection, and the enemy most dreaded by those of the Turkish commanders who have any experience in Montenegrin warfare. And so far is it from the fact that "a large proportion of her (Montenegro's) fighting men are already engaged" in the war—as you assert—that, while the number of rifles which the Prince can put in the field is 25,000 (including the home guard), the number of Montenegrin volunteers in Herzegovina has never, up to the time that I left there in March, been above 700, and is not now above 1,000. Of this I have various assurances too strong and too independent in their sources to be greatly in danger of error. We have a right to suppose that the Porte has used his best efforts to conquer the Herzegovinian insurgents. We know that troops have been sent even from the Asiatic provinces, and that the élite of the Turkish army have been employed in the fruitless struggle. Yet, if at any time since the beginning of it the 10,000 men whom Montenegro is always ready to send across the frontier had been sent into Herzegovina, that province of Bosnia would have been cleared of Turkish troops in a fortnight, with the exception of the few fortified places. It is very probable that in those battles which took place near the Montenegrin frontier, the people living along the frontier took their rifles and slipped across to the fighting and back again as soon as it was over ; and for this reason the Turkish commanders carefully avoided the frontier in all their operations, and the only cases in which they were obliged to approach it were the movements to relieve Niksics. The Prince of Montenegro had a most difficult task in compelling his people to maintain a neutrality which international law, as understood by civilized nations, would never have demanded of him, because the whole fighting population, if left free to follow its impulse, would have gone into Herzegovina ; and he had not merely to prevent organized expeditions, but to restrain the individual subject—to maintain his control over a population whose noblest occupation and most passionate ambition are to fight Turks. To enable him to do this, there was need of a discipline and moral control of which I venture to say no example can be found out of Montenegro, but also of a partial relaxation of that discipline to prevent an explosion at home.

There is no doubt that so far as the insurrection has gone its great strength has been in the Montenegrin volunteers in it, not from the numerical force, but from the higher character of the organization introduced by them and the moral influence of their presence. There is no more doubt in my mind (and I have had an inside view of the affair since August last) that if at any time Montenegro had sent ten thousand men into the field of hostilities the Turks would have been irretrievably beaten on that side, and that any attempt to avenge themselves on Montenegro by the southern frontier would have been equally put at naught by the fifteen thousand men left for its defence. We have, moreover, good military authority (Herr von Wickede, the German military critic) for believing that Montenegro and Servia would be able to hold their own against any army Turkey could *now* put in the field, even if it were concentrated to attack these two Principalities. But this is so far from being the case that already fifteen thousand men are required for a new insurrection in Bulgaria, and the garrisons in Crete, Epirus, Thessaly, and Albania must be strengthened to meet movements

threatened there, which will certainly be precipitated if the garrisons are withdrawn, and which now wait only for Montenegro to declare itself.

The destiny of the Turkish Empire may possibly be decided without any interference from without except that of Montenegro, the only non-vassal state whose interference is needful. This little remnant of a once great empire, the only fragment of it that has never been brought under subjection to the Turk, and which you leave out of consideration, is therefore really the most important element in the coming *mêlée*, not merely from the strength it can put in the field, but because its warlike prestige is so great amongst all the tribes west and south of it that its declaration of war will be the signal of half-a-dozen movements as formidable as that of Herzegovina.

It is certain that the Russian Government is not ignorant of any fact of importance bearing on this question, and that it perceives that the interference of Europe is not needed to break up the Turkish Empire. It is, I believe, equally beyond doubt that the same Government desires the dissolution of that empire, and that it is due to Russian influence alone that Montenegro and Servia have not interfered long ago ; and for these reasons it seems to me that we are looking in the wrong direction in expecting the fall of the Turkish Empire from outside aggression. Its dissolution will be due simply to the utter failure of the force that has held it together to accomplish that work any longer. The work of Russia since the Crimean war has been simply to restrain inopportune movements, to remove impediments to co-operation between the various elements of the empire, to restrain and direct, until the proper moment, all the aspirations towards independence of the several discontented tribes subject to the Porte, and to release them at that proper moment.

The only opponent of this policy in the councils of Europe to-day is Austria. The Hungarian element in the empire, which is at present the dominant one, understands that the formation of a Slav state at her southern boundary will ultimately draw away the Slav provinces of Austro-Hungary ; and the Hungarians, ready in past years to destroy the empire to secure their independence, are to-day ready to destroy it again rather than give the South-Slavs their freedom either from Turkey or their own rule. It would seem, too, that Austria would willingly risk a war with Russia rather than have the insurrection continue to a successful end, so that this antagonism between Hungary and Russia presents the only probability of war over the dissolution of Turkey. The vacillating tendencies of Vienna, one day subsidizing the insurrection and another crossing the Turkish frontier to kidnap a dangerous insurgent leader, were simply the struggles for ascendancy of the Slav and Hungarian elements, and while Russia had perhaps no objection to Austria leading the Slavs as a Slav power, she could not risk increasing the influence of Hungarian Austria ; so that, when the permanence of the Andrássy cabinet became assured, an immediate divergence between Austria and Russia manifested itself, and that divergence has become greater every day since, up to the holding of the Berlin Conference.

The first consequence of that divergence was the prohibition by Russia of any occupation of the disturbed provinces by Austria. Whatever public profession the Austrian Ministry made, this measure was prepared for with completest provision, and regarded by military Austria as beyond question up to February last, and even now is not by the army considered improbable.

In this juncture the Berlin Conference meets and "secures" the peace of Europe, menaced only by this divergence of the two Eastern empires. Information which I am disposed to regard as well-founded says that Austria, in this case, was convinced by a significant pressure from Germany that European interests would be consulted by allowing the insurgents (with the aid of such friends as they could get to aid them) to settle their account with the Turks without any Austrian interference except on conditions agreeable to Russia, and that the interference of the Principalities would not be considered to justify Austrian interference, the real intention of Germany being to prevent war between her two allies, and at the same time effectually to bar the future aggrandizement of Austria, by the formation of a confederacy of the Balkan provinces which should, at the same time, prevent Russia from acquiring any more territory on that side or getting possession of the mouth of the Danube. That this idea of the "United States of the Balkan" was present in the minds of influential Germans I have a proof in a letter addressed to me by a German friend of high consideration at Berlin on the eve of my starting for Herzegovina, in which this solution was laid down as the only one in accordance with English interests ; and, in the face of all the conflicting interests, it is clearly that which would be least likely to disturb the peace of Europe. The fact that the new accord of the three powers receives the energetic support of Berlin, while Vienna accepted it much against her will, goes to confirm this view of the matter, viz., that the peace of Europe is secured by Russia and Germany compelling Austria to consent to the practical relinquishment of all future annexation from the Turkish empire, Russia, on her part, renouncing any territorial acquisition.

There is an apparent inconsistency in the antagonists, Hungary and Russia, equally opposing Austrian occupation of Bosnia ; but this is explicable by the fact that both oppose the further annexion of Slav provinces by Austria—the Hungarians from fear of being overpowered, and the Russians from fear of losing their interest in the Slav states. Hungary would accept Austrian occupation in the interest of the Porte, and Russia in the interest of the insurgents, but as the Slav party at Vienna look forward to it as a stage towards absorption, both Hungary and Russia oppose it. In the early stages of the insurrection, while the policy of Germany was still veiled, Russia might have given part to Austria as the price of co-operation, but when Germany had come to an understanding with Russia, then concession became needless and was refused. This explains why, until the end of January, Russia made no objection to an Austrian occupation, which was in Ragusa regarded as a matter of course up to that time, and was only in February forbidden by Russia.

To your general conclusion—viz., that the sooner the crash comes in Turkey, the better—all that I saw in Herzegovina and Albania induces me to accord. The only vestige of government remaining in those provinces is the effect of the moral pressure of European functionaries ; beyond their reach, neither justice, liberty, nor protection of life or property can be depended on, and rarely are obtained except by the strong. Not a stone has ever been laid or lifted to further trade or production since the Turks came in. The only good road in Herzegovina was made seven years ago under pressure from Austria, and the bridge to complete it is still unbuilt, though the money has been sent five times from Stamboul to build it.

W. J. STILLMAN.

VENTNOR, ENG., May 26.

Notes.

THE second volume of Prof. E. C. Pickering's 'Elements of Physical Manipulation,' following the first volume at an interval of two or three years, will be published immediately by Hurd & Houghton. — Another professorship in the Johns Hopkins University, that of Natural History, has been filled from England, the chair having been accepted by Dr. H. N. Martin, Fellow and Lecturer of Christ's College, Cambridge, and an active coadjutor of Prof. Huxley's.——The Boylston Medical Committee of Harvard University offered last year a prize of $200 to all comers for the best dissertation on the thesis : "Do women require mental and bodily rest during menstruation, and to what extent ?" The manuscripts were sent in anonymously, and the successful competitor turns out to be Mrs. Dr. Mary Putnam Jacobi of this city, who thus wins professional laurels not for the first time.——The American Philological Association, Prof. Albert Harkness, President, will hold its eighth annual session at the University Building in this city next month, beginning on Tuesday, July 18, at 3 P.M. Members who report to Dr. Howard Crosby, chairman of the Local Committee, before June 20 will have entertainment provided for them. We understand that the Secretary, Prof. Samuel Hart, Trinity College, Hartford, has been notified already of the intended presentation of ten or twelve papers.

—The volume containing an account of the celebration of the last anniversary of the evacuation of Boston by the British army, March 17, 1776, published at the city's expense by A. Williams & Co., is perhaps the handsomest yet of the Centennial series. Not only is the typography excellent in a high degree, but the illustrations and maps are eminently well chosen and valuable. From Sparks's 'Life of Washington' has been borrowed an engraving of the gold medal voted by Congress to the American commander after the expulsion of Howe ; one of the most interesting incidents of the celebration having been the presentation to the city of Boston, by numerous citizens, of the medal in question, obtained by purchase from the descendants of Washington's elder brother Samuel. This relic was jealously guarded from the risks of the late war, and is now deposited in the Public Library, while, as it happens, in the cabinet of the Massachusetts Historical Society may be seen a copy of it in silver, together with silver copies of ten other commemorative gold medals (also struck in Paris by order of the Revolutionary Congress) presented by the French Government to Washington, and hence known as the "Washington Medals." Dr. Ellis has supplemented his oration with a Chronicle of the Siege, full of particulars de-

rived from the newspapers, diaries, private letters, and proclamations of the period, which leave the imagination little to do to picture what went on inside and outside the lines. By a very timely coincidence, Mr. Fonblanque's new 'Life of Burgoyne' appeared this year, and, in spite of all the researches of a century, has thrown important light on many of the principal transactions under Gage. Dr. Ellis makes free use of Burgoyne's letters in his Chronicle.

—J. H. Coates & Co., Philadelphia, have recently issued the second volume of the Comte de Paris's 'History of the Civil War,' including the third and fourth volumes of the French edition. All of the maps, with one or two unimportant exceptions, have been reproduced and in an admirable manner; we can recall no military maps previously printed in this country which are at all comparable with them. The print, paper, and binding are of the same excellent character as in the first volume, and its comparatively small price puts the book within the reach of every one. The labors of the editor (Prof. Coppée) have been principally devoted to the chapter on Finances, in which he has converted the francs into dollars, verified the numbers as far as possible, and added one or two notes in regard to Mr. Chase's Administration; he has also corrected the few minor errors of fact or identity which occur here and there throughout the volume. The Comte de Paris writes with such good judgment and is so completely strengthened in his positions by official documents (as witness his reply to Gen. Johnston's criticisms, p. 766) that perhaps there is little to be added by an editor, who might, however, in one direction have labored to advantage, viz., in converting the metres and kilometres into yards and miles. "A fatiguing march of twenty-two kilometres" does not yet convey an exact meaning to most American minds until they have stopped to solve a small problem in mental arithmetic; the same is true of the maps, where only the metrical scale is given, although any draughtsman could have added the scale of miles in a few minutes. A week's labor would have obviated all this, and we are the more surprised that it was not done, as this same criticism was so universally made on the first English volume. The translation is very good—free enough to read well in English, but still following quite closely the literal meaning of the French. Only occasionally do we find a little inaccuracy, as on p. 664, where we learn that the Indian trust-funds "embraced Government bonds, the interest on which was *paid by* the Indian Bureau." As the interest was paid by the Treasury, one would suppose this to be a misprint for *paid to*, but the original contains the verb "*administrés par*," the obvious translation of which is *disbursed by*. Of the work as a whole, we can only say that it maintains its high character; that the author's good sense is shown in abstaining from long arguments of the controversial features of the war, such as McClellan's removal, Fitz-John Porter's court-martial, Burnside's conduct at Antietam, etc.; that a careful study of official documents confirms its statements of fact with hardly an exception; and that, in short, it has firmly established its position as the standard military history of the Rebellion.

— Some Japanese ceramics and bronzes, exhibited at the Old Chickering Hall, are of unusual interest and value. They are generally modern, having been largely manufactured with the motive of display at the Centennial, but they are a striking exhibition of contemporary Eastern art at its best. There are nearly two hundred objects, mostly large—cloisonné vases like the pair No. 42, and lanterns like 103, being more than five feet high, and approaching Chinese enamel in brilliancy of color. The Satsuma vases 73 are 35½ inches high, painted with the zodiacal signs, and with some other porcelains are much beyond the common. Indeed, the general quality of the keramic collection appears to be higher than that of the pieces borrowed from English collections by Mr. James L. Bowles to illustrate his 'Keramic Art of Japan.' The proprietor, Mr. C. F. Pfoundes, purposes some lectures on Japanese art and letters; for illustrating the latter he has a rare library containing some seven thousand native books, of some of which he has published translations.

—An esteemed correspondent, a Kentuckian, sends us the following protest:

"I have often thought of the stinging little thorns which writers for the daily and weekly press stick into communities or whole sections of a people. In a notice of the poems of George D. Prentice, in your issue of the 1st instant, your writer says: 'In a period and region of low culture, he passed for a wit and poet, and was passable in both capacities.' Now, *culture*, especially either high or low culture, is a relative term, and that is what hurts—for comparisons *are* odious. Measured by Cambridge and Holland House, or by Harvard and Beacon Street, there is very little culture in the world. Relatively to the whole world, the United States may be called a cultured people, though not more so than five or six other nations. Relatively to other States of the Union, Kentucky is a community of fair average culture—a good deal of it being of the homespun order. In any proper sense it is not, and never was, a region of 'low culture.' The people of Kentucky and the entire Southwest appreciated Mr. Prentice at about his par value. As a poet, he was considered sprightly and pleasing, occasionally brilliant or profound—never great; as a witty and slashing political personalist, as an editor of his kind—and the *kind* was both common and popular twenty-five years ago—he was considered by friend and foe as without an equal; and this was true, for he had no equal. Recurring to the 'low culture'—the little thorn that smarts: the people of the *period* and the *region* indicated knew something, not very much, of Homer and Virgil, considerably more of Milton and Young, while their *favorites* (whom they quote and refer to in a manner that would make you doubt where you had landed, if you could go there in a balloon) are Shakspere, Byron, Pope, and Burns. Can it be fairly said that, as judges of poetry and wit, a people reading and *appreciating* such authors as these are a people of *low culture?*"

—Several interesting speeches were made the other day in Boston, at a meeting in Faneuil Hall called for the purpose of urging the city government to take immediate action upon the report of the Park Commissioners in favor of establishing a series of public parks in that city and its suburbs. Boston, it seems, is far behind New York, Chicago, Philadelphia, and other large cities in the matter of public parks, having only 100 acres, or thereabouts, to 1,000 (in round numbers) in New York, 2,000 in Chicago, and 3,000 in Philadelphia. Some statements contained in the speech of Dr. Oliver Wendell Holmes should be circulated as widely as possible, because of the chance that they may do some good during the coming hot weather. Referring to the high annual death-rate of Boston—which is 26.18, against 23.7 for London and 19.3 for Philadelphia—he stated that this death-rate has been shown to be due largely to the excessive mortality among infants and children under five years of age, and that the most fatal of the diseases that assail them is cholera-infantum, which prevails, moreover, almost entirely from June to October, "the weekly record of August and September being that of a pestilence." "The destroying angel carries off the first-born, and oftener still the last-born, out of almost every household in certain districts." The best-known remedy against cholera-infantum, Dr. Holmes states, is fresh air, temporary change of air often effecting a cure "which the apothecary cannot bring about with his drugs though the wisest of physicians had written the prescription." He quoted from several eminent physicians with reference to the restorative effects of fresh air in cholera-infantum. Dr. Bell, of Philadelphia, for instance, speaks of its effects as "strikingly evinced in the relief procured by many hundreds of children every summer in Philadelphia by their simply crossing and recrossing the River Delaware in steamboats once or twice a day." Dr. Holmes adds:

"The narrow and crowded streets of the northern slope of Beacon Hill and a wide region extending northward from it are inhabited by the very class most exposed to cholera-infantum and diseases of that nature. Having lived for many years in Charles Street, I had occasion to learn the incomparable comfort and delight to be got in a hot summer's day, when the wind is from the southwest, by turning the corner of Charles and Cambridge Streets and getting into the current of air cooled by passing over the water. Some of the poor mothers with sick children had found out where to bring them for relief, and I often thought if there were an open green filling up that corner with shade-trees and seats, what a priceless sanatorium it would be to all that suffering quarter of the city."

Dr. Holmes, of course, was speaking of the necessity for the establishment of public parks in Boston; but what is said of the effect of fresh air upon cholera-infantum should be borne in mind by rich and poor alike during the heated period.

—The death of George Sand, which took place last Thursday at Nohant, will probably be made the occasion of much writing about the most important literary work done in France during the last forty years, for this eminent author was, with the single exception of Victor Hugo, the last survivor of those who, although hardly as allies, have made modern French literature brilliant. Amantine-Lucile Aurore Dudevant, *née* Dupin, was born at Paris in 1804. On her father's side, by a chain of almost unbroken illegitimacy, she was descended from Maurice de Saxe, the natural son of Augustus II., King of Poland. Her mother had been the mistress of a wealthy general, whom she left for love of Dupin, a young lieutenant, to whose support she had already contributed from the general's funds. Shortly before this daughter's birth the two were married. The father died soon afterwards, leaving his daughter to the care of his wife and his mother. The child ran wild for some time, and was the cause of many quarrels between these two guardians, who, however, were not entirely different, for the story is told of the grandmother that, fearing that a brother of George Sand's by another father was not perfectly grounded in his catechism at the time when his confirmation was desirable, she plied with wine the priest who was to conduct the examination, and on that evening he, the newly confirmed lad, the sexton, and the maid-servant all

rolled together under the table. From these surroundings George Sand was sent to a convent for three years (1817–1820), and at one time she was anxious to become a nun, but her doubts forbade that, and when they were allayed she turned her attention to constructing a theatre for the entertainment of her schoolmates. When she returned home after the death of her grandmother, she found life with her mother insupportable, and in despair she married M. Dudevant, the natural son of a French colonel. This was in September, 1822. She bore him two children, one son, Maurice, of more or less note as an author, and a daughter, Solange, who married Clesinger, the sculptor, from whom she was afterwards divorced. In 1831, George Sand and her husband agreed upon a quiet separation, according to which she was to live half the year in Paris with her daughter and the other half at Nohant. Since her means of support in Paris were scanty, she tried to eke them out by translating, painting pictures on cigar-cases, etc., and, soon making a bold flight, she published her first novel, 'Rose et Blanche,' in conjunction with one of her many new friends, Jules Sandeau, a young man of twenty-one. This was also the time at which she put on men's dress in order to have greater freedom in studying "life." Boots especially pleased her. "I cannot describe," she said, "the delight they gave me. I should have liked to sleep in them; I ran from one end of the city to the other, , . . I went out in all weathers, and nobody noticed my disguise." Her first novel was soon followed by others: by 'Indiana,' with which she first assumed her *nom de plume* of "George Sand"—"Jules Sand" was the pseudonym she and Sandeau adopted for their joint authorship—by 'Valentine' and by 'Lélia.' In 1834, she visited Italy with Alfred de Musset, and her connection with him inspired many of her later novels. In 1836, she was legally separated from her husband. For eight years she had a *liaison* with Chopin, whose influence, as well as that of Madame Viardot, is to be detected in 'Consuelo,' which is perhaps the best known of her novels. The social questions that agitated France left their mark on her writings, as in 'Le Péché de M. Antoine,' etc. During these last years she has been a most industrious writer; her latest novel, 'Flamarande,' was but recently completed in the *Revue des Deux Mondes*, for which periodical she has written for many years. This is not the place to give a summary of her qualities or of the impression her writings leave. Of her wonderful genius there can be no doubt; her method of telling a story is beyond all praise, but as to the stories themselves opinions will not be so unanimous. She was always at odds with society and often with those rudimentary principles which distinguish civilization from barbarism, and indeed from the mode of life of the beasts that perish. She had an inexhaustible curiosity concerning forbidden matters which perpetually blotted even her best work. She defined herself with considerable accuracy in a letter written to Sainte-Beuve in the year 1833 concerning Jouffroy, whom he had offered to introduce to her; in it she said that Jouffroy would say of cannibalism that it never occurred to any one to eat human flesh, Sainte-Beuve would say that there are people who ask if such a thing is not possible, while as for herself she felt inclined to ask, why should one not eat it?

JOHN QUINCY ADAMS IN THE HOUSE.*

ON the 4th of March, 1831, Mr. Adams returned to public life as member of the House of Representatives of the United States, bringing with him his lifelong habits of conscientious industry. He was always in his place, always attentive to the business before the House, and always ready to justify his vote. In the knowledge required for wise legislation he had no superior, and in parliamentary tactics hardly an equal. It was a solemn moment when this ex-Minister, ex-Commissioner, ex-Senator, ex-Secretary of State, and ex-President resumed his place in the public councils. We shall not attempt to follow him step by step through the details of his Congressional career: his history is the history of the country; and all that we can do in a survey like this is to call attention to the characteristic traits of the statesman and the man. Let us also remember that he was more than once called upon to defend, as a Representative, principles and measures which he had enforced as President.

To his great regret, he was made chairman of the Committee on Manufactures. He asked to be excused from it as a subject with the details of which he was not familiar, but was told that the question of Union was involved in the question of a modification of the tariff, and that his influence was counted upon to reconcile the Eastern States to it. On being appointed on a committee to investigate the affairs of the United States Bank, he again asked to be excused from serving on the Committee on Manufactures—a request which called forth a debate which the papers of the day called "most extraordinary." "The present condition of the country," said Mr. Cambreleng, "and of the public mind demanded the intelligence, industry, and patriotism for which Mr. Adams was distinguished. The authority of his name was of infinite importance." Mr. Barbour followed in a like strain. "The member from Massachusetts," said he, "with whom I have been associated in the Committee on Manufactures, has not only fulfilled all his duties with eminent ability in the Committee, but in a spirit and temper that demanded grateful acknowledgments and excited the highest admiration." He concluded with an appeal to Mr. Adams, "as a patriot, a statesman, and philanthropist, as well as an American, feeling the full force of his duties, and touched by all their incentive to lofty action, to forbear his request." Mr. Drayton also eulogistically declared that "amidst all the rancor of political parties with which our country has been distracted, and from which, unhappily, we are not now exempt, it has always been admitted that no individual was more eminently endowed with those intellectual and moral qualities which entitle their possessor to the respect of the community, and to entire confidence in the purity of his motives, than Mr. Adams."

When we remember the parts which these three men bore in unseating Mr. Adams and making General Jackson President, we may well join the editor of *Niles's Weekly Register* in calling these speeches "most extraordinary." They may be considered, also, as a recognition of what was due to Mr. Adams's remarkable career, which, in their calmer moments, even his bitterest opponents did not hesitate to acknowledge. More than once, when debate grew warm and argument was lost in passion, he was appealed to to interpose between the contestants, and seldom failed to bring the discussion back to its starting-point by a clear statement of general principles or a happy illustration from his wide field of observation and reading. One more instance of this recognition we must give. Warren R. Davis, of South Carolina, was speaking. "I could only hear part of what he said. What I did hear, and what he said with great feeling, was this. Turning toward me, he said: 'Well do I remember the enthusiastic zeal with which we reproached the administration of that gentleman, and the ardor and vehemence with which we labored to bring in another. For the share that I had in these transactions, and it was not a small one, *I hope God will forgive me, for I shall never forgive myself.*' These were his identical words."

Mr. Adams was never a fluent speaker in his own opinion. All of his speeches were carefully studied in advance, and every part of his argument elaborately woven. Of language he had a full if not an easy flow; but it was only when the vein in his forehead began to swell that the torrent came.

It would be gross injustice to speak of Mr. Adams as a disappointed man, yet he sometimes writes de pondently. Thus, on the 9th July, 1834, he writes:

"Rode over and visited Mr. John Bailey at Dorchester, and had with him two hours of conversation. There is at present a great calm in the political world, and no prospects upon which I can dwell with satisfaction. The system of administration for the government of the Union is radically and, I believe, irretrievably vitiated—vitiated at the fountain. The succession to the Presidency absorbs all the national interests, and the electioneering contests are becoming merely venal. My hopes of the long continuance of this Union are extinct. The people must go the way of all the world, and split up into an uncertain number of rival communities, enemies in war, in peace friends. Were it otherwise, and were the future destinies of the nation to be as prosperous and as glorious as they have been hitherto, my lease of life is so near its close that I should live to witness little of it. My own system of administration, which was to make the national domain the inexhaustible fund for progressive and unceasing internal improving, has failed. Systematically renounced and denounced by the present Administration, it has been undisguisedly abandoned by H. Clay, ingloriously deserted by J. C. Calhoun, and silently given up by D. Webster. These are the opposition aspirants to the Presidential succession, not one of them having a system of administration which he would now dare to avow, and at this time scarcely linked together by the brittle chain of common opposition to the unprincipled absurdities of the present incumbent."

He expresses the same doubts in an interview with Mr. Yeardon, editor of the Charleston *Courier*:

"He (Yeardon) said, too, that at the next session of the Legislature the Nullification party would call a convention of the people, and thereby procure an amendment to the constitution of the State prescribing the test-oath, to establish the State authorities as the only sovereign powers in this Union. And he alluded to the apprehension always prevalent in the South that the people of the North have a perpetual propensity to promote the abolition of slavery in the South. This ghost, I believe, will haunt them till they bring it up in reality. I said I no longer had the same confidence in the long duration of the Union that I once had; but did not say why."

* 'Memoirs of John Quincy Adams. By his son, Charles Francis Adams.' Vols. IX.-X. Philadelphia: J. B. Lippincott & Co. 1875-1876.

It is interesting to see what he thinks of Mr. Webster's chances for the Presidency in 1834:

"He said that, to his certain knowledge, Mr. Webster had indulged not only the hope but the expectation of being a successful candidate for the Presidency at the ensuing election.

"I said I had heard so, but could not believe it, holding his sagacity and penetration in higher esteem than to be accessible to so much delusion."

The 7th of March, 1835, contains a striking passage:

"The position which I now occupy before the public resembles much that which I held in 1807 and 1808. The forced unanimous vote in the House on Monday evening last in favor of my resolution is the exact counterpart of the forced town-meeting called by the Federalists in Boston upon the affair of the *Chesapeake*, after they had refused calling one at my request, and of the forced resolutions then adopted; for which they took ample vengeance of me afterwards. My conduct then expelled me from the Senate of the United States, as it has excluded me from it now It afterwards sent me for eight years on important missions in Europe, made me eight years Secretary of State, and four years President. I have not life before me for such another career now, and, with the same ordeal to pass through, I have nothing before me but the prospect of a desperate struggle and political ruin. I shall not live to see, as before, the day of reparation. The French Chamber of Deputies will reject the bill for paying the five millions of dollars stipulated by the treaty; some rash and foolish act of President Jackson will follow; and if the two countries be saved from war it seems as if it could only be by a special interposition of Providence. The Presidential succession has mingled itself with all the important transactions of the recent session of Congress, broken up the Administration party, and laid the foundation for an entirely new organization of parties at the next session. Standing alone as I do, disconnected from all parties, and having at the recent session taken upon the French question a stand so conspicuous, so desperately contested, so triumphant in its result, and so sure to combine against me *all* the candidates for the Presidency, what can save me from destruction at the next session, if the French quarrel should continue, but an unseen protecting power? Be thou faithful unto death."

He looks anxiously to the next session and the part he will be compelled to take in its debates. "In the leisure moments of the day, and to compose as much as possible the agitation of my feelings, I wrote, in the form of a draft of a speech, an argument against the Patronage Retrenchment Bill concocted in the Senate at their late session between Calhoun, Clay, and Webster. This is another of the subjects upon which I expect, if I have life and health at the next session of Congress, to be called to act a most laborious, painful, and perilous part. I am preparing an argument against the bill for consideration." "I have examined this subject with much attention," he writes, on the 25th of March, "but not yet so thoroughly as I ought, before committing myself to the desperate chance of encountering all these giants." But he is not satisfied with his draft, although it would fill eleven columns of the *National Intelligencer*, and take between three and four hours in the delivery. "Upon reading it over, I find it is without method and in a great measure without point—a desultory discussion upon the debate in the first Congress on the President's power of removal from executive offices, with a severe and cutting review of Daniel Webster's speech in the Senate in favor of the bill. That speech is indeed so shallow, so unprincipled, and so subversive of all constitutional doctrine, that I could not possibly treat it with respect; but this is not wise." His researches lead him to Hobbes and Swift for the true meaning of the word "executive"; but he does not find it in either of them.

"This afternoon," he says, "the *Telegraph* contained J. C. Calhoun's last speech on his Patronage Bill, as shallow as Webster's, and much more dogmatical. There are plausible arguments in both, but not one that is sound. After reading that of Calhoun, and analyzing the mainstay of his argument, I found it ended in empty sophistry. His conclusion impudently overstretched his premises. I began this evening a reply to his speech, which employed me till near eleven o'clock."

"I finished this morning the remarks on J. C. Calhoun's speech on his Patronage Bill as additional to mine, and now, on reviewing my own, I find it like a tape-worm, without beginning or end, all desultory. I want patience to write it over again and methodize it.

"There is a great defect running through all the argument in reply to the speeches of Calhoun and Webster—it is contemptuous and disdainful, which I could not help. Calhoun's tone is so self-sufficient and overbearing, and Webster's reasoning so utterly ignorant or unprincipled, that they provoked my temper, and I answer them with cutting sarcasm. The use of this weapon is seldom politic. In the present case it would certainly not be so. I should write my speech over again, to say in mild, courteous, and inoffensive language what I have said in consuming caustic. I can make no use of my speech as now written, and yet it contains matter to grind up into dust Calhoun's and Webster's speeches, and also Calhoun's Patronage report."

There is nothing in the Memoirs which places Mr. Adams's thorough intellectual training in a more interesting light than the history of his preparation for this speech.

Among the carefully-drawn portraits of these volumes, the most interesting is that of Judge Marshall:

"John Marshall, Chief-Justice of the United States, died at Philadelphia last Monday, the fourth instant. He was one of the most eminent men that this country has ever produced. He has held this appointment thirty-five years. It was the last act of my father's Administration, and one of the most important services rendered by him to his country. All constitutional governments are flexible things; and as the Supreme Judicial Court is the tribunal of last resort for the construction of the Constitution and the laws, the office of Chief-Justice of that Court is a station of the highest trust, of the deepest responsibility, and of influence far more extensive than that of the President of the United States. John Marshall was a Federalist of the Washington school. The associate judges from the time of his appointment have generally been taken from the Democratic or Jeffersonian party. Not one of them, excepting Story, has been a man of great ability. Several of them have been men of strong prejudices, warm passions, and contracted minds—one of them occasionally insane. Marshall, by the ascendancy of his genius, by the amenity of his deportment, and by the imperturbable command of his temper, has given a permanent and systematic character to the decisions of the Court, and settled many great constitutional questions favorably to the continuance of the Union. Marshall has cemented the Union which the crafty and Quixotic democracy of Jefferson had a perpetual tendency to dissolve. Jefferson hated and dreaded him. Marshall kept Jefferson much under the curb—sometimes, as perhaps in the case of Aaron Burr's conspiracy, too much so; but Marshall's mind was far better regulated than that of Jefferson. It is much to be feared that a successor will be appointed of a very different character."

Amongst the calls upon Mr. Adams's time were the invitations to deliver addresses before literary and scientific societies. Some of these he accepted, but soon found it necessary to give a general refusal. To the invitation of the American Institute of New York, he writes:

"Should I undertake to deliver the address, it would be expected of me, and I should myself hardly be justified in undertaking it but with intention of presenting the subject under new and different views; and my own opinion was that the great difficulty under which the manufacturing interest of the country labors is a political combination of the South and the West against it. The slaveholders of the South have bought the co-operation of the Western country by the bribe of the Western lands; abandoning to the new Western States their own proportion of this public property, and aiding them in the design of grasping all the lands into their own hands. Thomas H. Benton was the author of this system, which he brought forward as a substitute for the American system of Mr. Clay, and to supplant him as the leading statesman of the West. Mr. Clay, by his tariff compromise with Mr. Calhoun, abandoned his own American system. At the same time he brought forward a plan for distributing among all the States of the Union the proceeds of the sales of the public lands. His bill for that purpose passed both Houses of Congress, but was vetoed by President Jackson, who, in his annual message of December, 1832, formally recommended that all the public lands should be gratuitously given away to individual adventurers and to the States in which the lands are situated.

"Now if, at this time, on the eve of a Presidential election, I should, in a public address to the American Institute, disclose this state of things, and comment upon it, as I should feel it my duty to do, it would probably produce great excitement and irritation—would be charged with having a political bearing, and subject me to the imputation of tampering with the election."

TWO COUNTY HISTORIES.*

TWO hundred years ago this very year, the Wabbaquasset country, through which ran the trail, known as the Connecticut Path, leading to Hartford and New Haven, was left vacant by the mild-mannered aborigines. They were involved in the tumult of King Philip's war, and at its close in 1676 they were either destroyed or hopelessly dispersed. With them, nevertheless, begins the true history of Windham County, for in 1670 they were visited by Indian missionaries, trained at Natick, Mass., and in 1674 by the Apostle Eliot himself; with fruits which were immediately swept away by the Narragansett outbreak. But the secondary consequences of this religious endeavor were that Eliot's town of Roxbury became interested in the colonization of the deserted region (then regarded as part of Massachusetts), and in 1684 sent out pioneers and surveyors, including such familiar Roxbury names as Dudley, Stoughton, Pyncheon, and Gore. The settlement thus formed at what is now Woodstock (then called by the planters New Roxbury) continued to have the pecuniary and moral support of the mother town until, in 1716, the infant colony, having outgrown its dependence, the relation became irksome and was broken off, not without some feeling, but on the whole with a good grace, on Roxbury's part. The separation of Woodstock from Massachusetts was accomplished much later (1747–1755), the town taking the initiative and being backed by the General Assembly of Connecticut, on grounds which have been thought little creditable to that body, and which were certainly technical.

* 'History of Windham County, Conn. By Ellen D. Larned.' Vol. I., 1600–1760. New York: J. Sabin & Sons. 1874. 8vo. pp. xi.–582.
'History and Directory of Yates County [N. Y.] By Stafford C. Cleveland, Editor of the *Yates County Chronicle*.' Vol. I. Penn Yan, N. Y. 1873. Pp. xxiii.–766.

It is curiously symptomatic of the Massachusetts character that, when Woodstock's revolt began to look serious, the first assertion of authority was ostensibly on behalf of public education. "Shortcomings in supporting schools had hitherto received indulgence, but now Woodstock was presented before the grand jurors of Worcester County 'for having more than a hundred families and not supporting a grammar school,' and summoned by warrant to account for her remissness"; but the Massachusetts authority was openly "contemned." To tell the truth, Woodstock had been less worthy of reproach in this matter than had Windham, a purely Connecticut settlement with a more auspicious and comfortable beginning. Instruction was provided for as early as 1690; "in 1704, the first school-house was built on the common, near the meeting-house," and in 1710 two new ones were ordered, the selectmen having been directed "to obtain a suitable person or persons to keep a school or schools to teach children to read, write, and cypher, till the first of March; after that by a woman or women" (presumably not "suitable persons"). Later on, however, the building of a meeting-house so taxed the resources of the town that they were kept "from having schools as the law provided," and were reduced "to one schoolmaster, alternating monthly for four months between the north and northeast school-houses."

Religion was, in fact, the main interest of these Puritan colonists. The "public works" enjoined upon them by Roxbury ran thus—"viz., meeting-house, minister's house, mill, bridges, etc."; and their first act on arriving out was to choose seven men "to stake highways needful for the present settlement, and a lot for the minister, and consider of land convenient for the planters to settle on, and for a convenient place for a meeting-house to stand on." One of these seven was Henry Bowen, sen., a man of presumed piety, but who does not figure as a premium pew-holder at the first allotment of seats in 1721. What part, if any, he took in the troubles with the minister, Mr. Dwight, does not appear; it was after his death that that blunt-spoken and eccentric divine, having submitted to an advisory council called to hear the differences between him and his congregation, and to "essay in accommodation between them," hotly refused "to come into proposals for calling a [mutual] council." Sooner or later in Woodstock and in her sister towns there was a squabble over the location of the meeting-house, in which the geographical centre, the centre of population, and the centre of convenient accessibility had each their partisans. But these, though conducted with heat and often ending in bitterness and disaffection, were insignificant compared with the dissensions to which Part III. of this History is devoted, and which formed what is known as the "Separate Movement" (1740–60). Miss Larned's account of it is the most lucid, orderly, and minute that has ever been attempted. In the space at our command we can only say that it had its beginning in a religious revival whose excesses led to the enactment of a law denouncing itinerant preachers, and even forbidding ordained ministers to preach or exhort in parishes not under their immediate charge without previous permission of the local authorities. The division of sentiment caused by this intolerant statute first took the shape of open antagonism in Canterbury, the bone of contention being the right of the church (*i.e.*, the parish), which was Revivalist, to settle the minister, as against the society, which was anti-Revivalist. The broad question was not discussed solely upon its merits, but directly involved the supremacy of two rival Platforms, the Cambridge and the Saybrook. The church at Canterbury had from the beginning conformed its practices to the former rather than the latter, and now, at the opening of the controversy, it reaffirmed its adherence; but this declaration was decided by Council to have come too late (since "every church in the commonwealth was assumed to be subject to Saybrook Platform except by formal dissent at the time of its organization"), and to have had no other effect than to erect another church in voluntary "separation" from those who adhered to Saybrook Regulation.

"The long church controversy had resulted in the complete triumph of the anti-Revivalists. The minority was recognized as the stated church within Canterbury society, to whom pertained the minister and the meeting-house and all the legal provisions for the support of religious institutions. This result was approved by the highest civil and ecclesiastic authorities of Connecticut, and the decision of the Council accepted as a just and legal exposition of the power of its religious Constitution. That a majority had been set aside was of no consequence. It was a question of status, not of members."

The Separatists were promptly levied upon for the ordination expenses and salary of the society's minister and the repairs of the meeting-house of which they had been disseized. "Refusing to pay these rates, their cattle, goods, and household furniture were forcibly taken, and in default of these their bodies were cast into prison." "As far as possible, the rights of citizenship were taken from them. No Separates were allowed to hold official positions." If sent up to the Legislature by fair majorities, they were expelled. "Baptisms and marriages performed by their ordained ministers were pronounced illegal." They were taxed for the support of the societies from which they separated, while Baptists, Episcopalians, and even Quakers were exempted by special acts of toleration. In 1755 this persecution began to be relaxed, but the Separatist churches had meantime exhausted their vitality.

When the Windham Association of ministers was engaged in exposing the Revivalist exhorters, it denounced their going about "pretending publicly to preach the Gospel, . . . having no better warrant than a persuasion of an inward call and motion of the Holy Ghost, acting upon that principle that every Christian who has (*i.e.*, who is persuaded that he has) an inward call, is sufficiently authorized for such an undertaking." It averred that in practice this unwarrantable principle would end in Quakerism, open infidelity, and the destruction of all Christian religion. In fact, the Separatists were little behind the Quakers in their views touching a hireling ministry and a "learned Gospel"; and we take them to have been the lineal progenitors of a sect which, about 1784, sprang up across the Rhode Island border, and which "rejected church organization, and insisted upon constant and direct guidance from Heaven." As this sect first roused to spiritual consciousness the mind of Jemima Wilkinson, the virtual founder of Yates County, N. Y., we find in it perhaps a connecting link between the two histories which we have undertaken to review together. She became a Friend (as her mother had been before her) and something more—the head of a new sect, orthodox in doctrine, except that they rejected total depravity and did not make a holy day of Sunday, and known only as the followers of the "Public Universal Friend." By this appellation the prophetess chose to be designated in place of the homely name contrived for her by her parents; it was commonly shortened to "Friend," or "The Friend," and etiquette forbade the use of pronouns in referring to her. Her dress resembled a clergyman's robes, but a broad-brimmed hat gave her a decidedly Quaker as well as masculine aspect, and it was "thee" and "thou" between her and her disciples.

That portion of the then wilderness of Western New York in which the Friend's Society selected the site of its New Jerusalem, had, in the adjustment of State boundary lines which followed the peace of '83, been allowed to Massachusetts so far as to give her the pre-emptive right to purchase it of the Indians, while New York retained civil jurisdiction over it. The settlement was begun in 1788, nine years after the expulsion of the Seneca Indians by Gen. Sullivan, but while savage incursions were still to be dreaded, and in perfect isolation. Two years later the Friend came out to it, and no time was lost in building a log meeting-house, which also served as a public school. "This cheap and simple edifice, devoted to religious worship and education, was the first one for either purpose erected west of Fort Stanwix." For the next eight or nine years the colony was united and prosperous, and drew to itself emigrants from all sides. At the end of that time a difference arose between the Friend and two of her chief managers, one of whom, a magistrate, on the complaint of the other, issued a warrant against her for blasphemy. Arrest was evaded on one occasion by the Friend's excellent horsemanship, and again by the stubborn defence of her adherents, who were so far from holding the Quaker doctrine of passive resistance that even the women could eject a constable "with so little care that some of his garments were badly torn, and a renewal of the onslaught was impossible without a repair of his breeches." When at last the Friend consented to appear for trial, she was able to avoid the court of her schismatic persecutor, and the grand jury unanimously threw out the indictment. Litigation in regard to trust-funds, and bodily infirmity, made the closing years of her life hard to bear. After her death in 1819, the Society, while not increasing in numbers, remained harmonious till 1830. Some new accessions then brought about fresh divergences, and twenty years later the Society may be said to have come to an end.

The interest of Mr. Cleveland's History centres in this religious experiment of the New Jerusalem. The details which he gives of the settlement of each town are only varied by individual biographies. There were the usual incidents of pioneer life in the midst of savages and wild beasts. If Windham County boasts of Putnam's solitary encounter with the she-wolf, Yates County can tell of a grand wolf *battue* nearly seventy years after the Pomfret exploit. Rattlesnakes, more numerous and more dangerous, were only extirpated by the hogs. In town nomenclature, Windham County offers us "Scotland" (the subject of the once-famous round, "Scotland's Burning," composed by a local musician); while Yates County points to "Italy," set off from "Naples"; "Milo"—an afterthought for "Milan"; "Jerusalem," from the Friends' settlement; "Penn Yan," composed of Pennsylvanians and Yankees, etc., etc. In agricultural products the younger and smaller

county surpasses the older, and revels in wheat, sugar, grapes, and wool. It has even an elm-tree 125 feet in height, with nearly as great a spread, and with a girth of 29 feet at two feet from the ground; a tree far bigger than "the historical big tree (oak) at Geneseo, which perished a few years ago," and one which, it is alleged, "has no equal in size in the State of New York." Of great men the county has not been prolific, Red Jacket being the most famous.

Transalpinische Studien. Von Wilhelm Lang. 2 vols. (Leipzig. 1875.)—The essays contained in these two volumes have already seen the light in various German periodicals, but are well worth a separate publication. The studies in the first volume are, with the exception of the first, of purely literary interest, and are devoted to Dante, Savonarola, and Michel Angelo's poems. The second volume is devoted to Italian politics in a broad sense; for although it contains an article on Manzoni, and one on Niccolini, these authors are judged rather in their relation to Italy and the national movement than as mere littérateurs. The article, however, which will be read with the greatest interest is the first, "Die Petrussage," which is devoted to an examination of the legend of the Apostle Peter's residence in Rome and his martyrdom there. In No. 391 of the *Nation* we gave some account of Lipsius's researches into the origin of this legend. According to Lang, who discusses the question in a more popular manner, the germ of the story is to be found in the early rivalry of the Petrists and Paulists. Paul was naturally regarded by the former as an interloper, and even, from his opposition to the Judaizing efforts of the Petrists, as a heretic. He was early represented under the disguise of the magician Simon as followed by Peter from city to city, until in Rome his arts are fully exposed and he meets with an ignominious death. Paul's unquestioned residence and death at Rome rendered it necessary that Peter should be represented as having been there also. As the feud between the two parties was softened by time, Paul was gradually rehabilitated, and the two rivals put on an equal footing. This later impartiality was carried so far that tradition says that in the year 319 Pope Sylvester divided the remains of the two apostles exactly by weight, and half of each was buried in the two basilicas still bearing the names of St. Peter and St. Paul. In order that there might be no dispute over the heads, they were both buried in a neutral spot in the Lateran.

The article on Savonarola is based on Villari's work, which is well known to English readers by Horner's translation. Of greater interest is the article on Michel Angelo's poems. What is not so generally known as it should be is that all editions of the poet's works prior to that of Guasti, published by Le Monnier in 1863, are utterly unreliable, and consequently all translations based on the old text must be used with caution. The poet's grandnephew, and first editor, was unfortunately himself something of a poet, and has so made over and tampered with his uncle's poems that they often express the very opposite of what the author intended. Guasti's edition reveals the great artist in a new light, and must, with his letters, form our best means of judging of the poet's inner man. The second volume opens with a long study on Manzoni in his relations to the Romantic school in Italy and the revival of the national sentiment. A fuller account of the latter is found in the article on "La Farina und der italienische Nationalverein." La Farina differed from most Italians of his class in that he was a patriot before he was a conspirator. Other studies of more or less political import are those on Niccolini, well known in this country by Howells's *North American Review* article, Cavour and the free church in the free state, and Germany and Italian unity.

These essays are the outgrowth of a systematic effort which is being made in Germany to bring about a better understanding between that country and Italy; for although the Germans have always been profound students of Italian literature, they have neglected the political and social questions of the country. It seems to us that we too as a people should have a greater interest in Italy than we usually evince. Two of her "burning" questions concern us vitally: the management of the finances and the relation of the church to the state. For a better knowledge of her, socially and politically, we commend the 'Transalpinische Studien' to our readers.

Háfiz of Shirâz: Selections from his Poems, translated from the Persian by Herman Bicknell. (London: Trübner & Co. 1875. 4to, pp. xx.–384.)—This very elegant volume is in part a monument of fraternal piety; its author died when the printing was hardly begun, and his work was finished by a younger brother, with help from other scholars. A brief biographical sketch is prefixed. From it we learn that Mr. Bicknell was a surgeon in the Indian army; he entered the service just before the breaking-out of the mutiny, but left it six years later, and spent the remainder of his life in study and travel. He is the only European known to have visited Mecca as a Mohammedan pilgrim without disguise of person or denial of nationality; the story of his pilgrimage forms an interesting appendix to this volume. It was in India that he became an enthusiastic admirer of the great Persian poet, and resolved to devote a part of his life to introducing the songs he so much enjoyed to the better knowledge of Europe. To this end he even lived for a time at Shiraz, that he might become "personally acquainted with the localities mentioned by the poet," and otherwise enable himself to cast new and clearer light on doubtful points. Seldom has a more loving care been expended upon such a task. Seldom, also, is such a work brought out more brilliantly. The volume is one of the richest products of Austin's Hertford press, a companion to the sumptuous edition of Monier Williams's translation of the Sakuntala: heavy green and gold borders; illuminated pages and headings; illustrative chromo-lithographs and wood-cuts, not fancy-pieces, but real subjects, casting direct light on the work—the two most interesting of them being views of Hafiz's tomb and of the striking landscape amid which he lies buried.

Hafiz, the contemporary of Dante, is the acknowledged prince of Persian poets, but, not less confessedly, he is the one hardest to be appreciated and enjoyed by Western minds. He is a pure lyrist; his works are odes of the most exquisite finish, and abounding in suggestiveness to one who reads them with a full comprehension, but just of the kind which must inevitably lose their beauty in the transfer to another medium of expression. To strangers there is little that is attractive in their themes; they sing the praises of love and of wine, of the rose and of the nightingale; they laud the fair one, and apostrophize the cup-bearer, in phrases of unfamiliar strain and replete with obscure allusion. As is well known, the Persian critics themselves dispute whether the odes are really anacreontic or not rather mystically pious. There are schools which interpret their outbursts of revelry as gushes of rapt devotion disguising itself under gross figures. This enigmatic quality seems to be, to Western as well as Eastern scholars, one of their principal attractions.

Notwithstanding its luxurious form, which challenges for it a place on drawing-room tables, and its metrical elaboration, which seems intended for the general poetry-loving public, Mr. Bicknell's work is really more for the use of the scholar who wishes to work his way into an understanding of those lyrics in their original Persian, or for the professed student of literatures. He would need, probably, to be an extraordinary compound of great linguist and great poet who should succeed in doing more.

By way of justification of our opinion, we quote a single ode (xliv., p. 77):

"Zealot, avaunt! invite me not to wend to heaven my way:
A man of heaven not made was I by God upon His Day.

"Not one grain of the sheaves of life is stored by those who've trod
This pathway of mortality, and sown no seed for God.

"For thee the beads, the place of prayer, strict rule, and virtue's road;
For me the wine-house, and the bell, the church, the monk's abode.

"Pure Sáfi, warn me not 'gainst wine; eternally decreed
The Sapient One with limpid wine my mortal clay to knead.

"No pure-souled Sáfi, heaven-inclined, exists who not like me
Has pawned his soul 'neath vintners' roofs, to drain his wine with glee.

"The calm of Paradise's bliss, the taste of Houri's lip,
Are missed by those who from their grasp the Loved one's skirt let slip.

"O Hafiz! if the grace of God gives help that shall suffice,
Be free from every fear of hell, nor care for Paradise."

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Alcott (Louisa M.), Silver Pitchers	(Roberts Brothers) $1 25
Allen (J. H.) and Greenough (J. B.), Latin Composition	(Ginn Brothers) 1 50

The Nation.

NEW YORK, THURSDAY, JUNE 22, 1876.

The Week.

THE Republican Convention met at Cincinnati on Wednesday week, and adjourned on the following Friday after nominating Rutherford B. Hayes of Ohio for President, and William A. Wheeler of New York for Vice-President. The Presidential candidates formally proposed included all those who had been much talked of beforehand except Mr. E. B. Washburne and Mr. Wheeler, neither of whom received more than half-a-dozen scattering votes. The proceedings were characterized by much harmony and good-feeling, the extremely small number of contesting delegations contributing to this result. The Committee on Credentials excluded the so-called Spencer delegation from Alabama and the Shepherd delegation from the District of Columbia, and their report was finally adopted by the Convention. Six ballots were taken for President before any change of votes sufficient to influence the result took place; but on the seventh ballot, Morton, Conkling, Hartranft, and Bristow being all withdrawn, the Convention divided between Blaine and Hayes, giving 351 votes to the former and 384 votes to the latter.

The Republican platform adopted by the Convention on Thursday declares that the United States is "a nation, not a league"; that until the truths of the Declaration of Independence are "cheerfully obeyed" "the work of the Republican party is unfinished"; demands that Congress and the Executive shall pacify the South, protect the negro, enforce the recent amendments, and "put into immediate and vigorous exercise all their constitutional powers for removing any just causes of discontent on the part of any class"; recalls the first act of Congress signed by General Grant, pledging the faith of the Government to make provision for the redemption of United States notes in coin at the earliest possible date, and demands that the promise be fulfilled "by a continuous and steady progress to specie payments"; insists that Congress should have nothing to do with appointments, which constitutionally belong elsewhere; rejoices in the "quickened conscience of the people concerning political affairs," and promises speedy punishment for all who betray official trusts; recommends an amendment to the Constitution "forbidding the application of any public fund as property for the benefit of any schools or institutions under sectarian control"; declares that the revenue should be "so adjusted as to promote the interests of American labor, and advance the prosperity of the whole country"; opposes further land-grants, and demands that the Government lands be devoted to "free homes for the people"; demands protection for immigrants and for adopted citizens; declares it to be the immediate duty of Congress to "fully investigate the effect of the immigration and importation of Mongolians upon the moral and material interests of the country"; recognizes the advance of woman towards equal rights, and declares her claim to further privileges entitled to "respectful consideration"; demands the extirpation of polygamy, and the fulfilment of the "pledges which the nation has given to our soldiers and sailors"; deprecates "all sectional feeling," and "notes with deep solicitude" the sectionalism of the Democrats; denounces the Democratic party for its rebel sympathies, for its repudiation proposals, for its "partisan mismanagement" as well as its "obstruction of investigation," and for having proved itself "utterly incompetent to administer the Government"; and finally thanks the Administration for its "honorable work," and General Grant for his "patriotism" and "immense services."

Two attempts were made to improve this platform, by striking out the Mongolian resolution and by inserting a plank pledging the party to resumption in 1879. Both were voted down without difficulty, and almost without debate. The Convention showed, in fact, no interest whatever in the platform, and a proposition made by one of the delegates to nominate first and make the platform afterwards was received with considerable approval, and only voted down because the leaders felt that, after all that had been said about reform and principle, it would be too barefaced a revelation of their real state of mind.

Many comic things occur at a nominating convention, but probably nothing so comic occurred at Cincinnati as the uproarious applause which greeted Senator Logan's announcement that the late exposures of corruption at Washington were the commencement of a "revolution" by the ex-rebels, consisting in "the assassination of the private character of every leading Republican in the land." We noticed that Mr. Blaine was disposed to take the same view of the matter in his defence in the House of Representatives, and seemed to maintain that the presence of "two rebel generals" on the Sub-Committee had some mysterious connection with the existence of his own letters to Mr. Fisher and with his operations in Little Rock and Fort Smith and Northern Pacific stock and bonds. Now, all this may be most excellent fooling, but it is still fooling. The people of the United States may be occasionally simple-minded, but they are not idiots, and it would take an enormous amount of eloquence to persuade them that it was the "rebels" who got Mr. Blaine into his railroad operations, or Mr. Belknap into his post-trader business, or Mr. Robeson into his Cattell relations, or Babcock into his whiskey dealings or safe-burglaries, or got up the Sanborn business, or put McDonald in office, or hired Jayne. The "rebels" must laugh consumedly when they hear that they are at the bottom of the various "investments" of our leading statesmen.

The Democratic Convention, which meets next week, will have its work rendered more difficult for it by the nominations at Cincinnati. It was the hope of the Democrats that Blaine would be nominated by the Republicans, in which case they would have had, in their own opinion, an easy victory. It is doubtful, however, whether they were right in this; for the nomination of Blaine would have led immediately to a Republican bolt, with results which it would have been difficult to predict. The same thing may be said of the results of the nomination of Morton or Conkling. But now the breach in the Republican ranks is entirely healed, and a candidate has been chosen who will probably enable the Republicans to carry the State of Ohio in October, and thus give the party a lift which will materially help it in the national struggle. Whether this can possibly be avoided by the Democrats is a very doubtful question, and, indeed, their only chance of carrying Ohio would be on a strong hard-money platform—which the Ohio Democrats would bitterly resent—and with a candidate who would draw off some Republican votes, if such a candidate could be found. If this hope is abandoned, the most important thing is the electoral vote of New York, and for that a strong hard-money candidate is necessary. The contest here, it is obvious, is not going to turn upon the platform, except so far as the platform is explained by the character of the candidates; and a strong effort will be made by the reform Republicans who have just succeeded in defeating the "machine," to get from Mr. Hayes such a letter of acceptance as will put some meaning into the platform on the two vital subjects of civil service and currency reform. This is now the only way in which the party can hope to remedy the blunder made in voting down the Resumption pledge and inserting the empty jargon about the civil service.

As the matter now stands, the Democrats will have no difficulty whatever in constructing a currency platform. They might simply repeat the performance at Cincinnati on this subject. All this points clearly to Tilden as their candidate, and the ablest and most disinterested Democrats plainly see this. But he will have against him the two-thirds rule, and the wonderful capacity his party has of late years developed of destroying its own chances by unmitigated folly.

General Belknap's counsel have made another attempt to obtain delay and a postponement until November, but without success. A postponement till after the Presidential election would have had so much the look of being in the defendant's interest that the Senate declined to grant it. The counsel refused to plead to the articles of impeachment, on the ground that General Belknap was substantially acquitted by the vote on the question of jurisdiction, as it fell short of two-thirds, and have presented a document setting forth this plea. This the Senate has ordered to be filed, and has voted to proceed with the trial on July 6, provided Congress be then in session, as on a plea of not guilty. The House has passed a joint resolution authorizing the Speaker of the House and the President of the Senate to appoint a commission to devise a new form of government for the District of Columbia, and what may be called a cognate bill for the repaving of Pennsylvania Avenue. The infamous bill to equalize bounties was also passed on Tuesday by this cheese-paring body. It will doubtless again receive its quietus in the Senate.

General Grant has sent to Congress a message urging immediate action on the appropriation bills. He calls the attention of both Houses to the near approach of a new fiscal year, and the failure of Congress to provide means to carry on the Government; quotes the Constitution and statutes to show that any outlay of public money after the expiration of the year for which the appropriations have been made is unlawful, except in the case of permanent appropriations; points out that the number of permanent appropriations is very limited, and covers but few of the necessary expenditures of the Government; declares that if the appropriation bills are not passed at once, the Government will be greatly embarrassed; and suggests by way of remedy the passage of a joint resolution extending the provisions of all appropriations for the present fiscal year to the next, in all cases when the new bills fail of passing before the 1st of July. This joint resolution would include the Legislative, Executive, and Judicial, the Consular and Diplomatic, the Post-Office, and the Army and Navy Bills. The Democratic papers, which have been loudly applauding Mr. Randall's proposition to cut down the appropriations by $40,000,000, are much displeased at this, and disposed to regard it as a piece of tyranny and improper interference with the prerogative of Congress. As the President is directed by the Constitution to "recommend from time to time" to Congress "such measures as he shall judge necessary and expedient," these criticisms are very frivolous. The Democrats had an excellent opportunity when the session began of securing genuine economy in all branches of the service, but they have thrown it away by a blind and indiscriminate attack upon expenditures, like those for the salaries of West Point officers, and the Consulates, and the Signal Service, which are most necessary and beneficial. We trust that the Democrats in the Senate will not recede from the position they have taken on this subject, or allow themselves to be persuaded into believing that the country, when it denounces the extravagance of the Administration, means the extravagance of paying barely sufficient salaries to public servants, or of lighting the coasts to protect the commerce of the country, or of detailing a few soldiers to make scientific observations which annually prevent the destruction of millions of property.

The English Courts have released Winslow as well as Brent, the Louisville forger, having no alternative in the present state of the extradition question between the two countries. The President has sent a message to Congress on the subject, giving a history of the two cases, announcing the release of the prisoners, and declaring that the position of the British Government, "if adhered to, cannot but be regarded as an abrogation and annulment of the article of the Treaty on extradition." Under those circumstances, he adds, it will not, in his judgment, "comport with the dignity or self-respect of this Government to make demands upon that Government for the surrender of fugitive criminals, nor to entertain any requisition of that character from that Government under the Treaty." He expresses deep regret at the possibility of such a termination of a treaty which has worked so well and so efficiently, and, notwithstanding the exciting and sometimes violent political controversies which have arisen in both countries, has given rise to no complaints. "Its violation or annulment would be a retrograde step in international intercourse." He says that he has tried to have a new and improved treaty made, enlarging the list of extraditable crimes, and introducing other amendments, but had felt it his duty "to decline to entertain a proposition made by Great Britain, pending its refusal to execute the existing Treaty, to amend it by practically conceding by treaty the identical conditions which that Government demands" (under the Act of 1870). The attitude of England he describes as a "menace of an intended violation," but throws out an intimation that this is not the only ground for our refusal to amend the Treaty, the inadvisability of treating of "only the one amendment proposed by Great Britain" being another. He therefore asks Congress to decide whether the Treaty shall or shall not be abrogated, and says, if the action of England remains unchanged, he shall not, without an expression of the wish of Congress, take any further action in extradition cases under the Treaty.

There is one thing which must have impressed the thoughtful and judicious during the late controversy over Mr. Blaine as very suggestive in more ways than one, and as by no means encouraging. In all the rejoicings over his reply to Mulligan, the mere fact of his not having confessed the truth of the charges and run away, and his having waylaid the witness, seized the letters, read them aloud in the House without flinching, and then attacked the Committee for suppressing a worthless despatch, are treated as amounting to a "vindication." In not one of the speeches or letters of his friends are the charges examined or explained, or, in fact, treated as of any consequence whatever. The answer to them is that Mr. Blaine is not afraid, that he was too much for the Committee, and that he is magnetic; and it will be observed that in all the comments on the matter at Cincinnati among the politicians, ending with General Hawley's speech at the ratification meeting, he is still treated as a spotless statesman, whom young men will do well to imitate. The Mulligan letters, if referred to at all, were referred to solely as something that would probably be damaging in a canvass, and not as something that at all lowered Mr. Blaine's standing in the Republican party. There can be little doubt that this throws a good deal of light on Belknap's case. Does it not make it clear that the reason Belknap is in disgrace and on his trial is that he is the only Republican statesman who has confessed to anything or shown any signs of shame or fear? Had he denied everything, blackguarded Marsh, bade the Committee come on, and denounced them as "rebels," would he not still be in the War Department and in good party standing? These questions would furnish much food for reflection.

The truth about the suppressed Caldwell despatch has at last come out, and it leaves no room for doubt as to where Mr. Blaine got his surprisingly accurate information of its existence. The telegram which Caldwell sent from London was not originally written by him at all, but by some one in Philadelphia, either Scott or some agent of his, with directions to repeat it to the chairman of the House Judiciary Committee. This was done by Caldwell. The question will of course be asked, "What does this prove?" It proves nothing directly as to the truth of Blaine's story, but adds

one more to the suspicious and mysterious circumstances which, taken together, look not like an honest attempt to procure evidence that will exonerate him, but like a tricky attempt to cover up some transaction that will not bear the light. Caldwell's despatch is, by the way, a perversion of the truth. He says: "I never gave Blaine any Little Rock bonds, directly or indirectly." This we know, from Mulligan's testimony, was not true. But the most suspicious circumstance of all is that Scott, who swears that Blaine had no connection with the $64,000 transaction, and that the money was paid to himself as extra salary, should immediately have begun to instruct Caldwell by Cable what to say about it. If Scott's story were true, he and Caldwell had no common interest in it whatever, and he could not have known whether Caldwell had given Blaine Little Rock bonds or not. There is one way in which a good deal of the testimony can be reconciled with Scott's story. If Blaine, who undoubtedly had a quantity of these Little Rock and Fort Smith bonds, had undertaken to "place" them on a commission, and the vendees had declined to take them or begged to be relieved of them, the bonds might have been turned over to Scott, possibly through a third person, and paid for by him. The transaction between him and the Union Pacific would, in that case, have been independent of Blaine, and Blaine might try to persuade himself that the transaction concerned only his friends who had originally applied for the bonds, and not himself, the agent in their transfer. If Scott could be persuaded to tell where he got his Little Rock bonds, a good deal of light might be thrown on the matter.

The retirement of Mr. Bristow from the Treasury, coming as it does at the beginning of a sharply-contested campaign, is a matter of profound regret. Had he remained in the Treasury, his presence there would have been a guarantee in which everybody would have trusted that the enormous powers of the Treasury would not, directly or indirectly, be used by the party in power to carry the election; whoever may succeed him now, we are hardly likely to feel the same assurance. Mr. Bristow has managed the Treasury as well as any man could who had no policy given to him by Congress to carry out at a time when the country most needed a policy, and who was hampered, to a degree difficult for any one not familiar with politics to appreciate, in the ordinary duties of his position by every sort of underhand trick and covert opposition. It is, we believe, a fact, and a most remarkable fact, that of the twenty or more cabinet ministers whom General Grant has called in to assist him in the work of government, he is the only one who has won any real popularity or obtained the hearty support of the public and the press; and this he has merited not by any remarkable displays of statesmanship or any brilliant financial feats, but because he has preferred to do his duty quietly and without ostentation, and has made it clear that he was not a man to tolerate dishonesty or peculation in public life for the sake of the party or anything else. His reward has been a practical isolation at Washington, the enmity of the whole political class, dastardly accusations of corruption in office, and a forced retirement at the very time when his honesty and good faith were most needed to protect the Treasury from being turned over to a corrupt gang of officeholders to keep themselves in power.

The war between the trunk-railroads continues, and there have been, during the week, several reductions in passenger fares; the rates for freights between the Atlantic cities and the West are now arranged on the standard of 16 to 25 cents per hundred pounds from New York to Chicago, or $3 20 to $5 per ton, which is hardly equivalent to the cost of cartage at either end of the route. It was charged early in the week that Mr. Jewett, the Receiver of the Erie, permitted that Company to be used by the Pennsylvania and the Baltimore and Ohio to lead in the fight with the New York Central, against which these companies and the Grand Trunk of Canada have common cause. Mr. Jewett denied this charge, and made the counter one that the New York Central had forced the war, and had led in the reductions of rates. Mr. William H. Vanderbilt replied that Mr. Jewett was mistaken, and here the matter stands—all the trunk-lines continuing to take business for the present, and some of them for months ahead, at rates which, under the most judicious management, make a losing business. While the trunk-lines are thus cutting their own throats, the effect of the dulness in the anthracite coal trade and the inability to get relief by combination are shown in the decline of the shares of the coal companies. The heaviest fall has been in New Jersey Central stock, this company deriving a large part of its income from mining as well as transporting coal. The other companies in the same business—the Delaware and Hudson and the Delaware, Lackawanna and Western—have suffered, but less than the New Jersey Central, because they are believed to be financially stronger. The roads west of Chicago have been profiting by the trunk-line war, which has increased and quickened the movement of grain. At the close of the week the grain movement was sluggish, because of the decline of prices in England, to which favorable accounts of the growing crops there and the disappearance of the war-cloud have contributed.

The foreign news of the week is unimportant. The new Minister of War in Turkey, Hussein Avni Pasha, and the Minister of Foreign Affairs, Ruschid Pasha, have been assassinated, and the Minister of Marine wounded, by a dismissed Circassian officer, who forced his way into the Divan while the ministers were sitting in council. The occurrence has no political significance and is not likely to have any serious consequences, as none of the ministers was a necessary man, although the Minister of War was perhaps the best representative to be found of the late revolutionary movement. There is increasing doubt as to the suicide of the late Sultan, but nobody will care to scrutinize the affair too closely. It is still uncertain whether the Servian Government will be able to check the popular desire to make an onslaught on Turkey, though its official relations with Constantinople are now very peaceful. Roumania is taking extraordinary precautions to preserve its neutrality, and Greece has published assurances of strict abstinence from any share in the troubles. What is most curious in the situation as it now stands is that the Russian press has begun to speak very approvingly of England's position, and to express the utmost confidence in her desire to ameliorate the lot of the Turkish Christians. In fact, all the signs are that no power will now interfere in the conflict, and the belief begins to spread that the insurgents, finding outside help hopeless, will come to terms with the new Sultan.

Some sensation has been created in France by the election of M. Buffet, the well-known reactionary ex-Minister, to fill a vacancy. As the Senate fills its own vacancies, and Buffet was an old and vigorous opponent of the Republican constitution, this vote has startled people who supposed that the Senate had a good Republican majority. It has accordingly roused some of the old feeling of bitterness against the Monarchists, and M. de Marcère, Minister of the Interior, has, it is said, been led by it, as a means of freeing the Government from all suspicion of sympathy with what has occurred, into taking more vigorous measures than ever against the prefects of reactionary antecedents or tendencies. One result of the occurrence has been to bring the Left into more cordial support of the Ministry than before. The bill giving the Government the sole power of granting university degrees sticks fast in the Senate, and it is now announced that the Ministry will make it a Cabinet question, and stand or fall by it. There are signs of a Ministerial crisis in Spain, owing to a difference between the Cabinet and the Cortes over a proposed increase in the land-tax, and the probability of strong opposition to the abolition of the Biscayan *fueros*; but with this exception a summer dulness seems to be coming over the politics of the Continent.

THE REPUBLICAN PLATFORM AND NOMINATIONS.

THE choice of the President of the United States ought to be, if any act of human beings ought to be, the result of reason and reflection; and as the readers of this journal are reasoning, reflecting men and women, what we have to say about the work of the Cincinnati Convention will have no flavor of campaign enthusiasm about it, and will be marked by no "generous illusions." The "shouting" for Hayes and Wheeler will be done by others so effectively that we are, even if "shouting" were desirable, under no obligation to swell the volume of inarticulate sound by which they will be aided in their canvass. The first thing to be noted about Mr. Hayes's nomination, as seen from our point of view, then, is that in so far as it is creditable, it is not creditable to the Convention; and, indeed, the way in which it was brought about bears out all we have been lately saying in these columns as to the aleatory character of nominations made in this way. Hayes was not a favorite, or prominent, or widely-known candidate when the Convention met, while nearly one-half the body was pledged, and enthusiastically, to another who had just been detected in jobbery, and nearly one-third to two senators who have been closely and intimately connected with all the abuses of the last eight years. Consequently, the prospects of reform when the Convention opened could hardly have been said to be cheerful. After a few trials of the relative strength of the competitors, made under great excitement and amidst the yells of the gallery, the "break" occurred; and it is to be observed, that whether it carried the majority over to Bristow or to Hayes was a matter of pure chance, which might as well have been settled by drawing lots as by voting. In fact, human reason had about as much to do with the selection of Mr. Hayes for the nomination as with the selection of Darius for the throne of Persia, and he, as is well known, owed his crown to the early neighing of his horse. To talk, under these circumstances, of the work of the Convention as well done is an abuse of language. The proper thing to say of the nominations by way of approval is that a great deal of excitement and confusion, following on a great deal of intriguing, ended by the merest accident most happily. If the choice of the Convention were final, of course such a mode of choosing the chief-magistrate of a great nation would be intolerable, and might result in frightful mischief. Even as a suggestion, it is, where the party is strong and well disciplined and the alternative very repulsive, full of dangers of one sort or another.

As to the nominations themselves, the candidates cannot, as regards personal character and antecedents, be spoken of too highly. They are eminently respectable men—the most respectable men, in the strict sense of that word, the Republican party has ever nominated. Were the Presidential office now what the Constitution intended it to be, were the Administrative machinery in proper working order, and were the Legislature confined by custom as well as by law to its proper duties, we should say that Mr. Hayes was precisely the kind of man for which the Presidency calls. He belongs to a type of which any country may be proud, and which it should be the aim of education and legislation in every country to foster as that on which free institutions most securely rest—the quiet, sober man, who does faithfully and without ostentation whatever his hand gives him to do; in peace an honest gentleman, in war a gallant and modest soldier; loving a private station best, but always ready on a lawful call to leave it for a public one. It is to this type of man that the Anglo-Saxon race owes most of its political liberty and prosperity, for it is the type which produced Hampden and Washington.

But Mr. Hayes, though by no means conspicuous in politics, is not wholly unknown, and we presume there are few even of those who know him best and like him most who do not doubt whether he is the kind of man for which the crisis through which we are now passing calls. The civil-service plank in the platform, though doubtless well meant, has, in its declaration that senators and representatives should confine themselves to their legitimate duties and refrain from influencing appointments, a ludicrous resemblance to the resolution introduced into the French National Assembly calling on all the rascals to quit France. It brings strikingly to mind the great fact, that to get rid of the master-evil of the Government in our day—that which has already degraded and paralyzed it, and threatens it with serious fundamental changes at no very remote date—the President must be a man of no ordinary tenacity and breadth of view, and must be prepared to sacrifice personal ease and smoothness of administration, and party harmony and success, to higher and more important things. We do not believe, with our present knowledge, that Mr. Hayes is such a man. We do not know, for we have no reason for believing, that he thinks the condition of the civil service a serious evil, that he would make great sacrifices to amend it, or that he thinks anything of more importance to the country than the supremacy of the Republican party, managed substantially as it now is. Let us not be misunderstood. We have no doubt he will surround himself with a respectable Cabinet; that his secretaries of state will never be chance acquaintances made in the railroad-cars or at dinner-parties; that his associates will be men of honor and education; that he will be in good relations with the intellectual and moral as well as the material interests of the country; that he will not tolerate thieves or theft in his immediate view and presence; and that he would be the enemy of all kinds of jobbery. But this he might be and do for four or eight years without permanently or even sensibly reforming the Government, or removing one of its Oriental features, and without checking that growing tendency to rely on individuals rather than on laws for the salvation of the Government which is the great danger and difficulty of the day. It will be seen that we do not seek to conceal his good points, but we fear that it is these very points which make him objectionable at this juncture. We fear that he will, if elected, send the nation to sleep again, to wake up once more in four or eight years to look for a "truly good man" to save it from the whiskey-thieves and the speculators and jobbers and ringsters. This reliance on special providences is the sign, however, not of healthy but of morbid politics; and the truly great man and the real reformer will be he who will bring about the revolution which will render great men unnecessary, and make the type to which Mr. Hayes belongs sufficient for all the needs of the state.

In short, what is perhaps worst about the nominations is their unobjectionableness. They are so good that the average voter will be very well satisfied with them—in fact, he is satisfied with them already. They will abate the desire for any effort at radical reform, and promote that love of palliatives and makeshifts which is already so strong, and which grows stronger as the voting population grows in volume, and its social interests and political aims and opinions grow more complicated and harder to calculate. They will make any revolt against the party organization at present both useless and hopeless, and offer but little prospect to those who were looking for some active attempt at amendment now, more attractive than that of being able to repeat a few years hence the now well-worn and melancholy boast, "I told you so."

But the Convention, whatever one may think of the nominations, did furnish signs of considerable improvement in party morals, and has left behind it some results of considerable value. It showed, for one thing, that the "Senatorial Group" was no longer a power in the party. Its two principal members, Messrs. Conkling and Morton, cut a very sorry figure as candidates. Indeed, the small amount of "strength" "developed" by Mr. Conkling contrasted somewhat ludicrously with the confidence of his followers and the size and impudence of the claque which was sent by them with music and banners from this city. Mr. A. R. Shepherd, too, was refused admission from the District of Columbia, and the Spencer delegates from Alabama. All these were favorable symptoms, and can hardly fail to have their effect in shaping Mr. Hayes's policy or in warning him of his dangers. Of the platform it is difficult to speak with patience and justice. It deals with the civil-service difficulty a little more minutely than that of the Philadelphia Convention, but its utterance, like that of Philadelphia, is a barren

proposition, and neither suggests nor calls for any legislation. It in like manner evades all specification in speaking of the currency, and, while advocating in a general way a return to specie payments at an indefinite date, says not one word in reference to the solemn pledge to resume in January, 1879, which the Republican party has placed on the statute-book, and which the Democrats are now trying to repeal. It throws a sop to the friends of woman suffrage in the shape of a "glittering generality," which may mean much or nothing, and makes a bid for the vote of California by an insinuation that "the immigration and importation of Mongolians" have injurious effects on "the moral and material interests of the country," thus flying directly in the face of that theory of the equality of all races on which the Republican party was largely built up and on which it has reconstructed the Southern State governments. After a fling at polygamy and a reproduction of that old and comic vow to stand by the soldiers and sailors about their pensions, it concludes with the customary curse on the Democratic party. It may be read with profit by the political student as an excellent specimen of the kind of mild imposture which the politician of our day tries to practise on the people after his party ceases to have substantial and unmistakable work to do. To pass any severer condemnation than this on it would be to ascribe to it more importance than it has or is likely to have.

THE INVESTMENTS OF POLITICIANS.

THE "Corruptionists" and their apologists have been resorting to a mode of lessening the force of the criticisms made upon Mr. Blaine's operations in stocks and bonds which, in some ways, is hardly less grotesque in its absurdity than the notion which they have also been trying to spread, that the recent exposures made at Washington are simply a "rebel attack on the character of our public men," the new weapon of the Confederates being what the eloquent Logan calls "the dagger of detraction." What they say in reply to strictures on Mr. Blaine's dealings, and especially to strictures which assume that men in public life cannot and ought not to have the same liberty of investment as other men, is, in substance, that those who are assailing Mr. Blaine are setting up a rule which would shut out from Congress and the Presidency nearly all men engaged in trade, commerce, manufactures, mining, or transportation, because there is hardly any branch of industry which might not be, for instance, affected by tariff legislation; and they then roll their eyes, as they do about "the spirit of slander which is abroad in the land" and about "the dagger of detraction," and ask whether you really mean to say that the Government ought to be committed to the hands of men who are so poor or so shiftless that they have no invested accumulations, or to mere essayists or orators who have had no practical experience of business; and, in some cases, ask you, with prayerful and lachrymose reproachfulness, whether you are not aware that John Hancock was a great merchant as well as a great politician.

Now, the sad part of all this is that our Corruptionist friends know that there *is* a well-recognized and long-established distinction, which has been embodied in the legislation of nearly all civilized countries, between men in official and in private life in the matter of pecuniary interest. Not to go out of our own country, the State of Pennsylvania absolutely prohibits the governor and the judges, the members of the legislature, and all executive officers—State, city, or county—who have the handling of the public moneys, from acting as directors of a bank. We believe all the States of the Union refuse to trust a judge with the decision of causes in which he, as a stockholder in a corporation, has an interest. When any such cause comes before him to which a corporation or any business concern in which he has a share is a party, the law says he must leave the bench or the case must be carried into another court. It says, in other words, that though he is a respectable man, trustworthy in all the ordinary concerns of life, it will not allow the two characters of investor and arbitrator to unite in him in any given case. Let his interest in a railroad or mine or factory be ever so slight, and let his character be ever so high, he shall not pronounce any decision by which he himself might profit even to the extent of one dollar. It is true, the decision might be just; in ninety-nine cases out of a hundred, it would be just. Nay, in a large number of cases men of high honor and sensitive natures would probably be led by the knowledge that they were interested in a cause to lean against their interest. But the law takes no note of these things; it insists not only that a judge must be pure, but that he shall put himself in no position in which plain people would be led, on an ordinary view of human nature, to doubt his purity, and thus have their confidence in the administration of justice weakened—so that he can never be an investor and judge at the same time.

Now, the legislation of most of, if not all, the States takes particular pains to fix the judicial character of legislative functions. It provides that anybody who promises or offers a legislator, either before or after his election, any gift, gratuity, or advantage, in order to influence his vote, opinion, or decision on any particular side of any question, cause, or proceeding before him, shall go to jail, and that the legislator who accepts anything of the kind shall go to jail too. The United States has a law to the same effect; and another, well known for its bearing on the late Mr. A. T. Stewart's appointment as Secretary of the Treasury, shutting out from that office every merchant engaged in foreign trade; and another, which forbids members of Congress from acting as counsel in the Court of Claims. In fact, we might fill a volume with citations from the statutes, both State and Federal, showing the popular anxiety lest executive or legislative officers should be influenced by pecuniary considerations in the exercise of their official discretion, and the popular determination that they should, as far as legislation could do it, be shielded against temptation. We might fill another volume with the opinions of jurists and moralists of every age and country as to the obligation resting on all lawgivers and magistrates not only to *be*, but to *seem*, disinterested in the discharge of their functions—that is, not only to avoid evil, but the appearance of evil, in their manner of acquiring property and in their tenure of it. It will probably surprise some of the "magnetic" patriots of the present day, and some Boston ministers, to learn that George Washington, when the Assembly of Virginia voted him by public act in open daylight one hundred and fifty shares of two canal companies in acknowledgment of his eminent services both as a soldier and statesman, and as a promoter of internal improvements, declined the gift on the ground that it was his wish as a public man "to have his mind and his actions, which are the result of reflection, as free and independent as the air; that he might be more at liberty (in things which his opportunities and experience had brought him to the knowledge of) to express his sentiments and, if necessary, to suggest what might occur to him, under the fullest conviction that, although his judgment might be arraigned, there might be no suspicion that sinister motives had the smallest influence in the suggestion." "Not content, then," he adds, "with the bare consciousness of my having in all this navigation business acted upon the clearest conviction of the political importance of the measure, I would wish that every individual who may hear that it was a favorite plan of mine may know also that I had no other motive for promoting it than the advantage of which I conceived it would be productive to the Union, and to this State in particular. How would this matter be viewed, then, by the eye of the world, and what would be the opinion of it, when it comes to be related that George Washington had received twenty thousand dollars and five thousand pounds sterling of the public money as an interest therein?" That these sentiments were not peculiar to him at that day, and showed themselves in the next generation, is proved by the fact that John Quincy Adams sold his shares in the United States Bank before legislating about it.

But then legislation can only ensure official purity within certain limits. It can only deal with corruption when it takes the gross and palpable form of bribery—that is, of the payment of money or valuables as the probable price of a vote or judgment. It cannot deal with transactions in that wide border-land between honesty and

dishonesty in which the connection of votes with favors or votes with self-interest is only a probable connection, and is too vague and shadowy to be dealt with by the coarse machinery of penal justice. This is left, and rightly left, as so much of the morality of private life is left, to the jurisdiction of public opinion; and public opinion, if in a healthy state, though it does not draw a precise line between what is allowable and what is not, and though it yields a wide margin for the play of circumstances, does make *some* improprieties perfectly clear. It does not, perhaps, prohibit a merchant from going to Congress and voting for a tariff which will raise the price of his own goods, or give increased activity to his own business, if his business be one in which so large a body of his countrymen share as to make his selfish interest in the change remote or minute; but, if he belongs to a small knot or ring of speculators, it does unhesitatingly declare his use of his vote or influence to enhance suddenly the value of his wares to be very indecent. It does in like manner condemn without flinching the sudden entrance of a man into a calling or speculation for the benefit of which he immediately afterwards seeks legislation. It would and does treat as a knave a man who buys a large quantity of whiskey and then begins in Congress to work for a sudden increase in the whiskey tax. It has nothing to say against members owning shares in a corporation organized, as the national banks are, under a general law, but it does object to the appearance on the floor of the representatives of corporations organized by special legislation, particularly if the special legislation confers on the company extraordinary powers or large endowments. In fact, one of the notorious facts of contemporary politics is the corrupting influence of special legislation on the legislatures. All the new State constitutions are providing against it in one way or another, and the way it corrupts is that it makes it worth while for small rings of speculators to offer members valuable considerations for their votes, or Speakers for their rulings, and not that it promotes intemperance or profane swearing. It is special legislation that leads speculators to place stock where "it will do most good," and get members of Congress to sell bonds at low rates among their friends; and the pretence that members of Congress, therefore, stand in no different position towards companies chartered or endowed by the United States from that of the rest of the community, or that in owning the stock and bonds of such companies a member of Congress is guilty of no greater impropriety than a private individual would be, is a very brazen pretence. Members of Congress themselves do not venture to offer it. It is offered for them by partisan newspapers and gushing ministers, who have lost or never acquired the faculty of seeing straight in the maze of commercial morals. When even such a person as Mr. Chandler boasted that he had always avoided holding the stock of a company chartered by Congress by a special act, and when Mr. Blaine wrote to his friend that he "could not touch" an "interest" in the Northern Pacific for himself, they acknowledged in clear terms the existence and notoriety of the rule for which we are contending. And it is a rule about which there is nothing intricate or abstruse. It is easy to extract it from any bundle of facts, and no duly sensitive man has any difficulty in applying it to his own conduct. In political as in private life we are to avoid temptations that are strong and direct, and we know well that the man who does so habitually need care nothing about the small and remote ones. The world does not expect men charged with judicial functions to be superhumanly pure, but it expects them to be as pure as a man may easily be, and, if they do not keep clear of every small influence that might lead them astray if they were very weak, to keep clear at least of those to which they know, and the world believes, the strongest may succumb.

THE REPUBLICAN CONVENTION.

CINCINNATI, June 18, 1876.

WHEN I arrived in Cincinnati, a week ago, in company with a party of New York Reformers, I found public interest in great measure centred in the discussion of the chances of the nomination of Mr. Conkling. Our train, with the exception of our own party, was a Conkling caravan, and many were the confident predictions and prophecies of the faithful band, who were not at all backward in lifting up their voices in the praise of the great senator, or in curses against his enemies. They did not appear to care to argue the question of his nomination, but, in reply to tentative questions, easily disposed of all rising doubts: they did not *think* anything about it; they *knew* he was going to win. On reaching Cincinnati they spread considerable terror among their opponents by producing among their "properties" a powerful brass-band and a magnificent banner bearing an awe-inspiring portrait of Mr. Conkling. Armed with these, they proceeded to cow their adversaries effectually, and ensure the success of their favorite, by marching up to the Gibson House, on which was a banner of the Republican Reform Club of New York, and placing immediately beneath it a banner of their own, inscribed with the words, "For President, Roscoe Conkling." No sooner had this feat been accomplished than it was telegraphed to New York, and the exultant followers of Conkling felt that the first blow of the campaign had been driven home. For twenty-four hours they succeeded in creating a belief in a good many quarters that they were really a formidable party, and on Monday, after a meeting of the New York delegation, I was told by a leading member of that body, not himself at all friendly to the Conkling faction, that the great danger of the moment was that Conkling would be nominated on the second ballot. This fear must, of course, have been based upon a belief that Pennsylvania would be delivered to Conkling, a belief for which, notwithstanding all that has been said about it, and all that may before the Convention have been intended about it, was certainly not among the possibilities at Cincinnati. This was due chiefly to the fact that the majority of the Convention saw that the Republicans of New York were divided among themselves, and that a division of the party in a doubtful and very important State could not be risked. The reading of the Reform Club's address from the stage by Mr. Curtis, put in a dramatic way what was already privately known and admitted; and though the Conkling party listened to it with assumed indifference, thinking, as one of them afterwards said, that "they might as well let Curtis air himself on that as on anything else," the language of the address was so pointed and cutting, and so different from the prevailing political jargon, that it was practically Mr. Conkling's death-warrant. It was curious to observe how completely the support of the "machine" had isolated Mr. Conkling's followers from the rest of the party. Their touch was evidently shunned by the others, and, so far from having any opportunity to compromise or barter, they were finally driven into the support of Hayes by the threatening increase of the Blaine vote, without having time to "place" a single post-office.

The telegram announcing Mr. Blaine's sudden illness caused an excitement among the delegates which, for the time being, threw everything else into the shade, and the immediate revelation of a widely-diffused popular comprehension of the science and practice of medicine was among the most striking things that gave interest to the discussions of the day or two preceding the Convention. From general reflections upon paralytic and apoplectic strokes to a complete diagnosis of the case, and explanations of the conflicting telegrams from the physicians, and the allopathic or homœopathic motives which dictated them, there was no species of opinion that had not a representative on the street-corners. Politicians who avoided, on principle, discussing Mr. Blaine's letters on their merits, and confined themselves to the question of his availability, had no hesitation in predicting that he would be dead within a week, or, if not dead, utterly incapable of using his mind or bearing any strain, while among the Blaine men there seemed to be a strong feeling that, whether dead or alive, conscious or unconscious, he was the proper candidate to beat the Democratic party with. Blaine was from the first the candidate who had most real party strength, and his managers had the best organization at Cincinnati. Two days before the balloting Mr. Eugene Hale had given out the exact figures which he expected to poll on the first ballot, and the vote for Mr. Blaine corresponded exactly—neither one more nor one less—with the vote (285) which was actually given to him.

It was clear from the first that unless Blaine was able to carry the Convention by sheer force of popularity, the nomination must be decided in a great measure by the Morton or Southern vote, which it was difficult to know about. The Bristow men, for some reason, believed in an alliance with the Morton party, but as they found themselves woefully left in the lurch when the crisis came, it is highly probable that the Morton managers did not confide their doubts, hopes, and fears to Bristow men only, but allowed it to be understood by other parties also that they would be willing to sacrifice all personal considerations to the highest interests of the nation. As a matter of fact, the account of the final defeat of the Bristow movement, given the day after by the Cincinnati *Commercial*, is perfectly correct.

The strenuous support of Blaine had at last convinced all opposed to him that he was the real enemy, and the more sagacious leaders of the party, knowing that disaster stared them in the face should he be the nominee—it was an open secret in Cincinnati that a bolt was inevitable in that case—resolved to combine against him. The Reformers had convinced Conkling's followers that he could not be nominated, and Morton was out of the question, as well as Hartranft. This left Bristow and Hayes as the only possible anti-Blaine nominees, and it was understood by the Bristow men that as soon as the Morton vote should go below that of Bristow, the vote of Indiana (thirty votes) was to be given to Bristow. The immediate causes which prevented this from being carried out were that Thompson, who was to have cast the vote, did not do so on the sixth ballot; that meantime Morton himself telegraphed to his supporters directing them not to desert him; and, in the interval caused by this delay, Michigan, which just before had given eleven of her twenty-two votes to Bristow, and was counted upon to support him in the end solidly, went bodily over to Hayes. These two defections settled the matter, and the anti-Blaine forces went over to Hayes with a rush. They did this, as the next ballot showed, only just in time, for the Blaine "stampede" had already begun, and it was by a narrow chance that he was not nominated. Blaine's vote on the sixth ballot was 308, or within 71 of a nomination. On the seventh vote, the doubtful and Southern States began to go over to him, and from the first nine States, out of a total vote of 140, he had 105, against 81 on the previous ballot; in other words, a gain of 24, or about 30 per cent. This he got not as the result of any bargains or consultation, but from the mere uncontrollable desire of a large part of the Convention to go with the winning man. The shouting and excitement caused by this increase of Blaine's vote were very great, and if the increase could have been kept up through the remaining States, Blaine would have received more than the 379 votes necessary to a choice.

The history of the somewhat mysterious proceedings of the Massachusetts delegation was in substance as follows: Before the delegates arrived in Cincinnati, it was known that a majority of them were for Bristow, but it was also understood that a minority—not strong in numbers, but possessing considerable influence—were for Blaine. The leadership of this Blaine minority fell naturally into the hands of Judge Hoar, who at first was a warm advocate of Blaine's, and whose behavior throughout the Convention is difficult to reconcile with any other belief than that he really desired his friend's nomination. I say difficult to reconcile, because, according to Judge Hoar's own account of the matter, his reason for wishing Massachusetts to support Blaine was in order that Bristow might be nominated. The intricate process of reasoning by which he reached this conclusion was that the support of Blaine would conciliate the Blaine men and win their affection, so that "when the break came"—the break being the critical moment when the greater number of Favorite Sons were to be deserted and (it is difficult to write elegantly about these matters) the winning horse was to make his appearance—they would come over to Bristow. When the voting by the Convention began, Judge Hoar did in reality vote for Mr. Bristow, but, by adopting the curious policy of working for Blaine in order that Bristow might be nominated, he did more than any one man on the Massachusetts delegation to prevent what the Bristow managers most wanted—that the leading Eastern Republican State should come into the Convention as a unit for him. It was felt by them—and they were unquestionably right—that with Kentucky and Massachusetts united, Mr. Bristow's candidacy would appear in a radically different light from that which a nomination by Kentucky seconded by a divided support from Massachusetts would have thrown upon it. Massachusetts, formerly the great stronghold of Republicanism in the East, had passed into the category of States that were doubtful, while Kentucky was in the position of a State needing to be "rescued" from the Democrats; and if, instead of Kentucky's bringing Bristow's name forward as a Favorite Son, his nomination could have been made by Massachusetts, on the ground that his name would secure an "old-time majority of 75,000," and seconded by Kentucky as necessary for her redemption (General Harlan, the Bristow manager from Kentucky, declared that Bristow could really carry the State), it is not at all impossible that Bristow might have received nearly two hundred votes on the second ballot. This was the hope of the Bristow men, but the chance was destroyed by Judge Hoar (not assisted, however, as has been incorrectly reported, by his brother, George F. Hoar).

The plan of a nomination by Massachusetts with a second by Kentucky was not acted on, but the reverse of this was attempted without success. A vote was taken in the Massachusetts delegation to authorize Mr. Dana to second the nomination when it should be made by Kentucky, but a single vote thrown against it by Judge Hoar prevented unanimity, and thus deprived the vote of its moral weight. Judge Hoar's position is made all the more mysterious by this, because the Blaine men were willing enough that the vote should be unanimous, while he, although intending to vote for Bristow in the Convention—this at least is a fair supposition, as he did actually cast his vote so—preferred to divide the delegation. The explanation of the whole is that he really wanted to see Blaine nominated, and supported Bristow finally because all the better part of his State was in Bristow's favor. But, as a politician, he played his cards badly, for he did not help Blaine and he alienated the friends of Bristow. Although his precise position was not known, it became generally understood early in the week that he was on the anti-reform side, and the criticisms that his supposed sympathy with the Blaine movement gave rise to were far from mild.

But, though the Bristow lobby (if such an expression may be used with reference to reformers) did not succeed in uniting Massachusetts on their candidate, they accomplished a great deal of what they went to Cincinnati to do. It is to the popularity of the Bristow movement, outside of politicians, that the defeat of Morton and Conkling, if not Blaine, must be attributed. During the few days preceding the Convention they were very active with meetings, speeches, torchlight processions, and "committees of reception." The local sentiment of Cincinnati was as unmistakably for Bristow as if he instead of Hayes had been Ohio's favorite son. Indeed, it was rather significant of the present condition of politics to find the Ohio politicians resolved to stand by Hayes to the last, when the people who elected these politicians were filling the air with cries for Bristow. The Bristow lobby was emphatically not a political lobby; it was a sadly honest-looking body of men, and the only body having anything to do with the Convention in whom any considerable number of gentlemen, in the strict sense of the word, were to be found. Looking at them, and seeing the thoroughly "visionary" way in which they tried to push the fortunes of their candidate by appeals to the desire of the Convention for honest government, and to the detestation of the delegates for all trickery and underhand proceedings, it was impossible for the most genuine reformer not to regret that they were too moral to use other arguments. A good campaign fund for distribution among the charitable and educational institutions and other infant industries of the South would have carried Bristow in with a rush, and it seemed almost a pity that so many corruptible delegates should come so far away from their homes and yet go back uncorrupted.

One of the most noticeable features of the Convention was the use made by the leading managers of the negro. The confused condition of the Southern delegations and the uncertainty as to their intentions made it important for every candidate to show that he controlled the negro vote, and would, therefore, carry at least some of the old slave States. On this account black orators were to be heard at every corner—Blaine negroes, who explained that the African longed to vote for the man who had "defied the Confederate Congress"; Morton negroes, who represented the persecuted freedmen praying to God and Indiana to send them a speedy deliverance from bloodhounds and Ku-klux; Bristow negroes, who descanted upon the virtues of the district-attorney who had actually prosecuted the Ku-klux; and even Conkling negroes, who, for reasons which they found it rather difficult to explain, maintained that the man to redeem the South was the "uncorrupt Senator from New York." The negro speeches, on the whole, were very nearly as good as the white speeches, and infinitely more amusing, partly from internal causes and partly because the negro "business" was so universally recognized as a piece of buncombe. The assumed deference with which the black delegates were treated by their white associates, and the gravity with which their arguments were listened to, were made extremely comical by the transparent way in which the real feelings of the dominant color now and then showed itself, as in the almost public boast by one delegate that his party "had a better nigger" than one of the other candidates, and, finally, by the tumult caused by the speech of the Blaine negro in the Convention, who referred to Mr. Curtis as the "poet from New York," and to Mr. Dana as the "Minister to England," and, after using up most of his five minutes, declared that he had only "twelve points" to make, the first of which was that "without Mr. Blaine there would have been no Republican party at all." This speech, however, was a confessed fiasco and a sort of *reductio ad absurdum* of the negro business. Some of the black delegates' speeches were quite effective, particularly one from a supporter of Mr. Bristow at one of the meetings before the Convention, in which the orator, at a loss for any parallel to Mr. Bristow's victory over the Whiskey Ring, compared him to Alexander the Great. Alexander, he admitted, was a great man; he conquered the world. But when it came to

whiskey, the conqueror of the world was no match for it, but, instead of overcoming it as Bristow had done, succumbed to its baleful influence.

It is impossible to sit through the proceedings of a national convention without wondering at its popularity as a method of selecting candidates. The objections to the old caucus were that it was a close corporation, and did not fairly represent local sentiment and voting strength. But while such a convention as that just held at Cincinnati certainly gets over these difficulties, it runs into others quite as bad. The convention is in theory a deliberative body; but it would probably puzzle the wisest parliamentarian to say how a body like that which met last Wednesday at Exposition Hall could possibly deliberate. There were, of course, several moments during the Convention when there was a pretence of debate—as, for instance, when the Committee on Credentials reported in favor of the anti-Spencer delegation from Alabama, again when the Mongolian plank in the platform was attacked, when an attempt was made to insert a resolution insisting on the fulfilment of the Resumption Act, and when Mr. Don Cameron attempted to make Pennsylvania adopt the "unit" rule; and speeches were made on both sides of all these questions, but they were settled by considerations which did not make their appearance in the speeches at all. The first three were all settled in favor of the regular committee's report, partly because any other course would have introduced disaffection and shown a want of harmony, and partly because, in the case of the Alabama delegation, the friends of at least two candidates —Blaine and Bristow—expected to get the vote of the regular delegation. This absence of all real opportunity for debate outside the locked rooms in which the committees or the delegates meet for consultation gives the speeches in a convention a curiously hollow ring, particularly as almost every delegate who has anything to say on any disputed point of fact or law invariably begins by protesting to the Convention that among his acquaintance he has an undisputed reputation for truth, fair dealing, and a keen sense of honor, and then triumphantly enquires whether any one can believe him to have any bad motive in supporting or opposing—as the case may be—the motion. When these protestations have been repeated by a dozen suspicious-looking characters from as many different States at the top of their voices, it begins to make the most credulous sceptical. And yet it is the only kind of argument that is used at all. A convention is really a spectacular body, and the vast audience that comes to see the show recognize this so clearly that they feel rather like resenting any appeals to the understanding instead of the senses.

The hall in which the Centennial Convention was held is an enormous building, capable of seating something like ten thousand persons. It must have held, beside the delegates and the alternates, fully six thousand people, all partisans of one or other of the candidates, and coming there with the avowed purpose of making as much noise as possible, and this not for the sake of disturbing or irritating anybody, but because it is a well-established fact that at a certain point in the proceedings noise will tell, and perhaps decide the nomination. The result of this is that the chairman practically presided over a body of about eight thousand people, and, not having a great deal of force, did not succeed in keeping the Convention well in hand. But, as a spectacle, it was very good. The magical certainty with which the delegate appointed beforehand to make or second a nomination was recognized by the chair, and the manly stride with which he mounted the platform and poured forth his glowing panegyric of a man whom he knew had not the remotest chance of being nominated, and called Heaven to witness that he would carry all the doubtful States, roll up an "old-time majority" in his own, and wipe the Democratic party out of existence; the steady, unswerving gallantry with which, each time the roll was called, the several States stood by their respective candidates until they had made up their minds to throw them over, were, from a theatrical point of view, very fine. The necessity, too, that the performers who have the principal rôles assigned to them feel of reaching the ears, not of the rest of the company, but of the surrounding public, seems by a sort of natural selection to have the effect of increasing with each generation of politicians the power and range of the human voice, and to be gradually making it as different from the voice of ordinary human beings as the moral and mental qualities of politicians are from those of the rest of mankind. Probably no school but that of American politics could have produced such a voice as that of "Bob" Ingersoll of Illinois, who nominated Mr. Blaine. After listening to the last reverberation of the echoes, it was almost painful to hear that the Government has preferred or is about to prefer charges against Mr. Ingersoll for certain fraudulent practices connected with the revenue, or, as it was picturesquely put by a leading Bristow editor, that "Four State-prisons are yawning for him."

THE INTERNATIONAL EXHIBITION.—V.

ORIENTAL CARPETS.

PHILADELPHIA, June 17.

IT is a disappointment to the enthusiast in textile fabrics to find at Philadelphia an inadequate display of Oriental carpets and rugs. Although there are many fine pieces, and many varieties represented by one piece at least, yet there are important styles totally absent, and of those which are present all, or nearly all, are those we have seen before at certain times and in certain places. The Exhibition should have brought together what at no other time and place could have been seen—we speak of the United States —namely, a comparative show of all the varieties of Oriental floor-cloths, from Morocco to Japan and from Bokhara to Madras. Such a collection would have been instructive and valuable even for the six months of the Exhibition, even for the five months of its comparative perfection, and even while scattered through the vast space of the Main Building and the other buildings where the carpets are to be found. If it could then be bought and kept in the country in the hands of some one of our museums, still greater would have been the benefit. Nothing needs enlightenment more than the carpet-making trade. Nowhere are the benighted ideas of kaleidoscopic design more firmly intrenched. A museum of textile fabrics is one of our greatest needs; and it seems as if that branch of the art which has care of carpets and rugs is most in need of the teaching of such a collection, and at the same time would give the readiest and most delightful result from it.

Whatever collection could have been made at this Exhibition would have been wholly of modern work; at least, there is hardly to be expected any great display of ancient textile fabrics, or of ancient art of any sort, in an international exhibition of industry. Textile fabrics are among the most perishable objects to which art is applied. Even if kept exclusively for decorative purposes, and never trodden upon, rugs and carpets are liable to many injuries and to rapid decay. Persian and Cairene carpets exist, no doubt, at least two centuries old; French and Italian tapestries three hundred years old remain to us; but the greater part of these are wall-hangings of pictorial design. Chinese silk fabrics of undefined age are to be found, seldom in Europe, more often in the far East. It could hardly be brought about, however, that our Exhibition would contain many of these. It could not be hoped that they would be for sale. In considering, therefore, what the Philadelphia Exhibition has and what it lacks, we have to speak of carpet-making of the present time; of the productions of the East, not yet spoiled in design by the supposed necessity of consulting Western taste; of the same fabrics as modified by that commercial intercourse which has lowered their standard of merit; of the carpets of Europe, sometimes frankly Oriental in design, sometimes as frankly of some bygone style of Europe, hardly ever of original design, and, even when so, never very interesting; and, finally, of American struggles to make our own carpets at home, and to hit upon the secret of keeping our own buyers from going abroad.

India and Persia are the two homes of fine carpet-weaving in modern times. In the case of India there are many varieties, known by the name of the provinces they come from. Madras and Delhi, each a great centre of the industry, each giving name to a beautiful and costly fabric, are about as far apart as Philadelphia and Key West, and between them is not a fluent and constantly mingling population, corresponding and telegraphing and communicating with itself in all its distributions, but fixedly established in an ancient and immutable order, so that the student looks for greater divergences in style than he finds. All the India rugs which come to our knowledge at the Exhibition or elsewhere are thick, of long and soft nap, the wool, however carefully selected and prepared, seeming of coarse fibre, much as if the nap were made of zephyr worsted shaved off at a level of a half-inch above the warp. The colors of the wool show always on the reverse side; each bundle of fibres is doubled and knotted around the heavy warp, held in place by the threads of the woof, and has both extremities exposed, cut off level, to form the nap. It may be assumed that for all purposes of modern manufacture and commerce India rugs are of this nature, whether they contain twenty square feet or five hundred. There are differences in weight and thickness, in closeness of texture, and more particularly in pliability, some being as soft in the hand as flannel, others much stiffer. The common talk of the dealers puts down these soft ones as "old" ones, which have been "washed." There seems no reason to doubt, however, that there is a greater difference in the make than in the age. The stiffer rugs have the closer and more uniformly smooth surface, the softer ones are more open and the nap irregular and loose. The former are of the higher price, and apparently of better quality. But if age and wear do not change the character of the fabric very much, they

give a lovely softness to the color. If the buyer finds a carpet which has been very much worn and washed and scoured, he has found a treasure of mingled and indescribable hues, as far removed as possible from the harsh mosaic of contrasts which meets the eye in the regulation modern carpet. The great durability of these carpets, joined to this quality of growing more beautiful by time, is a boon to those persons who have got beyond the raw stage of furnishing, which may be said to consist in liking new things the best.

The India carpets in Philadelphia are of pretty even firmness. The very largest are somewhat the thickest, having the deepest pile, as well as a somewhat heavier body than the small ones; but the greater part of even the small rugs are nearly as thick. There are two principal groups of them: one in the section devoted to the British dependency of India, where are hanging from the girders of the building and high overhead a half-dozen large carpets; the other in Great Britain proper, where the three firms—Gregory & Co., Lapworth Brothers, and Vincent Robinson—have each a large alcove floored and walled with Oriental carpets of various sorts, of which the greater part are Indian. In the Gregory alcove there is especially to be observed a carpet about fifteen by nineteen feet, and priced £74 in bond, without duty. There are larger and more showy carpets, and more costly and finer ones perhaps, but the splendid design of the centre of this, stiff leafage and flowers on a ground of "camel white"—that is to say, of a changing creamy color, varying from pale straw-color to buff, but so pale as to look white until compared with actual white—gives it perhaps the first place as a design in color. Another in the same exhibit, about twenty-one by twenty-two feet, and priced £110, has a dark-red centre, in general effect, and a border of white with a small pattern in dusky colors. The flowers upon it are as formal and severe as in the former example, and the colors are generally very deep. A carpet similar to this, but smaller, was lately, and perhaps still is, in the possession of Cottier & Co. of New York. It is noticeable, however, in both these carpets, and in others, how important a part is played by a peculiar deep-yellow, which is commonly used as an outline or *trait* to mark out the pattern, and also forms little subordinate lines and veins on the formal leafage. It will be understood by every one familiar with Eastern carpets that there is no attempt at representing natural forms—not even a remote resemblance to them; but perhaps it will not be readily understood how strictly severe and how abstract the forms of these "flowers" and "leaves" are until one tries to draw the outline of them, when they will be found as rigid as a marble mosaic. With these should be compared the magnificent Madras carpet exhibited by Vincent Robinson, probably the most delicate and perfect large carpet in the Exhibition, priced at $812 in currency, and worth it, in fineness and perfection of make, but perhaps hardly as admirable in design as either of the two last mentioned. Of those hanging up in the "India" section, the centre one of three, smaller than the others, and dark-yellow in general aspect, is especially remarkable in design. There are in all about fifteen large India carpets in the Main Building, all in the two places named. The four selected for special mention above are distinguished from their fellows merely by their artistic interest—all are fine. The prices of these would vary from five hundred to eight hundred dollars, after payment of our monstrous duty, and the general price of such carpets may be taken at twenty dollars a square yard delivered in the United States, or four times the price of fine English Wilton carpets, costing about four dollars a yard, of the usual breadth. Good as the latter are, the Indian carpets will probably outwear them at least four times over. They ought to prove practically indestructible. In a careful household, where a respect for its possessions exists, such carpets should last for two generations of constant wear—much longer in a retired place. So long as the pile remains at all, until the carpet is worn down to half its thickness, until the warp and woof begin to show, and even after that, the colors and the design remain perfect, gaining a deeper and a richer tone with years. The original value of the Indian and English carpets, as decorative objects, cannot be compared of course. In buying these costly things, however, care should be taken to select the real Indian designs, for there are those in market which have clearly had an impulse from Europe.

The small rugs of Indian make are sometimes like little pieces cut out of the great carpet. A piece out of a large design makes the centre; the border is the same as one of the large ones, but with fewer members. Other rugs again have their own especial "motive," a central lozenge-shaped or irregular figure, smaller and subordinate figures around it, and a border enclosing the whole. It appears that the best small rugs are apt to be of the former kind. It would be interesting to know whether there is a province in which the rugs and carpets are generally made in this way, the whole centre filled with a diaper pattern cut off anywhere to make it the right size. The talk about "Delhi" rugs can hardly amount to much, for Delhi holds prodigious fairs, to which textile fabrics from far away would naturally be brought. Masulipatam gives name to some, and Benares to others; but who shall say how far these names are given correctly? It is greatly to be regretted that the house of Vincent Robinson is not represented by an "expert" in these matters. This establishment at least goes directly to India for its carpets; and, as the artistic feeling of the designers is found to be already spoiled by orders from Europe in the more settled and frequented districts, year by year the purchases are made in more and more remote provinces in the hope of fine and purely native designs. It is probable that other importers do the same. The firm of Watson, Boutor & Co. does not exhibit at Philadelphia; they import largely, and it is probable that the majority of India rugs in England pass through their hands. If either this house or the one named before were directly represented in Philadelphia, some exact knowledge of the geography of India carpets might possibly be obtained.

But as for small rugs, those from three feet by six upward to six feet by ten, nothing is to be found so rich and varied as the Persian display. Here, again, our geographical description fails us. There are no means at hand of confirming the ascriptions to this and that province which are commonly made. There are cases even in which there is doubt whether India or Persia should be credited with a beautiful stuff; but none of these difficulties offers itself at the Exhibition, unless there should be some doubt about one fine rug in the Robinson alcove. That one is 4′ 2″ by 6′ 5″; it has a border of black ground with figures; the ground of the centre is white, with a great circular figure filling it from side to side. It is one of the most interesting rugs in the Exhibition, a fine work of art in its way, remarkable in having sharp and decided contrast for its motive, instead of gentle gradations of color; its price is $146, including the duty. Its near neighbor, a square rug, white, with a pattern in green and pink, and priced $150, is as unusual in character. This would be a difficult rug to use in furnishing a room. Its very odd and not wholly agreeable chord of color would require especial surroundings. It is a "museum piece," and ought to be kept on exhibition somewhere. There is another rug in this alcove, 4′ 1″ by 6′ 7″, with an orange centre, priced at $146, and one about the same size in the Gregory alcove adjoining, with a centre of uniform dark blue, priced £7 10s. in bond—both very fine and very unusual in character.

The visitor should go from this English section across to the northwest corner of the Main Building, where Messrs. W. & J. Sloane of New York exhibit their importations. Perhaps a dozen delicate and beautiful Persian and other rugs are here together; they are hung at different heights, and it is hard to compare a rug one can reach with one ten feet above the head, but all are interesting in design, and in general the fineness and delicacy of the fabric vary with the price. Among them all there is one that should be observed with especial care. It is small, blue in general effect, differing from its neighbors in degree of excellence rather than in kind; its price is $275. It finds its match, and perhaps more than its match, in one other in the Exhibition, of which hereafter. It is one of several imported a year ago by the Messrs. Sloane, and made, as is asserted, under peculiar circumstances—namely, as the especial handiwork of this or that lady of quality; as her sampler, shall we say? All Persian and Indian rugs are hand-made, and made not in factories but in the dwellings of the people. But the extraordinary delicacy and necessarily great cost of these gems we are considering make excusable almost any "yarn" about their origin. At the Sloane warerooms in New York there are two or three of these superlative rugs, of which one, at least, is superior in quality as it is in size and price to the one at Philadelphia. And in the Boston Museum of the Fine Arts there is one, perhaps, as delicate as any of these, which was imported by Bumstead & Co., and bought by Mr. Perkins for the Museum two or three years ago. These rugs are all of a surface like velvet; the nap is short, very dense and thick, offering a smooth surface very firm and solid to the touch, hardly yielding to pressure. It would be interesting to see the process of weaving these, and the looms on which they are made, and to compare these with the Aubusson loom and with the process of making the tapestries of France. There is, no doubt, a radical difference in their make, but the similar delicacy of the resulting fabric suggests a similarity in process of manufacture which it would be interesting to trace. In the matter of design, which is our chief business at present, these exquisite rugs are not so superior to their less costly brethren as to challenge comparison. As much beauty of color and of pattern can be had, sometimes, for a hundred dollars as for five hundred. But these fine ones have their special character too. Are they made to hang up? are they intended to cover divans? They can hardly be intended for use in the way we can best use them here—as table-cloths. However

that is, their design is invariably very minute, very finely subdivided, the whole surface covered with a delicate play of small patterns and of colors not contrasting very forcibly with one another. The largest of all these—the five-hundred-and-fifty-dollar one at Sloane's—is wholly covered with a small diapering of subdued shades of warm color on a white ground, except for a narrow border of almost the same hues. There is one of these high-class rugs in the exhibit of Vincent Robinson, 4′ 8″ by 6′ 7″, and priced at $355 currency. With such opportunity for comparison as is given, when things are so far apart, in place or in time, we incline to consider this one the most perfect of all the lot we are considering, and therefore the finest rug in the Exhibition. R. S.

Notes.

HURD & HOUGHTON have published in handsome form a translation of Julian Klaczko's 'Two Chancellors,' by Frank P. Ward. The work has already been introduced to our readers in the letter from our Paris Correspondent printed in No. 563 of the *Nation*.——The index to the first ten volumes of *Scribner's Monthly* (Nov., 1870, to Oct., 1875) fills 80 pages 8vo, and is attractively printed. Owing to the different character and scope of the magazines, this index is less valuable apart from the volumes which it unlocks than is that of *Harper's Monthly*.——Vol. V. of the Centennial edition of Bancroft's 'History of the United States' (Boston: Little, Brown & Co.) ends with Cornwallis taking possession of Philadelphia.——'The Tour of the Prince of Wales in India,' including his visits to the courts of Greece, Egypt, Spain, and Portugal, is announced by Sampson Low & Co. to appear next October. The narrative will be by Dr. W. H. Russell, the illustrations by Mr. Sidney Hall, the Prince's private artist, from hitherto unpublished sketches. The price of the work will, in expectation of a popular demand for it, not be excessive.

—We are glad to learn from a printed circular that the Faculty of Antioch College has been moved to investigate and expose the "Great Western Literary Bureau," alias "Great American Literary Association of Yellow Springs, Ohio," to whose fraudulent operations we called their attention last fall. It appears that the "Bureau" was organized in 1871, and conducted by "two young gentlemen whose names are now withheld." Their successor, the "Association," was one William M. Hafner, who has from time to time varied the monotony of his name by styling himself H. H. Hay, Ferdinand Otto, and Mrs. McRoy, and the monotony of living at one place by having letters addressed to him at Fairfield, Osborn, Clifton, Xenia, and Dayton, as well as Yellow Springs. His literary qualifications have been derived wholly from his studies, long since terminated, in the preparatory department of the College, and they have not proved sufficient to keep him from "plagiarism," from "obtaining articles from their authors upon false pretences," and from "selling the same production repeatedly." In other words, he is a fit subject for the penitentiary.

—We have received, wholly unheralded, a translation by John J. Lalor and Alfred B. Mason of Part I. of Dr. H. von Holst's 'Constitutional and Political History of the United States' (Chicago: Callaghan & Co.) Our opinion of this remarkable work has already been expressed, apropos of the German edition, in No. 466 of the *Nation*. The translators are quite right in judging it to be one of the fittest literary historical monuments of the Centennial year, and as such they offer it to the public, who, we are sure, will both appreciate and reward their labors. Dr. von Holst himself contributes to it a special introduction, composed in English, partly explanatory of the way in which he came to undertake a task of such magnitude, partly apologetic of shortcomings which a foreigner can hardly escape. Of these last he remarks truly that they are of the least consequence to American readers, who, if they ever feel the author's lack of the national sentiment, have always the corrective in themselves. He tells how he came to this country as an emigrant, and took the first opportunity of registering his intention to become an American citizen. A disciple of Laboulaye, he brought with him an idolizing regard for the great Republic, and was, as he says, "rather unprepared for Tammany Hall, the first institution I got somewhat better acquainted with."

"For a long time I was fairly bewildered by the throng of most opposite impressions, and, even after I had read and studied many a good book, I searched in vain for a thread to lead me safely through this labyrinth. Only very gradually I succeeded in finding out what, up to this day, seems to me the one reason why all my efforts thus far had resembled so much a wild-goose chase. Without being fully conscious of it, I expected to find in everything something particular, quite different from what was known to me either by study or by personal observation; and this all the books I had read had failed to distinctly show me as a mistake which could not but be fatal to the success of my studies. That I at last became aware of the mistake is the explanation of the claim raised before [above] that I have studied and written with more soberness of mind than any of my predecessors. . . . Nothing was left of either the misty vagueness of the grand and wonderful fairy-tale or of the prickling atmosphere of the strange puzzle: I felt myself standing in the fresh and clear air of stern historical truth."

The translators announce that hereafter their version will keep pace with the progress of the parts yet to appear—the present dealing with State-sovereignty and Slavery (1750–1833). They have been fortunate in one respect, namely, that in the original edition Dr. von Holst's frequent citations from his authorities are always in English—a practice which, if it had been observed by Dr. Kapp in his historical series, would have rendered their translation a much less formidable undertaking than it must be now, even with direct guidance from the writer to chapter and verse.

—The fourth volume of the ninth edition of the 'Encyclopædia Britannica' (Boston: Little, Brown & Co.) is, in the variety and treatment of its subject-matter, but little if at all inferior to its predecessors. Though lacking the co-operation of the many eminent names presented by the preceding volumes, it nevertheless embraces among its contributors a number of men widely distinguished in the field of their own special research. A more than usual share of space is allotted to biographical notices, but the preponderance of scientific subjects is quite as apparent as heretofore. Among the contributions of note and of general interest may be mentioned the essays on Lord Brougham, Chevalier Bunsen (by his son, Georg von Bunsen), Bunyan, Burke (by John Morley, 12 pages), Robert Burns, Bishop Butler, Byron (7 pages), Calvin, and Camoens, and the articles on Brahmanism (by Julius Eggeling, Professor of Sanskrit at University College, London), Buddhism, Building (66 pages), Calendar, and Canal. The geographical articles are numerous and important, and comprise among others Bolivia and Brazil (both by Keith Johnston), Bombay (by W. W. Hunter), Borneo, Canada, and California, the last by Prof. J. D. Whitney, the geologist. We have already had occasion in our previous notices to point out glaring blunders in relation to the extent of the Argentine Republic and the location of Pensacola; we must now point out one equally gross in the case of Borneo, whose area is given on the authority of Melvill von Carnbee at 12,745 square miles—an obvious confusion of German with English measures. The carelessness with which some of the geographical articles are revised is, indeed, truly amazing. Thus, under 'Africa,' Vol. I. p. 254, we are told that the Cunene River has a south-*eastward* course; again, on p. 255 of the same article, the Tioge is represented as flowing *north*-east; on the same page, Lake Baringo is placed north-*west* of the Victoria Nyanza; and lastly, on the following page, it is stated that the Harmattan blows on the *east* coasts of the Sahara. Sir John Herschel, if we recollect rightly, in the table appended to his elaborate treatise on 'Physical Geography,' contributed to the last edition of this work, located some of the highest summits of the White Mountains in Massachusetts. While deprecating the occurrence of such indefensible errors in a work having the reputation of the Britannica, we must admit, on the other hand, that the treatment of technical subjects leaves little to be desired. The articles on Botany (by Prof. J. Hutton Balfour of Edinburgh) and Bridges (by Prof. Fleeming Jenkin, also of Edinburgh) cover 84 and 56 pages respectively, and, form complete treatises in themselves. Both are profusely illustrated by means of wood-cuts and steel engravings. Other noteworthy scientific articles are Brachiopoda (in which a marked tribute is paid to our own laborer in the field, Prof. E. S. Morse), Butterflies and Moths, and Breeds, the last from the pen of Mr. Francis Darwin, a son of Charles Darwin. There are two full-page maps—of California and of British America.

—The 'Annual Register' for 1875 (London: Rivingtons) maintains its excellent character as a chronicle of the events of the year in all civilized countries. Its chapter of remarkable trials embraces that of the city editor of the *Times* and his co-defendant, the notorious Albert Grant—known as the City Libel Case; the St. Leonards' Will Case; the Whitechapel Murder; and Keet *v.* Smith and others, or the Wesleyan minister's right to the title of "Reverend." The more important state-papers given at length are Gortchakoff's letter to Shuvaloff on England's refusal to join the St. Petersburg Conference on the usages of war; the report of the Foreign Loans Committee; the court-martial finding on the loss of the *Vanguard*; and the Admiralty circular on Fugitive Slaves and the Queen's ships. These are followed by abstracts of various reports concerning British interests, such as the Indian census, agricultural and trade returns, census of factories, post-offices, army and police statistics, statistics of railways, wrecks, etc., etc. The politics of the United States have more space by one-half allotted to them than was the case last year, and on the whole the perspective of the review is beyond criticism. The exposure of Indian

frauds, and Secretary Delano's resignation in consequence, are the only important topics that go unmentioned. The whiskey frauds and the Beecher trial are barely mentioned, and there will be few Americans to blame the compiler for that. In the narrative of the Louisiana difficulties, the unconstitutional exercise of authority is duly pointed out, but something more might have been made of the Wheeler Compromise, both on account of its extraordinary nature as an extra-official and extra-legal way out of an apparently hopeless muddle, and on account of its demonstrating an unexpected moderation in the Southern character. The case of Arkansas, too, would have borne a greater enlargement. That the Civil-rights Bill was, very soon after its passage, declared unconstitutional in several courts; and that the outgoing supporters of the luckless Force Bill in the House were carefully provided with office by the Administration, are facts that might appropriately have been noticed. "Mr. Fisk" for "Mr. Fish," "Edmonds" for "Edmunds," and "Conshatta" for "Coushatta," are the only errors we have noticed, and these are clearly typographical.

—One of the penalties of a civilization which is able to carry passengers from the Atlantic to the Pacific Ocean in less than four days, is the compulsory transportation of contagion and insect pests at correspondingly rapid rates. The march of the Colorado beetle, however, from the Rocky Mountains to Passamaquoddy Bay, which we expect him to reach this year, must be regarded as rather slow, since it has taken him something more than half a century to get over the ground with all the modern conveniences for locomotion. Fifty years ago the observations of a Missouri entomologist would have had little interest for a cultivator of the soil in Maine, who now, thanks to the appearance of the inexorable potato-bug, suddenly wakes up to the fact that Dr. Charles V. Riley's annual reports have something more than a fresh-water and inland utility; that though paid for by the State of Missouri their value is not local merely. In his eighth report, just received, the Colorado potato-beetle has the post of honor, and we learn what it will feed on, what will feed on it, what Paris green and sundry patent mixtures will do for it, what its native haunt is, etc., etc. Dr. Riley mentions two new natural enemies of it, one being our friend the common crow, which "even digs up the ground to get at them after they have entered it to hibernate." More briefly we are told of the canker-worm, and more at length of the army-worm, whose enemies are legion, and manage to keep them down so effectually that "two great army-worm years have never followed each other, and are not likely to do so." The greatest space is naturally allowed to the Rocky Mountain locust, which Dr. Riley does not regard as a divine visitation, and does not believe can ever obtain a permanent settlement in Missouri. Some of the compensations for the destruction which it caused last year are curious and noteworthy. Thus, the locusts robbed the dreaded chinch-bugs of the vegetation on which they commonly lay their eggs unseen, so that they were obliged to lay them in exposed situations where the young broods were doomed to perish. The result is that exemption from this pest—which the Missouri farmer has always with him—is secured for two years at least, and the same is true of many other insects. Then, again, the locusts in dying left a rich coating of manure, which made the soil of the stricken country unusually productive. In fact, the fruit-growers suffered much more heavily than the grain-growers and stock-raisers. After the devastation was over, there was a great prevalence of plants which in ordinary seasons are scarcely noticed, among them the grass known as *Vilfa vaginæflora*, generally suppressed in the struggle for existence with the blue-grass, but which sprang up whenever that was killed, and, while young and tender, furnished a fattening nutriment to the cattle. Dr. Riley's account of his experiments to test the edibility and palatability of locusts is extremely entertaining. He succeeded in demonstrating that they make excellent soup, and can be served up in a batter as cakes, or simply baked or fried. "When freshly caught in large quantities, the mangled mass presents a not very appetizing appearance, and emits a rather strong and not over-pleasant odor; but, rinsed and scalded, they turn a brownish-red, look much more inviting, and give no disagreeable smell."

—We are sorry to announce that we have detected the Baltimore *American*—a very respectable paper—in an act of very gross "journalism." The *Nation* of June 8 drew attention to the notorious and long-established rule of political morals that legislative and judicial officers ought to keep out of commercial enterprises or speculations which seem likely to bring their public duty into conflict with their private interest—a rule which Mr. Blaine recognized when he said he "could not touch" an interest in the Northern Pacific stock. Our language was:

"It ought not to be forgotten, and we see that Mr. Blaine himself has not forgotten it, that the position of a legislator towards persons who are calling, or are likely to call, for the exercise of his powers for their private benefit, is essentially a judicial position. He has to decide between them and the public. His first duty is, therefore, not to accept favors from them, or put himself under any obligations to them, or become interested in the success of their enterprises."

The Baltimore *American* thereupon journalized the above in its issue of June 10, at the close of a long article, as follows:

"Is it seriously supposed that we could have a Government capable of transacting the business of the legislative, executive, and judicial branches if it were seriously held that all members of it must be prohibited from money investments and be required to relinquish all interest in the ordinary pursuits of life? Such a rule would, in fact, be the most effectual means of creating a class of professional politicians, who, being forbidden to make money out of politics, would be the more dependent on making it inside of politics."

Here we see it is set down as a positive fact that the *Nation* has protested against the admission to public office of anybody who has invested money in anything whatever. This is one of the best cases we have seen since Mr. Louis J. Jennings left the New York *Times*.

—"In spite of the new regulation by which an artist is allowed to exhibit but two works, the Paris Salon of 1876," writes a correspondent, "has a longer catalogue than that of last year. It numbers 2,095 oil-pictures, 621 pieces of sculpture, and a very long list of water-colors, drawings, and cartoons. Among these works none has become strikingly conspicuous; there is no 'picture of the year,' as there has so often been; no revelation of a new talent or particular happy hit of an old one. The general level of ability, if not of interest, is high, however, and the Salon of 1876 is a very good average exhibition. The most valuable work of the year is to be found in the department of sculpture, where it has given a really brilliant lustre to the name, already well-known, of M. Paul Dubois. The two figures of M. Dubois excite extreme admiration, but they cannot perhaps be said to have acquired notoriety, inasmuch as that admiration is confined to people of what is called 'quiet taste.' Such people just now rank M. Dubois very high—some of them perhaps a trifle too high. The figures in question form part of a monument to be erected to General Lamoricière at his native city of Nantes, and they are entitled respectively 'Charity' and 'Military Courage.' They are to be seated at two of the angles of the pedestal supporting the statue of the hero, which, with the figures for the other angles, will presumably be exhibited next year. 'Charity' is a young woman with two infants in her lap, one of them asleep and the other with his lips at her breast. Her head, draped down to the brow in a voluminous cloth, is erect, but her eyes are bent upon the children, and her two arms are extended with a movement of extraordinary grace, as if to close them toward her, without touching them. Her drapery, a trifle realistic, is the plain boddice and scant, simply-falling skirt, of heavy material, of the peasant-woman. This figure has an extraordinary beauty, of a kind that it is very difficult to define, being at once very simple in its effect and profoundly suggestive of all the delicately-assimilated culture which has nourished the artist's talent and enriched his inspiration. The face is admirable, the harmony and fluidity and at the same time severe intention of the lines most noble, the expression of the whole figure singularly touching and pure. One feels that the artist has placed his ideal very high, and that, on the whole, his powers of execution have sustained him in his effort to reach it. The image of 'Military Courage' is even more interesting. It represents a young man in a helmet, with a little winged dragon couchant on the top of it, seated, with his left hand resting on the hilt of his upright sword, and his right hand, with the fist closed, upon his knee. The skin of a beast hangs over his shoulders, with the fore-claws knotted upon his breast; he wears a sort of coat-of-mail and kilt, but his legs and arms are bare. The sentiment and intelligence shown by M. Dubois in the type, attitude, and expression of his young soldier form a remarkable combination of imagination and culture. Anything less vulgar, less brutal, less allied to the usual representation of the virtue of which the artist has sought to give an image, it would be difficult to imagine; the figure is almost too reflective, too sedentary. But, rightly viewed, it is supremely impressive; it represents the courage in which passion has been purified by intelligence, and which holds itself ready to fight for conscience' sake. The young man is, as the French say, *sur de son affaire*. Like his companion-figure, he suggests two or three great models; it is not probable that he would have been exactly what he is if M. Dubois had not looked very often at Michael Angelo's 'Lorenzo de' Medici' at Florence. The shadow of the helmet falls across the brow in a manner which recalls the ever-unlighted forehead of that great figure, and the fashion of the nose, mouth, and jaw is a memory of Michael Angelo. M. Dubois is certainly a sculptor, and sees things as a sculptor—sees lines and forms and contours, and not intentions, motives, and dramatic effects. But his two figures seem to me to lack just that supreme element of ease and independence

which makes the work that is rarest in quality. Still, in its intelligence, purity, and high plastic tendency, the quality of his work is very rare."

MARKET FLUCTUATIONS.*

THE literature of political economy has within a few years been enriched by several English treatises of a high order on special subjects belonging to the general domain of finance. Among these, Göschen's 'Theory of the Foreign Exchanges' and Bagehot's 'Lombard Street' are conspicuous examples. The book which is the subject of the present notice belongs to the same category.

The fluctuations of markets increase with the development of industry and the quickening of all social exchanges. Before the introduction of steam and the telegraph, and before the credit and banking system had reached their present perfect organization, there was more steadiness in the markets of all countries, because they were much less subject to foreign influences. Now, whatever acts favorably or unfavorably on the markets of one country is instantly reflected in the markets of all others. There is a constant tendency towards equilibrium, and whenever the balance is disturbed there is an instant effort to restore it. "The existing system is, in fact, very much like that in the Bessemer saloon-steamer, where men are employed continually adjusting the movements of the swinging saloon, in obedience to the indications of the spirit-level on which their eyes are fixed."

The writer of the present volume endeavors to show, "first, that market fluctuations are never without some cause, and, second, that these fluctuations are exaggerated in all cases." His observations are not confined to speculative markets, the movements of which are necessarily more obscure and, if we may be allowed the expression, sentimental, but are extended as well to markets of the most stable commodities; and the causes which influence each are pointed out with much distinctness, and illustrated by many pertinent examples. Markets are stubborn facts, and must be accepted and dealt with as such, as well by statesmen as by men of business. Their traditions cannot safely be ignored or overridden. Mr. Lowe, one of the most learned Chancellors of the Exchequer, but a doctrinaire, "still incurs much censure and has lost much popularity on account of the derangement to the money market which he caused when he altered the system of collecting taxes, so as to bring the bulk of the Treasury receipts into the Bank of England in one quarter of the year, so draining the market of its usual supply, disturbing the steady circulation of that blood of commerce, causing congestion, possibly inflammation and disfigurement, but certainly annoyance."

There are some notable exceptions to the tendency toward equilibrium in the labor market of particular countries. Thus, in England, there is a wide difference between the wages of agricultural labor in counties not very remote from each other, and Mr. Cliffe Leslie has lately shown that the same disparity exists in adjacent districts on the continent of Europe. Ignorance, combined with poverty so abject as practically to chain the laborer to the soil he cultivates, are the assigned reasons for this disparity. A recent correspondent of the *Nation* has pointed out the irreconcilable competition which exists in California between Chinese and native labor. It is usually assumed that the laboring classes of all countries, when subjected to the same influences, will assimilate, and, having essentially the same wants, will be entitled to the same wages; but how can the American laborer, born and bred to a decent regard for the usages of civilized life, possibly compete with the Chinaman who "never adopts an iota of our civilization," who subsists on "a diet of rice and entrails," lodges in a coal-hole, wears "clothing of the simplest pattern and cheapest material," and is withal patient, industrious, and skilful?

The importance which in England attaches to the harvest is well known, but probably few foreigners understand precisely why the harvest has the stimulating or depressing influence which is there assigned to it. The matter is thus explained: a demand for products must start with the consumer; the consumption of the laboring classes, outside of bare subsistence, depends on the price of food. With a bad harvest food is high, and the laborer's margin for other things is little or nothing; with a good harvest it is considerable, and that of many laborers amounts to a large sum added to the purchase fund of other articles than food. This fund goes to increase consumption, but it does not, except through the slow medium of realized profits, go into the general loan fund available to producers; consequently, it raises prices by quickening demand, while it does not inure soon enough to the benefit of production to increase supply in a corresponding manner. This state of things is peculiar to countries in which the laboring classes earn a bare subsistence. Therefore it is that the condition of the harvests in this country, where most laborers earn at all times much more than a bare subsistence, has a very different bearing from what it has in Europe. The difference between a good and bad crop in America has very little immediate influence on the consumption of other things; it affects the laborer's savings much more than his consumption. Large or small crops do not greatly affect the trade of the country, except as they co-operate with the grain markets of other countries.

It is a familiar fact, as stated by our author, that "a small increase or a small decrease of supply on a market will have a disproportionately great effect on the price," and it can never be predicted, with any accuracy, how great that effect will be. It is said that "when labor is decreased 20 per cent. prices go up 60 per cent." When the cattle plague was under discussion in Parliament in 1866, and the question was how the farmers were to be compensated for the cattle destroyed by the public authorities, John Stuart Mill, to the great disgust of the country gentlemen, reminded the House of the familiar economical law, that the commercial value of a short harvest is greater than that of an abundant one, and that, therefore, the farmers had gained rather than lost by the killing of their cattle. Hesiod was evidently the author of this economic axiom, and furnished a text for Mr. Mill's homily in his famous saying: "Fools are they, since they do not know by how much the half is more than the whole."

There is no doubt, also, much truth in the following proposition, namely, that "the further prices sink, the more ready are they to respond to any revived demand; and the higher they rise, the less strong are they." It must, however, be accepted with this limitation, that the prices in question shall be of such things only as have intrinsic value, and that no great and permanent influences have arisen to increase or depress them. It would be very unsafe, for example, to assume that the late inflated prices caused in this country by a redundant currency can be restored except by the same vicarious agency. The present low price of loanable capital is, of course, due much more to idleness and distrust than to superabundance. Indeed, the supply must very seriously have been curtailed by over-investment in fixed property, much of which is worthless. But the curtailing of production has been still greater, and the revival will be slow. There is every reason to suppose, therefore, that for some time to come capital will be cheap for the service of legitimate enterprises; and as cheap capital stimulates production, we may anticipate a great increase in all products. The margin of profit or savings, which is always a large sum in the aggregate, will increase the loan fund, and thus tend permanently to lessen rates of interest. It may be safely assumed that more than one decade will intervene before this country grows up to its present railway system; and it is not easy to see any other form of fixed investment which can absorb so much capital, and absorb it so rapidly, as the construction of railways has done within the last ten years. Why is not this view encouraging to the owners of land, at least of improved land yielding rent?

Under the head of "Money" we find some excellent comments on the Collie scandals. The spirit of competition among bankers is contrasted with the spirit of co-operation, and it is justly argued that they would gain more by exchanging facts and opinions about their customers than by following the secretive and antagonistic methods of doing business now in vogue. This habit of privacy in all that pertains to one's own affairs is far more English than American. An English banker of high authority, in commenting on the examination of banks under the national banking system of the United States to an American friend, expressed the greatest surprise that the examiner should be allowed to see the paper under discount, and said that English bankers would never submit to such a system. Contrast with this that striking provision of the Louisiana Bank Act of 1842 which required a New Orleans bank, in which a note went to protest, to notify every other bank of the fact, and prohibited them all from discounting the paper of the party thus discredited until he had paid up in full. The Collie frauds were the direct consequence of that spirit of privacy which dares not even to ask the questions necessary to proper information lest it should betray the nature of the enquirer's dealings.

A good deal has been lately said in the English papers about the effect of the fall of silver on the trade with India. It will be remembered that the prevailing currency of India is silver. The following passage presents the subject in a clear light:

"When silver falls in value, imports of goods into India are checked, our shippers want more of the Indian currency than before to compensate them for its decreased value, and this, having all the effect of making prices dear, checks the demand for goods; and, on the other hand, exports of Indian produce are just as much stimulated, for gold can be obtained for them,

* 'The Rationale of Market Fluctuations. By a City Editor.' London: Effingham Wilson. 1876. 12mo, pp. 186.

and gold has become more valuable in its relations to silver. So that in the case of a fall in the value of silver, India exports more in order to get gold prices, and imports less in order to avoid paying the enhanced silver prices; and as this must leave an increased balance in favor of India, money must be sent to settle it. When the value of silver rises, the rule, of course, has an inverse application, and it absorbs less."

An element of disturbance of markets which is much more keenly felt in Europe than in America, thanks to our living in another hemisphere, is the fear of war. Actual war spreads its influence into the markets of all countries, but apprehended or possible war does not seriously affect the money market of countries out of its probable path. At this moment the Eastern complications affect directly only the grain markets of the United States, but they are acting with immediate force on all the markets of Europe. Our author points out the nature of this depressing influence in the following quoted passage:

"The revival of alarmist rumors is a distinct hindrance to any revival of trade which might otherwise be at hand. Unless enterprises of magnitude have time for development they will not be commenced, and thus the existence of disquieting rumors, like those now agitating European capital, deprives the capitalist of that assurance of time for development which is necessary to tempt him into a great investment."

PESTALOZZI.*

HEINRICH PESTALOZZI was born in 1746 at Zurich, in the German part of Switzerland. His ancestors were Italian Protestants who were expelled from Italy by religious persecution. His father died when the boy was six years old, and his mother did not remarry. His constitution was delicate and sickly. At school he incessantly committed errors and fell into scrapes because of the excess of his feelings and imagination, but in his light-heartedness he quickly forgot his troubles. He never excelled in those branches which tax merely imitation and memory; he neglected orthography and penmanship, and his reason for abandoning the profession which he at first selected was that he made mistakes in repeating the Lord's Prayer and stopped short in his sermons (which he was obliged to commit to memory). After quitting the ministry he studied law, with a view to political reform, but was dissatisfied by perceiving the insufficiency of human legislation to do away with abuses. He abandoned the law for agriculture, in order to support the lady whom he wished to marry. The letter in which he proposed himself to her is so characteristic as to be worth quoting from:

"My failings which appear to me the most important in relation to the future are improvidence, want of caution, and want of that presence of mind which is necessary to meet unexpected changes in my future prospects. I hope, by continued exertions, to overcome them; but know that I possess them still to a degree which does not allow me to conceal them from the maiden I love. They are faults, my dear, which deserve your fullest consideration. I possess yet other failings, which must be chiefly attributed to my irritability of temper and oversensitiveness. I go to extremes in my praise as well as in my blame, in my likings and dislikings. I also enter into plans and schemes with such fervor as to exceed proper limits, and my general sympathy is such that I feel unhappy in the misery of my fatherland and friends. Of my great and very reprehensible negligence in matters of etiquette and conventionality it is useless to speak, as it is too obvious. I am further bound to confess that I shall place the duties toward my fatherland in advance of those to my wife, and that I shall be inexorable even to her tears if they should ever try to detain me from performing my duties as citizen. My wife shall be the confidant of my heart, the partner of all my most secret counsel. A great and holy simplicity shall reign in my house. One thing more, my life will not pass without great and important undertakings. I shall never refrain from speaking boldly when the good of my country demands it. My whole heart belongs to it, and I shall risk everything to mitigate the misery and need of my countrymen."

To this lady, Anna Schulthess, he was united in his twenty-fourth year. He bought an uncultivated tract of one hundred acres in the canton of Aargau, in order to cultivate madder as a profitable speculation. But he became interested in the labor question, publicly advocated industrial schools for the poor, and started one on his own farm to set the example, and began weaving cotton cloth. This, being his first extensive financial experiment, naturally failed, but it lasted from 1775 to 1780. His wife sacrificed the greater part of her property to save him from bankruptcy. He said concerning this disaster: "In the midst of the withering sneers of my fellow-men the mighty stream of my heart ebbed and flowed, as it ever had, to stop the sources of misery. My failure even showed me the truth of my plans. I was always deceived where nobody was; and where all were deceived, there I saw light." From 1780 to 1798 he wrote six books, of which the most popular was 'Leonard and Gertrude,' a tale in imitation of the style of Marmontel. His remuneration from the publisher for this book was to be "three dollars per sheet, with twenty dollars additional if it should reach a second edition."

One cause of Pestalozzi's poverty was his uncalculating benevolence, which the following anecdote illustrates. When in great need he once borrowed from a friend $100, and on his way home he met a poor peasant wringing his hands in distress. On being asked the reason of his grief, the peasant answered that his house had been burned and he was without shelter. This was too much for the feelings of Pestalozzi. Forgetting his own errand he put all the borrowed money into the hand of the peasant, and hurried off to his own desolate home. Arriving there without money and telling his story, his wife asked whether he knew the name of the fortunate receiver. "I do not know the man," he said, "but he looked so poor and honest that I am sure he must be good."

In 1798 he tried his second educational experiment. Napoleon had just conquered Switzerland, and had punished Unterwalden, the only canton which had made an armed resistance against him, by burning every village it contained except one. To this one village, Stanz, the destitute people flocked, and Pestalozzi made an offer to the Government to go there and collect and instruct the poorest of the children. His offer was accepted, and an empty convent was assigned him. Before it was made ready, orphan children came to it in large numbers. He had no school-furniture or apparatus, and he governed by love. His own words are too remarkable not to be quoted:

"I was among them from morning till evening. Everything tending to benefit body and soul I administered with my own hand. Every assistance, every lesson they received, came from me. My hand was joined to theirs, and my smile accompanied theirs. They seemed out of the world and away from Stanz; they were with me and I with them. We shared food and drink. I had no household, no friends, no servants around me: I had only them. I slept in their midst, and taught them in bed until they fell asleep."

His aim evidently was to make a school resemble a family. He relied less on words than on actions to enlist the sympathy of the children. At Stanz no text-books whatever were employed. Whether permanent organization could have been maintained without books remains unproved, for in 1799 a French company in retreat quartered itself in the convent and dispersed the occupants. Pestalozzi immediately demanded new employment and accepted the first vacancy, which was a subordinate position in a school at Burgdorf, in the canton of Berne. The head-master became jealous of the affection and attention of the scholars to their new teacher, and got him discharged on the ground, among other pretexts, that he did not know how to read and spell correctly. He next applied for occupation in a school, also in Burgdorf, where children from five to ten years old were taught by an old dame. It was given to him to relieve the lady, and he introduced a series of object lessons, an innovation which encountered opposition from parents. A man said to him: "Why, these exercises are so simple that my wife and I could give them at home." "The very thing you ought to do," replied Pestalozzi, delighted to have an opportunity to speak in behalf of domestic education. In 1800 he proposed to a neighboring teacher, Hermann Krüsi, the father of the author, that they should commence a private school in partnership. An old castle on a rocky eminence, which had formerly been occupied by a governor of the district, was offered them free of rent. They soon won confidence, pupils increased, and such enthusiasm was aroused in them that the school became famous all over Europe. In 1802, as a result of Napoleon's influence, the obsolete governorship was restored, the castle reoccupied, and the school turned out of doors. The institution was soon reassembled at the castle of Yverdon, at the southern end of Lake Neufchâtel, and flourished for many years. Dissensions among the teachers finally broke it up in 1825, and its founder died two years later.

Our space does not allow us to explain the methods by which Pestalozzi sought to substitute realities in place of words. But what few anecdotes are told of him remind us of the so-called 'Gospel of the Infancy,' in which it is related that Jesus refused to learn the name of the letter B until the signification of the letter A had been made clear to him, and that he remained so obstinate in this refusal, even after being flogged for it, that he had to be expelled from the school. It will at once be inferred that Pestalozzi employed the phonetic method of teaching spelling, and that one of his cardinal principles was never to teach a second step or fact until the first had been thoroughly understood in all its bearings (a truth which it would be well always to bear in mind concerning the political education of a nation). When we speak of the "principles" of Pestalozzi, it should be explained that we mean rather those of his disciples, for his own principles were felt by him rather than clearly thought out or uttered. He knew how to teach, but he could not express this knowledge in laws.

* 'Pestalozzi: His Life, Work, and Influence. By Hermann Krüsi, A.M., son of Pestalozzi's first associate.' Cincinnati and New York: Wilson, Hinkle & Co.

He was continually experimenting and changing. His associates were infected by his example, and it was thus that the reform spread. His assistants and students became disseminators of his spirit in Switzerland, Germany, France, and Spain. In the last-named country the chief minister, Godoy, founded the Pestalozzian Royal Military School in 1807. In 1808, through the influence of Queen Louisa, the Prussian Government sent twelve young men to Yverdon to become acquainted with the details of Pestalozzi's principles and methods, so that they might be introduced more rapidly into the Prussian schools. The students were selected with great care by Süvern, Minister of Education, and on their departure the latter said to them :

"The object in sending you to Pestalozzi is not merely that you may study the external or formal part of this system, or to acquire skill in teaching, but that you may warm yourselves at the sacred fire which is glowing in the bosom of that man, who is full of power and love ; that you may walk in a similar spirit in the path of truth and in the observation of the laws of nature ; that you may become simple as children, in order to obtain the key with which to open the sacred temple of childhood ; that you may never forget that a knowledge of the elementary part of each science is the most difficult to obtain, since it requires a thorough perception of the realities of things ; that the characteristic feature of the Pestalozzian method is the fact of its being equally adapted for scientific research and for popular application, since it does not spoil the desire for knowledge by light and unwholesome food, but strengthens it by vigorous nourishment."

Napoleon did what he could to destroy the new principles, and his success was lasting in Spain and France, though not in Germany. In the United States the Oswego Training School for a long time furnished a representative of Pestalozzianism as adequate as circumstances admitted, and the Oswego graduates throughout the country may be referred to as illustrations, with the qualification that our national tendency to materialism has led to a premature stiffening of methods into routine which is rendering the Oswego school yearly further off from the perennially fresh momentum of Pestalozzi. We wish that Mr. Krüsi had related more anecdotes concerning his father's friend, for he must have heard many, and he has underrated their value. We will quote another specimen of the few that are printed :

"Having undertaken a journey on foot [from Yverdon] to the town of Solothurn, he met a beggar, who asked for alms. Pestalozzi, who could never refuse any appeal of that kind, searched his pockets for money, but found that it had already taken to itself wings. In order not to disappoint the man, whom he saw anxiously watching him, he looked about his person and found that he could easily spare his silver shoe-buckles. These he accordingly gave to the beggar. Finding afterward, however, that the shoes had a tendency to slip from his feet, he fastened them with bits of straw, and thus trampled along the dusty road. On entering the gates of the city he was arrested by a policeman as a vagabond. He expostulated in vain, and could not convince his uninvited companion of his respectability. As a last resort, he asked to be taken before the Mayor, who at once recognized his esteemed friend, and embraced him."

One of his books has a political bearing, 'Figures to my Spelling Book.' It is a collection of fables. Here is one :

"The fishes of a pond complained that they were persecuted by the pikes ; whereupon an old pike, who was the judge of the pond, pronounced this sentence : 'The defendants, to make amends, shall in future permit every year two common fishes to become pikes.'"

The introductory fable is perhaps a justification of his own occupation against the labor reformers of his time. It is called "The Painter of Men" :

"He stood at the easel, and the people thronged around him and said : 'So, thou hast turned painter ! Truly, thou hadst done better to mend our shoes !' And he answered, 'I would have mended shoes for you ; I would have carried stones for you ; I would have drawn water for you ; but you would not have any of my services ; and, therefore, in the compulsory idleness of my despised existence, what else could I do but learn painting.'"

Mandalay to Momien. By John Anderson, M.D. (London and New York : Macmillan & Co. 1876.)—We fear that this book will not have in this country the wide circulation which it has had in England, and which it well deserves. To a large number of well-instructed persons here the very names of its title are barely known and but little regarded, whereas the keen eyes of the British merchant, and others interested more or less directly in British commerce, are always directed to anything which has a bearing on the routes of trade with China. In 1862 the British and Burmese Governments made a treaty of amity and commerce, and the intimacy resulting from this treaty developed the fact that in 1855 the trade between Burma and China had amounted to £500,000, but had since almost entirely ceased. This led to the despatch of an expedition in 1868 under Major Sladen, with instructions "to discover the cause of the cessation of the trade formerly existing by these routes, the exact position held by the Kakhyens, Shans, and Panthays with reference to that traffic, and their disposition, or otherwise, to resuscitate it ; also to examine the physical conditions of these routes." Dr. Anderson accompanied this expedition as medical officer and naturalist, and his account of it occupies three-fourths of the book.

The route chosen was from Mandalay, the capital of Burma, up the Irawady by steamer to Bhamô on the Burmese frontier. Here they began the overland journey on the 2d of March with a train of pack-mules, and crossed the frontier into the Chinese province of Yunnan. They had gone but a short distance beyond it, however, when, on the morning of the 7th of March, the muleteers, without complaint of any kind, deserted in a body, taking their mules with them. The result was that the expedition remained two months in camp, while a large amount of correspondence was carried on to convince the Chinese Panthays of the benefits which would result from opening the trade and of the peaceful intentions of the travellers. Dr. Anderson improved the time in visiting some silver mines, which were at that time not working, and in studying the habits of the Kakhyens, whom he describes as "a perfectly wild race of mountaineers, supplying themselves with most of the necessaries of life by rude cultivation. . . . Whether their character has been deteriorated by knavish injustice on the part of Chinese traders, or high-handed extortion and wrong on the part of Burmese, they are at the present time lazy, thievish, and untrustworthy."

The diplomatic difficulties having at length been adjusted, fresh mules were procured, and the expedition moved on about a hundred miles further to Momien, which was at that time the principal city of the Panthays or Mohammedans of Yunnan. Here they were hospitably entertained by the Governor for a period of six weeks. The Panthays have but little sympathy with their neighbors, being different in character, customs, and manners. Their origin is attributed to "a possible Arab stock to which has been added a considerable number of Turkish emigrants." In 1855 they rebelled against the oppression to which they were subjected by the mandarins, and succeeded in maintaining their own authority throughout nearly the whole of Yunnan, and in defiance of imperial Chinese troops, for seventeen years. This revolt was at its height at the time of Major Sladen's visit, when it seemed even probable that Yunnan would become an independent kingdom ; but the very kindness with which he was received by the Mohammedans made it extremely impolitic for him to venture further among the Chinese. The expedition, therefore, returned to Bhamô, varying its course somewhat so as to examine another route for trade and to study the habits of the Shans. These are the descendants of the Tai race, which was conquered by the Chinese in the fourteenth century ; and "the little nest of valleys, cradled in the parallel ranges which lie between the Salween and the Irawady, has preserved almost unmixed the relics of the ancient Shan kingdom." They are a thrifty race, though apparently somewhat deficient in spirit. "The women are constantly engaged in weaving and dyeing, for the yarn from home-grown cotton is spun, dyed, and woven by their industrious fingers. They are adepts at needlework and silken embroidery. . . . The great body of the Shan population is engaged in agriculture ; and as cultivators they may take rank even with the Belgians. Every inch of ground is utilized, the principal crops being rice, which is grown in small square fields shut in by low embankments, with passages and flood-gates for irrigation. . . . Tobacco, cotton, and opium are grown on the well-drained slopes of the hills."

The expedition reached Bhamô, on its return, in September, having fairly accomplished the objects set forth in its instructions, although without finding many conditions favorable to a revival of the trade. One of the first results of it seems to have been a determination on the part of the Chinese to put down the Mohammedan revolt in Yunnan, and it was completely subdued by the summer of 1874. Meanwhile, the relations between the British and Burmese had become more and more friendly, the native trade had considerably increased, and the British trade was beginning to flourish as the power of the Panthays declined. It was now thought that the time had come for another expedition with almost the same objects as the previous one ; and accordingly one was sent out in February, 1875, under Colonel Horace Browne of the Burmese Commission, Dr. Anderson again going as medical officer and naturalist. This expedition was preceded by much diplomatic correspondence with Burma and China, both of whom entered heartily into the project, and gave special passports and instructions to assist the expedition in every way. Hardly had it crossed the Chinese frontier, however, before rumors of opposition were brought to it. Mr. Margary—a talented young official of the British Consular Service, who had made, with only a few attendants, the journey entirely across China from Shanghai to Bhamô—was sent ahead to the next village to enquire into these reports. Here he and his secretary were murdered, and the next day the

expedition was attacked by overwhelming numbers of Chinese and Kakhyens, against which it defended itself as best it could, and made its way back to Bhamô. The whole subject of this murder and attack is still involved in considerable mystery, but there can be no doubt that this expedition was a complete failure.

Our synopsis is intended to show the thorough, painstaking, and conscientious character of Dr. Anderson's work. It seems to be without pretension, as it certainly is without brilliancy. In addition to the information contained in the body of the book concerning a country and tribes almost unknown to Europeans, there are appendices concerning their deities and superstitions and a vocabulary of two hundred words in the various dialects of the hill-tribes. The illustrations throughout the book are excellent, but we fear its excessive price will materially reduce its circulation. The question of trade, which was the determining cause of these expeditions, is one of the most important, not alone to British, but also to American, commerce. The day may not be so far distant when American prints and manufactures will undersell those of the British at the mouth of the Irawady; but, putting that aside, and considering only our present trade with China, the establishment of the caravan trade overland from China to Burma would, in connection with the Suez Canal, compete seriously with the present route *viâ* the Pacific Ocean and railway.

Ueber deutsche Volksetymologie. Von Karl Gustaf Andresen. (Heilbronn: Henninger. 1876.)—Dr. Andresen has done teachers and readers, both at home and in this country, a good service by thus putting into convenient book-shape his Bonn lectures upon the origin of the more puzzling German vernacularisms. So far as we can judge, the work answers its purpose admirably. It gives within a small compass the explanation—so far as any has yet been obtained—of those curious terms which the student has to accept on the authority of his dictionary or his teacher, but which never cease to puzzle him by their discrepancy between form and meaning. Such words as *Salamander* ("einen S. reiben"), *Pumpernickel*, *ungefähr*, *Hugestolz*, *Bockbier*, *Salbadern* may serve as examples. A curious bit of contemporaneous word-formation is the Berlin Stock-Exchange phrase for *Bismarck*—namely, *baisse-marc*, which might be rendered not inappropriately by "bear in the gold-room." It is almost as classic, in its way, as the '48 perversion of the notorious Hessian minister *Hassenpflug* into *Hessen-fluch*, or Fischart's *Jesu-wider* for *Jesuiter*. A perusal of the work is not only informing, but entertaining. We see the illiterate folk-spirit struggling with foreign or obsolete forms, and hammering them into the most fantastic shapes to suit its practical wants. Dr. Andresen's studies are in accordance with the principles of the most advanced linguistic research, and may be regarded as thoroughly trustworthy. A full alphabetical index facilitates the use of the work, which we commend especially to those who are interested in the study of the language, but are not in a position to consult the dictionaries of Grimm, Schmitthenner-Weygand, or the countless monographs cited by the author.

Condensed Classics,

PREPARED BY

ROSSITER JOHNSON (Ed. of 'Little Classics').

MESSRS. HENRY HOLT & CO.

Are publishing a series of Standard Works of English Fiction in a condensed form, in the hope of securing for such editions many readers who would never attack the complete ones. The aim has been to cut out everything that a skilful novel-reader would skip, and everything that he might skip if he knew what were coming. Nothing has been consciously omitted which helps on the story or is necessary to the delineation of a character or the graphic portrayal of a scene. The condensation leaves the novels, on the average, about half of their original bulk.

18mo, cloth, price $1 per volume.

SLAVE SONGS OF THE UNITED STATES.

A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an Account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

STUDENTS AND OTHERS, who desire to lessen their hours of study, should use our *Interlinear Classics*. Circulars free. Address CHAS. DE SILVER & SONS, Publishers, Phila., Pa.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

The Atlantic

FOR JULY

Commences the Thirty-eighth Volume with a capital number:

CHARLES DUDLEY WARNER
Writes of his travels "From Jaffa to Jerusalem."

GEN. O. O. HOWARD
Describes in a graphic manner the "Campaign and Battle of Gettysburg," and the part he took in it.

OLIVER WENDELL HOLMES
Narrates in amusing verse "How the Old Horse Won the Bet," the horse being "the same that drew the one-horse shay."

W. D. HOWELLS,
Under the caption "A Sennight of the Centennial," tells what he saw at the Philadelphia Exhibition; and "The Characteristics of the International Fair" are also treated of by an anonymous writer.

MRS. KEMBLE,
In the twelfth chapter of her "Gossip," describes her first night upon the stage.

CHARLES FRANCIS ADAMS, Jr.,
Contributes a third paper on "The State and the Railroads"; and

HENRY JAMES, Jr.,
Gives the third and fourth chapters of his new novel, "The American."

There are poems by T. B. Aldrich, H H., Mrs. Piatt, and Kate Putnam Osgood, and the usual editorial departments of Recent Literature, Art, Music, and Education.

Now ready, and for sale everywhere.

Terms: 35 cents a number; $4 a year; with life-size Portrait of Longfellow, $5.

H. O. HOUGHTON & CO., BOSTON;
HURD & HOUGHTON, NEW YORK.

"Mr White has shown an ability hardly less than genius in the preparation of his Art Studies."—*Atlantic Monthly.*

A Practical System of Drawing.

PROGRESSIVE ART STUDIES.

By GEORGE G. WHITE, Professional Artist.

A complete course in Drawing for schools and private learners, published in the form of cards, neatly enclosed in envelopes of 12 each, with blank sheets of Drawing Paper, and an accompanying Manual of Instructions for each set.

The Course now comprises:

I. THE ELEMENTARY SERIES.
A.—Lines and their Combinations.....Price 60 cents.
B.—Cubic Diagrams.....Price 60 cents.
C.—Light and Shade.....Price 60 cents.
D.—Practical Studies. Reviewing what has been previously gone over.....Price 60 cents.

II. THE LANDSCAPE SERIES.
A.—Trees and Foreground Plants.....Price 60 cents.
B.—Rocks and Water.....Price 60 cents.
C.—General Principles.....Price 60 cents.

III. THE ORNAMENTAL SERIES.
A.—Application of General Principles.....Price 60 cents.
B.—Examples of Different Orders.....Price 60 cents.
C.—Suggestions of Original Designs.....(In Press)

IV. THE INSTRUMENTAL SERIES.
A.—Elementary Problems.....Price 60 cents.
B.—Advanced Problems and Mechanical Studies.....Price 60 cents.
C.—Compound and Point Curves and Mechanical Application.....Price 60 cents.
D.—Mechanical Studies.....(In Press.)

Samples of any of the above, if desired for examination with a view to introduction into schools, will be sent, prepaid, on receipt of 30 cents per envelope.

BETHANY ACADEMY, a Family School for Boys. Board and Tuition, $175 per school year. Address WM. LOUIS WOODRUFF, Principal, Bethany, Conn.

BORDENTOWN FEMALE COLLEGE, N. J.—Select, thorough, Christian; delightful situation, and very healthy. Rev. WM. C. BOWEN, A.M., Pres.

BOSTON UNIVERSITY, Eight Colleges and Schools. Open to both sexes. Dr. D. PATTEN, Registrar.

BOWDOIN COLLEGE Summer School of Science, for Teachers and others, of both sexes, desiring a practical familiarity with Botany, Chemistry, and Mineralogy. Opens July 11; extends six weeks. Address Prof. H. CARMICHAEL, Ph.D., Brunswick, Me.

BOYS AND YOUNG MEN privately fitted for College. Conditioned or rejected candidates coached. Stockbridge, Mass. F. HOFFMANN.

BRADFORD ACADEMY for Young Ladies. Year commences August 29. For circulars or admission, apply to Miss ANNIE E. JOHNSON, Bradford, Mass. May 15, 1876.

CARLETON COLLEGE, Northfield, Minn. Open to both sexes. J. W. STRONG, D.D., President.

CAZENOVIA SEMINARY. Established 1825. Has prepared over 600 young men for college. Address W. S. SMYTH, Cazenovia, N. Y.

*CHANDLER SCIENTIFIC DEPART*ment of Dartmouth College.—Liberal education on a scientific basis. Specialty, Civil Engineering. Address Prof. RUGGLES, Hanover, N. H.

*CHEGARAY INSTITUTE for Young La*dies and Misses, 1327 and 1329 Spruce Street, Philadelphia, Penn. Madame D'HERVILLY Principal.

CHICAGO.—Union College of Law, of the two Universities. V. B. DENSLOW, Secretary.

CLEVELAND SEMINARY. Boarding School for Girls. For catalogue, address S. N. SANFORD, Pres., Cleveland, O.

*COLLEGIATE INSTITUTE, Newton, Sus*sex Co., N. J. Sept. 8. S. S. STEVENS, A.M., Principal.

COLUMBIAN UNIVERSITY, Washington, D. C.—College, Law School, and Medical School. For catalogues, address J. C. WELLING, LL.D., President.

DENISON UNIVERSITY, Granville, Ohio. Address Rev. ELISHA B. ANDREWS, President.

DE VEAUX COLLEGE, Suspension Bridge, N. Y. Rev. GEO. HERBERT PATTERSON, Pres.

*DR. MEIGS'S Family School for Boys, Potts*town, Pa. Classical, Scientific, and English Courses.

The Nation.

NEW YORK, THURSDAY, JUNE 29, 1876.

The Week.

As we go to press, it is impossible to form any opinion as to the chances of the St. Louis nomination. Beyond the fact that Mr. Tilden has secured a larger number of delegates than all the other candidates put together, it is hardly safe to go. The Southern vote is, as it was in the Cincinnati Convention, an almost unknown quantity. The total number of delegates being 738, 492 are necessary to a choice; and while 216 votes are cast by the Southern States, three-quarters of these are votes which all the candidates hope to get. Tilden's strength comes from New England, New York, and the Northwest, but the active opposition to him comes chiefly from his own State. There is, on the other hand, no objection urged against Tilden which is not stronger against almost every other candidate. There is some doubt whether Tilden can carry New York, but there is very little doubt that Hayes will carry Ohio against either Thurman or Allen, while in New York neither of the latter would draw over any Republican votes. Tilden did undoubtedly act with a party which talked some years ago of "four years of failure to preserve the Union by war," but it now appears that he opposed the declaration on this subject in the platform of 1864, and at one stage of the proceedings got it struck out. Putting forward a candidate with Bayard's "war record" with Hayes on the other side, would make the campaign turn on the very issues the Democrats wish to avoid and the Republicans long to have made prominent. To take Davis from the Supreme Court would be ridiculous for a party which is undertaking to give the country reform; while Hendricks is objectionable as a soft-money candidate, and Hancock as being another "man on horseback." This leaves the friends of New Jersey's "favorite son," Joel Parker, against whom there seems to be nothing positive, in a fair position to play the same game that the supporters of Mr. Hayes did at Cincinnati, but with what success, if they should attempt it, remains to be seen. The lobby at St. Louis is a very numerous and powerful body, including as it does almost the entire government of this city from John Kelly down, embracing some of the most muscular statesmen of this or any country.

The Chicago *Tribune* has made up an interesting table classifying the votes cast at the Cincinnati Convention, which fully confirms what is said by a correspondent on another page as to the complete absence of anything like sectional feeling in the choice of the candidate. It shows that among the Western delegates Blaine, the Eastern candidate, got 148 votes on the first ballot and 140 on the last, while there were cast against him from the same source 110 on the first ballot and 110 on the last. On the other hand, the Eastern States only gave him, the Eastern candidate, 42 votes, while they cast 184 against him on the first ballot. On the last they only gave him 84 votes, while they gave Hayes, the Western candidate, 134. These figures, however, we think, confirm our correspondent's view in more than one point. They go to prove also the correctness of his notion that the Western delegates were less troubled than the Eastern men by the moral aspects of Mr. Blaine's case, and were more impressed by the "magnificent fight" he made. In fact, as the Chicago *Tribune* points out, if the choice had rested with the Western delegates, he would have been nominated by a large majority, in spite of his stock and bond transactions, so that we were saved by the greater scrupulousness and nicer moral sense of the East from a canvass which would have consisted so largely of an enquiry into the pecuniary affairs of the Republican candidate that there would have been little or no time left for the discussion of public questions, and which, we may add, would have ended in defeat.

The Senate has been engaged during the week in passing the resolution for the issue of $10,000,000 silver coin, the Indian and Naval Appropriation Bills, and a new Enforcement Act. The silver resolution as passed authorizes the issue of $10,000,000 in exchange for greenbacks, with an amendment providing that the trade-dollar shall not be a legal tender, and shall only be coined to an amount necessary to meet the export demand. The House appropriations in the Naval Appropriation Bill have of course been increased, and the electioneering abuses in the navy-yards have been disposed of by the addition of a clause forbidding any increase of force at any navy-yard within sixty days of a Presidential or Congressional election, except on the published certificate of the Secretary of the Navy that "the needs of the public service" make the increase necessary. The Massachusetts reformers, who have made many complaints at the extraordinary increase of activity frequently witnessed in the bright autumn days in the Charlestown Yard, will no doubt be glad to learn from Mr. Dawes's remarks on this subject that any attempt to control Massachusetts votes by putting people to work in such places is "futile," because in Massachusetts a man "must be a resident of the town in which he offers to vote at least six months." The new Enforcement Act, which the Judiciary Committee lately reported, and which the Senate has now passed, is designed merely to patch up the holes in the original act revealed by the recent decision of the Supreme Court; but it is not a matter which is likely to go further than the Senate, as the House is probably well satisfied with the present position of affairs. In the House, the last appropriation bill has gone through, and the order of the day for the next week or more will be committees of conference, disagreements, dead-locks, and compromises. In round numbers, the reductions effected are $40,000,000—$65,000,000 having been struck out of the Department estimates. In the consideration of the Sundry Civil Appropriation Bill, another step was taken in the direction of fastening the debt of the District upon the United States, by the adoption of a clause providing that in case there shall be no funds of the District to meet the 3.65 interest, the Treasury shall advance the necessary sum. The appropriation of $25,500 for the detection and prosecution of crime has been struck out. By a vote of 78 to 70, the appropriation of $50,000 for the Wheeler Survey west of the 100th meridian was also struck out. The election cases of Rainey of South Carolina, Strait of Minnesota, and Finn, the contesting delegate from Idaho, have been decided by the House in their favor. Mr. Sayler of Ohio has been made Speaker *pro tem.* in the absence of Mr. Cox, who has gone to St. Louis.

By an act of Congress, passed near the close of the last session, provision was made for the appointment of a board of experts, consisting of two army officers, two naval officers, and three civilians, to test the strength and character of American iron and steel; and appropriations, amounting in all to seventy-five thousand dollars, were made for the purchase of suitable machinery and to meet the expenses of the experiments. The civilians were appointed from a selection made by the American Society of Civil Engineers, and the only compensation paid to any member of the Board is a salary of $1,200, which the civilian who acts as secretary receives. The Board was organized in April, and quietly entered upon the performance of its duties. It was not expected that its work would be completed for several years, and the period which has now elapsed has not even sufficed for the completion of the principal testing machine. The labors of the Board, however, have already achieved very important results, prominent among which is one which has led to the adoption of a correct standard test of chain-cables, in place of a test by which the cables

were so seriously injured that when approved for use they were really on the point of breaking. The appropriation made last year has not been entirely expended, but the unexpended balance is not enough to enable the Board to prosecute its labors, and $50,000 are now asked for to cover the expenses of the coming year in the appropriation bill at this writing before Congress. A commission more totally free from political favoritism or more competent to perform its duties has never been appointed, and the value of its labors to the Government—which has used more than eight thousand tons of iron and steel in its buildings alone since the appointment of this Board—and to the industrial enterprises of the country can hardly be overestimated.

The mystery with regard to the Caldwell-Blaine despatches is not yet cleared up. Mr. Scott has appeared before the Judiciary Committee and sworn that he knows nothing about the two messages sent to Caldwell from Philadelphia, excepting that a young man named Read, who represented himself as Caldwell's private secretary, called upon him and showed him a copy of a despatch which he wanted to send to Caldwell (which would have cost about $100 in gold), and asked his (Scott's) assistance in doing so. This Scott refused, and Read then said that he would cut down the despatch and send it himself. The telegram was similar to the one received by Proctor Knott afterwards, but Scott did not think the wording was exactly the same. He said he knew nothing of Read. Robinson, the telegraph manager, to whom the despatch was brought, says that the man who brought it, on being asked to give his name, smiled, and said: "John Smith." Mr. Blaine's friends are not at all disturbed by this, and Mr. Frye wants to know what difference there is between sending out a despatch for Caldwell to repeat back, and sending a prepared affidavit to a witness for his signature and oath. The only difference, of course, is that affidavits, when prepared, are usually sent by some responsible person who has no objection to having his name known, and does not run away and hide himself immediately afterwards. It is obvious that a good many of our leading statesmen have not familiarized themselves yet with the *World's* apologue of the "Innocent Dog."

The *Tribune* has published a long letter on the relations between the Pacific Railroad and the Government which it calls a "cogent statement of the railway side of the case." It begins, as all these communications do, by pointing out, what nobody denies, that the Pacific roads form one of the "conspicuous works of internal improvement belonging to this age of civil engineering and co-operative effort"; compares the Pacific roads with the Erie and the Suez Canals; declares that "publicists are dividing" on the question whether Government ought to "relinquish all connection with branches of activity which individual or combined effort can accomplish," or ought to extend its functions "until it includes, besides carrying our mails, doing our banking, carrying, inspecting, and manufacturing also." What this has to do with the present question between the railroads and the Government we do not know, but the letter goes on to point out, what is more to the purpose, that the gist of the whole controversy, as the case stands, is, How shall the Government secure a debt which is not due now, on which no interest is payable till maturity, and to extinguish which the annual sinking-fund provided by Congress is inadequate? Now, this question is really a very simple one, and requires no such far-reaching discussion of the history and nature of internal improvements as "C. T. R." seems to think. The Government holds what is known among the children of this world as a second mortgage to secure its loan; it had a first mortgage once and gave it up; but as it is, it has a second mortgage. Everybody who has had any interest in the roads has had full notice of their second mortgage and the debt it was intended to secure, and they have acquired no rights legal, equitable, or moral against the Government. Now, if the Government wants to be paid when the debt matures, let it say to the railroads: "Make some provision for this debt, or we will take possession of your road, buy in the first mortgage, and sell the whole property for what it will bring. You may now go on and enjoy the revenue and make the property as valuable as you please for the next thirty years, and at the end of that time we will take it." The roads are now paying large dividends on their stock, and at the same time whining and groaning over their inability to make any provision for the money secured to the Government by a precedent mortgage, and making preposterous offers of establishing a sinking-fund of lands, which they say are mines of wealth, and other people maintain are worthless and unsalable, and which were, at any rate, given to the railroads, not to be returned to the Government, but sold by them for the benefit of their creditors.

The appointment of Mr. Morrill as Secretary of the Treasury has been received with general satisfaction, and it is to be hoped that he will accept the office. There is always a possibility of such queer and eccentric appointments being made by General Grant, that the satisfaction felt at any good selection is considerably increased by the reflection that the choice has not fallen upon any of the class of which Shepherd and Tom Murphy are prominent members, and Casey and Packard lesser lights. Mr. Morrill has had a great deal of experience in the practical details of financial administration at Washington from his position as chairman of the Senate Appropriations Committee, and he has the reputation of being in every respect a "safe" man. He would not be likely, if he took the office, to introduce any startling changes in the financial policy of the country, would probably allow the "machine" to work as usual, and would not feel himself called upon in any way to resent the levying of strictly voluntary contributions upon the office-holders for the approaching campaign.

We regret to find, in the address to the graduating class at Amherst composed by the late President Stearns, and read by Professor Seelye, amidst much excellent advice, one of those deliverances on a point of contemporary politics which their want of precision and boldness make, when spoken to young men, rather corrupting than improving. Speaking of the substitution of peaceful arbitration for war as a mode of settling international differences, he says: "America stands [in this matter] in the advance. Brave as the bravest, high in the prerogatives of freedom, she has been foremost in the overtures of peace. The Geneva arbitration ushered a new era into the history of nations. The international Conference which interested all the Great Powers soon followed. America has influence over the world. The country stands well on the question of high-toned manliness. We can take the lead in elevation of character and international magnanimity." Now, if any of the Amherst graduates looks into the effect of this Geneva arbitration on the national reputation, he will find, as a matter of fact, that our mode of acting under the award has damaged us and this mode of settling disputes, in the eyes of all civilized nations; that we do not stand so well with the world as we did before the Conference; that we are held guilty of sharp practice with regard to it; that the arbitrators themselves are shocked and grieved at the result of their work; and that the whole affair has deepened the suspicion as to the moral soundness of the country which has been bred by the disclosures of corruption in political circles. It is the solemn duty of any public instructor who teaches on this matter before the youth of the country to tell the whole truth about it. We mention the subject at the risk of seeming disrespectful to the memory of an eminent man, whose loss Amherst College is justly lamenting, because we feel, on reading over the commencement sermons and addresses at this season, that it is only in so far as they are sincere and thorough in their treatment of topics that they make young men feel the reality of the connection between college education and active life. If the burning questions of political or social conduct are to be taken up at all on these occasions, they ought to be handled not slightly or rhetorically, but with the vigor and completeness of a man talking to men about the most

serious problems at the most momentous period of their existence, when all shrinking or evasion or ornamental concealment is dangerous and unbecoming. In the *Alabama* matter Congress, under the lead of a rascal, has disgraced us, the Executive which accepted the award sitting silent by. This is the truth of the matter. We advise every bachelor of arts to make a note of it, not to deceive himself or others about it, and to do what in him lies that no such shame shall ever come upon us again.

Mr. Henry C. Carey has issued a letter to the workingmen of the Fourth Congressional District in Pennsylvania recommending them to re-elect Mr. W. D. Kelley, in which he gives a remarkable account of some of the effects of "British free-trade." According to him, this sinister agency, which is commonly supposed to consist in the admission by the British themselves to their own ports of foreign goods free, or at low duties, has also compelled various other nations of the world, not subject to British rule, "to confine themselves to the brutifying work of dragging out the soil and exporting it for the supply of foreign mills and workshops." Its other effects have been not less remarkable. It has "established tyranny" in the following States—"to wit, Ireland, Portugal, Italy, Turkey, and the Empires of the East," and introduced and maintained slavery in our Southern States, which, strange to say, it also caused to rise in rebellion, and produced our national debt and our system of internal revenue. If Mr. Kelley be the man to cut down this Upas-tree and get the British to raise their import duties, he certainly ought to be elected. The despairing cry of "Ireland, Portugal, Italy, Turkey, and the Empires of the East" ought to be listened to by the workingmen of the Fourth Congressional District; but, before starting Kelley on his regenerative mission, we warn them that they will have to arm him with belligerent rights, otherwise the nations above mentioned will, on finding him closing their ports, bring him before the nearest police-justice and put him in the common jail, thus crowning the free-trade infamy and shutting the gates of mercy on mankind.

The price of silver in London has fallen to 50*d.* per ounce and in New York to $1 09 per ounce, 1,000 fine, or $0.981 per ounce, 900 fine, which is the standard for silver coin. This is the lowest price ever known. It is evident that the German Government have been steadily selling in London whenever the market would permit. As the so-called premium on gold in New York has also fallen during the week, under the influence of actual and expected Treasury disbursements of July gold interest, the difference between the paper currency furnished by the Treasury and the silver currency has widened. The paper dollar has advanced to 89⅛ cents gold; the proposed silver dollar (412.8 grains) would have been worth about 84⅓ cents. The gold or bullion value of the silver tokens has fallen to 79 cents to the dollar. The $10,000,000 Silver Relief Bill has not yet become a law, but bids fair to do so before another week has passed. The scarcity of small change will then be relieved for the time at least, as under this bill large amounts of subsidiary silver coin can be obtained in exchange for United States legal-tender notes, which are to be held for the redemption of fractional notes as the latter come in. The full effect of the heavy decline in the price of silver on the value of silver coins is not yet comprehended by the people of the countries where silver currency is used; so that it is yet possible to pass silver coins worth 79 to the dollar at 96 to 97, gold; accordingly, shipments continue—last week nearly $200,000 fractional silver coin having been shipped from here, principally to the West Indies and South America. There is, moreover, still a profit in sending the coin to California, where, as fractional parts of a gold dollar, it can be used at 95 to 96 cents, gold, to the dollar. A public movement, however, has been made in California to accept the coin at not above 90 cents to the dollar.

The commercial depression continues to be very severe in England, there being again a decrease in the imports and exports for the month of May, in the former of over nine per cent. and in the latter of over six per cent., compared with the corresponding month of last year, though the showing for the five months ending May 31 is more favorable. The same story comes from Germany and, indeed, from all parts of the Continent, but particularly from Germany, where all sorts of securities are just as low as they are here, and the number of bankruptcies almost as great, and all without as yet "touching bottom" or beginning "a healthy process of recuperation." Of course, the fear of war arising out of the Eastern complications has much to do with the continuance of the depression. Curiously, however, there is no demand anywhere over there for the issue of more paper-money to "lubricate the wheels of industry." Senator Jones's great silver speech has, we regret to say, been received with derision by the "money kings" of the Old World. The *Economist* says he talks like an auctioneer who has silver to sell, and "consequently will not admit that it can ever be plentiful or that it will ever come not to be required." But, it adds, "his statements are too exaggerated, his figures too hastily compiled, and his arguments too inaccurate to have any serious effect on European opinion." This unwillingness of the "coupon clippers" of Europe to discuss schemes for replenishing the poor man's wallet at a cheap rate is, however, fully understood on this side of the water.

The condition of the Eastern Question now seems to be this: that the revolution at Constantinople, combined with the opposition of England to any active pressure on the Porte, having led to the withholding of the proposed memorandum, has led also to the open or tacit abandonment by the Three Powers of all interference whatever, including all efforts to restrain Servia or Montenegro from participation in the struggle, and to the refusal of the insurgents to listen to any further talk of accommodation. The result is that Servia appears at this writing to be on the point of crossing the frontier with a considerable portion of one hundred thousand men, and we may any day hear of a collision. There can be little doubt that if this takes place Montenegro will move simultaneously, or soon after. But the news is very conflicting, and the Servian Government, which is just now pushed on by popular feeling against its own better judgment, may find means at the last moment of staving off action, particularly as there is every reason for believing that Austria and Germany are almost as reluctant as England to see the struggle assume larger proportions. All that the Turkish Government has done in the meantime is to proclaim an armistice of six weeks to enable the insurgents to come in and make their submission, and get the benefit of the reforms which are promised for the whole Empire, but they have refused to accept it, and continue their military operations—the Turkish troops, in the meantime, remaining strictly on the defensive. The new Government has, however, withdrawn, or takes no notice of, the special offers made to Bosnia and Herzegovina by the late Sultan. There is as yet no indication at Constantinople as to what the reforms are to be, and the murder of the two principal promoters of the late revolution has probably caused more or less confusion and uncertainty. The more a National Assembly is talked of, the less likely its formation seems to be; but a formal limitation of some kind on the civil list of the reigning sovereign does seem to be among the possibilities. In "the case," as we should say, submitted to the Sheikh-ul-Islam to procure his opinion whether the deposition of Abdul-Aziz would be lawful, one of the hypotheses was "the augmentation by the Sultan through personal expenses of the burdens of the nation beyond what it could support." Another was "his causing such disorder in spiritual and temporal affairs as to threaten the ruin of the Empire and of the Mussulman community." This last expression is worth noting, as throwing light on the meaning attached by the Softas to the word "reform."

THE SHAM OF CONVENTIONS.

IF a history of parties in the United States is ever written, one of its most curious chapters will be that containing an account of the rise and growth of the nominating convention and the manner in which it has gradually supplanted every other process of selecting candidates. It was unknown fifty years ago, and it is only one of several methods which have all been in use in this country, and within the memory of the generation yet on the stage, but to-day it is so much a part of the established order of things that few people ever think of the possibility of any other method. In theory, a convention of delegates from every part of the country, representing all its diverse interests, both material and moral, is the fairest and most genuinely democratic system that could be devised. Its introduction was, however, a part of the great Democratic revolution in the management of the Government which took place forty years ago, and which resulted in making most administrative and judicial officers elective, under the idea of increased responsibility, and in giving us rotation as an instrument of increased efficiency in the public service. Like the other contemporary changes, the substitution of the convention for the caucus, by which Presidential nominations had previously been made, appeared at first to secure a decided improvement. The caucus had been a secret body, composed of men already connected with the machinery of the Government, and therefore out of sympathy with the feelings of the public. Their action was likely to be determined by personal and private considerations rather than the public good. They were likely to put up a candidate whom the public cared nothing for, in order to prevent the election of a man they themselves did not like, or *vice versa*. The caucus was a hot-bed of intrigue, which was continually interfering with the honest expression of the desire of the majority. Unfortunately, it was not foreseen, when the convention system was introduced, that the other institutions which sprang up about the same time might have an important influence on it. In order to have a genuinely popular nominating body, the one important thing was to draw a rigid barrier between it and the political class, so that the latter should be relieved of all temptation to interfere in their own interest with the functions of the former. Instead of doing this, however, the very party which introduced the convention introduced the change which is gradually sapping the life of the convention, and turning it into an empty form.

Everybody understands now so well the close connection between such bodies as nominating conventions and the civil service that it is difficult to see why it should not have been predicted at the outset. At any rate, the process by which the patronage, first seized upon as a help to popular power by the Executive, has gradually but surely and inevitably passed out of his hands into those of Congress, or rather of a small knot of men in Congress, and is now used by them to keep themselves in power, is only too familiar to us; and the result of it is, that by a curious sort of revolution the convention has brought us back to almost all the evils of the old caucus which it was devised to remedy, combined with others which are a great deal worse than any one ever dreamt of the caucus producing. A national convention, as it now exists, is a broad burlesque of popular institutions, and consists of a series of carefully regulated shams, under cover of which the real work of nomination goes on. The first sham is the selection of delegates by the primary meetings, the delegates being, in theory, men selected by the voters to deliberate on the choice of a candidate who will represent the ideas of a political party, and, in fact, office-holders chosen by other office-holders to select a candidate who will help them to more offices. The second sham consists in the now recognized custom of putting forward in every important State several candidates whom nobody intends to vote for in the end. The third sham consists in the pretence of deliberation. If a convention were really a deliberative body, or capable of deliberative proceedings, it would meet in some place where argument and debate were possible. Instead of this, it gets the largest place of meeting it can find, and, after surrounding itself with a noisy and uncontrollable audience, it proceeds to business under circumstances which render any real debate or discussion impossible, and which make all the parliamentary forms followed sheer pretences. The selection of officers, the adoption of a platform, and action on committee's reports, are not the work of the convention, but of a small number of selected men, who do its work for it in absolute secresy and seclusion between the meetings. The final sham consists in the balloting. A real ballot for President in a genuinely popular body would be an interesting thing; but the practice of having sham candidates invariably makes all the early balloting in a convention a hollow mockery. Everybody knows that a large number of votes are only waiting a preconcerted signal to desert their ranks and unite on some new combination. The growing favor in which the practice of instructing delegates to vote as a "unit" is held, tends constantly to make the voting a greater and greater sham, because under it there is no external evidence of any change in the sentiments of a State in which a fierce internal dissension may all the while be raging, until suddenly, without a warning, its whole vote is changed from one candidate to another.

Of all those shams such a convention as that lately adjourned at Cincinnati or that which met on Tuesday at St. Louis is sure to give plentiful instances. The appearance at Cincinnati of seventy delegates from the leading State in the country to urge the nomination of one of the State senators ought to have meant a great deal, but as a matter of fact everybody at Cincinnati knew that the Conkling delegates had not been elected by the party at all, but by the office-holders who owed their place to Conkling, and that the real leaders in the party recognized the sham so thoroughly that they had not made any attempt to control the primaries, but gave public notice that they would not allow Mr. Conkling to be nominated—the result being that the name of New York's "favorite son" was presented to the Convention by a delegate who, in the same speech in which he descanted on his virtues, intimated in no very round-about language that, as he could not carry his own State, it was hardly worth while to nominate him. The "favorite-son" sham has been carried so far that the usual argument among shrewd people about any candidate who appears to be "developing strength" just before a convention, is that he cannot possibly carry the convention. The deliberative sham at Cincinnati consisted in a pretended debate over the platform and the admission of the Alabama delegation—the platform being really drawn up by a committee in secret caucus and swallowed by the Convention, and the merits of the Spencer and anti-Spencer case being settled without even a presentation of both sides to the Convention. The balloting sham was admirably illustrated at Cincinnati. In the first five ballots half the votes cast were given to candidates whom their supporters had over-night agreed to desert, and on the final ballot it was a mere chance whether Blaine or Hayes or Bristow would get the nomination; and this chance was determined partly by the shouting in the galleries and partly by bargains and understandings arrived at the night before between the leaders of parties supposed to be hostile to each other. The "unit" sham has not got such a complete hold of the Republican as it has of the Democratic party, and so at Cincinnati the ludicrous mistake of deciding that a delegate in a popular convention could not vote as he pleased, but had to have his vote cast for him, by some one else, in favor of some candidate he did not desire to have nominated, was not made. But the rule is growing in favor every year, and in most of the States is generally already acted upon, for the simple reason that it gives immense opportunities for private caucusing and wire-pulling as the preliminaries to the brilliant dramatic *coups* which are the life and soul of the balloting.

To sum up the whole thing, the convention, which is ostensibly managed by open debate, by "comparison of views," and honest voting, is really managed by secret caucuses and conferences of a few leaders, while the voting and debate are either pure forms, gone through with to ratify a previous private decision, or else determined by the accidental whims and fancies of a herd of delegates under the influence of some momentary feeling. The result is arrived at in much the same way that a horse-race would be if the owners who

made the entries were to arrange with the jockeys privately in what order the horses should run the first three-quarters of the race, and leave the finish to be decided by chance, the cheers of the crowd, and the fancy of the riders. So far as this result is produced by secret cabals and intrigues, it is obvious that there is little to choose between a convention and an old-fashioned caucus as a means of nominating candidates, and it is hardly open to doubt that if the caucus system had been still in existence, and the nominations this year had come from it instead of from a convention, the leading candidates would still have been Morton, Conkling, Blaine, and Bristow, and that the nominee of the caucus would have been a compromise candidate like Hayes.

Some of these evils are undoubtedly inevitable, but not all of them. When we come to examine what it is that makes our machinery for selecting candidates such a farce, we find it agreed on all hands that the root of the trouble is in the "machine," or, in other words, in the control which the political class has acquired over the process by which the convention is produced. This, indeed, it is which gives rise to the most farcical phase of the convention system—the practice of supplementing and reinforcing its labors by the outside pressure of an enormous body of self-constituted delegates. If a convention were really what it pretends to be, all outside interests would obtain through the primaries representation in the convention; but, knowing the hopelessness of this, the outsiders now allow the machine to turn out its delegations without opposition, and then organize themselves for the purpose of capping the power thus obtained. A more preposterous result to be worked out by an institution designed to give effect solely to the popular will, it is difficult to conceive, and it is due of course to the enormous and arbitrary power which the administrative system gives the office-holders. To do away with it, a reform of the civil service is the first thing necessary. We do not by any means mean to imply that taking the civil service out of politics would rid us of political intrigue in the nomination of candidates, but it would give nominating conventions what they now so sadly want—reality. They would no longer be composed of men who themselves know that they represent nothing but their own interests, but of delegates really selected by a popular process to represent popular feeling; and this of itself would give a substance and dignity to their proceedings very different from the theatrical excitement under which they now go to work.

THE FEW NECESSARY FIRST STEPS TO CIVIL-SERVICE REFORM.

THERE was an indistinct notion on the part of some of the advocates of Mr. Bristow's candidacy that the Convention might be induced to choose him confessedly as the representative of reform in the civil service. The journey to Cincinnati no doubt cured them of that idea. Mr. Bristow was plainly very objectionable to the body of the delegates, and his nomination was only possible because he had been committed to no special programme of reform, because his attitude of opposition to their system was rather general than definite and particular. Had Mr. Bristow been plainly committed to what every friend of civil-service reform knows to be necessary—the absolute repression of all political activity on the part of the employés of the Government, his name would not have been considered by the delegates. Can we expect men—and such men as they—to vote away their own powers, to consent to the breaking-up of a system by which they not only rule but live? For legislation to be made in the interest of mice we do not go to cats. At the recent Convention, the platform and the floor were filled with postmasters, collectors, and supervisors; besides Federal office-holders, there were assessors, commissioners of charities, State and town officers in profusion. It was these people and their friends who were the secretaries and vice-presidents of the Convention and had most to do in controlling it. It could have been scarcely worth while to ask that they should willingly put an end to their own supremacy. All that the reformers could hope was that a man should be nominated who would rule for the people rather than for the Convention—who, relying upon the support of the country, would endeavor to set up a sensible and permanent civil service.

One of the first steps taken by the reforming Government must be to forbid all political activity on the part of office-holders. This reform is necessary both to improve the service and to wrest from the politicians the power of thwarting the will of the people. The office-holder will, of course, have his vote, though even that privilege is denied him in Great Britain. But beyond the simple act of voting, any connection whatever with the working of politics should be punished by dismissal. And the rule must be as rigidly enforced against those who support the reformers as it is now against those who oppose it. The outcry which may follow against "a tyrannical interference with the rights of citizens" will produce little effect. Even should the people not be able to see that no man is compelled against his will to accept an office, it is not in the nature of things that they should ever be profoundly touched with the wrongs of office-holders. The effect of this provision, if firmly carried out, will soon be felt. If the Government is in earnest, it will be hard for office-holders to evade it. To follow the business of politics secretly the office-holder will find a difficult undertaking. A little sharp dealing with a few offenders will induce him to be very wary in his style of procedure; and as he will be assured of permanence in his position during his proper performance of its duties, and assured also of immediate dismissal should he begin to tamper with caucuses and primary meetings, he will probably find it convenient and easy to become the quiet servant of society we wish to see him. If that should not be his disposition, it will not be hard to find one to take his place who will not insist upon ruling the country which feeds him. The country, no doubt, would generally support action of this sort on the part of its Government; a successful resistance or evasion of it need not be feared from the office-holder. But the resistance from the more powerful class of politicians will be passionate and formidable.

The reforming Government, in entering upon its work, will find the offices largely filled by men who have grown up under the state of things to which it desires to put an end. So long as these men acquiesce in the new order, perform properly the labor for which they are paid, and are correct in their transactions and deportment, the most of them will, no doubt, be retained. But it will be the duty of the Government to fill vacancies with men whose associations are not political. When a vacancy occurs in some remote collectorship, it will not usually be easy for the President to name some good man of the neighborhood for the office. Were our political affairs in the condition they were meant to be in by the framers of the Government, the President might go to the member of Congress for advice. But the member of Congress is now the one man to whom recourse cannot be had, because he would be sure to recommend some political friend and supporter. The necessity of ignoring Congressional advice in selecting officers will compel the establishment of some system which will do the same kind of work as is now done by the British Civil-Service Commissioners; and the construction of such a system will call for all the skill the Government may command. The system will be strange to our habits; to set it up and give it control over appointments through a vast area like our own will, no doubt, be a harder matter than in a little, compact country like England. But the work may be assisted by allying the choosing and examining power as much as possible with the ordinary conduct of the Government. A sensible Executive will not make the mistake of setting up novel concerns to attract to themselves all the rage and contempt of the Opposition, and to place the new ideas in an attitude of weakness before the country. The choosing power may be so imbedded in the Departments among the other functions of the Government as to be not separately ostensible to the public, though entirely effective.

It is fortunate that the Government will be able to go of itself a good way in the right direction, for Congress will not legislate in favor of the new order of things until compelled to do so by public sentiment. The President will no sooner enter upon the line of conduct just marked out before he will find himself face to face with

the Senate, Congress, and the power of the politicians. If he be of a peace-loving order of mind, and prefer quiet to doing his duty, then indeed there will be no more hope of obtaining civil-service reform until the next election. The Senate will oppose him with its Tenure-of-office Act. But this may be declared unconstitutional, or the Senate may not be able to enforce it, for it is scarcely possible that the Senate can lay down for itself a course of opposition and adhere to it in the face of the expressed will of the people. The inevitable danger will be the constant pressure upon the President of the friends of the older order. It will be very difficult to resist the continuous juxtaposition of senators, generals, judges, and the like. Washington society is in their hands. It is they he will meet at dinner. Their wives and daughters will be the intimates of his own family. They will surround him in flocks; their voice will fill his ears when that of the country and of the press is silent. One great use of an immediate, sharp, and determined effort on the part of the President will be to interrupt the relapse of the public into its accustomed sleep of apathy and unconcern. This apathy of the public and the numbness which besets the press are natural, indeed, reasonable enough, because, under our form of government, at times other than just before a general election it is scarcely possible that anything beyond the general instruction of the people can be accomplished. If the people and the press should feel that the reforming Government was really in earnest and needed their support, they would no doubt be able to express themselves to some purpose.

The hope is that the new President may address himself to his task while he yet has the assistance of that power which inheres in a "new broom." He must at once make haste to commit himself. Should he think to be "wise," to defer and temporize, his task will become greatly harder. He will be tempted to be good-natured and obliging; knowing how small a claim his own services have given him to the position, he will fear to magnify his office. Pleased, perhaps, with the flattery of men of greater power than he has hitherto wielded, it will be only natural that he should wish to postpone the fight. But, should he enter upon the work of reform and accomplish it (and if he resolutely sacrifices to the undertaking the inducements of comfort and ambition, he will accomplish it), his name will be remembered by the side of the greatest of our statesmen. Even in the midst of the work, he will be assisted by the pleasure which men take in contemplating purity of character, by the power of rectitude of purpose to attract to itself the attention and the confidence of the country. The spectacle of his predecessor retiring from a position which he has only used for the destruction of his own reputation should cause him to reflect that wisdom may not consist in sloth, content, the applause of favorites, and a hand-to-mouth way of living from day to day.

The few first steps to be taken in the way of reform are simple enough. Will they be taken? The platform of the Convention, of course, assures us of nothing. In the present condition of the public mind, it seems almost an impertinence that the country should ask of the candidate in what way he intends to rule it. But since, in the nature of things, nothing can be expected from the office-holding and office-seeking conventions, we must await specific promises from the candidates. Meantime, in regard to one of them, we herewith append an extract from a private letter which we have received from a friend of Mr. Hayes's in whose judgment we have great confidence:

"I have known Hayes for more than twenty years. I believe I know all about his work and his way of doing it, his opinions and how he came to them, and where they lead him. As everybody criticises his friends, I have made an estimate of his knowledge and abilities.

"In the first place, he is not a 'self-made man,' but was regularly educated, as that phrase goes in this country. He never had to get over any objection to learning, and has not picked up his notions of finance and the rest of political economy by observing the crops from the windows of a rail-car like Boutwell. He believes in history and experience, and does not, like Morton, hold that old principles are inapplicable to new countries. He believes in study, and for more than thirty years has studied public affairs about as carefully and quite as intelligently as the men who were carrying them on. In a word, he is not a new man in national politics, if people mean by 'new' to imply that a man lacks familiarity with the subject. To illustrate what I mean: he knows every bit as much about our true politics (not about running a party) as Mr. Blaine or Mr. Morton, and his opinion is worth twice as much as that of either of them. As to one of them, I think I put it very mildly. I should have supported Mr. Bristow most cordially, but, knowing both men well, I have to say that Hayes is in every respect his equal. He is certainly Bristow's equal intellectually, and has much larger knowledge and more experience.

"He is not a 'magnetic' man; he is not audacious; he is not a 'leader'; he does not impress one as a great force, and all that. But when he has a duty to perform he first proceeds to throw aside all nonsense, and, with a peculiar singleness and simplicity, sees just what the matter is. After that the devil can't scare him. I never knew a man who listened with a franker willingness to learn, and I have known very few men who were so sure to end with an opinion of their own which nothing could shake. I observe that the little people of the *Herald* and *World* speak of him as a 'colorless' candidate. Well, his color is not loud; but what they actually mean is nonsense. They had better encounter him some time when he has a duty to perform, and try to turn him aside, and then tell us whether he has color. I have seen him tried, and noticed that his color was a good deal like steel.

"Undoubtedly, he is a party man. It would take much more to drive him from the Republican party than would suffice for Schurz; for he holds that the party is something else than its leaders, and that it can learn. But my private talks with him make me feel sure that he is not, in the least degree, a *partisan*. He is loyal to the Republican party simply because he really believes it means something, not because it is *his* party.

"I need say nothing about his honesty; you've seen that mentioned in every paper that names him, though perhaps I might just as well add that he is just absolute integrity. My main purpose was to speak of his capabilities, since that must be the chief point of curiosity just now. For whatever it is worth, my clear conviction is that he is a very able man, very thoroughly informed, of a good deal of culture, of rare soundness of judgment, and of a courageous, high character."

THE INTERNATIONAL EXHIBITION.—VI.

AUSTRIAN ART.

PHILADELPHIA, June 24, 1876.

THE Austrian contribution is at once redeemed from mediocrity by the striking works of Hans Makart. The "Catarina Cornaro," the "Abundance of the Land," and "Abundance of the Sea," are works which by their essential pageantry and decorative character would do honor to any grand exhibition. One would say, too, that they do not find their true place until some vast world's palace is built for them, and an international concourse of spectators is assembled before them. Imposing in their merits and their faults, they need a festival or a commemorative occasion to shine properly; in ordinary galleries, they seem portentously out of scale. They are "tableaux," and as clear of a moral or a syllogism as any grand group among the clouds; and by their serene *aloofness* from any expression that the literary critic can comprehend they set this sort of observer securely off the track at once, never to find his home or his lodestar while he remains under their disturbance. The pair called "Abundantia" are youthful works, and full of young extravagance; but there is no poem of Keats's that shows a more secure promise. Makart, born in 1840 at Salzburg, passed his youth at the Vienna Academy of Fine Arts, and afterwards took the tinge of the Piloty school at Munich, passing some intercalary time meanwhile at Paris and in his native place.

The "Abundance" pair are long sheets of color, stretching like tapestries across the measured space they were intended to fill in a nobleman's banquet-room. Chains of colossal figures, without composition or coherence, yet submitting in a capricious way to the intended sentiment, entangle themselves from side to side of the enormous extent. In the landscape, it is Plenty seated under her dais-canopy, served by hunters who bring up their prey, vintners who dance forward with their tipsy load, and harvesters who garner the corn. In the marine subject, it is the opulence of treasure from the sea, the fishes and monsters of the deep, ocean nymphs playing at the feet of the superb Amphitrite, infants of the water wondering to find themselves upon the beach, and Tritons pouring pearls "while on land they wither and adore." These subjects are printed on a ground of gold, which represents no effect in nature, but which astonishes the eye among the heightened colors of the whole no more than some rather flagrant sunset among the trees. Here and there the artist, with audacity and skill, wipes off a desultory patrern in the paint with his fingers, and makes the gold tell as a texture in a drapery or a garland. The harmony of the pictures with the supposed design of architecture around them is secured with entire success, yet without the usual recourse to flatness or paleness. The whole key-board of color is boldly struck, and the richest chords fearlessly played, yet the work is not too solid in effect. Although dark and gorgeous, the canvases are not felt to hollow out an excavation in the walls where they are hung; rather, by a sort of decorative breadth and relievo, by a crowded continuity of forms, and by carefully-

soft transitions from the deeper tones to the higher, they are felt to rest upon the architecture as a clothing, and to warm it as velvets and tissues would do. The occasional lapses from exact drawing are obvious enough, but they somehow do not offend much. Never was a style of art that had the privilege more completely to beguile away the critical mood. A rush of teeming composition is felt, the impetuousness of a hot sketch, the confident carelessness of a good draughtsman in his royal mood; and the eye can scarcely pause to fix a defective posture where all seems to be in motion. This is the very art of Rubens, to lead the spectator off from the relish of rule-and-line analysis. Yet the painter, though resembling Rubens in his *brio*, is really very little like Rubens. Through all his hurry, he betrays an inclination to calm and laziness, like the Venetians. The silver serenity of Veronese seems to be his ideal, and it hangs always above his compositions, just out of reach, while the artist is busy with the Venetian *chercheurs*, the Palmas and Giorgiones and Tintorettos. The most serious error of Makart's, and that which shows him a nineteenth-century regeneration rather than an authentic contemporary of the colorists, is a want of consistency. The light is of a different tinge on different parts of his composition; or a foot or a hand of a particular figure will escape in shadow from the drapery, and not be of the same gilded or argentine complexion as the controlling portion of the form. These lapses show here and there that his color-dream does not steep him completely enough. The faces are what would quickliest dissever his claimed parentage with the Venetians. They are the long faces, with projecting jaws, of Kaulbach's female figures—sometimes blending with Austrian lips and high-bridged Marie-Antoinette noses; they are different from the types of any of the old masters, yet they seem sufficiently imprinted with majesty to hang an allegory upon.

Makart exhibited in 1867 at Paris with his fellow-pupils of Munich, and was then criticised as a Bavarian; and one of his three contributions found favor even with Madelène, the dire pessimist of the *Paris Guide*. "I am quite disposed to pardon M. Makart his 'Undines,' in recollecting that large, soft color-master's sketch called 'Centaurs carrying off Women.'" It is "large, *grasses* sketches of a color-master" that Makart paints still, and his "Catarina Cornaro" is but little more solid than his "Abundantia." The widowed daughter of Venice, returning to be a Venetian republican again, with the island-empire as her gift, is represented throned on a quay, and receiving the homage of the powers of sea and land. It is not very strict history. The heroine is, once more, an Austrian beauty, with lovely elongated features, telling of experience, widowhood, the fatigue of empire, and the peace of reassumed mediocrity. A statesman like a Venetian doge is at her right hand, beautiful nymphs offer tributes of flowers, musicians blare through golden trumpets, and masts and sails are printed upon the sky in fantastic designs, as they print themselves in the pageants of Gentile Bellini. Through it all we find that the political dignity of Cyprus ex-queens and Venetian senators is very little in the artist's mind, and their forms and dresses very prominently so. The intense blue of the gondola draperies, and the cloth-of-gold of Catarina's robe, are more important than any manifestation of character. Impertinent or magnified accessories are introduced at will, their apology being their shape and color. "We poor curs of painters," said Veronese before the Council which summoned him for introducing lap-dogs into his sacred subjects, "put in the prettiest works of God where we think they look best." In the "Abundantia" the most faultless piece of painting is a bunch of dried maize, where the intermixed bead-work of black and yellow grains, the twisting ropes of heavy vegetable pearls and tossing leaves of the noble plant, make an unapproachable piece of still-life. The function of this man of genius is that of a decorator: the same, primarily, was the function of Tintoretto, Veronese, and other so-called religious painters. But the modern has not the advantage of living in an atmosphere of unquestioned clerical tradition, and his works thus lose the privilege of going down to posterity enhanced by the attachment of man's deepest faith.

Other Austrians who should have exhibited, Romako, Muncacsy, Matejiko (painter of the great "Diet of 1773 at Warsaw"), must be examined in private collections or the galleries of importers. Very little is known here of the Academy of Vienna, whose professors seem as destitute of parentage as so many Melchizedeks, while the pupils turned out from their retreat frequently astonish the world by their originality and strength. Friedrich Amerling, connected with the Vienna Academy, and contributor of some fine portraits to the Paris Exposition, sends a "Jurisconsult," evidently a work of character-interpretation, and clothed in effective and finely studied official garments. Gustav Gaul, whose portrait of the tenor Roger we recollect distinctly through the lapse of nine years, contributes a not less striking study under the title of "Satanella." August Schaeffer, whose "Hungarian Forest" was deemed worthy of purchase by the technical judgment of Professor Morse, contributes a quiet work, full of grace and sentiment, "November Evening in the Prater." Adolph Obermüller, also of Vienna, but enamored of Tyrolese and mountainous subjects, sends an ambitious and theatrical, well-colored study, which represents a less hopeful phase of Austrian art, "A Storm or Föhnwind on the Lake of Constance."

E. S.

WALLON'S JOAN OF ARC.

PARIS, June 2, 1876.

M. WALLON has been sometimes called the father of the Republic; he has given his name to our present Constitution, though I fancy that M. Laboulaye had more to do with the framing of its articles than he had. The Republic has shown, with regard to M. Wallon, that it has no gratitude; it is the old story: "Sic vos non vobis." M. Wallon has vanished out of sight; he is nowhere; or, rather, he has returned to his quiet functions of perpetual secretary of the Academy of Inscriptions and Belles-lettres. He has published a book on Joan of Arc, with beautiful illustrations, and this book has been blessed by the Pope himself.

Joan of Arc is better made to tempt a poet than a historian; she is one of those figures which, so to speak, defy history; she is unaccountable—a Catholic would say, miraculous. There is an equestrian statue of Joan of Arc on the little Place de Rivoli, opposite the Tuileries. It is not generally admired, but in my opinion it has much beauty. The horse is but a poor creature, but the head of Joan has a nobility of expression, a *je ne sais quoi*, which speaks to my imagination. It was the fashion at one time to cover the pedestal of the young heroine with crowns of immortelles; the memories of the war were still alive. Now, the statue is abandoned, as well as the statue of Strasbourg on the Place de la Concorde, but I have seldom passed before it without seeing some Frenchman looking at it with a sad interest. The uses of art are great. Fancy a poor little Breton soldier coming from his *lande:* "Who is the woman on horseback?" he says to his clever comrade in the regiment who comes from the South. "Don't you know?"—and then comes a story of the heroine of Vaucouleurs which I should like to hear even better than the reasonings of M. Wallon. For, after all, facts—hard facts—are nothing when they have ceased to exist; they can only exist then in the imagination of men.

The historical sources in regard to Joan of Arc are all well known by this time; there is the 'Journal of the Siege of Orléans' and the chronicles of the fifteenth century. Most of the authentic documents have been well analyzed in Quicherat's great work, 'Procès de Condamnation et de Réhabilitation de Jeanne d'Arc.' Strange to say, Voltaire, who wrote the famous 'Pucelle,' a work which sullies his memory and the memory of a time which applauded it, did justice to Joan of Arc in his serious 'Essai sur les Mœurs.' Though he speaks lightly of her youth, of her audacious attempt, he cannot help being moved by her simplicity and her courage. "This heroine," he says, "worthy of the miracle which she feigned, was judged in Rouen by Cauchon, Bishop of Beauvais," etc. He speaks of her answers before the tribunal as "worthy of being eternally famous." The devotion to the memory of Joan of Arc is a modern phenomenon; the old historians do not speak of her as we do now. Consult the books of Robert Gaguin, of Paul Emile, of Polydore Vergil, and of many others, and you will find everywhere a tone of moderate enthusiasm. I have before me, for instance, a book which was written in 1571 by Bernard de Girard, Seigneur du Haillan, secretary of the Duke of Anjou, under the title, 'De l'Estat et Succez des Affaires de France.' He tells the story of Joan's arrival at the French court, and adds:

"The miracle of this girl, whether it was true or supposed, elevated the hearts of the King, of the nobles, and of the people; such is the force of religion and often of superstition. For it is said that this Joan was the mistress of John, Bastard of Orleans—others say, of the Sire de Baudricourt, Marshal of France; which men, being cunning and wise, seeing the King so astounded that he did not know what to do or say, and the people so discouraged by continual wars that they could no longer excite its hope, bethought themselves to employ a miracle, made of a false religion—the thing which, of all others, most excites the human mind; and the time was quite fit for the reception of such superstitions, as the people were ruined and unhappy. Therefore, these noblemen during two or three months instructed her to make answers to the questions which might be put to her by the King or by themselves in presence of the King; and in order that she should recognize the King, they showed her every day his portrait. On the fixed day when she was to see the King they were present. The first who asked her what she wished were Bastard and Baudricourt; she said that she wished to speak to the King. They presented to her another of the gentlemen who were present, saying that he was the King; but she, well instructed of what she was to do, said that he was not the King, and that the

King was concealed in the *ruelle* of the bed (where he in fact was), and, going in that direction, she found him and told him what had been agreed."

This curious passage of a very respectable historian shows that what may be called the legend of Joan of Arc was not formed in a day. There is a general belief still in existence that Joan thought her mission ended after she had forced the English to abandon the siege of Orléans and had seen the young King crowned at Reims. This is a mistake: she had a very distinct view of what she considered her divine mission. After having taken the King to Reims, she was anxious to bring him to Paris, which was in the hands of the English. She told John of Alençon in confidence that God had imposed four tasks upon her: the raising the siege of Orléans; the coronation of the King; the total expulsion of the English; the deliverance of the Duke Charles, who had been made a prisoner at Agincourt. Why was she stopped in her career after the wonderful success she had achieved before Orléans? It is difficult to explain it; all the towns of Champagne and of Picardy were already in insurrection against the English. The King, unfortunately, was of a very indifferent and lazy nature; he seems not to have had any distinct idea of his own rights; he was no patriot; the Duke of Bedford reproached him in a letter which he wrote him for making use, in order to deceive the poor people of France, of "a disorderly and ill-famed woman." The King, however, made a faint attempt to retake Paris. Joan established herself at St. Denis. She fought bravely as usual, but she was unfortunately wounded; and the sight of her wound perhaps shook the belief of the army in her supernatural power. The next day, the King ordered the retreat. The Duke of Burgundy, who had been wavering for some time, abandoned the cause of the French King and joined the English army before Compiègne. Joan now determined to save Compiègne; but the King remained quietly at Mehun; he tried to console Joan by giving her letters of nobility, with an escutcheon which bore a sword and two fleurs-de-lis. Joan left the court and succeeded in entering Compiègne. She invited the inhabitants to make a sortie; in this sortie she fought like a man, but remaining too late before the walls, till the drawbridge was lifted, she was made a prisoner.

The rest is well known: how Bedford sang a *Te Deum* in Paris, and how she was finally given over to the jurisdiction of the ex-Bishop of Beauvais, Pierre Cauchon, who had become Bishop of Rouen. The Count of Luxembourg, whose prisoner she was, hesitated to give her up. He was a needy prince, and finally sold her for ten thousand livres. From Beaurevoir, near Cambrai, she was therefore transferred to Crotoy in Normandy, and afterwards to the castle of Rouen, where she was treated with the greatest cruelty. Cauchon was the creature of the English, and it was the interest of Bedford to give as much *éclat* as possible to the trial of Joan. Six famous theologians were sent from Paris to Rouen, and became the accomplices of Bishop Cauchon. The interrogatories of Joan will always remain among the most extraordinary historical documents. The duel between craft and simplicity, between cunning and innocence, cannot find a more dramatic expression. When Cauchon, in order to try her, engages her to recite the *Pater*—"Willingly," says Joan, "if you are willing to hear me in confession." "Take care, Bishop," says she in one of her sixteen interrogatories—"take care; you declare yourself my judge, you assume a heavy task. Take heed what you do, for, in truth, I am sent by God, and I advise you of the great danger in which you are placed." Joan, in her interrogatories, confesses that she has always heard *voices*, which have dictated her actions. Once she was asked: "Are you in a state of grace?"—a most dangerous question, as, in case she said no, it was proved that she could not be in communication with the powers of heaven nor hear the saints; and if she said yes, she became guilty of the most audacious pride. Joan quietly answered: "If I am not in a state of grace, let God place me in it; if I am, let him maintain me in it."

The trial of Joan is a most pathetic succession of scenes. She remained always faithful to herself; she seems perfectly natural, sincere; there is nothing of the charlatan in her. When it was announced to her that she would be burned, she did not try to conceal her fears: "Alas! alas! must I be so treated? Must my body, which was never corrupted, be now consumed and destroyed?" M. Wallon shows very conclusively that Joan was abandoned by all those who ought to have protected her. The Court of France was shamefully ungrateful to the poor heroine. Not only was no effort made to save her, but her memory was given up, her services were forgotten. We do not like to be saved, especially when the saviour is of very humble origin. It required more moral courage than was possessed by the feminine King of the time to recognize the greatness of the shepherdess of the Vosges. The people had a keener appreciation of the truth. The extraordinary destiny of Joan could not help impressing itself on the imagination of the soldiers, the peasants; she assumed rapidly the proportions of a saint. Charles VII. was soon forced by public opinion to order an inquest on the trial of Joan; the family of Joan herself asked for a revision of it. The rehabilitation of Joan, who had been condemned as a sorceress, was pronounced on the 7th of July, 1456, by an ecclesiastical tribunal composed of the Archbishop of Reims, of the Bishop of Coutances and of Paris, and of the Great Inquisitor Bréhal. Expiatory processions took place in Rouen, in Orléans; and in the latter place a monument was erected to Joan. This monument was demolished during the French Revolution, but it has since been replaced by another, which is the object of great veneration.

Physiologists have tried to explain Joan of Arc by the phenomenon called hallucination. It seems very absurd to doubt her sincerity; she was always ready to risk, and she finally gave, her life for what she considered her mission; she did hear "voices," which ordered her to save the King and France; she had "apparitions." Who can measure the power of the imagination and the power of the senses? Hers was a simple soul, religious, ecstatic, given to contemplation, nursed in solitude. She became the instinctive and heroic exponent of a national thought, at a time when king and nobles thought more of themselves than of an ideal France. She always makes me think of the daughter of the architect of the Cathedral of Strasbourg, who was a somnambulist, and used to walk at night over the high scaffolds and inspect the progress of her father's work. The legend says that one night she was struck by lightning while she was boldly making her unconscious round; she fell to the ground, and expired without waking up. Poor Joan was not so happy; she died in the flames, her eyes fixed on an image of Christ on the cross.

Correspondence.

INJUSTICE TO COL. INGERSOLL.

To the Editor of The Nation:

Sir: You do Mr. Ingersoll a very great injustice in your letter from Cincinnati in the *Nation* of June 22. At first I thought some one must be guilty of deliberate slander; but I can see how the mistake came to be made.

Mr. Ingersoll holds no office, and never has held any except that of Attorney-General of Illinois. Although a great deal of highwine is distilled in his town—Peoria—the Government concedes that the business is honestly conducted, thanks to the integrity and efficiency of the officer in charge. There is not a man of more scrupulous honesty on earth than Robert G. Ingersoll. In private life his record is without reproach. A strong Republican, although a free-trader, and an ardent Positivist, he has the full confidence and admiration of all who know him, whatever their politics or religion.

Evidently your correspondent mistook something which he heard about a distinguished client of Mr. Ingersoll's for a remark applied to the Attorney himself. Col. D. W. Munro, *late* Supervisor of Internal Revenue for Illinois, Wisconsin, and Michigan, was indicted in three States, and it has often been said that "three penitentiaries were hungry for him." His counsel is Mr. Ingersoll. One indictment has been tried; the accused was acquitted. It is easy to see how the client and his lawyer might be confused in the mind of one unacquainted with both.

Believing that the *Nation* would do no intentional injustice, I ask room for this correction. F. G.

Chicago, Ill., June 24, 1876.

PERSONAL INJURY BY NEWSPAPER ATTACKS.

To the Editor of The Nation:

Sir: Will you allow me a few remarks on your editorial allusion last week to Mr. E. P. Smith, late Indian Commissioner?

It is very natural that a journalist should think few men are permanently injured by unjust newspaper attacks. The people who are wounded or wrongfully treated have no chance to expose their wrongs in public. To have a controversy with a powerful journal is understood now to be a losing thing. A man who is abused has nothing to do but keep quiet; even a suit for libel is utterly useless. The only protection of an individual against the newspaper is in time and experience justifying his character. We believe Mr. Smith is a case in point. He was first attacked by a very narrow-minded and bigoted member of the old Indian Commission, and the case was thoroughly tried in Minnesota. The trial not only resulted in his entire acquittal, but showed that there was not even a reasonable basis for an accusation. Prof. Marsh made

another assault on the whole Indian Department, and we do not say but that it was well deserved, in which attack Mr. Smith was involved. The committee to whom the accusations were referred, after a laborious investigation, reported that there was not a shadow resting on Mr. Smith's personal integrity, but that he did not show "the astuteness, vigor, and decision" necessary in that position. Even the Red Cloud Agent, who was especially attacked, was found to be incompetent rather than corrupt, and was reported to have retired from his agency poorer than he entered it. Two cases of decided pecuniary loss to the Government, and those not of large amount, were found in an administration disbursing more than three millions of dollars, and over a very great extent of country.

Now, we are quite ready to admit that in so large an administration Mr. Smith may have appointed here and there an incompetent agent, and that the old abuses and corruption of the Indian management had not been entirely rooted out; but we maintain, from much personal study and observation of the Indian administration, that Mr. Smith had made very great reforms, and, so far as he himself is concerned, had conducted his office with the highest purity and integrity. His friends all know him now to be as poor as when he entered the office, and, from the experience of more than twenty years with him in various offices and duties, they would trust anything to his integrity. They claim that nothing is proved against him, and that it is a cruel injustice to allude to him, as you do in your columns, as a detected peculator, or as one only righteously treated by the attacks of the press. The very responsible association, the American Missionary Society, which employed him for years before he entered the Indian Bureau, shows its confidence in his character by sending him on a responsible mission to the missionary stations on the coast of Africa.

Amid these indiscriminate assaults on the Indian Bureau, the only one with means enough to reply to them in the courts was a contractor, Mr. A. H. Wilder, from Minnesota. I know nothing about the merits of his case. Mr. Wilder had business with Mr. Smith in the beef contracts for the Red Cloud Agency, and other contracts. He brought a suit for libel against Mr. Welsh, of the Indian Commission, who had led the newspaper attacks against himself and Mr. Smith. After a long litigation, the jury entirely acquitted Mr. Wilder of any charge of peculation or fraud in his dealing with the Indian agencies, but they did not sustain the charge of libel, on the ground that Mr. Welsh's motive did not appear to be personal vindictiveness. This suit is said to have cost Mr. Wilder over $5,000, and one can well understand why Mr. Smith did not try the same remedy.

D.

New York, June 12, 1876.

[The report of the Commission employed last year to investigate the affairs of the Indian Department we consider of little weight or authority, and the Commission itself as only valuable for having taken evidence which each enquirer must read and weigh for himself. We base this opinion on the exposure we have had to make in these columns (No. 548) of the conduct of Mr. Thomas C. Fletcher, the chairman of the Commission, during the investigation—conduct which showed that person to be wanting in common decency, to say nothing of sense of justice. We know of nothing against the other three members of the Commission, but we are forced to the conclusion, with the knowledge we have of the chairman's state of mind, that the enquiry was not conducted by any of them in a judicial spirit. We were still further put on our guard by the course of Mr. E. P. Smith in writing a letter of instructions to the Commission (he being one of the persons to be investigated), giving them a slighting account of Professor Marsh's charges, insinuating that he (Marsh) might refuse to present them in any definite shape, and warning the Commissioners against the misrepresentations of "partisans," and "of the difficulty of discovering truth amid conflicting statements and allegations." This was a most improper letter, and of itself justifies the conclusion that Mr. Smith is not an "upright man." Our correspondent is in error in saying that we have anywhere spoken of him as "a detected peculator." There are all sorts of want of uprightness besides peculation, although it is now the fashion to treat every man as spotless as long as he has not been indicted by the Grand Jury. This letter of Mr. Smith's was the more improper because it came close on one by his chief, Mr. Delano, in which, when calling on the Board of Indian Commissioners to name a Commission, he spoke of Mr. Marsh with consummate assurance as "a Mr. Marsh"—that is, as an obscure and presumably impudent person, of whom it was condescension in a man like Delano to take notice. Finally, let us add, the appointment by the Indian Board of the Commission to investigate their own agents, whose credit they were interested in the strongest way in maintaining before the world, Mr. Marsh being unrepresented in the choice of the tribunal, was an improper proceeding. The Commission, it is true, reports that "they have encountered no transaction which casts the least shadow upon Mr. Smith's personal or official integrity"; but we must take leave for ourselves to refuse to accept any definition of "personal or official integrity" from a paper whose chief signer is Mr. Thomas C. Fletcher, and must be allowed to put our own construction on the said Fletcher's admission that he and his associates have discovered acts of Mr. Smith's "which exhibit a want of due diligence, and liability to be deceived and imposed on by cunning and unprincipled men." We are afraid the author of the "Pi-ute Letters" is himself easily led astray by the wicked, and knows how it is. We also find Mr. Smith guilty of want of uprightness in inserting in the statement read by him to the Commission, after the evidence had been closed and the Commission had broken up, a charge of a serious character against Mr. Marsh, and in having it printed in the official report as if read in Marsh's presence. The passage is to be found on page 660 of the report. Mr. Marsh, on seeing the volume, called Mr. Fletcher's attention to this interpolation, on which this gentleman printed Mr. Marsh's letter, and an answer of a somewhat abusive and evasive character from Mr. Smith, in an appendix, without giving Mr. Marsh any opportunity for reply. That Mr. Fletcher should not have perceived the objections to this performance is not surprising, but that Mr. Smith, after his sad experience of "cunning and unprincipled men," should not have seen it, we trust will puzzle our correspondent.—Ed. Nation.]

MASSACHUSETTS ART-INSTRUCTION.

To the Editor of The Nation:

Sir: In discussing the above subject, it seems to me very essential that misstatements of facts should be avoided, otherwise the opinions formed on their consideration will be equally wrong. It may not be a matter of much consequence what the opinions of any art-student may be concerning a school, but it is of consequence to all those who wish to have some opinion on the subject that they should not be misled as to their data.

In the letter signed "Art-Student," and published May 25, all the statements of facts are opposed to the truth, and would, therefore, if uncontradicted, create a wrong impression. May I ask you, therefore, in justice to the School which has been attacked (the Massachusetts Normal Art-School) and to myself, its equally maligned Director, to publish this reply?

First, as to facts. Your correspondent says: "In the regular reports [of the Boston School and Drawing Committee] are published the names of teachers who fail to comply with the rules, and prepare for special examination in drawing." This is an absolute untruth. Such a list of names has never been published.

Again: "A large percentage of the first year's students [of the Normal Art School] were either teachers of drawing in Boston and vicinity or former students of drawing in the Lowell Institute." This is untrue. We keep all the records of students, and also the exercises which they work for permission to enter the School, and these records show in the student's own handwriting that only an insignificant percentage of first year's students were teachers of drawing, whilst the exercises in drawing prove that others could have received no art-instruction anywhere.

Again: "At the close of the year only thirteen out of a hundred and thirty-three students could take the diploma, and yet each successive year the system is braced by increase of work." I can hardly be held responsible for the fact that persons entering the School should be so utterly ignorant of drawing that only thirteen could take the diploma the first year (though, as a matter of fact, twenty-two passed instead of thirteen); but I assert and can demonstrate by the printed circulars that no additional work has been required from the first year's students since the School opened. The first list of studies and lectures is that now acted on in the third year of the School's existence. It may, however, qualify the statement about thirteen passing if it be known that only twenty-nine attempted to pass the whole examination.

Again: "Remonstrating against this condition of things as crushing to the spirits, a student was coolly recommended by the director to take 'mor-

phine.'" When I read this statement in the *Nation* I was ignorant of what morphine was, and only discovered the shocking wickedness of the charge on learning that morphine was a preparation of opium. The statement is shamefully false.

"The school is no longer free, there being a charge of $20 a year. A debt of $20,000 has been incurred by the managers during the past year, which is given as a reason for the change." No such debt exists, and no such reason was ever given for the fee of $10 a term for incidentals, *not* for instruction. The fee for instruction is $100 a year, and this no resident of the State is expected to pay or ever has paid.

"The Finance Committee of the last Legislature refused to consider a resolve appropriating $14,000 to the School." This is not true; and, in spite of a libellous circular issued by anonymous persons, and referred to by your correspondent, addressed to the members of the Legislature, the necessary appropriations were made without much discussion, and what discussion there was was principally on the subject of draped *versus* nude figures.

This circular was not considered by "a meeting of students called by the managers of the School to express approbation of the system," as your correspondent says, for no such meeting ever was called. When the circular was issued, an indignation meeting of the students was held, at which no manager or teacher or officer of the School was present, nor had any one of them the first thing to do with it. Disgusted with the anonymous libels directed against the School and myself, the students addressed the following letter to me, it having been unanimously passed at the meeting, and afterwards signed by every student attending the School during the week it lay for signature:

"We, the undersigned, pupils of the Massachusetts Normal Art-School, having seen an anonymous circular against you, printed for distribution, at the State House, and signed 'Artists of Boston and Students of the Normal Art-School,' take this means of assuring you that we are in no way parties to this underhand and cowardly attack, and that we utterly repudiate all connection with it. We have always had and have the fullest belief in your exceptional fitness for the position of director, and gratefully recognize the devoted care which you have taken of the School, and the zeal with which you have labored to further its best interests. With the hope that you may long continue to direct the School, which owes its existence to you, and which without you would cease to exist, for want of a competent director, we remain yours faithfully."

No one person distinguished in either the practice of art or in education has adversely criticised the work of the Normal School, and every attack made on it has been made by persons who were ashamed to sign their names, or knew that their names, if given, would answer their aspersions. It is this cowardly way of discussion that settles the rights of these critics to their opinions; men entitled to opinions on such a subject are not afraid to state their opinions or ashamed to sign their statements, as I have now. I would like to say in reply to the general charge of overwork in the School, that systematic art-study appears to be something new among the class which attends the School, and many students have informed me that previous to entering it they had never been subjected to any kind of discipline. To such, any regular work would be hard. Then, also, amongst the 700 students who have entered during the past three years, some few have been so afflicted either with age or lack of sight that they had much better never have entered. Your correspondent's phrase "nerve-force" reminds me of one student, who began at her first lesson and explained to her teacher that she was deficient in nerve-force, and never received instruction from any teacher during the few months she was in the School without actually remonstrating with them for giving it, on account of the consumption thereby of her nerve-force. Discovering that art-study meant work, like any other study, she quickly gave it up, and has engaged herself since in less onerous occupation.

But to settle the question of there being too much to do in the first year's course by students, who give their time in the Art-School as they do in all other normal schools—that is, a reasonable time for five days in the week—let me say that every year since the School has opened there have been several Boston public-school teachers who have done their work regularly in the daytime, all the year round, and yet have had time *in their leisure* to produce all the diploma-drawings, study the subjects, and pass the examinations in addition. That being so, how can the work be possibly too much for others whose sole occupation it is? With regard to students having graduated in the School and there being no employment for them, allow me to say that no student has yet graduated, and none can do so until 1877, when the School will have completed its fourth year's existence, and its first class will then graduate. But a very large number of students are already employed as teachers, on the strength of a year or two's study in it, who would be much better employed in completing their own education. That is one of the chief difficulties, viz., that students seek and find employment in teaching before they are fit to have it. Whilst a professional training in the old countries occupies from five to ten years, here a student expects to be ready to earn his living after a year's instruction.

In conclusion, I claim that the School, so far as the studies and students are concerned, is in an excellent condition, constantly increasing in numbers and steadiness of work, attracting to it the young and diligent; there are those among its students who, when they have had their four years' training, will show something new in this country—accomplished teachers of art, trained on American soil.

WALTER SMITH,
Director of the School.

BOSTON, May 30, 1876.

[We regret the delay in printing this letter, due to a miscarriage in the mails in consequence of our having mislaid "Art-Student's" address, which we still lack.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: The discussion going on in the *Nation* on the subject of art-education interests me so much, and I have so far studied the matter practically and subjectively as well as objectively from the theoretical point of view, that I trust you will allow me to say that I regard the extirpation of the South-Kensington system, entire or modified, the most important work to be done in America. The position taken by the *Nation* in a late reply to a correspondent is quite unexceptionable from its point of view.

The study of art and that of nature (pictorially) differ as much as those of music and elocution. *Art* can only be studied in schools of art, where examples, traditions, and great works of art can be studied continually in their own atmosphere, while nature can only be studied as nature and before nature, the aid of art being simply *a help to see*. South Kensington is neither art nor nature, but a wretched conventionalism which has never helped anybody in England either to see clearly or work well, and will never help any one in America. It has about as much relation to art-education as rebuilding of cathedrals has to religion: they both enable people of a certain temperament to do what they consider a duty, to spend a certain amount of money in a way which they hope will do no harm and may do some good, and relieve their consciences.

Getting up new schools of art is much like getting up new religions—they will come of themselves sometimes, but not to order. Nature may always be studied without schools, but, as a school of drawing merely, South Kensington is the worst failure of the age of electroplate.—Yours truly,

W. J. STILLMAN.

VENTNOR, ENG., June 5.

BLAINE'S POPULARITY AT THE WEST.

TO THE EDITOR OF THE NATION:

SIR: One of the most striking facts in connection with the Cincinnati Convention is the entire absence of sectional preferences. Leaving out of account the "favorite son" business, there was hardly a trace of any such influence. Except in his own State, Mr. Morton had no support in the West; except in his own State, Mr. Blaine had no strength in New England; except in his own State, Mr. Conkling had few votes from the North; besides his own State, Mr. Bristow's followers were almost confined to New England. Mr. Blaine's strength in the Northwest affords an instructive example of this fact. The Northwestern group of States—Illinois, Wisconsin, Minnesota, Iowa, Kansas, Nebraska, and the Territories—cast almost a solid vote for him; and the causes of this are worth seeking.

In the first place, this strength was largely factitious. Perhaps there was a majority of the Republicans of these States for Mr. Blaine, although the Chicago *Tribune* denies it for Illinois; but it is very certain that there was no approach to any such unanimity as the votes would indicate. Our people are so accustomed to having the minority party go entirely unrepresented that they cannot see any injustice in having the minority within the party equally overridden by the majority; and, in truth, it is no worse for "Bob" Keyes or "Bob" Ingersoll to carry the Republican delegation of Wisconsin and Illinois in their pockets, than for the Republican party as an organization to pocket the entire State of Iowa in Congress. But it is very certain that a large and the best part of the Republican party in these two States felt not only that Mr. Blaine could not carry those States, but that if he did it at all it would be without their votes—unless, that is, the Democrats should commit another of their inconceivable follies. Admitting, however, that Mr. Blaine was the clear choice of the majority of the Republican party of the States in question, what was the cause of it? Mainly, no doubt, because he represents that pluck and audacity which are certainly no marks of statesmanship, but which in a new community are as much needed

as statesmanship, and which ten years ago were the foremost qualities in the needs of the day. The Northwest has not yet outgrown the memory of the war, and is not yet freed from the requirements of the frontier. Mr. Blaine's "vindication" was, say what we will, a splendid piece of fighting; and it was as victor in a battle that his followers hailed him.

As to this vindication, it is absurd to speak of it as such. We will not say that Mr. Blaine cannot prove himself innocent, but he certainly has not done so. Nevertheless, the people of the Northwest think he has—partly that they have not read and sifted the evidence, partly that nobody is logical when loyalty or personal attachment is in question; and the attachment to Mr. Blaine took the form of personal loyalty. And if the Boston *Advertiser* refuses to see any defects in the vindication, who can blame the people of these frontier communities? By sheer effrontery on his own part, and by generous devotion on that of his adherents, Mr. Blaine has managed to place himself in the light of an innocent and persecuted man, and, like General Grant, the Western voters refuse to desert him under fire.

But, after all, neglect to read the letters and lack of logic are not the only causes of this determination to believe Mr. Blaine innocent; it is, in a very large degree, that moral obtuseness, that lowering of the standard of public morality, which has been so deplorably manifest of late, and which has found its best illustration in the case of Mr. Schenck. This moral obtuseness is not greatest in the cities, where the exigencies of commerce keep up a reasonably high standard of conduct in business intercourse; nor in the older communities generally, where there are well-established traditions and accepted standards of action, and where a tolerably homogeneous population presents the elements of a steady and somewhat organized society. But the West, with its chance confluence of incomers from all States and all nations, receiving necessarily at the same time an undue proportion of persons who have "left their country for their country's good," is peculiarly exposed to the lowering of the standard. We see it in the corruption rife in the early history of nearly every one of the new States; we see it in the Granger legislation. These States have elements of admirable promise, and are steadily outgrowing their faults, not of youth, but of want of organism. Meanwhile, there is perhaps no more conscious dishonesty than in older communities, but there is a great deal more unconscious.

Mr. Blaine represents the crude, aggressive life of the nation, and was therefore the candidate of that part of the nation whose life is still crude and aggressive. You would hear—not often, but occasionally—"What if he did defraud the Government? He showed his smartness in it, and that he is just the smart man that we want"; oftener, however—"Hadn't he a right to put his money where it would do him most good?"

A.

ILLINOIS, June 1, 1876.

["A." has omitted to notice one matter connected with what may be called the moral side of the Convention, and that is the extreme magnanimity, benignity, and general benevolence of the politicians. Along with their moral obtuseness goes an apparent incapacity of resentment which now seems, like the prodigious sonorousness of their voice of which we spoke last week, to be becoming an inherited quality. It may be laid down as a rule that a man who cherishes rancor, and cannot conceal it, cannot now succeed in political life. And it looks as if the habit of concealing it had at last produced inability to feel it, so that it begins to take the place in the politician's moral constitution of the rudimentary organs in his physical frame. But this, again, most probably has had its origin in the peculiar conditions of colonial or frontier life. The frontiersman, when once he rises above the savage condition in which, like the Indian or the tiger, he seeks the death of his enemy, becomes curiously cautious about making enemies, and is disposed to put up with almost any amount of merely moral injury sooner than treat a man as an enemy—a state of mind which is doubtless due to the deep and constant feeling of dependence on one's neighbors which is always the strongest social tie of colonial life in a sparsely settled region. The knowledge that one may any day need the help of one's neighbors produces in such a community an amount of toleration for moral aberrations and shortcomings which revolts people in older societies, in which the opposite lesson, the necessity of keeping people up sharply to the conventional standards as one of the first conditions of social safety, has been learned through bitter experience. The politician has not unnaturally borrowed the frontier code, and will probably stick to it as a matter of professional convenience long after it has disappeared in every part of the country. But its early disappearance is not probable anywhere, as it is diffused among the whole chromo-civilized community, both East and West. A chromo-civilized man will denounce you in the papers as a forger, cheat, and adulterer in the most savage terms, and the next day meet you with a smiling face and outstretched hand and ask you to dinner. If you denounce him in like fashion, and even if you prove your charges, he will meet you in the same way, and tell you that he cherishes no unkind feeling towards you whatever, and in fact cherishes no unkind feeling to anybody that lives or ever did live, and, in so far as he has any feeling towards a person who has accused him or whom he has accused, it is one of gratitude, though for what he does not well know. In older communities this is apt to be set down by philosophers as a sign of moral decay. Sainte-Beuve says, in his recently published 'Chroniques Parisiennes,' apropos of it: "This absence of rancor, and this readiness to be reconciled after the most outrageous treatment, which may be repeated the next day, is perhaps the gravest symptom of moral decadence in a people. One reads in Chinese novels that the mandarins, after playing each other some scurvy trick, laugh in each other's faces, and drink together out of their little cups, the same as if nothing had happened. There is not the shadow of a resemblance between this and Christian forgiveness." *

We have little doubt, however, that here it is rather the product of an early and rapidly disappearing simplicity than a sign of a declining civilization. As the tug of war grows harder in a society based on competition, the easy good-nature of the militia has necessarily to give place to the stern discipline of the regulars. One is set to thinking on this point by the early opportunity which the heroes of all our late scandals have taken of announcing their forgiveness of all their slanderers, and their love for the entire human family—a fact which they are apparently more anxious to spread abroad than the proofs, if they had them, of their innocence. There grows out of this, or is perhaps inseparably associated with it, the politician's or chromo-civilized man's horror of "losing his temper." There is perhaps nothing he would not sooner have leak out about him than "that he had lost his temper." If he has to communicate to you this intelligence about one of his own friends, he will, if there is anybody near, call you into a corner and whisper it to you. That there is anything about which it is lawful to lose one's temper is something which never occurs to him. He will see his own character or that of his nearest or dearest assailed with the foulest aspersions and will only smile, but if anybody says he "got mad," on any occasion whatever, he will be deeply moved.—ED. NATION.]

Notes.

A SECOND volume from the pen of Prof. J. W. Powell, well known for his daring explorations of the great cañons of the Colorado River, has just appeared from the Government Printing-office. It is a thin quarto of 200 pages, accompanied by an atlas of eight maps and diagrams, giving the results of geological observations on the eastern portion of the Uinta Mountains, made in the course of his explorations, and includes a résumé of the invertebrate palæontology of that region by Dr. C. A. White, formerly State geologist of Iowa. About one-half of Prof. Powell's report is devoted to questions of structural geology whose range is not always confined to the region described. His treatment of these questions merits a more critical notice than time or space will permit us to give.——From the Ninth Annual Report of the Trustees of the Peabody Museum of American Archæology and Ethnology we learn of the accumulation of the building fund

* "C'est peut-être le plus grave symptôme de décadence morale chez un peuple que cette absence de toute rancune, et cette réconciliation banale après d'indignes procédés, sauf à recommencer demain. On voit dans les romans chinois que les mandarins, quand ils se sont fait quelque mauvais tour, se mettent à rire au nez l'un de l'autre, et boivent ensemble leurs petites tasses comme devant. Il n'y a pas ombre de ressemblance entre cela et le pardon chrétien."—*Chroniques Parisiennes*, p. 69.

beyond the amount fixed by the terms of the endowment, and that a building for the Museum will accordingly be begun as soon as Harvard College grants a site for it. The accessions to the collections during the past year have been very numerous and valuable, Mr. Alexander Agassiz, in particular, having generously contributed upwards of five hundred articles from Peru. Among these, the curator remarks, is a collection of human hair which "shows not only the peculiar modes of braiding, but also the fact that hair other than that belonging naturally to the head was worn to a great extent in the form of 'switches,' and that even these ancient people were familiar with the use of the 'rats' of the modern hairdressers." The report is embellished with a fine steel portrait of Mr. Peabody.——Delays in designing the binding of the 'Condensed Classics' lately announced by Henry Holt & Co. will prevent the publication of this series before the fall.——*Nature* for June 1, a double number celebrates the return of the *Challenger* by reviewing for each year from December 21, 1872, the vessel's course and achievements. This review is illustrated with a number of interesting woodcuts, and a fit tribute is paid to Prof. Wyville Thomson, the chief of the expedition, in a biographical notice accompanying his portrait, one of *Nature's* well-known and most artistic series.——In the *Geographical Magazine* for June there is a map illustrating a pundit's venturesome journey through Thibet in 1874, together with articles of the usual variety and interest. The *Mittheilungen* for May 6 maps the course of the explorer Giles through the interior of Australia, from May to November, 1875, and contains also a chart showing the public institutions for the higher education in Germany in 1875. Only those towns are indicated which possess a Gymnasium, a Progymnasium (Latin School or Lyceum), or a Realschule of the first or second rank. A conventional sign for each of these schools is affixed to the circle which marks the town; and the circle, again, shows the number of inhabitants.——*Appleton's Journal* hereafter abandons its weekly issues, and takes its place among the monthly magazines.

—The late expedition sent out by the Palestine Exploration Society took a large number of photographs of scenery and topography; and copies of ninety-nine of these, of liberal size, the Society proposes to present to subscribers to its fund. Having examined them, we are able to say that the negatives are exceptionally fine, and that the prints possess great interest not only for archæologists and Biblical students, but even for architects, and of course for collectors generally. Among the architectural plates we will specify No. 24, Temple at Musmeih, No. 26, Temple at Suleim, No. 28–29, "Convent of Job" at Kanawat, No. 42–43, Temple and columns at Bozrah, No. 68, Temple of the Sun at Jerash, and No. 70, Triumphal arch at the same place. Some of the panoramic views are really extraordinary—pure landscape, as in No. 20–23, Lake Phiala, so called on account of its bowl shape, which results from its occupying an extinct crater; architectural remains of prodigious extent, as in the street of columns at Jerash (No. 49–55), or the southeast section of earthquake-shattered Bozrah (No. 38–41); or landscape and ruins in striking combination, as in No. 89–92, the panorama of Amman (O. T. Rabboth-Ammon, where Uriah was slain). Lovers of the picturesque will single out the magnificent view of Mt. Hermon (No. 5), or the unusually wooded view of the fountain of the Jordan at Tell el Kadi (No. 19), or the cliffs, with cavernous stables, at Arak el Emir (No. 81–83), or the ruins at Mashita (No. 85, or still better No. 88). There are, besides, one or two views of inscriptions, and some charming ones of cedar groves; and among the entire number we have remarked very few that are unattractive. The printing of them has been entrusted to the capable hands of Mr. Geo. G. Rockwood, who, we understand, means to employ for a portion at least of the set the Lambert process of permanent photography, called the chromotype. This art, which is really a development of and improvement upon the old carbon process, has never before been practised in this country. It is hardly dearer than the silver process, and promises, in our opinion, to supersede the latter to a very large extent, especially in the field of portraiture. We ought to add that subscriptions to the Society will be received by the Rev. O. St. John, Financial Secretary, 115 Worth St., N. Y. A subscription of $200 will entitle the giver to the whole set, and so proportionately down to $10, which will entitle to five photographs.

—There is plenty of light summer reading in *Harper's* for July, but nothing of exceptional literary merit. The paper on "Nominating the President" has a timely interest, and one may learn from it that the late contest at Cincinnati was a tame affair compared with the travail of not a few of the older conventions. It may be said of all of them, however, that the number of delegates has been excessive, and that it is now at least seven times too large. It was a Democratic convention which gave us the present system of apportionment after the manner of the House of Representatives, and no better scheme could have been devised for lowering the quality of the electors and for fostering particularism and sectionalism. If in place of a delegation of fifty-eight nobodies like that from Pennsylvania, whose "sale" and "delivery" were openly speculated upon, the State had been represented by even one citizen of national reputation and unquestioned integrity and patriotism, will any one pretend that his vote, given after deliberation among his equals, would not infinitely have outweighed that of the troop actually headed by the Secretary of War? A body composed of the élite of either party, whether one, two, or three from each State, would be capable of reflection and sober discussion of candidates, would be beyond the reach of panics, and would command respect just in proportion to the character of its members. The effect of this on the constituencies would be to put against the temptation to vote with the majority a strong inducement to vote with the most honest and decent citizens; and this again would be an obvious and very precious advantage for new parties, which might easily convene eighty or a hundred notables, whose character and deliberations would not suffer by comparison with those of their long-established rivals. But the subject is too fruitful to be here pursued further. Among the illustrated articles, Mr. Lanman's account of Block Island and the paper on Samuel Adams are worth reading. The new instalment of "Daniel Deronda" is to our mind decidedly the finest yet.

—Apropos of Mr. Hudson Holly's paper on "Modern Dwellings" in this number of *Harper's*, a fellow-architect, who sends us his card, writes as follows:

"Some time ago, the author of a series of articles, entitled 'Modern Dwellings, their Construction, Decoration, and Furniture,' now appearing in *Harper's Magazine*, published a work on 'Church Architecture,' which called forth a scathing review from a leading English architectural journal, and which now finds place in some libraries as one of the curiosities of literature. It is a queer patchwork, largely adapted (to use a mild term) from 'the authorities,' and only calls for notice at this time because of the unfortunate fact, that the author does not seem to have profited by an experience which might and ought to have taught him that in these days of cheap printing it is not safe to 'adapt' too freely. The third part of the magazine article alluded to above, and which is just printed in the July number, begins, after a brief preamble, with the words: 'It is a very general impression that good taste comes naturally to gentle blood,' etc. If you will look at page 7 of J. R. Osgood & Co.'s edition (1872) of 'Eastlake's Hints on Household Taste,' at about the middle of the page, and will read on, comparing the magazine article with Eastlake, it will be found that in essentials the magazine article is, with a coolness almost refreshing at this warm season, 'adapted,' down to the dramatic point of the select on of a carpet 'that Angelina a moment before had decried to be a fright.' Here 'Angelina' and a trifling difference of time are the only new features; 'Materfamilias' having made the same discriminating criticism '*two* minutes ago'—in the original It would be tedious and useless to follow the author (?) through his remarks on furniture, except to notice that his kind mention in one place of Mr., and in another of Sir Charles, Eastlake, ought in simple fairness to have been made in nearly every paragraph. It may be said that the general drift of the ideas advocated in the article is good, if the ideas are *not* original; that we need popular discussion of the question of household taste, in which as a people we are sadly deficient; that principles are in question; and that the discussion of principles of taste, which do not change, is not calculated to admit of much originality of treatment. I reply that the large and increasing body of American architects has a right to demand that a 'Fellow of the American Institute,' in writing for the public, shall carefully guard against anything so discreditable as even an appearance of piracy; and that the correspondence of ideas, and even of words, is so marked in this case as to call for indignant rebuke."

We have compared the passage in *Harper's* with that in Eastlake, and our correspondent's statement is, we regret to say, fully borne out. Nor is this all. Throughout these papers the reader is left to suppose that the greater part of the designs by which they are illustrated are the author's own. This is so far from being the case that we understand that the publishers of the magazine have felt constrained to make the proper acknowledgments to a very prominent English firm exhibiting at the Centennial, from whose catalogue Mr. Holly has freely helped himself. As these papers in *Harper's* are in fact, however they may be intended, an advertisement of the writer, the injury thus done to the profession does indeed "call for indignant rebuke."

—The prospect of raising a sufficient sum to save the Old South Church in Boston from destruction is, we understand, good, but a considerable amount of money needs still to be raised. The preservation of an historical monument like this church is one of those things about which there ought to be no doubt, and it would certainly be discreditable in the last degree, not merely to Massachusetts, but to the whole country, if any sordid considerations were to interfere with it. Four years ago, we ventured in these columns to call the attention of the public to the fact that this building was threatened with destruction, and that a "desecration" much worse than that for which the British troops made themselves responsible had

been effected by the conversion of the building into a post-office, rented to the United States. The use of a church as a stable and cavalry riding-school by an invading army may be considered as the fate of war, which rather heightens than diminishes our attachment for the object desecrated; but the destruction of an ancient building, associated with some of the most inspiring events in the history of the country, because it stood on a valuable corner-lot, would simply be a humiliating proof that all our patriotic sentiment is mere sound and fury, signifying nothing, easily hushed into an eager silence by the clink or rustle of the almighty dollar. The reaction from the old Fourth-of-July fashion of self-glorification has been of late years so strong as to threaten to lead us to an opposite extreme quite as bad—an attitude of levity and contempt with regard to the really honorable and venerable traditions and memories of the past. Certainly, the associations connected with the Old South Church are too precious to be lost. The Boston *Herald*, we see, throws doubts upon the genuineness of the popular sentiment with regard to the preservation of the church, and hints that if there had been any real feeling about it the desecration of four years ago by the Government would never have been permitted. This is true, and we believe it to be also true that if the Hancock House had been preserved, the question of destroying the Old South would never have arisen. But this only furnishes an additional reason for straining every nerve to save what is left to us. Behind the Old South are the Old State House and Faneuil Hall, and if one goes all may go, and with them the popular susceptibility to the educational influences of monuments like these—which would be, perhaps, the greatest misfortune of all.

—A pioneer of American letters passed away on the 20th of June. Mr. John Neal, of Portland, Maine, was born there in 1793, but achieved his reputation first in Baltimore and afterwards in England, where he was for some time a member of Bentham's family. His success across the water was due to the novelty of his position as an American writer on American affairs, added to his trenchant and outspoken style in discussing his countrymen—a style characteristic of the man. His success at home as a novelist and poet was possible only in the reign of the "genial critic." Mr. Neal's career was in all respects a remarkable one, and his conceit of his own performances was kept from being repulsive by a bluff manliness and a really generous nature. His autobiography, published in 1869, entitled 'Wandering Recollections of a Somewhat Busy Life,' is probably destined to be his most enduring monument. Its value is considerable, not only for the writer's confessions about himself, but for the curious light it throws on his contemporaries in the early dawn of our literature. Mr. Neal possessed unusual physical powers, and his twin-sister, although delicate, also lived to a good old age. They were of Quaker parentage.

—Among the many good qualities of our "Anglo-Saxon" race, its sympathy with the feelings of brute animals deserves an honorable mention. We only hope that this virtue will not run to a maudlin excess in the coming passage by the British Parliament of a law regulating vivisection. All England seems just now to be in a hubbub on the subject; and one knows not what most to admire, the unintelligent zeal of the humane public which quotes such ill-chosen cases as examples of the "horrors" of science, or the facile logic of certain friends of physiology to whom the *tu quoque* argument addressed to fox-hunters, bird-shooters, and goose-liver-pie-eaters seems a perfectly satisfactory defence. The Royal Commission appointed to take evidence on the subject recommended, very properly as we now think, a license law. But the Government has decidedly outstripped the recommendations of the Commission in the bill which Lord Carnarvon introduced the other day into the House of Lords, and some of its proposed provisions seem to us as silly as they are mischievous. The bill says that all painful operations *must* be performed under anæsthetics, and Lord Shaftesbury, in supporting it, cited with horror the tying of arteries on a living dog by Sir Astley Cooper. Now, if anything is certain it is that the simple act of introducing a canula into a vessel or tying it (one of the operations most frequently called for in physiological experimentation) is immeasurably less distressing to the animal than the operation of being etherized. Humanity alone should make the physiologist refrain from ether in such cases. The bill absolutely forbids curara "as an anæsthetic." As this poison may be greatly abused, the prohibition is possibly wise. One of the great faults of the bill is that its provisions will apply to any animal, from a rotifer to an elephant, the almost insensible frog being treated with the same consideration by it as the sensitive horse; whilst, incredible to relate, the dog and cat are exempted altogether from paying tribute to science—in other words, it is made penal to operate on them at all. This is simply maudlin caprice, for the plea offered that the laboratories now encourage cat and dog stealing is too silly. The worst feature of the bill, however, is this: it only legitimates such experimental investigations as are made with the express purpose of relieving human suffering. A flatter ignorance of the motives of science, or of the conditions under which discoveries useful to man have hitherto been made, cannot be conceived. A hundred such discoveries turn up as incidents in the course of researches begun with no immediately utilitarian aim to one directly sought for. Were this provision literally enforced, its only effect would be indefinitely to retard therapeutics; whilst if allowed to be liberally interpreted, or, in other words, to become a dead letter, it simply casts over the whole bill an air of quibbling and insincerity. It is probable that as soon as Parliament has legislated on the subject a movement of the same sort will begin here. We hope, whatever it accomplishes, that it will in no way tie the hands of investigators already in the tide of discovery. That occasional experimenters, simple lecturers, students desirous of merely getting some data that may do to print in a thesis, and bunglers generally, should find themselves a little hampered, seems no great evil.

—The *Portfolio* has lately been increasingly good, the etchings repeating their originals with sympathy and spirit, and the reading-matter being of great distinction. Compared with this periodical, any other technical journal of the fine-arts in our language seems a time-serving organ and puffer of some shop. The *Portfolio*, though it sometimes seems to draw breath a little hard and maintain its life with difficulty in an unfriendly air, is really a serviceable, critical, and incorruptible thinker. There is not so impartial a judge of art as Mr. Hamerton now speaking in any nationality of Europe, and we doubt if there is a better. His article on Turner is resumed in the June number, and though we do not find him in it at his best, we know of no one who could place Turner so well in the rank of painters. We observe that he claims for Turner a visible influence on some modern French landscapists—a claim which seems rather fondly pushed in the case of the etching he gives by Brunet-Debaines. The river-side in question appears to us to be simply the effort to get novelty by imitating water-color effect in aquafortis instead of that of oil-color, and to be of the seed of Turner no more than of the seed of Harpignies. Two etchings after Claude—Mr. Chattock's of the "Cephalus and Procris," and M. Gaucherel's of a classic garden—give respectively the more solemn and the lighter aspects of his talent; it is hard to say which is the happier interpretation. The more popular illustrations of the last number are Del Sarto's portrait of himself from the National Gallery, and Decamps's "Boat-horses"—the finest piece of realism in the Louvre—by Lurat, the highly-promising young etcher who made his début in the *Portfolio* lately with the striking girl's figure called "Meditation." This running art-gallery connects itself in the *Portfolio* with a text in which, as we have said, Mr. Hamerton displays in eminent degree the grace of impartiality, and which somehow reminds us all the time of Mr. Arnold's phrase of "sweet reasonableness." The journal seems to us to exert, however unobtrusively, the happiest effect on its reader, who finds himself a person of taste without particularly meaning it.

—"M. Victor Cherbuliez," writes a correspondent from Paris, "publishes in the *Revue des Deux Mondes* for June 1 the first of a series of articles on the Salon of 1876. He executed with some brilliancy a similar work four or five years ago, and it is not brilliancy of a certain kind that is wanting in the paper before us. Its serious value, however, does not strike me as high; M. Cherbuliez seems long since to have made up his mind to be nothing if not 'smart.' His smartness has run away with him, and he cracks his whip with a vivacity that only quickens its pace. I may mention in connection with M. Cherbuliez that he has just published another novel—it has been running in the *Revue*—in what may be called his second or even third manner. 'Le Fiancé de Mlle. de St. Maur' has the aroma of culture and the delicacy of imagination which characterize everything the author writes, but the story is hard reading for his old admirers. The style is so tricked out with artifical graces, and the dialogue, especially, in which no one says good-morning without putting it in the form of an epigram or a quaint adage, is so flaming and super-subtle that twenty pages of it produce a fatal irritation of the nerves, to which the reader's curiosity to know what becomes of the fascinating young Viscount who has a love-affair with his brother's wife is not found a sufficient sedative. We like M. Cherbuliez's 'Salon,' on the whole, better than this. He treats, in the pages before us, of the landscapes, the portraits, and the small genre pictures—speaking also very happily of the large archaic cartoons by M. Puvis de Chavannes, representing, for the decoration of the Pantheon, the history of St. Genevieve. M. Cherbuliez very justly characterizes the desperate naïveté and, as it were, simplicity at any price of these compositions. He praises the fine landscape of M. Pelouse,

which has received one of the first medals of the year—'A Wood-cutting at Senlisse'; he speaks appreciatively of the two admirable Russian snow-scenes of M. Chelmonski, among the most solid and yet the most entertaining works in the exhibition; and he picks out the remarkable little specimens of street-landscape with figures in which M. de Nittis makes extreme elegance and realism go so happily hand-in-hand. He renders justice to the admirable 'Femme du Pollet' of M. Vollon, a bare-legged, bare-shouldered fishwife, with her empty basket swung over her back, stepping out with the freedom and dignity, the mingled lightness and weight, of a goddess on her cloud-pavement. He pays his respects to the extraordinary 'Marché aux Fleurs' of M. Firmin-Girard, a portrait of one of the quays of Paris, with background and figures strongly suggestive of an ill-colored photograph, but with ranged nosegays and flower-pots and over-heaped hand-carts rendered with a wonderful intensity of brightness. M. Firmin-Girard's picture is vulgar to my mind, but his flower-heaps are a triumph. M. Cherbuliez expatiates more largely than seems necessary upon the immense but vacant portrait by M. Clairin, the friend and the imitator of Henri Regnault, of Mlle. Sarah Bernhardt, the charming actress of the Théâtre Français, the vulgarization of whose personality, as the Salon contributes to it (there is another and much worse portrait of her, and a very amateurish sculptured group by the lady herself), is not delightful to those who associate a certain peculiar and altogether delicate poetry with her acting. On the other hand, M. Cherbuliez can say nothing too good of the portrait by M. Paul Dubois of his two little boys—the artist concerning whose two figures in sculpture for the monument of General Lamoricière I lately wrote you. M. Dubois has gathered two distinct laurels (his sculpture has received the medal of honor and his portrait a medal in painting), and it is hard to know on which to congratulate him most. He paints admirably, and with the same profound purity of intention with which he models. This little elder and younger brother, with their hands interlocked, their little feet near together, and their sweet-tempered, well-behaved gaze at the world, form one of the most delightful pictures in the Salon. M. Cherbuliez of course devotes a paragraph to the two remarkable works of M. Gustave Moreau, the 'Hercules and the Lernæan Hydra,' and the 'Salome dancing before Herod.' These are the two pictures of the year, in the sense that they are the two pictures that have been most talked about. If it is true of any picture that it must be seen to be appreciated, it is peculiarly true of these strange, elaborate, fantastic, and erudite compositions of M. Gustave Moreau. They are extremely difficult to describe, and at first they are difficult to enjoy; but they improve vastly on acquaintance, and they end by acquiring a singular fascination. They are open to a dozen charges which, with regard to works of a different sort, would be damning charges of want of drawing, want of knowledge, of sense of possibility, of proportion, of most things, in short, that a well-regulated picture is supposed to rest upon. The only want of which they have not been accused is, we believe, that of color. The best plan for M. Moreau's defenders, I think, is to give up defending him, and to content themselves with enjoying him. He charms, he takes possession of the imagination, and leads it away into regions untrodden and unexplored. His 'Hercules' is a beautiful but somewhat ill-drawn young man, strangely caparisoned, and standing erect in the midst of a fantastic and unearthly landscape of jagged rocks and moss-hung caves. Face to face with him rises the many-headed Hydra out of a bed of mouldering victims, bound together and strewn about in every shade of lividness and every form of agony—a great cluster of gray-green serpents, which, without being as fine as those which encircle the terrible Gorgon-mask of Leonardo da Vinci at Florence, are yet sufficiently ghastly. The coloring is capricious but exquisite, and the whole scene, if unreal enough to common sense, has a great deal of truth to the imagination. The 'Salome' perhaps has even more. The daughter of Herodias is bedizened with embroideries and jewels, and, while she holds out a great lotus-flower with her gem-encrusted arm, spins round, with her head bent and her long eyes askance, on the tips of feet that support her by the help of sandals that are stiff with precious stones. Herod sits upon his throne like some human idol that has successfully accomplished the feat of seeing himself as others see him, and a long, lean slave stands beside him with a drawn sword, casting a diabolical oblique glance at the young girl. Above and behind is an indescribably gorgeous architecture, which, like most of the rest, has been evolved from the moral consciousness of the artist—a moral consciousness, however, evidently fed by a great deal of curious culture. The picture produces the same sort of effect as Coleridge's poem of 'Kubla Khan'; it is like a strange dream made visible. The arbitrary in painting must always strongly justify itself, and one may say that with M. Moreau it does."

CONCERNING ENGLAND.*

THE present volume of Hillebrand's essays concludes the series entitled "Zeiten, Völker und Menschen," of which the first two volumes have been already discussed in our columns (Nos. 418 and 523). The author renews the intimation made in the preface to Vol. II., that with the series he bids farewell to the career of journalist and reviewer. We can only express the hope that this intimation is not to be taken too literally; that one with whom we have passed so many hours of pleasant and profitable intercourse is not going to bury himself wholly in *Gelehrsamkeit*, but will emerge from time to time and give us—in the same trenchant style—his views upon the great movements in European thought and culture. No country, least of all Germany, is so rich in men uniting knowledge with diction that it can afford to lose a writer of Prof. Hillebrand's ability.

Both in style and in substance the volume concerning England differs from its predecessors. In unity of theme, it stands between the two. In spirit, it is more sober than either. To be frank, we miss with somewhat of regret the aggressive sarcasm which marked the essay upon Gervinus and upon the historic school in Germany. This sarcasm, although barely keeping at times within the limits of the permissible, was wonderfully racy and inspiring. But in approaching England, the author seems to be impressed with the consciousness that wit and sarcasm would be out of place. His pace, without dragging, becomes slower, his judgments are more carefully weighed and qualified, and his tone in general is that of a cautious observer. Only on one occasion, so far as we remember, does he indulge in a Voltairean fling, namely, p. 27, in his application of the charming little Piedmontese anecdote to the discussions held at the London Metaphysical Club. Yet the attentive reader will discover, we judge, that the author, despite the care that he has taken to cloak his views in moderation, does not cherish any very profound reverence for his subject. We feel that he might, if he saw fit, say sharper things. In fact, not a few of his judgments and criticisms are all the more grave for the seeming hesitancy with which they are proffered. In this respect, the present volume may well serve as a counterpart to M. Laugel's essay.

In dealing with a work that covers so much ground, we cannot of course follow the author step by step. We must content ourselves with indicating the premises, consciously or unconsciously adopted, from which he has taken his start. Formally, the volume is divided into three parts: first, Letters from England; second, French Studies by English Contemporaries (a critique of Bulwer's 'Parisians,' Grenville Murray's 'Member for Paris,' Marshall's 'French Home Life,' and Morley's 'Voltaire' and 'Rousseau'); third, essays upon Fielding's 'Tom Jones' and upon Sterne. Prof. Hillebrand has but little faith in the present democratic régime in England. Lord Palmerston is for him the last real statesman of the old school, and Palmerston's successors, Gladstone, Disraeli, Lowe, and the others, are intrinsically weak, vacillating, and short-sighted. The extension of popular suffrage to the lowest classes of the great cities without coupling with it the corrective of suffrage for the land-folk, is a sheer blunder. The English aristocracy, having lost not only its actual power but even its ambition and its political traditions, is fast degenerating into a mere nobility. The Utilitarian school of Bentham and Mill meets with but little favor from this writer. Mill's overestimate of French democracy, his sacrifice of the study of facts to dialectic finish, his want of knowledge of men and character, are laid bare, calmly, it is true, but without mercy. The author does not scruple to express, on more than one occasion, his preference for the England of the eighteenth century. Its very excesses and prejudices were the overflow of robust, many-sided manhood asserting its individuality. In fact, the Englishmen of one hundred years ago, with all their insular arrogance, were more truly cosmopolitan—that is, more accessible to Continental ideas and entering more effectually into Continental affairs—than their polyglot descendants who discuss Taine and Turgenef and Schopenhauer; who chase over Europe and "knock at a hundred doors without finding the right one." The dangers which threaten the English Government are two: Ultramontanism and Materialism. These great parties are slowly summoning up their resources for the decisive encounter, while the truly liberal, the enlightened, cultured classes, the professors, men of letters, barristers, and young noblemen are withdrawing more and more from the arena. In a word—here the author gives us of the Western world a *Seitenhieb*—England is "Americanizing" herself.

We cannot refrain from raising the question: Would a collection of essays like the present have been possible ten years ago? The triumphs of Sadowa and Sedan seem to echo through the pages. Not that Hillebrand is the first of his countrymen to find fault with England. Heine, for in-

* 'Aus und über England. Von Karl Hillebrand.' Berlin: Robert Oppenheim; New York: L. W. Schmidt. 1876.

stance, vented upon the British some of his choicest diatribes. But Heine wrote in the spirit of petulance, discontent, and *médisance* habitual to him, while Hillebrand is courteous and discriminating, basing his opinions upon reasons, and ready to acknowledge the good no less than the evil. Above all, he gives us to understand—not so much by direct mention as by his confident tone—that he is the citizen of a state which now considers itself the peer of England in most respects, and superior in some. He would have us know that he is above mere fault-finding, that he can respect England and the English without disloyalty to German hegemony. The most characteristic of his utterances is one (p. 48) to the effect that the two nations have exchanged parts, that the English have taken to philosophizing and the Germans to politics. Seldom is his disapproval or condemnation expressed warmly, and but once is it tinged with positive bitterness. In the note to page 93, he virtually charges England of to-day with "cant" in its condemnation of the means employed by Germany for crushing Ultramontanism, and its exhortations to Christian tolerance:

"Thanks, gentlemen, for the good advice, that reminds us so forcibly of the equally sincere exhortations of the French, when they extolled to us Germans and Italians the superiority of confederacy over unity, but rejected every idea of a dissolution of their own *belle unité* as a sin. Thanks, ye Lucretian sages safe in port, and when Papacy is reduced in Germany to the proportions that—by the virtue of your worthy forefathers—it has in England, we will take your friendly advice into consideration—yes, and follow it. But until then we are satisfied if history lumps us (*uns in einen Topf wirft*) with the glorious barbarians of the seventeenth and eighteenth centuries, to whom you owe your religious freedom."

Much space in the First Part is devoted to an analysis of the literary activity of Dickens. It is interesting to note the deep impression made by the great novelist upon a critic of so different an order of mind. Hillebrand's estimate of his prodigious fertility is in the main just, but we are disposed to think that he overrates his direct influence upon letters and even upon contemporary opinion. Dickens's career is of a kind to fascinate the foreigner, and to mislead him into confounding popularity with influence. The author's estimate of Bulwer's 'Kenelm Chillingly' also seems to us a trifle too high. On the other hand, his examination of Mill's credentials to greatness is the most searching that we have met.

In Part Second—the critique of the 'Parisians,' 'The Member for Paris,' and the works of Morley and Marshall—Hillebrand is thoroughly at home, and, we may add, more at his ease. Life in France is to him evidently an easy-chair, seated in which he views the motley shapes of capital and province pass by in everyday panorama. Nothing could be more thoroughly fair than his appreciation of the efforts made by English authors to delineate French society. His recognition of their success is ungrudging, and his correction of their shortcomings is not only charitable but suggestive. So far as his conclusions can be summed up in a brief paragraph, we may represent him as holding that Bulwer and Murray are good in what they give and poor in what they have failed to give. Bulwer has depicted very skilfully the movements of French life, Murray its leading figures; but both have neglected to take into account many of the most important elements. Both are signally imperfect in their portraiture of the leading types of French women, both seem to be unaware of the silent power possessed by the professors, lyceum teachers, and other men of real culture, as distinguished from the noisy, chattering feuilletonists; and both are strangers to the lower and lower-middle classes, the *petits bourgeois* and *ruraux*, upon whose good sense and thrift the welfare of France ultimately rests. Marshall has produced an interesting and valuable work, but, with all his prolixity of details, he has failed to strike the key-note of French life, which is at bottom nothing more nor less than a perfectly organized system of rationalism. He sets too high a value upon the training of French girls, and underrates that of the boys. At least, his condemnation of its evil results does not proceed from a perfectly clear perception of the causes. Marshall finds the weak spot of this training to be the want of physical and religious development. Hillebrand finds it to be the herding of great numbers in *pensions* and in the system of degrading espionage. Morley's 'Essay on Voltaire' he regards as the most valuable of those produced in recent times. It is to be ranked even above that by Strauss, because more in accordance with the robust philosophy of the eighteenth century. In his 'Essay on Rousseau,' Mr. Morley, although perfectly just and painstaking, shows more than once that he has not penetrated to the very core of Rousseau's artistic nature. We are summoned to take note of a defect in the organism of the English mind. The Englishman, straightforward, clearly conscious of his own rectitude or painfully aware of the opposite, not over-nimble in his intuitions, is unable to understand the perpetual vacillation between right and wrong, high and mean, the easy waiving of principle for a practical and immediate end, the bluntness of the ethic and acuteness of the æsthetic sense, which are so conspicuous in the Latin races and which reached their acme in Rousseau.

Hillebrand's study of Fielding is an additional proof of his preference for England of the eighteenth century. It is the product of careful reading and warm sympathy, and withal of sound judgment. The comparison of Fielding with Goethe (in the 'Meister') and with Cervantes is carried out with great delicacy and precision. It is penned in the author's happiest vein, and leaves scarcely anything to be desired. The essay on Sterne is less satisfactory.

O'HARA AND HIS ELEGIES.*

THE editor of this little volume was, we are informed, recently a Professor in Transylvania University, and the successor of Col. Breckinridge as editor of the *Observer and Reporter* in Lexington, Ky. Professor Ranck says: "America has as yet produced but one elegiac poet of acknowledged genius, and that poet is Theodore O'Hara, author of 'The Bivouac of the Dead' and the ode to Daniel Boone." It may be an illustration of the aphorism that the world knows nothing of its greatest men that, till we read this statement, we had been ignorant of the existence of Theodore O'Hara, and we have found since that this ignorance was snared by several usually well-informed and intelligent persons. "The remarkable merit," we cite again from Professor Ranck, "of these tender, mournful, but inspiring elegies has never been disputed. They have always been most warmly admired by the scholarly and cultivated, have grown steadily in public estimation from the time they were penned, and will continue to grow in favor with the growth of years. May we not reasonably hazard the prophecy that the time will come when O'Hara will occupy the same place in our literature that is now held in the field of English letters by the celebrated author of the 'Elegy in a Country Churchyard'?" Professor Ranck tells us that O'Hara was born in Danville, Kentucky, in 1820. "He was the son of an Irish political exile, noted for his piety and learning." His father gave him instruction "until he was prepared to enter college, and then that ripe scholar had so thoroughly done his work that he was at once admitted to the senior class of St. Joseph's Academy at Bardstown. There, among the learned clergy of his Church, he soon became pre-eminent as a profound and accomplished scholar." "Study was his passion. It engrossed his entire boyhood, and added fuel to the fires of his genius." He received the compliment of being chosen Professor of the Greek language at Bardstown, but after bidding farewell to his alma mater in a speech that "enraptured those who heard it with its elegance of style, depth of thought, truthfulness of sentiment, and beauty of composition," he studied law in the office of Judge Owsley. In 1845 "he held a position" in the Treasury Department at Washington; "but his life from this time till its close was obscured by the same dark clouds of misfortune and disappointment that seem so strangely to hang round the pathway of genius—the pressure of a narrow fortune, combined with the aspiration of a noble ambition, conspired to make his life erratic."

He received a captain's commission and served through the Mexican war; after the war "he commenced the practice of law in Washington City, where he remained until the breaking-out of the Cuban fever, when, with many other gallant Kentuckians, he embarked in that ill-fated enterprise. He commanded one of the regiments in the disastrous battle of Cardenas, and was badly wounded." On his return to the United States he for a time "conducted the Mobile *Register*, was subsequently editor of the Louisville *Times*, and afterwards of the Frankfort *Yeoman*." "He was peculiarly fitted for an editor, as his knowledge was varied, deep, and comprehensive, and the glowing sentences flashed like jewels from his gifted pen." Professor Ranck states that "he was frequently called on by the Government to conduct diplomatic negotiations of importance with foreign nations," and that in 1854, when the remains of the distinguished statesman, Hon. William T. Barry, arrived from Liverpool and were reinterred in the State Cemetery at Frankfort, Col. O'Hara was the orator of the occasion, and delivered an oration "so glowing, so chaste, so appropriate, and so full of pure and lofty eloquence as to entitle it to a place among the best specimens of American oratory." "At the beginning of the late war his heart swelled with sympathy for the people he had always loved so well, and his sword was at once unsheathed in defence of the South. He was immediately honored with an important position"; but when, at the close of the war, "one of the grandest dreams of modern times dissolved and ended," he was left "without a dollar," and went "to work to retrieve his fortunes." He engaged in the cotton business at Columbus, Georgia,

* 'O'Hara and his Elegies. By George W. Ranck.' Baltimore: Turnbull Brothers. 1875. 12mo, pp. 41.

but was burnt out. He then retired to a plantation on the Chattahoochee, and there was laboring successfully when he was attacked with fever, of which he died June 6, 1867. He was buried at Columbus "in consecrated ground, where he slept until the State upon which his genius had been reflected proudly claimed his ashes." In accordance with a resolution of the Kentucky Legislature, his remains were brought to Frankfort, and on the 15th of September, 1874, were reinterred with appropriate ceremonies in the State Cemetery. "The obsequies closed with the reading of 'The Bivouac of the Dead.'" "His fame rests," says Mr. Ranck, "upon his elegies. It is as a poet that O'Hara is known and celebrated. That one great lyric, 'The Bivouac of the Dead,' would alone have made his name immortal." Mr. Ranck says that as a martial elegy it surpasses the famous stanzas on the burial of Sir John Moore; that "in perfect harmony of spirit, style, and subject it is equal to Longfellow's 'Psalm of Life,'" and superior to it "in reaching out and touching the borders of the unseen"; that "the combination of spirit-reach and spirit-prescience which this production contains is the highest, strangest, and most solemn gift a poet may possess"; that "if it had no other claim upon life than the sublimely beautiful metaphor in the first stanza, that alone would preserve it through the ages"; and that "the hold of this elegy upon the popular heart grows stronger and more enduring." And recurring again to Gray, he adds that "in death as in life O'Hara seems the twin brother of Gray, the author of that exquisite emanation, the 'Elegy in a Country Churchyard.'" Professor Ranck is undoubtedly right in regarding the intimacy of apparent relationship as being quite as close in the one condition as the other.

It may not be an impertinent assumption to suppose some of our readers to be as ignorant of this admired production as we ourselves have hitherto been, and desirous of seeing so esteemed a poem. We consequently cite it at length:

"THE BIVOUAC OF THE DEAD.

"The muffled drum's sad roll has beat
The soldier's last tattoo;
No more on life's parade shall meet
The brave and daring few.
On Fame's eternal camping-ground
Their silent tents are spread,
And glory guards with solemn round
The bivouac of the dead.

"No answer of the foe's advance
Now swells upon the wind;
No troubled thought at midnight haunts
Of loved ones left behind;
No vision of the morrow's strife
The warrior's dream alarms;
No braying horn nor screaming fife
At dawn shall call to arms.

"Their shivered swords are red with rust;
Their plumed heads are bowed;
Their haughty banner, trailed in dust,
Is now their martial shroud;
And plenteous funeral tears have washed
The red stains from each brow,
And their proud forms, in battle gashed,
Are free from anguish now.

"The neighing steed, the flashing blade,
The trumpet's stirring blast,
The charge, the dreadful cannonade,
The din and shout, are past;
No war's wild note, nor glory's peal,
Shall thrill with fierce delight
Those breasts that nevermore shall feel
The rapture of the fight.

"Like the dread northern hurricane
That sweeps his broad plateau,
Flushed with the triumph yet to gain,
Came down the serried foe.
Our heroes felt the shock and leapt
To meet them on the plain;
And long the pitying sky hath wept
Above our gallant slain.

"Sons of our consecrated ground,
Ye must not slumber there,
Where stranger steps and tongues resound
Along the heedless air.
Your own proud land's heroic soil
Shall be your fitter grave;
She claims from war his richest spoil—
The ashes of her brave.

"So 'neath their parent turf they rest,
Far from the gory field;
Borne to a Spartan mother's breast
On many a bloody shield.
The sunshine of their native sky
Smiles sadly on them here,
And kindred hearts and eyes watch by
The heroes' sepulchre.

"Rest on, embalmed and sainted dead!
Dear as the blood you gave
No impious footsteps here shall tread
The herbage of your grave.
Nor shall your glory be forgot
While fame her record keeps,
If honor points the hallowed spot
Where valor proudly sleeps.

"Yon marble minstrel's voiceless tone
In deathless songs shall tell,
When many a vanquished age hath flown,
The story how ye fell.
Nor wreck, nor change, nor winter's blight,
Nor time's remorseless doom,
Shall dim the ray of holy light
That gilds your glorious tomb."

This is the elegy that is so much admired. It forces upon us the sense of the difference in contemporaneous standards of literary excellence, and impresses us with the complexity of the problem of American culture. But we have given so much space to the poem that we have no room in which to draw out its moral.

The only other poem of Col. O'Hara printed by his enthusiastic editor is called "The Old Pioneer," and Mr. Ranck tells us that "on this field at least the bard of Newstead Abbey must lower his plume to O'Hara," and that "the sad notes of this sweet and solemn dirge will float and linger with undying cadence for generations to come around the name of Daniel Boone." It is admitted, however, to be on the whole inferior to "The Bivouac of the Dead." We can only say that even if Mr. Ranck's praise should seem somewhat indiscriminate and slightly injudicious in its tone of laudation, the poem is incapable of being lowered by it in the estimate of the cultured and fastidious reader. It will be matter of surprise, however, if Professor Ranck be right that this poem "is a prophecy of Kentucky's literary future."

The Mountains. A Collection of Poems. (Boston: Roberts Bros. 1876.)—Two years ago there appeared 'Sea and Shore,' a poetical volume of appropriate poetry for summer enjoyment by the water-side. The present collection is, we believe, by the same compiler, but it seems to us inferior to that which preceded it, or at least to our recollection of it. The want of a severe taste which we pointed out in 'Sea and Shore' is quite as visible here, and in the very forefront of the volume, the opening pieces being particularly, and one would say unexpectedly, feeble. A still better test of this lack of discrimination is afforded by verses like 'The River's Lament' and 'The Flower from the Catskills' (apparently the productions of friends or of the compiler himself), whose authorship is only indicated by initials. A large number of the selections would as fitly illustrate any theme as "mountains." The real subject is a flower, a tree, a waterfall, a bird, with barely an incidental allusion to hills, or heights, or crags, and sometimes, as in the case of Dean Trench's "Heron," without even that. This, though legitimate enough, conveys the impression that the mountains have had fewer bards than the sea. But, whether such be the fact or not, there can be no doubt they have had many more than could be represented in the compass of the volume before us; and we half cherish the suspicion that tables of contents have been called into requisition where a deeper acquaintance with the poets and a wider range of reading would have ensured both a richer and a more even harvest. After all, it may be questioned whether the everlasting hills do not call for higher powers of poetic expression than does the sea. The impression they make on us is more subtle and more complex, and such as an ordinary versifier is quite unable to deal with. It is not every comer

"Who, in large thoughts, like fair pearl-seed,
Shall string Monadnoc like a bead,"

or receive its

"Welcome, if thou bring
My secret in thy brain."

Monadnoc, by the way, is justly distinguished in this collection over all its New England rivals in beauty and grandeur by being the occasion of three poems, two by Mr. Emerson and one by Whittier; and better inspiration is hardly found between the covers of the book. Poems worthy to be placed beside these, indeed, might almost be numbered on the fingers of one hand, and there is too much rubbish to make 'The Mountains' a treasury.
